But the larger part of the present volume is taken up with the collection of the miracles of Thomas made by the same William, and, what is to be noticed, dedicated to the elder King Henry. This should be noticed and compared with the tone which the writer takes in the Life. He is very anxious to free the King from all suspicion in any share in the Archbishop's death, and gives great prominence to Henry's justification of himself. And among the miracles is one where Firmin, a physician of Canterbury, has a vision, in which he sees the names both of the King and the Archbishop about to be written in the Book of Life. This again must be taken in connexion with the famous saying of Herbert of Bosham, that both the King and the Archbishop had alike a zeal for God, and that it was for God alone to know which zeal was according to knowledge. These sayings, coming from devoted admirers of the Archbishop, should be further compared with William of Newburgh's dispassionate statement of the whole matter. It would seem that it was easier for men at the time, who could see the motives of both sides, to do justice to both sides, than it has sometimes been found to be in later times, since the whole matter has been made a test of partisanship. And of course, besides this, when Thomas was once canonized, Henry and of all who had taken his side to throw themselves with special zeal into the new worship. That our author was not a mere flatterer, but one who ventured to pass an independent judgment on the events of his time, appears from a remarkable passage in which he speaks his mind freely about the invasion of Ireland. St. Thomas works a prodigious miracle by restoring to life a knight who had died of sickness in the war without confession; and our author comments:—

Factum est igitur non sine causa in conspectu eorum qui sine causa proximos suos inermes inquietabant, nationemque, quamvis inculcam et barbaram, tamen cultricem fidei et Christianæ religionis observatricem, facinus præclarum et memoria dignum.

When William wrote, the worship of Thomas was naturally the popular worship of the day. A new saint was of course looked to for special displays of miraculous power, and we are told by our author, in so many words, that in such cases the elder saints rather held back from any displays on their own part, in order that their new brother might have a fair field for working. The vast collection of signs and wonders which we find here gathered together of course suggests the same kind of questions which are suggested by every collection of the kind. How much, if any, was actual imposture? How much is mere exaggeration in the telling? How much is the effect of that process which may be called either fancy or faith? How much comes from attributing a supernatural cause to events which are easily explained by natural causes? All these points were discussed long ago by Professor Stubbs in his preface to the Waltham Book. And his remarks apply with equal force to all stories of the kind. But it should be borne in mind that the miraculous stories are not at all confined to professed collectors of such tales, like the present William. Stories no less wonderful are told with undoubting faith by a critical historian like William of Newburgh, and an experienced Court official like Roger of Howden. Those who are used to the writings of this age soon come to take the miraculous element in collections of this kind for granted, and to look through the tales to see what light they throw upon other matters. For, as these stories are for the most part private stories, tales of what happened to otherwise unknown persons of all classes, there is no kind of evidence which throws more light on all points of language, nomenclature, habits, and all things bearing on private and daily life. Thus a crowd of stories show how common marriage, or something equivalent to marriage, still was, on the part of the clergy. A crowd of miracles are wrought on behalf of the wives or mistresses and the children of priests, without either the martyr himself or his chronicler seeming in the least scandalized. Yet St. Thomas was otherwise not lax on such points, and he would have nothing to say to the offerings of a man or woman who was living in fornication. A crowd of other points are illustrated. We get, for instance, a vivid picture of the brutal punishments inflicted in the King's courts, when we read two stories, one of them certified by no less a person than Hugh of Puiset, Bishop of Durham, how two men who had been mutilated were restored by the miraculous power of the saint. One of these is also found in the other collection of miracles by Benedict. In comparing that collection with the present one, we again see the difference between the work of the Englishman and the work of the foreigner. In Benedict's collection most of the miracles are wrought in England, and most commonly on behalf of people bearing English names. In William's collection, on the other hand, miracles are wrought in all other parts of the world, and in English stories the names are more often Norman than English. Yet we get a precious bit of English in the form of an anthem which the saint desired to have sung in the English tongue, and it is an important point in the history of language when we hear of an English knight getting a teacher from Normandy to teach his son French. Yet if there be any meaning in words, this must be the meaning of the following tale:—

Tornator Durandus nomine, Normannus natione, filium suum Symonem, annos jam pubertatis ingredientem, partes Anglicanas induxerat, qui doceret filium cujusdam militis linguam suam.

In a good many cases the saint brings dead animals to life for the benefit of their owners. Among others, he restores a dead gander, whose neck had been twisted and his feathers plucked by some naughty boys. Anselm, we may suspect, would have punished the boys as well as restored the gander. But perhaps the most marvellous tale of all is that of a tame starling which, among other imitations of human speech, had learned to say a prayer to St. Thomas. The pious bird, being seized by a hawk, repeated his prayer, seemingly in earnest, and was presently set free from h enemy's grasp.

We must give Mr. Robertson the credit which he asks for t pains he has taken in fixing the names of the places at which the different stories are placed. It is indeed often a hard task to recognize a plain English name when we have it in an antique form, and when that antique form is further disfigured by the corruptions of a foreigner. The volume greatly wants an index. There will doubtless be a general index of the whole series when it is finished, but we want an index to each volume, as in the volumes of Giraldus edited by Mr. Dimock. It is especially needful in a collection like the present, so full of small anecdotes and of names of persons and places. Still, even without an index, Mr. Robertson has amply fulfilled the promise in his preface, of making something more intelligible than Dr. Giles. We would gladly have seen so great a subject in stronger hands still, but we certainly have no reason to find any positive fault with what we have got.

LIFE AND CORRESPONDENCE OF GENERAL BURGOYNE.*

THE object of this volume is to rehabilitate in public estimation a tattered reputation. The result is a highly interesting book. Whether Mr. De Fonblanque has been successful in his task—undertaken, he says, at the instance of the granddaughters of the subject of his memoir, and the children of one of England's most distinguished soldiers—the reader will be able to infer from the following remarks.

Mr. De Fonblanque sets out by proving satisfactorily in the first place that John Burgoyne was born in wedlock, and that he was not, as Horace Walpole and others, including the usually accurate Earl Stanhope, have asserted, of illegitimate birth. Born in the year 1722, his father being the younger son of a baronet, and his mother the daughter of a wealthy London merchant, he was educated at Westminster, and became a captain of dragoons at twenty-two. A year later he eloped with Lady Charlotte Stanley, daughter of the eleventh Earl of Derby, and sister to an intimate friend, Lord Strange. Contrary to received opinion on such marriages, this union turned out a very happy one, and the Derby family soon became reconciled with Burgoyne. But before this happened want of means obliged him to leave the army and take his wife abroad. After losing several years' seniority in this way, he was reinstated in the army, and gazetted in 1756 junior captain of the 11th Dragoons, being then thirty-four years of age. But promotion was rapid in the Seven Years' War, which had just broken out, and the cadet of a great Whig house would of course get his full share; and after serving in the attack on Cherbourg, and in the unfortunate expedition to St. Malo of 1758, when the British troops were very roughly handled, he was appointed to the command of the newly raised 16th Dragoons, or, as they came to be called, Burgoyne's Light-Horse, which he soon brought into very efficient order. In 1760 he served as a volunteer in the expedition against Belle Isle, the cavalry detachment which embarked being too small for a lieutenant-colonel's command. But his first principal military service was in the expedition to Portugal in 1762, when the English came to the rescue of that country on its invasion by the Spanish and French. This war in some sort recalls the efforts of the Duke of Wellington under not dissimilar circumstances. The Count La Lippe, who was placed at the head of the allied forces, was one of the best soldiers of the age, and the Portuguese furnished a good raw material, although wretchedly equipped and officered. Nevertheless the heterogeneous body of English, Germans, and Portuguese collected under La Lippe made a very good fight of it, and Burgoyne, now a brigadier at the head of 3,000 cavalry, mostly Portuguese, distinguished himself at the outset by a very dashing surprise of the enemy's advanced troops at Valentia.

The war came to an end with the conclusion of peace in the following year, and Burgoyne came home a colonel, and with a great reputation for gallantry and intelligence, to take the seat for Midhurst to which he had shortly before been elected. Peace for Great Britain lasted for fourteen years, during the early part of which Burgoyne made a long tour to the seat of the late war on the Continent, visiting the scenes of most of Frederic's battles, with a view to writing a work on the subject. He sent home to the Government some very observant criticisms on the three great Continental armies, and it is remarkable that he formed a much higher opinion of the Austrians than of the Prussians. The latter, notwithstanding their wonderful victories, had, in Burgoyne's opinion, deteriorated:—

> Most of the generals who eminently possessed the great parts of their profession perished in the war, or are worn out by the fatigue of it, or have sought occasions to retire; the greatest part of the present set have recommended themselves by their assiduity upon the parade, and are men of very confined education . . . . and Prussian officers, by length of time and experience, only become more expert artificers to prepare and sharpen a fine weapon . . . . awkward and ignorant if compelled to employ it themselves.

He speaks disparagingly also of the Prussian cavalry. Of the Austrian army he says that it "shows all the natural advantages the Prussians want" (p. 69). Of the French army he remarks (p. 77) that "the want of subordination and discipline has long been supposed the cause of all their misfortunes;" and, noticing the severity of treatment of the French soldier which had just been copied from the Prussians by the Duke de Choiseul, the French War Minister, in order to remedy these defects, he observes that "the French character would bear the old principles of glory and duty to be wound up to a height that would answer the purposes of the strictest disciplinarians," and foretells that the free use of the stick on parade, imported from over the border, may possibly bring the army into a worse condition than before.

In 1768 Burgoyne was appointed Governor of Fort William in Scotland:—

> With a handsome person, a manner the charm of which, it was said, neither man nor woman could easily resist, a genial, kindly nature which drew all hearts towards him, a ready wit, a cultivated mind, and the pres-
>
> ir
>
> ...ent, all surrounding circumstances justified him in indulging in the hope of eminence in public life and of gratified ambitions in time to come.

Then came the American war; and Burgoyne, who had steadily opposed the infatuated policy which brought it about, but who was too ambitious a soldier to refuse military employment, was sent out the junior of three major-generals—Howe and Clinton being the seniors—appointed to the staff of the small force then assembled at Boston. Burgoyne, who was now fifty-three years of age, did not much relish the subordinate position to which he was posted, there not being really troops enough for three major-generals to command, and used all his Court and Ministerial interest to be made Governor of New York; and his dissatisfaction was to a certain extent justified by the fact that he was merely an unemployed eyewitness of the battle of Bunker's Hill, a very interesting account of which will be found in his correspondence. Even at this early period of the contest Burgoyne clearly foresaw what would be the final result if the Ministry continued to carry on the war in the fatuous way they began—for already the troops found themselves outnumbered and without money or supplies—and in a letter to the Secretary of State he states his opinion that there is no practicable alternative between carrying on the war on a vastly larger scale and in a more energetic way, or abandoning the contest:—

> I am fully persuaded that any intermediate measure between these disagreeable extremes [relinquishing the claims to tax the Colonies, or waging war on a great scale], except that of withdrawing your army, and leaving the restraints of trade enforced by a fleet to operate, which would be a work of long protraction, I repeat my full persuasion that any other intermediate measure, supposing the confederation to be general, will be productive of much fruitless expense, great loss of blood, and a series of disappointments.—

The wretched Government which then misruled the country, and the obstinate King, had at any rate a clear warning from one who had the best opportunity of judging. But, although Burgoyne from the first took the gravest view of the issue, he was too good a soldier not to be ready with his sword. He got leave indeed to England in the autumn of 1775, after using every sort of interest for permission to do so, but sailed in the following spring with reinforcements to Canada, where he served as second in command to Sir Guy Carleton. The campaign of 1776 was not eventful, and the Government, dissatisfied with Carleton, limited his command for the future to the Canadian provinces, and gave to Burgoyne, who again came home in the autumn of 1776, the charge of the expedition with which his name has become indelibly associated.

The scheme was in one sense well planned. A force marching from Canada by way of Lakes Champlain and George, and co-operating with another advancing to join it by way of the Hudson from New York, would cut off the New England States from the rest of the Union, and thus it was hoped to strike a decisive blow. But the movement of two armies acting on exterior lines from distant bases, with the enemy between them, is always a ticklish operation—in fact, only justifiable in case of great superiority of strength—and in this instance the imbecile conduct of the British Government rendered failure almost a certainty. The instructions dictated to General Burgoyne, regarding the expedition ordered to start southward from Canada, permitted no latitude or discretion in the mode of carrying it out. He was not even allowed the option of turning aside and moving to the eastward on New England, if he found the obstacles in his front too great to be overcome. He was to push on by way of Lakes Champlain and George until he should effect a junction somewhere on the Hudson with Sir William Howe advancing from New York to meet him. But, although everything thus depended on the two generals acting strenuously in concert, the Government, with a degree of folly that would seem incredible if it had not been proved against them, while thus giving Burgoyne positive and unconditional instructions as to his share of the business, actually left Howe such complete liberty of action as to justify him in setting out for the south at the very time that the force with which he was intended to effect a junction was advancing to meet him from the north. Indeed the only orders given to Howe were "comprised in this casual sentence contained in Lord George Germain's despatch of 18th May, '77, with reference to the threatened operations of the insurgent army in the south: 'I trust, however, that whatever you meditate will be executed in time for you to co-operate with the army to proceed from Canada.'" The suppression of the revolt was perhaps from the first an impossible task, but truly the wretched Government of the day did its best to assist the colonies in establishing their independence. A despatch containing full and explicit instructions to Howe for his co-operation with Burgoyne was indeed written, but by one of those shameful acts of official neglect of which our history unfortunately affords but too many examples, this document was pigeon-holed in the Secretary of State's office awaiting the Minister's signature, where it was found after the convention of Saratoga.

The history of the ill-fated expedition is excellently told by Mr. De Fonblanque. At first all went swimmingly, and Fort Ticonderoga, on Lake George, was taken in brilliant style, the news causing great excitement and satisfaction at home; and, but for the strongly expressed wish of Burgoyne himself, communicated by his friends to the King, he would have at once received the distinction of the Bath, at that time a conside... one. But at this point the success of the campaign ended. ... whole distance to be traversed was only about two hundred ... as the crow flies, but through a country for the most part roadless, covered with virgin forest, and bristling with difficulties. The means of transport were deficient; the Indian allies were more ... blesome than useful; the expectation of aid from loyalist ... proved delusive. As Burgoyne pushed on he could get no news of the expected army coming to meet him, which, in

* *Political and Military Episodes in the Latter Half of the Eighteenth Century. Derived from the Life and Correspondence of the Right Hon. John Burgoyne, General, Statesman, Dramatist.* By Edward Harrington De Fonblanque. London: Macmillan & Co. 1876.

fact, at this very time had started on an expedition to Pennsylvania. He could indeed get no news at all, the scouts being all intercepted and hanged, while a vastly superior force collecting before him barred the road in front. Still Burgoyne pressed on, actuated by a sense of duty compelling him to carry out his instructions to the letter, cutting his way painfully through the woods with enormous labour, till, when he came on Gates's army drawn up at Saratoga on the Hudson, retreat was impossible. A desperate effort to break through the enemy's lines failed after severe loss, and Burgoyne fell back for a brief pause on an entrenched position with his back to the river, cut off from movement in any direction. At this very time Clinton with a small force was actually close to him. One of Burgoyne's messengers had succeeded in reaching Clinton, who had been left in command at New York, and the latter had moved up the Hudson with the small force at his disposal, and was now a short distance below Saratoga. But Burgoyne did not know this, nor, if he had known it, could the issue have been different. Hemmed in on all sides by superior numbers, encumbered with wounded, and with supplies almost exhausted, only one course remained open, and, after a few hours spent in negotiations, the remnant of Burgoyne's small army marched out of their lines with the honours of war, and laid down their arms before their captors.

The question which here arises, and which the reader will find very fully and clearly discussed in this book, is whether this disaster could and might have been avoided, or whether, after a certain point, it was inevitable; in other words, was Burgoyne an able or an incompetent general? The latter has hitherto been the popular impression, but we think that no impartial reader of this very interesting work will continue to be of that opinion. Burgoyne was evidently one of the most professionally accomplished officers of his time; he was distinguished for personal gallantry, and he gained in a high degree the respect and attachment of his troops. No incompetent officer ever succeeded in doing this. That his reputation was so damaged by this great misadventure was due to the scandalous ill-treatment which both he and his unfortunate army received from the Government, especially from the Secretary of State, Lord George Germain, who, Mr. De Fonblanque observes, was probably the meanest and most incompetent person that has held high office in modern times. Burgoyne was thrown over to save the credit of the Government; it must be added that the King did not come much short of his obsequious Ministers in ill treatment of the unfortunate general. Such was the political degradation of those times that the Government which was losing the colonies could yet always command a majority; and Burgoyne, although exceptionally well placed for obtaining justice from his position as a member of Parliament, with considerable reputation as a debater, and on intimate terms with the leaders of the Whig party, could yet not succeed in obtaining the inquiry into his conduct which he demanded, and suffered for many years all the contumely awarded to a political scapegoat.

Reviewing the case now, it does certainly appear that the only other alternative open to Burgoyne was to have retreated upon Canada at an early period of the campaign; or, still better, perhaps, not to have embarked on it at all. But by taking this course he would have jeopardized the position of Howe, if the latter, as he believed, had really been advancing from the opposite direction. Burgoyne sacrificed himself to a chivalrous sense of duty. If any fault can be found with his dispositions, it would be that he did not perhaps sufficiently insist on being provided with proper transport and supplies before starting. But it is easy to be wise after the event; and, as Burgoyne himself remarks, in his "Narrative" of the campaign published in 1780, "where war is concerned few men in command would stand acquitted, if any after knowledge of facts and circumstances were brought in argument against decisions of the moment and apparent exigencies of the occasion." It may be added that the reputation of Lord Cornwallis did not appreciably suffer from his surrender under not very dissimilar conditions, but it is very doubtful if he displayed any higher military qualities than the unfortunate Burgoyne.

A word must be said in praise of the way in which the author has executed his task. While doing battle valiantly, and as we think with complete success, for General Burgoyne's reputation, M. De Fonblanque avoids the common fault of converting the subject of his memoir into a blameless hero. Indeed he manifests a keen sense of his literary and other failings. He has also avoided the common error of prolixity. Although it would have been easy to extend it over two volumes, Burgoyne's life has been condensed into one moderate-sized volume. The references to persons and events which appear in the correspondence are clearly explained in the notes, and the general result is a highly interesting and instructive work. The moral to be drawn from Burgoyne's misadventure is to the full as applicable to the present times as to the time when it happened.

THE VICAR OF MORWENSTOW.*

FEW tourists during the last thirty or five-and-thirty years can have made their way along the north coast of Cornwall without at least hearing of the Vicar of Morwenstow. If they were themselves of any note they were sure to make his personal acquaintance; and many will recall his strangely-dressed figure, standing at the open door of his vicarage, which commanded the long, descending road of approach, ready to greet his visitors "with a sunny smile and both hands extended in welcome." Never were a poet and his dwelling-place more completely in harmony. Mr. Hawker's very peculiar temperament, to some extent inherited, was nurtured and developed at Morwenstow in a manner which would have been almost impossible in any other English parish. Wild legends, strange fragments of folk-lore, and old-world customs and ceremonies long disused elsewhere, lingered, and still linger, in that remote corner; while the shelves and spires of the iron-bound coast afford scenery the impressive grandeur of which can hardly be exceeded. His love for such scenery and such legends was part of his heritage as a Cornishman; and many of what we regard as his best verses—"The Silent Tower of Bottreaux," "Mawgan of Melhuach," "A Croon on Hennacliff," and, above all, the famous "Song of the Western Men," with its "Trelawny" burden—are full of the true spirit of the country—a spirit which makes itself felt, but which is hardly less difficult to seize and to "bind in words" than the scent of the furze and the heather filling the long coombes that wind toward the sea. Morwenstow supplied the poet with ample material for his verse; and the extreme seclusion of the place, which is still, and always must be, far away from railways, helped to develop the independent thought, the peculiar and imaginative notions, and the impatience of control which distinguished Robert Hawker as a theologian and a parish priest. He hardly left his parish during the forty years for which he was its vicar. "The Lord shut him in," he would say, "as Noah was shut into the ark." The sea on one side, and on the other a broad tract of land without great towns and almost without villages, separated him from his fellows; and the natural result was that he became altogether unlike other men. The Vicar of Morwenstow at the beginning of the fourteenth century could hardly have differed more completely in all his thoughts and feelings from an ordinary English clergyman than the Vicar in the nineteenth. He would not have been himself elsewhere. But it says not a little for his native power of mind that isolation and seclusion, while they produced much eccentricity, were so far from extinguishing that power, as would certainly have been the case with one less naturally gifted, that they steadily developed and sustained it.

All who approached Mr. Hawker must have been struck, first by his peculiarities and then by his mental activity. The two memoirs which have appeared so soon after his death sufficiently attest the widespread interest felt in his life, character, and genius. Mr. Baring-Gould's book is very amusing, and shows us the Vicar with all his kindliness and all his eccentricity. Dr. Lee brings out the theologian somewhat more strongly. Both writers have inserted much irrelevant matter. We do not greatly admire Mr. Baring-Gould's description of Long Bill Martin's private Bible Christian meeting at Kilkhampton, which has nothing to do with Robert Hawker; but we very much prefer that to the unnecessarily long and mischievous discussions and appendices which Dr. Lee has introduced with reference to the reception of Mr. Hawker, on the last day of his life, into the Romish communion. Definite conclusions are one thing. If Dr. Lee really believes that Mr. Hawker (or his friends for him) was justified in taking the step which he did, let him say so plainly. But no man has a right to scatter his doubts broadcast about the world. On this subject, however, we do not propose to dwell. It may well call for discussion elsewhere, or separately; but it is far pleasanter to recall the Vicar of Morwenstow as we remember him during his long life, in the quaint vicarage which he built for himself under the shadow of St. Morwenna's tower.

Robert Stephen Hawker was the grandson of Dr. Hawker, Vicar of Charles Church, Plymouth, a well-known Calvinistic divine, whose "Morning and Evening Portions" are still in favour with those of his own school. Dr. Hawker affected strange turns and oddities in his discourses; and on one occasion, after pausing for some minutes and looking full at the Mayor and Corporation of Plymouth, seated in state below his pulpit, he exclaimed, "There are no scarlet robes in heaven"—a statement which he was perhaps hardly justified in making. Much of his grandfather's love of singularity passed to Robert Hawker, who lived at Plymouth for some time, until the pranks in which he delighted, and in particular the mystification of certain devout ladies attached to the congregation, became unbearable, and he was sent back to his father, at that time curate of Stratton, in Cornwall. He then passed to the Grammar School at Cheltenham, and in 1823 he was entered at Pembroke College, Oxford. But his father was unable to keep him there. There lived, says Mr. Baring-Gould:—

> at Whitstone, near Holsworthy, four Miss Pans, daughters of Colonel Pans. They had been left with an annuity of 200*l.* apiece, as well as lands and a handsome place. At the time when Mr. Jacob Hawker announced to his son that a return to Oxford was impossible, the four ladies were at Efford, near Bude, a farm and house leased from Sir Thomas Acland. Directly that Robert Hawker learnt his father's decision, without waiting to put on his hat, he ran from Stratton to Bude, arrived hot and blown at Efford, and proposed to Miss Charlotte Pans to become his wife. The lady was then aged forty-one, one year older than his mother; she was his godmother, and had taught him his letters. Miss Pans accepted him, and they were married in November, when he was twenty.

Thus he was able to return to Oxford, to finish his course there, and to win the Newdigate—the subject being "Pompeii." Miss Pans made him an excellent wife, and the marriage, in spite of all

* *The Vicar of Morwenstow: a Life of Robert Stephen Hawker, M.A.* By S. Baring-Gould, M.A. London: Henry S. King & Co. 1876.
Memorials of the late Rev. Robert Stephen Hawker, M.A., sometime Vicar of Morwenstow, in the Diocese of Exeter. Collected, arranged, and edited by the Rev. Frederick George Lee, D.C.L., Vicar of All Saints, Lambeth. London: Chatto & Windus. 1876.

that might have been prophesied, turned out a very happy one. He took his wife to Oxford riding behind him on a pillion, and migrated from Pembroke to Magdalen Hall. On leaving Oxford he and Mrs. Hawker established themselves at Morwenstow, on the coast, some seven miles from Stratton. There he read for Holy Orders, and even then forecast in rhyme his future connexion with the place:—

> Welcome wild rock and lonely shore,
> Where round my days dark seas shall roar,
> And thy gray fane, Morwenna, stand
> The beacon of the Eternal Land.

His first curacy was at North Tamerton, a quiet village on the upper course of the Tamar, and still in the Stratton district. In 1834 he became Vicar of Morwenstow, on the presentation of Dr. Phillpotts, who had not long become Bishop of Exeter.

Morwenstow had been without a vicar for a very long period. What passed in the outer world was little known there; and in the adjoining parish of Wellcombe, which for some time was attached to it, an ancient dame once showed to Mr. Hawker her Prayer-Book, "very nearly worn out, printed in the reign of George II., and very much thumbed at the page from which she assiduously prayed for the welfare of Prince Frederick." Morwenstow abounded in Wesleyans and Bryanites. The parish is agricultural, for the coast is without harbours, and there is little or no fishing. But there was wealth of another sort to be gained from the sea. The "wrecking" for which the Cornish coast was so long infamous found here one of its most productive quarters; and its results affected the character and disposition of almost every native. The long line of coast between Hartland and Padstow, with Tintagel standing out like a rocky buttress in the midst, is one of the most dangerous in this country, and if, under a fierce storm from the north or north-west, a vessel is beaten inland from the open sea, there is little or no chance for her. The saying runs:—

> From Padstow point to Lundy light
> Is a watery grave by day or night.

The storms that howl along this wild coast must be felt to be understood. The roar of the breakers is heard far inland, and great flakes of foam have been known to fall in the churchyard of Hols-worthy, from which the sea is at least ten miles distant. The old Shetland belief too, just as we find it in Scott's romance of the *Pirate*, prevailed, and no doubt still prevails, in North Cornwall. To save a shipwrecked man was to make for yourself a certain enemy, and no good could possibly come of it. As in Shetland, "providential wrecks" supplied farmers and labourers with many of the necessaries, and some of the luxuries, of life. "I do not see why it is," said a Cornish clerk one day, "why there be prayers in the Buke o' Common Prayer for rain and for fine weather, and thanksgivings for them and for peace, and there 's no prayer for wrecks, and thanksgiving for a really gude one when it is come." Wrecking—that is, the showing of false lights, or the direct misleading of a vessel—is perhaps no longer practised, but the spirit is far from being extinct. In 1845, when a ship came ashore in Melhuach Bay, between Morwenstow and Bude, a rocket was fired over it, and the hawser was successfully secured; but some wretches, "more greedy for prey than careful to save life," cut through the rope, and of all the crew the only man saved was the captain.

The wrecks which occur every winter along this coast are sufficiently terrible without the addition of human crime. Some of the most striking have been described by Mr. Hawker himself, in his *Footprints of Former Men in Far Cornwall*. His own exertions on such occasions were indefatigable; and we well remember seeing him, in alb and stole, conducting upward from the beach a sad procession which bore with it the bodies of two sailors, found the same morning on the rocks. For such a ceremony he had a special office, and the dead were placed in his church until they could be decently laid to rest in the sunny churchyard; in one instance, at least, with the figure-head of the shattered vessel raised near them as a memorial. The church itself contains much curious imagery and sculpture which, to Mr. Hawker's fancy, had been mainly suggested by the sea and things of the sea. He found seals' heads in some of the rude Norman grotesques; the cradle roof of the nave was the upturned keel of a vessel, and the cable moulding of the font was the ripple of the waters of Gennesaret. The church was his chamber of meditation. He frequented it at all hours, by day and by night, and was more than once favoured there by a vision of St. Morwenna herself. "I have seen her," he wrote. "She has told me that she lies here; and at her feet ere long I hope to lay my old bones." This, however, was a communication to a favoured friend. To ordinary persons he did not unfold himself so unreservedly; and when a neighbouring vicar once asked him "what were his views and opinions," Mr. Hawker drew him to the window and said:—"There is Hennacliff, there is the Atlantic stretching to Labrador, there Morwenstow crag, here the church and graves. These are my views; as to my opinions, I keep them to myself."

St. Morwenna (so Mr. Baring-Gould tells us, and there is no better authority) was one of the many daughters of Brychan, a Welsh kinglet who died in 450. Her legend brings her to the Cornish coast; and possibly she established her cell in the valley where her church now stands. But the "stow" termination, which meets us often in this part of Cornwall, cannot have been given until after some kind of English colonization. Mr. Hawker, however, who developed his historical views very much in his own fashion, preferred going back to the British church and British Christianity. Accepting an old theory which has now been abandoned by all scholars, he determined that the most ancient Christianization of Cornwall came from the East; and accordingly, High Churchman as he was from the beginning, the bent of his mind, where it was not quite independent, was rather towards the Eastern Churches than towards Rome. He wore a cope, and a very wonderful one, for celebration, after the fashion of the Armenian Church; and at one time he adopted a pink hat, without any brim, also designed after some Eastern type. Latterly his usual dress was a dark blue jersey, with a red cross worked into the side, a purplish garment, half cassock, half coat, and tall fisherman's boots. The dress set off a fine figure, and a very handsome, expressive countenance. It had a dash of the sea, which in his mind had always been connected with the church; and it harmonized admirably with the wild country, and with the wilder stories belonging to it, which he poured forth in profusion as he wandered with some favoured guest along the broken cliffs, or through the woods of Sir Bevil Grenville's Stowe, which adjoins his parish. The superstitions of the district were not superstitions to him. He defended, with an elaborate theory, his belief in the evil eye. He maintained that witches were not by any means extinct, and of one old woman he said, "I have seen the five black spots placed diagonally under her tongue, which are evidences of what she is. They are like those in the feet of swine, made by the entrance into them of the demons at Gadara." About mermaids he was not quite so sure, though one of his old people assured him that he had seen and heard one, and that "the sound of her music was exactly like Bill Martin's voice, that singed second counter in church." He was firmly convinced that he had himself once seen a pixy—a diminutive creature, the last, we may suppose, of his race, who was heard of from time to time in the parish, and who one day showed himself to the Vicar at the opening of a rocky cleft. In many of his sayings and verses which refer to the ministry of angels and to the power of evil spirits there is wisdom and poetry of a very high order. The latter is perhaps most conspicuous in his theory that a plot of ground called the "Chapel piece of Morwenna," on which some kind of oratory had formerly existed, was kept clean of thorn and furze by the watchful care of angelic "existences." The chancel of his church was strewn with marjoram and wild thyme "for the angels to smell"; but the decorations went little further. Burnt ends of matches were left on the altar, and a deal kitchen table was part of the furniture of his chancel. His cats, nine or ten in number, generally went with him to church, and amused themselves as they pleased while he read the service; but one of them, having on one occasion caught a mouse in the chancel, was excommunicated until she should learn, like Dandie Dinmont's bairns, "to behave herself mair distinctly." Birds too were especial favourites, and he often quoted a saying of Thomas Aquinas, "ubi aves ibi angeli." So greatly did he desire a colony of rooks for a grove of trees near the vicarage that he made it the subject of an especial prayer, going for that purpose to his chancel, and kneeling before the altar.

A man like this would, no doubt, as Mr. Baring-Gould suggests, have become a mere dreaming visionary but for his firm grasp of certain fundamental truths of Christianity. He attached himself to no school. He was never what was once known as a Tractarian, and still less what is now understood by a Ritualist. But he was outspoken and fearless in his zeal for what he held to be the true teaching of the Church; and few could listen unmoved to his sermons—powerful, earnest, pictorial, and yet simple in the extreme. The Dissent in his parish was of course a great trouble to him. It was not easy to manage Bryanite divines who, convicted as they might be of gross immorality, were nevertheless held to be "sweet Christians"; yet he lived, so far as he might, on friendly terms with them, and his care for all his poor, in temporal matters no less than in spiritual, was unceasing. Day and night he was at their service. He held indeed that he and his parish were under very especial guidance and protection; and he never hesitated to appeal before the altar against those who opposed him in his schemes for good. He held that they suffered accordingly. This is one of the points, and it is a painful one, in which he showed himself far more of a mediæval than a modern pastor. There is a passage in the same spirit, quoted by Dr. Lee (p. 146) from a letter written late in life, which can only be characterized as shocking.

Mr. Hawker's *Cornish Ballads* and his prose volume of *Footprints* are too well known to need recommending here. His poetry, if not of the highest order, has the true ring. He was a born poet, and wrote because he could not help it. His prose stories are admirable. We confess to a doubt whether, like Sir Walter Scott, he has not supplied some of his Cornish legends with a hat and cane "to fit them for going into company"; but, if so, they are none the less delightful, and they reflect in a wonderful manner the very colouring and atmosphere of that wild coast. We can only regret that Mr. Hawker's biographers have not given us more of his letters. They must exist in great numbers, and were often as striking in their contents as in their appearance—written as they were on a peculiar parchment-toned paper, ruled with red lines, and with a deep purple ink fit for an emperor of the East. The writing was large and very characteristic. The seal was sometimes the mystic Ichthys, sometimes the pentacle of Solomon.

Dr. Lee has undoubtedly shown that recent events, and in particular the passing of the Public Worship Regulation Act, had much troubled Mr. Hawker. He wrote that "his soul was low"; and it is probable that some doubt had crossed his mind as to his position in the Church of England. As to the last scene, there

are discrepancies. Mr. Baring-Gould's statement, which is borne out by that of Mr. Hawker's old servant, is that he was quite unconscious when the sacraments of the Roman Church were administered to him. Mrs. Hawker (not his first wife, who died in 1863, but the lady whom he married shortly afterwards), writing to Dr. Lee, declares that "his reason returned at the moment when, in the morning, I told him that a priest should see him in the evening. He broke forth into the jubilant Antiphon, the 'Gloria in Excelsis,' 'Te Deum,' and other canticles of praise." But this matter we hardly care to discuss. His name will be inseparably connected with the "dark grey tower" of Morwenstow, and with the cliffs that guard the coast. It is no great wonder that, since he was laid to rest in the cemetery at Plymouth, his well-known figure has been seen, according to some of his simple parishioners, kneeling sadly over a grave in his own churchyard, beside which he had always hoped to sleep himself.

DISCOVERIES IN NEW GUINEA.*

CAPTAIN MORESBY'S *Discoveries and Surveys in New Guinea* is a narrative of explorations and surveys conducted with great zeal, skill, and judgment, and fruitful of results valuable alike to the ethnologist, the navigator, the trader, and the intending colonist. The book is free from the faults that too often disfigure works of a similar kind. There is no depreciation of preceding labourers in the same field. There is, on the contrary, a readiness to acknowledge the full value of their services; and there is also an eagerness to do justice to the zealous co-operation of the officers and men under his command which very favourably impresses the reader. The style, too, is just what it should be, perfectly free from all pretentiousness. It is blemished by none of that offensive fine writing which makes so many records of travel insufferable, by no straining after effect, and no ambitious word-painting. The gallant author writes as a sailor should, in a manly, straightforward manner; and the charm of naturalness and lucidity is heightened by very considerable descriptive power. Highly, however, as we rate the literary merits of the book, and valuable as is the contribution it makes to our geographical knowledge of a region which is doubtless destined to have an important influence on the development of commerce in the Far East, its most pleasing feature is the abundant evidence it affords of the humanity, right feeling, tact, and judgment of its author. In his many months of close and constant intercourse with different tribes of suspicious and easily offended savages he was never provoked to use his great superiority of force to their detriment. We are happy to be able to believe that the officers in our navy are extremely few who would wilfully abuse their incomparably superior strength for the destruction of the helpless aborigines with whom their duty brings them into contact. But savages are capricious, treacherous, and quarrelsome, and it requires much tact, firmness, and forbearance, as well as a ready wit and a capacity for understanding the workings of the untutored intellect, to avoid disputes with them. These qualities Captain Moresby possesses in a high degree. As an instance of his power of divining the intention of savages, and of his humane anxiety to be spared the necessity of using force against them, as well as for its ethnological interest, we may cite an incident that occurred at one of the Killerton Islands. On the first approach of the *Basilisk* the natives were inclined to be hostile, but the prudence of the party sent on shore prevailed, and some of the natives put off for the ship, taking with them a dog. Springing up the side of the vessel, the leader, carrying the dog in his arms, dashed out its brains on the quarter-deck, before any one had a notion of what he was about to do. The ire of the officer of the watch was aroused at this defilement of Her Majesty's quarter-deck, and he bundled the savages into their canoes. Captain Moresby, however, rightly guessed that the sacrificial act was intended as a pledge of friendship, and, apprehensive for the result of what would be regarded as a rejection of peace, he hurried on shore. He found a noisy crowd collected round the dead dog. But his arrival was accepted as a full atonement for the affront, and the best terms were established with the natives. Here there was no intention to give offence to the natives. The officer of the watch, we can well believe, would have sincerely regretted had hostilities followed his hasty act. Nevertheless, had his misconception of the sacrifice of the dog been allowed to work its effect, hostilities would probably have ensued, and the unfortunate savages would have been slaughtered.

In the middle of January 1871 the *Basilisk* was ordered to proceed from Sydney to Cape York, the most northern point of the Australian continent. She had two routes to choose between, one inside, the other outside, the Great Barrier Reef—a barrier which runs north and south 1,200 miles, at a distance varying from seven to eighteen miles from the shore of Australia. The *Basilisk* took the inner course, as, in spite of its intricacy, being shorter as well as more sheltered. On the way she fell in with an evidence of the horrors of the kidnapping trade, a vessel drifting helplessly with a cargo of Solomon Islanders dead and dying. The vessel proved to be the *Peri*. She had been employed to take the islanders to Fiji, but, maddened by hunger, they rose against the crew, and threw them overboard. The poor wretches drifted helplessly without food or water, and, when found by the *Basilisk*, six of them had already perished. The remainder were saved by the attentions they received. The object of the *Basilisk's* cruise was, first, to land stores at Somerset, a settlement on the extreme northerly point of Cape York, which, from its geographical position, it was hoped would prove another Singapore, but which is fast decaying, and which Captain Moresby thinks ought to be at once abandoned for one of the islands in the Straits; secondly, to visit the pearl-shelling islands in the neighbourhood, to see that the Polynesians employed were not ill used; thirdly, to relieve some Polynesian missionaries sent to those islands; and, lastly, to determine the position of certain dangerous rocks in the Straits. Three months were employed in the performance of these duties, and the vessel then returned to Sydney. Almost immediately she was sent upon a second and longer cruise through the Polynesian Archipelago. And it was only upon her return from this second cruise that she was sent back to Cape York, permission being given to Captain Moresby to spend a certain time in the exploration and survey of the south-eastern coast of New Guinea. In these two cruises, the primary purpose of which was to put down kidnapping, and to see that the islanders legally employed were not ill treated, Captain Moresby collected a considerable body of evidence showing the horrors that had been perpetrated by the ruffians who had revived the slave-trade in the South Seas. But he did not himself witness any of its atrocities, and we are happy to say that his testimony goes to show that the Kidnapping Act of 1872 has proved effectual. So much has been written about the crimes of the kidnappers that we need not here enter upon the subject. But we cannot resist the temptation to extract the following description of one of these kidnappers:—

> Near the anchorage was the cotton plantation of one of the most notorious of those lawless men who have been charged with the commission of frightful crimes in procuring labour from the islands, and who, with reckless hardihood, have planted themselves in solitary independence on these islands, prepared to defend their possessions, purchased for a few old Tower muskets, by the terror they inspire. . . . He was a big, burly, middle-aged man, with a large red beard and moustache, a small nose surmounted by light, restless, blue eyes, and a low square forehead, which betokened the power to will and do without regard to consequences. He walked with difficulty, from more than one gunshot wound received from the natives. . . . Gangs of natives from other islands were at work, and appeared to be well fed, and happy enough in the prospect of a musket or two when their term of servitude should expire. There can be no doubt of this man's ultimate wealth, if he can secure his life; but that is the question. As we passed a small neat enclosure, I asked, "What is that?" and he said, "My partner's grave, sir. He was shot there where he is buried, nine months ago, by some of the hill natives who had laid in ambush for him, and shot him as he walked along the path where we now stand." I asked "why they shot him," and the reply was, "They owed him a grudge for something or other." I did not care to press the question, as it was evidently not an agreeable one, and the matter had been settled before my arrival. When we reached his small wooden house, built of planks obtained from the labour vessels, and guarded by an outside fence to stop a rush, he stepped in before and gave me a hearty welcome; and I sat and talked awhile with this strange solitary man. Loaded guns hung around the room, and the pistols in his belt showed that he was ready for any emergency.

The survey of the coast of New Guinea, performed after the return from Polynesia, was accomplished in two distinct cruises. In the first the specific object was, as before, to put down illegal practices in connexion with the pearl-shelling industry. But Captain Moresby obtained leave to visit the coast of New Guinea, and himself undertook the exploration. His labours were completed on his return voyage to England, when a surveyor was sent out to join him, and the Queensland Government lent him a steam pinnace. The great island of New Guinea, though lying so close to the north of Australia, and on the direct line from Queensland to China, is very little known. Previously to Captain Moresby's survey, indeed, even the navigation of Torres Straits was not settled. The Straits, which divide Australia from New Guinea, are about two hundred miles in length, and in the narrowest part almost eighty broad. Over thirty years ago Captain Blackwood, in the *Fly*, had surveyed the southern side of the Straits. But the northern had not been visited; and since then nothing had been done to complete the sounding of these waters. Yet they were becoming increasingly used by merchant vessels, and it was even in contemplation to run a line of steamers through them from Brisbane to Singapore. Captain Moresby's first work was to survey this passage, and here is the result at which he arrived:—

> The space of thirty-six miles which lies between Jarvis Island and the low mangrove-covered coast of New Guinea is a mass of coral reefs, and contains no passage for ships, and scarcely any for boats. Thus all the passages by which ships can enter Torres Straits lie between Jarvis Island and Cape York, and are now British waters. These passages are very narrow, under two miles in width; whilst the one most generally taken—the Prince of Wales's Channel, between Hammond Island and the north-west reefs—is nearly a mile and a half wide. We hold this great highway of the ocean, therefore, on the best strategic terms. The average depth of water in these channels is only seven or eight fathoms, and a few torpedoes judiciously placed would effectually block up this route to an enemy.

Sailing to the eastward from Torres Straits along the southern coast of New Guinea, landing here and there, opening friendly communication with the natives, and exploring, as well as time would permit, the harbours, bays, and mouths of rivers met with, Captain Moresby arrived at Testa Island, the utmost limit of the then known coast. Close to this island begins the Louisiade Reef, the dangers of which are such that no navigator had previously encountered them. It was consequently believed that the south-east coast of New Guinea ran out almost to the reefs in a long, narrow promontory; and thence in a north-westerly direction the coast was equally unexplored for nearly four hundred miles. The

* *Discoveries and Surveys in New Guinea.* By Captain John Moresby, R.N. London: John Murray. 1876.

task which Captain Moresby set himself, then, was to determine the configuration of the south-eastern corner of New Guinea, to survey the unknown north-east coast, and to discover whether there was a passage between the Louisiade Reef and the south-east point. To this latter problem he attached much importance. If such a passage could be found—and he had a strong conviction that it could—it would very materially shorten the voyage from Melbourne, Sydney, or Brisbane to the Chinese ports. We cannot here do justice to the skill, patience, zeal, and energy with which Captain Moresby conducted his explorations, or to the willing and efficient manner in which he was seconded by officers and men—the best proof that he was well fitted for the command. But in the end he triumphed over all obstacles, and achieved the task he had set himself. He found that what had been mistaken for a long promontory was a series of three islands, named by him Hayter, Basilisk, and Moresby Islands, and between Hayter Island and the real south-west point he discovered a navigable passage through which vessels bound for China can sail. This was the limit of Captain Moresby's first exploratory voyage. On his way home he was joined by a skilled surveyor, and took up the work where it had been left off, and he also traced the previously unexplored north-east coast. Thus he has the honour of finally determining the configuration of this magnificent island. The addition he has made to our geographical knowledge is likely to prove of essential service to commerce. In addition, he collected a mass of varied and most interesting information relating to the climate, productions, and scenery of New Guinea, as well as to the character, disposition, and customs of its inhabitants, which will not be less highly prized by adventurers, settlers, and scientific inquirers than are his marine surveys by navigators.

LETTERS AND PAPERS OF THE REIGN OF HENRY VIII.*

Second Notice.)

THE prorogation of the Legatine Court by Campeggio on the 23rd of July, 1529, forms the turning point in the relations of Wolsey and his master. The King was foiled in his expectation that judgment would on that day be passed in his favour, and with the removal of the cause to Rome it was impossible to say how long judgment would be deferred. It was the first great disappointment he had ever experienced. And he had been thwarted in a quarter from which he had least expected opposition. He believed, or at least professed to believe, that the work against Luther which passed as his own composition had done essential service to the Church and the Pope in defending the faith; and, as Mr. Brewer observes, it was probably this conviction more than any other which had induced him to adopt Wolsey's suggestion, and apply to the Pope for a divorce rather than have recourse to more pliable instruments at home:—

> Now obstructions and vexatious opposition to his wishes had sprung up where he least expected. Timid and over-awed as she was, Catharine had contrived to lodge a protest against his proceedings at the court of Rome, and by this one act the fabric he had been raising with so much ingenuity, expense, and labour, was levelled to the ground. Fisher, the most devout and self-denying of all his prelates, had freely denounced the King's arts and arguments in his own cause as sophistical and unjustifiable. The boldness of his attitude, so unlike that of the rest of his brethren, had produced a powerful effect; and his firm and daring rebuke lost none of its effect when compared with the timid compliance of Warham and the rest, or the manifest efforts of the Cardinal to intimidate the weaker party.—P. cccxcv.

At this point we may date the beginning of Wolsey's fall. On July 28 Gardiner, who was rising high in favour with the King and Anne Boleyn, was appointed Secretary, and we have no more confidential communications between the King and the Cardinal. And from this point to near the end of his preface Mr. Brewer is occupied in detailing the sad story of his favourite statesman's fall, and in bespeaking his readers' pity for his sorrows and misfortunes, and admiration for his diplomatic talent and devotion to his master's interests. We are sorry that we are compelled to pronounce so unfavourable a judgment of one who was perhaps the greatest statesman that England had seen, and who, but for the transactions connected with the divorce, might have been thought in moral character, as well as in intellectual endowments, to rank above most of the ecclesiastics and politicians of the day. But, as regards moral character, Sir Thomas More and Bishop Fisher of Rochester stand out as the two men who are specially entitled to our respect and admiration. Both of them died martyrs to the cause which they believed to be that of truth and justice, and the lustre of their virtues is enhanced by the fact that in this world they did not meet with their reward. In the fall of Wolsey, on the other hand, whatever may be the feelings of just indignation with which we regard Anne Boleyn and her faction, his bitter and unscrupulous opponents, however we may grudge them their triumph over an enemy who in every point of character was so greatly their superior, and deep as may be our sympathy with their unhappy victim, there remains on the mind the feeling that the Cardinal's sufferings were due to his having thrown himself into a cause which his conscience could not have approved, and that his fall was the just retribution for his sin.

The Cardinal of York is Mr. Brewer's hero, and there is no more beautiful or more forcible piece of writing in the whole of this elaborate Introduction than that in which, after detailing the circumstances of the last few months of Wolsey's life, he proceeds to sum up the character and career of this remarkable man. After favourably contrasting the reign of Henry VIII. with that of his father, in spite of the ability of Henry VII.'s Ministers and his own superiority to his son and successor in all the excellences looked for in a sovereign, and glancing at the absence of all that could be deemed splendid and great in the remaining years of the reign when Wolsey's place was vacant, he dwells, as elsewhere in his narrative he has dwelt, upon the undeniable fact that it was owing wholly to Wolsey's powers of administration that England rose from the rank of a third-rate State to a level with the most influential Governments of Europe. We have only to glance at the transactions for the management of the marriage of Prince Arthur and the Princess of Aragon at the beginning of the preceding reign, as detailed in the records at Simancas, to see of how small account this country was held in the councils of Europe at the conclusion of the fifteenth century; whilst Henry VIII. in the first quarter of the sixteenth century enjoyed the satisfaction of finding himself feared and courted by both Francis and the Emperor.

Thus far we entirely agree with the writer, and can only regret that we have not space for giving our readers his opinion in his own words. And again, in his estimate of the hard measure dealt to Wolsey's character by his contemporaries, and to his memory by subsequent historians who have followed in their wake without stopping to examine how far their obloquy was justified by historical fact, Mr. Brewer has exercised a discriminating power which throws into the shade the attempts of all his predecessors in the field. Speaking of later historians, he says:—

> They have accepted the estimate of his character and conduct from those who were specially concerned to misrepresent and blacken both. To the professor of the old faith Wolsey was nothing less than the author and promoter of the divorce, the unscrupulous opponent of the Pope, the enemy of her whose cause was bound up with the survival of the old religion. To the Reformer he was the type of the wealth, the luxury, and the worldliness of the ancient Church, which the Reformer hated and despised. He was the proud prelate who, by his insolence and ambition, had overshadowed the salutary influence of the royal authority, and represented in his own person and actions the intolerable aggressions of the spiritual on the temporal authority. . . . From either of these—for the nation was sharply divided into two portions, who could neither understand nor esteem each other's position, and were only unanimous in condemning the one man of the age who rightly belonged to neither—it is impossible to obtain a just, fair, or discriminating estimate of Wolsey's character or measures. A reformer so far as to show no especial interest in maintaining the strict Ultramontanism of doctrine or discipline of his own time—an earnest promoter of education and the new learning, if not unfriendly to the religious orders, yet anxious to convert their endowments to better uses—he was still a faithful adherent to the ancient faith and practice in his love of splendid ceremonial, in his political dislike of Lutheranism, in his conviction of the need of a great central spiritual authority to preserve the peace and unity of Christendom.—P. dcxxv.

As regards the particular subject of the divorce, Mr. Brewer proceeds to vindicate the conduct of the Cardinal, or at least to excuse it, principally on the ground of the necessity in which he found himself. He was in the first instance averse to it, and when he discovered the King's intention to marry Anne Boleyn, he went on his knees to beg him to desist from his ill-starred project. But, finding the King inexorable, and foreseeing that the marriage was inevitable, he threw himself unreservedly into the King's cause and did his utmost to gain the Papal sanction for it. The King was determined to make Anne Boleyn his queen, with the Pope's permission if possible, but, if necessary, without it. It is here that the editor seems to us to act the part of a special pleader. The difficulty of resisting so imperious a master, the extremity of his own danger if he should in any way be discovered thwarting the King's proceedings, the political consideration of the greater evils that would result to Church and State if he adopted a different line, and the earnest desire to aggrandize his country and to exalt his King at the sacrifice of equity and justice, may be allowed in extenuation of Wolsey's conduct in the matter. Still, even if it could be conceded that his conscience was quite clear in changing sides in the matter and furthering the divorce, which, till it was inevitable, he so much dreaded, how is the oppressive conduct towards Catharine, and the wholesale system of lying and deceit with which all the proceedings connected with the divorce were conducted, to be justified? After allowing all possible margin for diplomatic arts, there are principles of morality which underlie all political considerations, and it is simply impossible to regard the measures which Wolsey adopted and sanctioned as consistent with the character which the world has a right to expect in a Christian bishop. We do not think Mr. Brewer means to imply that they were; and in defending his hero against unjust obloquy, it may be said that he was not bound to dwell upon incidents which in the preceding part of his Introduction he has fairly and fearlessly detailed. Yet the following passage seems to suggest a view somewhat different from that which we have felt compelled to adopt:—

> If Wolsey, in his grief, disgrace, and leisure moments, regarded his service to the King as incompatible with his service to God, this was not the conviction of his stronger hours, nor yet of many others beside himself. Possibly all that he meant by those memorable words was not the incompatibility of the two in themselves, but that the hours necessarily occupied by secular employments had detracted too much from those opportunities of prayer, devotion, and contemplation in which the service of God consisted, and for which the monastic and religious institutions and practices of his times furnished so many opportunities and held out numerous examples.—P. dcxxxiii.

* *Letters and Papers, Foreign and Domestic, of the Reign of Henry VIII., preserved in the Public Record Office, the British Museum, and elsewhere in England.* Arranged and Catalogued by J. S. Brewer, M.A., under the Direction of the Master of the Rolls, and with the Sanction of Her Majesty's Secretaries of State. Vol. IV. Introduction and Appendix. London: Longmans & Co. 1875.

Unfortunately, no amount of rhetoric will avail to blot out the stain that must ever remain on the memory of the greatest of English Cardinals; no special pleading will succeed in acquitting Wolsey of the charge of having used the vilest arts of trickery and deceit in persecuting and oppressing the defenceless Queen, and, when he found there was no hope of Anne Boleyn's following in the track of her elder sister and being discarded after a few months, or perhaps years, of incestuous intercourse with the King, bent all the powers of his mind to place her on her hated rival's throne.

Mr. Brewer in all his remarks has been dwelling on the political aspect of the divorce, but it must not be forgotten that there is also a moral aspect of the case. He has passed very lightly over two matters which, from the moral point of view, are of prime importance. Wolsey was fully aware both of the virginity of Catharine when she was married to her second husband and of the King's connexion with Mary Boleyn, which placed the same bar to the marriage with Anne as that which had rendered the Papal dispensation necessary for Henry's marriage with Catharine; and if the Cardinal could once reconcile his conscience to undertake the conduct of the divorce under such circumstances as these, we need not wonder at the unscrupulous methods adopted to bring about the wished-for result. If the story had been a fiction instead of a reality, poetical justice would have demanded some such retribution as that which fell on Wolsey's head. Let us hope that his dying words meant, not what Mr. Brewer suggests, but that he really was repentant of the part he had played in the King's "great matter." And, as we call to mind the saying of the most philosophical of Greek tragedians —

δράσαντι παθεῖν, τριγέρων μῦθος τάδε φωνεῖ—

and recognize its application to the present case, we may adopt the more hopeful view of the relation of sin and suffering opened out to us by Revelation, and take leave of the great Cardinal of York in the words of Sanders:—

Ac Volsæus quidem dignam suæ præteritæ assentationis et superbiæ mercedem in hoc mundo accepit, idque ut speramus, ne in æternum puniretur.

TAMIL PROVERBS.*

MANUFACTURED proverbial philosophy is apt to be tedious. But that which is of spontaneous birth and natural growth, gathered from the lips of a people to whom intellectual forcing-houses are unknown, inspires a deserved interest and may boast of a real value. Much depends, indeed, upon the knowledge and judgment of him who gathers it, who ought to be one thoroughly well acquainted with the people to whom it belongs. Such a gatherer, so far as everything Tamil is concerned, is Mr. Percival, of whose rich collection of Tamil proverbs the first English edition has lately been issued. From it may be obtained, if not a complete view, at least some stray glimpses, of the Tamil side of that "native" mind which so often perplexes the rulers of India. Tamil proverbs are not often picturesque or poetic. Now and then a sentiment is expressed which comes home to our own hearts, as in "A separate hole is to be preferred, though it be but a rat-hole"; and sometimes a touch of nature links the Tamil and the English mind, as in "Those who have not heard the lisping of their own children say that the flute is sweet." But they are by no means devoid of shrewd humour. Setting expression aside, we may detect something like a Poyser-like ring in "A dog imagines everything taken up by the hand is intended for him"; "If a low-bred man obtain wealth, he will carry an umbrella at midnight"; "The ass boasted there was no voice equal to his, and no gait equal to that of his eldest sister"; "Stones are thrown at a fruit-bearing tree"; "No matter where hit, a struck dog lifts up its leg"; "What has a naked mendicant to do with the friendship of a washerwoman?" Somewhat acid are "The green leaves of the palm laughed because the dry ones fell off," and "He who has killed a thousand men is half a doctor." "The mortar went to the tom-tom with its complaints" requires the explanatory remark that the mortar is beaten at one end only, the tom-tom at both ends; but no explanation is needed by "It is said that when the hare went with the tortoise to lay eggs, it strained its eyes out and died." Some of the proverbs might well become current among ourselves. Thus, to Scotch publicans may be recommended, "Having forced one to take toddy, do you seize him by the hair and demand payment?" Captain Cuttle would have delighted in "Though only one item, note it"; and some of Mr. Plimsoll's opponents will appreciate "The shipowner's wife is in good condition as long as the ship is safe, but if that is lost she is a beggar." It may be doubtful whether any English medical practitioner at home would now adopt as his motto "Know the efficacy of mercury by the glow of health on the cheeks"; but in India calomel is looked upon with a more friendly eye than in England. "The drawing back of the he-goat shows that he is about to butt" would have made a good motto for the Circular containing Prince Gortchakoff's famous assertion that "La Russie ne boude pas, elle se recueille."

Some of the specimens in Mr. Percival's collection seem to be drawn from classical sources, as in the case of "God demonts him who is to be destroyed." Others appear to be of Biblical origin, probably set in circulation by missionaries. To this class belong "Is it proper to tie the mouth of the ox that treads out the corn?" and "Can a camel pass through the eye of a needle?" Somewhat suspicious, also, at least in form, is "God is the helper of the helpless child," which corresponds with the Russian "God stands behind the orphan." Perhaps, also, some of the sayings about heathenism which betray a sceptical feeling may have owed their inspiration to a foreign unbeliever. Such, for instance, as "A terrible ascetic, an atrocious cheat," or "The neck of the hypocrite is covered with rosaries." These statements appear to be too straightforward to be of home growth. In the same way, "Will sin be expiated by bathing in the Ganges?" is a strange question to arise in a land where such a story can exist as that of the robber who was sent to the infernal regions for having committed every crime conceivable, and who remained there till one day a crow, which intended to carry a piece of his skull across the Ganges, let it drop into the holy waters; whereupon the robber's sins were expiated in a moment, and he was released from his place of torment. The sarcastic tone seems genuine, however, of such sayings as "Will a dog understand the Vedas, although born in a Brahman village?" or, "Will the temple cat reverence the deity?" or, "Will an ungodly cat ascend to heaven?" And all of these "Protestant" doubts may be the independent result of that turn of the Dravidian mind on which the late Mr. Gover laid such stress in his striking work on "The Folk-songs of Southern India."

But we are on safer ground when we are dealing with references to prevalent popular errors and unshaken heathenish beliefs. Of these many occur. "Even water will forgive a fault three times" refers to the opinion, maintained in other lands as well as in India, that he who falls into deep water rises three times before he is drowned. "When destiny is written on the skull, can you avert it by artifice?" is one of the many questions suggested to the Indian mind by the likeness to writing discovered by it in the sutures of the skull, a writing which is supposed to have been traced by the finger of Fate. In "The goddess of fortune dwells in the feet of the industrious, the goddess of misfortune in those of the sluggard," a moral lesson of the copybook class is conveyed, similar to that inculcated by Nitinerivillakkam's admired stanza, which tells that "When the goddess of prosperity finds that her favours are not appreciated, she introduces her elder sister, the goddess of adversity, and then takes her departure." But those deities are believed to act capriciously in many cases, and without any eye to the reformation of sluggards or other offenders, some people being born to misfortune, as when "The destitute brings forth a female child, and that on a Friday, and under the star Púrádam." Friday, however, is not altogether inauspicious, being a day which would have suited Falstaff admirably; one on which it is fortunate to receive money, but unfortunate to pay it; though some lenders indignantly ask, "Is Friday a sufficient excuse for not returning the coin given you to look at?" All through a man's life is he liable to unlucky influences, but death frees him at last; for "What matters it whether the head of a corpse be towards the east or west?" While alive, even some Christian natives are careful to lie down with their heads towards the south. A westerly direction might prove fatal, and the north is the region of Yama, the god of death. In "A Saturday corpse goes not alone" allusion is made to a belief generally held that Hindus often kill and bury a fowl when a death happens on a Saturday. By that means death may be averted from a human victim. Mr. Percival has even heard of a chicken being put into the coffin of "a deceased Native Christian." Many evils of this kind are of course ascribed to demoniacal beings, but sometimes unjustly; for "To a gloomy eye all obscure things are demons," and "To the timid the sky is full of demons." Even such beings, it seems, are not without their feelings, if it be true that "Even a demon will not enter a house that has pooh-poohed him." This remark, however, probably refers, not to a malevolent spirit, but to the generally benevolent house-demon, our Brownie or Hobgoblin, the Russian Domovoy, whose cultus is closely connected with the old worship of ancestors. Another domestic guardian is the lizard, whose chirping, akin to that of our cricket, must never be disregarded, being often fraught with a message of great consequence to the family or individual concerned. So high does it stand in the opinion of the people, that when a person of distinction does anything injurious to his reputation, men say it is "As if a lizard, the oracle of the whole village, should fall into a pot of gruel." Jugglery, Mr. Percival remarks, is generally attributed by the common people to the power of a dwarf demon, to whom the juggler entrusts his "properties" except when he is in actual need of them. But he is obliged to bear in mind that "The dwarf demon returns only that which has been given to it." From demoniacal associations has probably sprung up the prejudice that "A rogue may be trusted, but not a dwarf"; a proverb which, if attended to at the time, might have done good service to Bali, the Daitya ruler of the three worlds, when Vishnu appeared before him under the form of a vámana, or dwarf, and suddenly displayed such striding powers as would have reduced the swiftest seven-leagued boots to despair.

Tamil proverbs relating to women are for the most part uncomplimentary. "A woman of fifty must bend the knee before a boy of five" shows how superior is the man's position to that of the woman. Her lot must indeed be a hard one if it be true that "Even a demon will pity a woman," or, to put the case still more forcibly, "If the word woman be uttered, even a demon will be

---

* *Tamil Proverbs, with their English Translation* By the Rev. P. Percival. Third Edition, being the first English issue Henry S. King & Co. 1875.

moved with compassion." We learn from Mr. Percival that "Many modern Hindus of the day (1873), though themselves earnest about University honours, evince but very little interest about the intellectual or moral culture of their daughters;" and a proverb asserts that "No matter how skilled a woman may be in numbers and letters, her judgment will be second rate." Another goes even further in its distaste for female education, declaring openly that "Though one wear cloth upon cloth, and is able to dance like a celestial, she is not to be desired if she can press a style on a palm-leaf"—*i.e.* if she can write. This proverb, it appears, "is in harmony with the sentiments of the majority of Hindus who have received high education in English." The proverbs often gird at wives. It is remembered that "Acquiescence with the wishes of his wife proved fatal to Rána," and that the consequence of marriage often is that a man is "Fettered with a wife and muzzled with a child." It frequently happens, we are told, that "Having married a wife, the boy has become a fool; having given birth to a child, the damsel has become mean in appearance." A good deal depends, it is true, on the wife's nature, which in its turn depends upon that of her mother. "As is the mother, such is the child; as is the yarn, such is the cloth." But to the daughter's husband the mother is often distasteful, so that he is apt to cry:—"The mother-in-law is frightfully ugly already, and the flour on her face makes her more so." Still, "However cruel a mother-in-law may be, she is nevertheless desirable"; a sentiment akin to that expressed in "Though she be a more monkey, one should take a wife in one's own tribe." But it would be incorrect to attribute to any distaste for a wife's relations the statement that "The murder of a father may be expiated by residing for six months in the house of one's mother-in-law; for Mr. Percival ascribes it to the fact that "Hindus account it disgraceful in a son-in-law to live in the house of a mother-in-law at her expense," so that it is probably "writ ironical." But the following may be taken literally:—"Although one may live six months with an elder brother, one cannot abide with his wife even half an hour."

One of the proverbs in which an elder brother is mentioned belongs to a class of sayings to which Mr. Percival has been obliged to supply explanatory notes of some length. It states that "The horn of my elder brother is as soft (or harmless) as a shivered stick." The explanation is that in a certain district the foxes imagined that the hare's long ears were formidable horns; so at first they kept at a respectful distance. At length, however, in order to ascertain the truth, they invited a number of hares to a feast, at which each guest was placed between two of the hosts. After a time one of the foxes, feigning a profound admiration for his neighbour's horns, contrived to test their texture by touch, and embodied the result of his experience in the proverb just quoted. Whereupon each fox seized and devoured his defenceless neighbour. A proverb full of meaning, however, asserts that "Even a beast without horns will attack the poor." The meaning of "He is as if a libation had been poured out to the god of fire" would remain obscure were not the reader told that, "When water is poured on burning charcoal, the cinders appear exceedingly black," and therefore the saying is employed as a description of a *man* who is "naturally very black." Perhaps the Oriental original of Llewellyn's dog Gelert is sufficiently well known to render intelligible the allusion to "The story of killing a mungoose that had done well." But "As the hanging-nest bird gave advice to the monkey" requires its accompanying reference to the story ("graphically told in, I think, *Panchatantra*," says Mr. Percival) of the bird which expostulated with a storm-beaten monkey for not having provided itself with a similar shelter to its own, whereupon the monkey, enraged rather than edified, pulled the bird's nest to pieces. The story is the eighteenth of the first book of *Panchatantra*, but the bird, as the tale is told there, is a sparrow which has built its nest on a mimosa's pendent tendril. In some Tamil variant, no doubt, the "hang-nest" has taken its place. To English readers some of the proverbs on which no comment has been made by the editor will require explanation. "As the monkey perished by drawing out a wedge," for instance, refers to the fate, somewhat similar to that of Milo, brought upon a monkey which removed a wedge from a half-split log without keeping clear of the wooden jaws, which snapped together as soon as the gagging wedge was extracted. In like manner, every reader may not remember that "The blind quarrelled about an elephant they had examined," because each of the two sightless examiners thought he had got hold of the tail, for which one of them had not unnaturally mistaken the trunk. The great Indian epics, also, may still be so little familiar to the generality that "The birth of Sita was the ruin of Lanka" may require to be rendered intelligible by such a paraphrase as "The birth of Helen was the ruin of Troy." But the great majority of the sayings in Dr. Percival's book speak for themselves articulately enough, bearing intelligible and trustworthy evidence, among other things, to the thorough goodness of his work.

DEAD MEN'S SHOES.*

TIME and hard usage will wear out any substance; and the mind has no immunity from the law which governs all forms of matter. Continual grinding takes off the fine edge of the fancy till neither sharpness nor delicacy is left; while a habit of mind, a trick of thought or expression, so grows by use that what was once a slight characteristic becomes an exaggerated mannerism, and the faculty of self-correction is lost. This remark is specially applicable to Miss Braddon's latest novel—a book in which we look in vain for even the coarse kind of power which redeemed to a certain extent the faults of her earlier works. *Dead Men's Shoes* appears to us the worst book she has produced. It has all her faults and none of her good qualities, and gives one the impression of utter weariness and mental exhaustion. It has not one solitary ray of originality, either in the characters or the plot; and, save that it is written with the technical ease gained by long practice, has no sign to mark it as the work of one who has filled so large a space in modern light literature as the author of *Lady Audley's Secret*.

We are not among those bland believers in universal goodness and virtue who see only sweetness and light wherever they turn; we see whom a miser is a man of prudence, and a spendthrift fool taken as as a good-hearted fellow and no one's enemy but his own; with whom a hoyden is a child of nature, and an *intrigante* claims credit for her brains and perspicacity; but all the same we trust that the men and women of our daily life are not such fools or knaves as are the personages of this uncomfortable story. There are but three good people in the whole gallery, and two of these are as remarkable for their folly as for their virtue; while all the rest are mean or bad, and are described with that curious air, characteristic of a certain school of cynical delineators, which seems to accept meanness and badness as matters of course, and no worse than other people's goodness. The three sisters of whom the heroine is one are perhaps the least charming young ladies with whom we are acquainted. Sibyl Faunthorpe, the heroine in question, is a weak transcript of Lady Audley. Sensual and selfish, she is unable to bear the poverty to which she finds herself reduced by her secret marriage with a handsome young failure, just as she was unable to bear the petty disagreeables of a governess's life; though in the one case she loves and is loved, and in the other was treated with kindness and consideration. She is of the kind to whom fine dresses and personal luxuries rank before anything else in life, and who do not trouble themselves about the pedantry of virtue—about faith or truth or honour or fidelity—so long as they can have money, and what it brings. As for truth indeed, the author seldom overweights her characters with an inconvenient amount of this quality; and she scarcely seems to expect her readers to regard falsehood and imposture as vices which degrade and tarnish those who indulge in them. Sibyl Faunthorpe, or Secretan, is one of those to whom falsehood comes as easy as breathing. She deceives every one, and lies with frank impartiality to every one in turn. When a governess at a certain Mrs. Hazleton's, she forms a secret intimacy with Alexis Secretan, a handsome, good-tempered, impecunious young ex-officer, and ends by running away and making a stolen marriage with him, confessed to no one. The uncle who has been to her and her orphan sisters like a father, and those sisters themselves, still believe her to be at Mrs. Hazleton's, where the housemaid manages her correspondence and forwards her letters. After this chapter of deception has been fully worked out, she turns next to deceive her husband. They have fallen into deep distress, and he, with every apparent quality which should ensure success and command esteem, can find nothing better to do than sponge on his parents and borrow of every one who will lend. This kind of thing, with a Finnan haddock for dinner, tea, and supper, all in one, does not suit Sibyl. She urges her husband to borrow yet another ten pounds, which she whispers to him she needs for her approaching confinement, and, when he has taken this sum from a poor map-maker who has laid it aside for his rent, Sibyl, true to her nature, runs away for the second time; has her boy-baby born in a workhouse; leaves him in the care of a farmer's daughter; and presents herself at her old home at Redcastle as Miss Sibyl Faunthorpe, one of the claimants for the love and money of their uncle, Stephen Trenchard, a reputed millionaire lately returned from India. As she is lovely in person, and has pleasant, soft, caressing ways, she charms the old man, who takes her to live with him, and carries on her acted falsehood here for three years. Her husband, naturally distracted at her sudden disappearance, and unable to find her—thrown off the scent as he is by the deliberate lying of the youngest Miss Faunthorpe, aged twelve—asks news of his child; for he can communicate with his wife, though she keeps her whereabouts a secret. Her answer is that it is dead—which is as untrue as the rest. But all this is justified to her own mind by the absolute necessity she is under of escaping from the poverty to which she had condemned herself by her marriage, it being impossible that she should bear the consequences of her own action and be faithful to love and duty. For the third time, too, she runs away, which we think a monotonous kind of thing, and by no means worthy of Miss Braddon's reputation for fertility of expedients; while, as if to repeat the law of triplets on which *Dead Men's Shoes* has been constructed, we have old Stephen Secretan living his life of deception, and Joel Pilgrim living his.

The heroine's two sisters, Marion and Jenny, are even less pleasant and no more commendable than herself. The former indeed is simply odious, being as false as Sibyl, as selfish, as worldly, and as calculating, without her grace, her beauty, or her surface amiability. The two sisters quarrel and snarl as we hope ordinary English sisters do not; while Jenny is *l'enfant terrible* with fancy additions on a large scale. She is "an overgrown girl of twelve, with a very short frock and stalwart legs, encased in brown worsted stockings," who puts her "arms a-kimbo, like Madame Angot's

* *Dead Men's Shoes.* A Novel. By the Author of "Lady Audley's Secret," &c. 3 vols. London: John Maxwell & Co. 1876.

daughter," and talks in a language composed of bad grammar, slang, and impudence in about equal proportions. "Why does she come and loaf about here, then, with her stuckupishness?" She says of her sister Marion, with whom she is quarrelling, "A fat lot (*sic*) she teaches me!" "She nags at me for an hour and a half by the kitchen clock every morning, and calls that education!" is another little compliment of the same kind flung at the head of the same person; and when asked in what edition of Lindley Murray she finds the verb "to nag," her answer is, to say the least of it, scarcely natural. An uneducated semi-savage of twelve would not have made this answer:—

"It's as good a verb as any other. I nag, thou naggest, he or she nags, generally she; or take it in Latin if you like, Nago, nagas, nagat, nagamus, nagatis, nagant; first conjugation; perfect, nagavi."

Or would she have spoken like this?—

"Oh, very well, if you like to tell crammers, of course I can't help it. My experience of elder sisters is that they may break all the commandments with impunity, and drive a coach and six through the Catechism. I think they wash their hands of Christianity when they're confirmed."

And is "By all that's wonderful" a usual expression of astonishment with a girl of twelve? "If Marion or Hester were in the way now it would be all UP" is another of her polite phrases, just as she is entering on that interview with Alexis Secretan wherein she denies that her sister Sibyl is at home, and improvises the fact of her "governessing in Jersey when we heard from her last—but that's ten months ago, and she's too much of a rolling stone to have stayed so long as that in one place"; adding, as a "graphic touch that she thinks will give reality to her narrative," that "the lady had red hair and used to fly into passions," and that her name was "Mrs. Yokohama Gray." All this is but wretched stuff, wanting in lifelikeness and genuine humour; poor fustian in the place of fun. But the fun all through this book is but poor stuff from first to last. To call a schoolmistress Miss Worrie, and a milliner Miss Eylett, a boot-maker Mr. Korksole, and a shipbuilder Mr. Marlin Spyke; to dub a firm of lawyers Messrs. Gull and Sharpe, and a clergyman Mr. Chasubel; to have one surgeon of the name of Krysis and another of that of Skalpel, while Kabriole is a cabinet-maker and undertaker, and even the banker must be Groshen—to do this is to show but little ingenuity, and no real humour; but when she has done this, Miss Braddon has exhausted her store of wit.

Part of the motive for the deception in which Sibyl indulges, in the hope of getting Uncle Stephen Trenchard's money when he dies, lies in the deadly enmity felt by him towards the whole race and name of Secretan. In early days it seems that this same Stephen Trenchard had supplanted Philip Secretan, the father of Alexis, in the affection of his father, so that the fortune which should have gone to Philip was bequeathed to him. He also cut him out in a love affair; for both of which offences Philip first called him a reptile, then slapped his face, and finally, overmastering him in a struggle, flung him through the brushwood into the quarry, near to which the two men had been fighting. The consequences of this fall were a compound fracture of the leg, a scar across the forehead, and lameness for life; together with the bitterest and most undying hatred to every "viper of that blood," culminating in a melodramatic curse "on him and his seed to the third generation," when Sibyl, anxious to know her ground, tempts her uncle to speak of his old enemy and to tell the story of his own wrongdoing to Philip Secretan and of Philip Secretan's wrongdoing to him. As his are the "dead men's shoes" for which this younger likeness of Lady Audley is waiting, she feels that, after this exposition of his feelings, to tell him that she is married to the son of his former foe would be to ruin everything. Hence she is hard put to it for reasons why she will not accept the attentions either of Mr. Frederick Stormont, who is "a youth of very thin legs, and not much body, who wears a cutaway coat that just clears his hips, and has never been seen in an overcoat, or without a flower in his button-hole," or of the great young man of the place, Sir Wilford Cardonnel, who, gentleman as he is, and of an old English family, does not disdain to talk of "Lady Malvina Vielleroche" as "a good deal too weedy for my money, and I don't like 'em that colour." Him, however, Sibyl makes her confidant, when he asks her to marry him, and thereby secures his friendship and the cessation of his pursuit; but when Joel Pilgrim, a sly, slimy Anglo-Indian half-caste, comes over, and causes Mr. Trenchard evident disgust and annoyance, which is somehow to be atoned for if she marries him as she is to be forced to do, then her resources fail her, and she has nothing for it but flight, for the third time, as we said. All this part of the book is huddled and confused. Who murdered Mr. Trenchard, and how the murder was found out, with every incident connected therewith, belongs to the worst school of writing—sketchy, imperfect, hurried, and unlikely and forced in incident and motive. The circumstances and character of Joel Pilgrim, the old man's half-caste son, simply make a blot on the picture as silly in motive as it is ill done in workmanship—a would-be spectre with a turnip head and a lighted candle inside. In conclusion, we cannot do better than quote for the author's benefit some words of Dean Swift's:—"An experiment very frequent among modern authors is to write upon nothing; when the subject is utterly exhausted, to let the pen still move on; by some called the ghost of wit, delighting to walk after the death of its body. And to say the truth, there seems to be no part of knowledge in fewer hands than that of discerning when to have done."

CRANSTOUN'S PROPERTIUS.*

MR. CRANSTOUN has accomplished no inconsiderable task in his series of elegiac translations. His version of Propertius completes an English reproduction of a poetic constellation which also includes Catullus and Tibullus. It may be that Mr. Cranstoun has simply taken the poets in the order in which they are usually placed; but, if he has gone on the principle of leaving the most difficult, though not the best work, to the last, he has acted wisely. Catullus is surely the greatest poet of the triad, Propertius the hardest to deal with. And so Mr. Cranstoun has done well to take the fullest time to explore his text, and to weigh the endeavours made by scholars at home and abroad to mend its corrupt readings, to rectify its disordered arrangements, and to reduce to something like consistency a poet who has lain under a ban very much because he had come down to us in so perplexing a form. That he has mastered all helpful criticism on the intricacies and dark places of the text will be seen by any who happen to be familiar with Mr. Paley's latest edition of Propertius, or who have studied Mr. Munro's very acute paper on the arrangement of the last Elegy of the Third or Second Book, in the sixth vol. (1875) of the *Journal of Philology*—to say nothing of the commentaries of Barth, Kuinoel, and W. Hertzberg. As is meet in an English translation, the notes are mostly brief, and illustrative of mythological or historical allusions; but the extent of the translator's acquaintance with the best and most recent criticism is easily discernible by a comparison of the translation with the text. An agreeable feature of the work before us is that Mr. Cranstoun has varied his English metres, and afforded the relief of long-ballad metres, heroics, and here and there shorter measures, to the more orthodox elegiac quatrain. Mr. C. R. Moore's meritorious version (Rivingtons, 1870), on recurring to which our opinion of its accuracy and general neatness of translation undergoes no abatement, was rendered tedious by the unvaried use of the heroic couplet, though Sir Edmund Head's one or two experiments in various metres might have taught a translator of Propertius another lesson. In Mr. Cranstoun's work free play is given to the poet's mood and tone at the time of writing, and a sound judgment is shown for the most part in the forms chosen to render passionate and pathetic love elegies, on the one hand, and archæological poems on Roman history and mythology, such as those of his later years, on the other. The result cannot fail to be a wider acquaintance with and appreciation of the Umbrian bard.

Of the birth, parentage, and education of this Roman Callimachus, as he delighted to style himself in token of his early draughts at the fountain of Alexandrian poetry, Mr. Cranstoun gives all that is known with commendable succinctness. He notes at the outset that Propertius was younger than Tibullus and older than Ovid, but not much in either case; not enough younger than the graceful and plaintive Tibullus to have caught the melancholy sweetness with which his own earnest force and genuine fire are in strong contrast, nor so much older than Ovid (though the latter outlived him some forty years) as to have retired from the field of poetry before he was aware of an imitator availing himself of his grand but hastily struck keynotes, and moulding the topics of his Roman and mythic poetry into Fasti and Epistles, and of his love-elegies into the Art of Love. It would be interesting to go further into the history of those essentially Roman poems which were his earliest and seemingly also his latest themes, but which no persuasions of his patron Mæcenas, no atmospheric influences of the Esquiline, where he mixed with Virgil and Horace and must have contracted some of the manners of a courtier, could induce him to prefer to the one constraining inspiration of his muse, the Cynthia of his first and completest Book of Elegies. It seems not improbable that some poems of the Fourth and Fifth Books on legendary subjects mark a date when he had buried Cynthia, and bidden adieu to her successor, of whom we get a glimpse in V. vii. 39–48—when he had relinquished gallantries which, despite his protestations of constancy, were some justification (had she cared to plead them) for Cynthia's infidelities, and turned his attention to graver and more philosophic studies. Yet after all it is a gain to poetry that in the interval between his earliest and latest work, Cynthia and love laid an exacting and importunate embargo on his muse. Unquestionably the sweetness, tenderness, and real, if sometimes rugged, pathos of his love-elegies show more genius than the loftier vein and nobler purpose of his later productions. There is not space in a brief review to sketch even the influence on Propertius's poetry of the brilliant, accomplished, queenly "meretrix"—for such she was, not only in her legal status at Rome, but in her fondness for the wine cup, her passion for dress, and the inordinate avarice whereby she got the means of gratifying it—who is as much associated with the name of Propertius as Lesbia with that of Catullus. But though the fluctuations of love and jealousy, quarrelling and reconciliation, are drawn out to a length which only a versatile fancy could prevent from becoming tedious, somehow one does not tire of recurring to the outbursts of Propertius's jealousy on the alarm of his mistress having gone off once and again with the loutish but lavish Illyrian Prætor—an alarm which, in one instance at least, turns out to be false (I. viii. 33–6)—his clever artifices to dissuade his friends from an introduction which may convert them into rivals, and his threats to go to sea or to kill himself if Cynthia is unkind, though he is quite pre-

* *The Elegies of Sextus Propertius.* Translated into English Verse, with the Life of the Poet, and Illustrative Notes. By James Cranstoun, B.A. and LL.D., &c. Edinburgh and London: William Blackwood & Sons.

ed to stand on his head, or, as he puts it, "to tread heaven's rry floor," when she is favourable to his suit.

Mr. Cranstoun is extremely sceptical—despite the poet's expressed ention of an immediate visit to Athens (iv. xxi.), and his refer- es to a shipwreck in the Ægean from which he had escaped, l despite also his graphic picture (in El. XV. Book I.) of the igers and terrors of a storm at sea—as to his having ever left native shores. "The absence," he argues, "of direct testimony the point, and even of a single poem bearing directly on foreign vel, is tantamount to evidence against such a supposition" xviii.) By the light of such suggestive criticism it is amusing read such appeals to Cynthia's feelings as this from the Seven- nth Elegy of the First Book:—

Ah! perish he who first with impious art
In sail-rigg'd craft dared tempt the unwilling sea,
'Twere better I had sooth'd my mistress' heart,
Hard though she was, how peerless still to me!
Than view this wild and forest-mantled shore.
And woo the longed-for Twins that calm the wave.
Then earth had veiled my woes, life's fever o'er,
And some small stone—love's tribute—marked my grave.

that this means is that the jealous lover has, in an inoppor- ie visit, stumbled on some of her so-called relatives (cf. II. vi. 3), or, as he puts it:—

Quinetiam falsos fingis tibi sæpe propinquos,
Oscula nec desunt qui tibi *jure* ferant.

Sham cousins often come and kiss thee too,
As cousins alway have a right to do.

perhaps her prætor has been availing himself of a holiday at me to renew his attentions, and amidst elegiac couplets in praise the simplicity and purity of "straw-built" Rome, Propertius ates, in III. vii. on the troublesome fact that—

From the Illyrian land the other day
Your friend the prætor has returned, I learn—
To you a fruitful source of welcome prey,
To me of inexpressible concern.

cruel a pang as any is inflicted when this Roman Lais or Phryne es it into her head to run down to Baiæ (El. I. xi.); not that poet doubts her honour or constancy, but the place is danger- s. His advice to her—gratuitous, and doubtless unheeded—is, Mr. Cranstoun renders the couplets (9–10, 11–12):—

Atque utinam mage te remis confisa minutis
Parvula Lucrina cymba moretur aqua, &c.

On Lucrine's bosom rather drift and dream,
And the light skiff with tiny paddles guide,
Or bathe alone in Teuthras' limpid stream,
And cleave with pliant arms the yielding tide.

re it seems more satisfactory, if a little harder, to take "con- " as the vocative suggested by *te*, than, as Paley would have us te it, as agreeing with *cymba*. The scholar's argument is that s construction is supported by the fact that "a gondola relies its oars for safe guidance." But the translator sees rather in *nba* a skiff which, in her lover's mind, Cynthia might conveni- ly paddle for herself. He wishes her not to have com- ny in her bark or her baths. In one instance, however, we icy that neither Mr. Cranstoun nor Mr. Moore quite gives full pression to the poet's jealousy—*e.g.* where, on the eve of one of imaginary voyages, he reproaches Cynthia with her indifference. e count in the indictment is (vv. 5–6):—

Et potes hesternos manibus componere crines,
Et longa faciem quærere desidia,

ere *hesternos crines* need not mean "crines qui manserunt ut ri erant." Instead of translating, as Mr. Cranstoun does—

But airily thou trimm'st the locks thou braidedst yestermorn;

with Moore—

Smoothing the locks that lay last night so trim;

should render the lines:—

Yet airily thou trimm'st thy locks, *as thou didst* yestermorn,
And leisurely with tireless hands thy person dost adorn.

ie poet just afterwards contrasts with this elaborate dressing lypso's unkempt locks when she was deserted, in a passage which a fair specimen of the translator's average work (cf. 9–14; "At n sic Ithaci—conscia lætitiæ"):—

Not so Calypso wept beside the bleak and barren sea,
What time Ulysses left her island-home for Ithakè;
But many a day with hair unkempt she sat in sorrow lone,
And wildly to the cruel waves outpour'd her weary moan;
And though she knew that he had gone for ever from her ken,
Kept brooding o'er remembered joys she ne'er might know again.

It is somewhat odd that where, in the Sixth Elegy of Book II., e poet is reproaching the mistress whom, by a tacitly accepted tion, he calls "wife" in the same breath, he comes out with unwonted burst of morality, happily turned into heroics his latest translator. It reads in English like a bit of Juvenal, ough the form of verse forbids such mistake as to the Latin. ie truth was, the poet could be severe on laxity that operated ainst his own monopoly of license; and the fallacy is in the word *uptæ*, in the couplet:—

Templa Pudicitiæ quid opus statuisse puellis,
Si cuivis *nuptæ* quidlibet esse licet.

at the poet flies off to reprobate the frescoes which, in private uses, discredited the value set on virtue in the public temples ee 27–36):—

The hand that first depicted scenes impure,
And decked chaste homes with lust's foul garniture,
Corrupted modest maiden's guileless eyes,
Till then unschooled in immoralities—
Curse him, who with insidious art could throw
The veil of rapture o'er the springs of woe!
Men had no statues in the olden time,
Nor lined their walls with scenes of pictured crime;
Now cobwebs veil our fanes, with weeds o'ergrown
The gods deserted lie—the fault's our own.

It is as well to observe that Dean Merivale (*Hist. Rom. Emp.* vi. 249, note) doubts whether this account is anything more than rhetorical, unless referable to a time antecedent to the revival under Augustus.

Scant space remains to speak of the other side of Propertius's poetic genius, that which sprang from his stock of legendary lore. His Elegies, on whatever theme, are rich in ancient mythic fable, and in snatches and reminiscences of Theocritus, Callimachus, and Apollonius. But he deserves distinct recognition (as Mr. Cranstoun puts it) for embodying in Roman Elegy "the time-hoary legends of Rome, the praises of Mæcenas and the glory of Augustus; the untimely fates of Pœtus and the young Marcellus; the devoted affection of Ælia Galla, and the stainless honour of Cornelia." Some of these themes, it is true, belong to his early muse, and are most interesting as germs of Ovid's Fasti; but there are others of high purpose, such as the last Elegy of all, the lament over Marcellus, and the Battle of Actium, perhaps of a later date. We extract as a specimen of the second of these Mr. Cranstoun's version of the passage following Apollo's address to Augustus on his victory (V. vi. 39–68):—

Proud Cæsar shouts from his Idalian star
"The God is proved by godlike deeds of war."
Old Triton cheers, and all the Nereids raise
Around the flag of freedom songs of praise.
Borne in swift bark, the harlot seeks the Nile,
Her all that's left—to linger on awhile.
'Tis well: poor triumph that one woman tread
The streets through which Jugurtha once was led.
Hence rose this shrine to Actian Phœbus' name,
Whose every shaft ten hostile ships o'ercame.

No small matter in such a translation is the choice among competing various readings. Mr. Cranstoun's scholarship is accredited by his work in this respect. We cannot doubt his judgment in adopting, at I. viii. 19, Munro's emendation—

Ut te prævectam felice Ceraunia remo—

for the old reading *felici prævecta*, which involves making the latter word a vocative. Again, in I. xviii. 27, he holds by the MSS. reading, "Divini fontes," against the proposed correction "dumosi montes," no doubt on the strength of Paley's quotation from Theocritus, viii. 33, *ἄγκεα καὶ ποταμοὶ, θεῖον γένος*. So in El. II. of the Second Book (11–12) he is certainly safe in adopting *Brimo* for *primo* with Lachmann and Kuinoel, Brimo being a name of Proserpine. We are not so sure that he is right in writing "Babeis' hallowed tide" in the same passage. Surely it should be "Babe's hallowed tide." He is mostly happy too in giving the gist and point of single lines—*e.g.* I. vii. 20:—

Nec tibi subjiciet carmina serus Amor.
Love out of time is ever out of tune;

and, *ibid.* 26:—

Sæpe venit magno fœnore tardus Amor.
Love's bills long due bear fearful interest.

But when he renders

Nec nova quærendo semper amicus eris (I. xiii. 12)
Nor will you always counsel fresh amours,

in a bit of advice to Gallus to stick to a worthy object of choice, he is not so right as Mr. Moore, who hits the sense by translating

Thou must be true if thou wouldst make her thine.

Glancing back over the whole ground, we find such good work predominating in this translation, that, coupling it with Mr. Cranstoun's Tibullus, we augur increased credit to Scottish scholarship.

MR. AUGUSTUS HARE AND THE *SATURDAY REVIEW*.

WE have had sent us for review a work by Mr. Augustus Hare called *Cities of Northern and Central Italy*. On examining it, we find that, among the passages which Mr. Hare, according to his custom, copies from other writers, there are many extracts, sometimes of great length, taken from our own columns. These passages have been copied without our leave or knowledge; and to this breach of ordinary courtesy Mr. Hare has added another breach, by making no acknowledgment of the source from which they are taken. Instead of so doing, Mr. Hare, with an impertinence which we should not have looked for in any one claiming the name of scholar or gentleman, has added the name of a writer by whom they have not been acknowledged, and to whom Mr. Hare has therefore no right to attribute them. So flagrant a breach of the rules according to which literary intercourse is usually carried on puts Mr. Hare, as far as his present book is concerned, out of the pale of the society whose laws he has broken. We therefore decline to take any further notice of the *Cities of Northern and Central Italy*.

GERMAN LITERATURE.

THE present course of events in European Turkey gives much additional interest to a work which would have commanded attention at any time—C. J. Jireček's History of Bulgaria.* The book is not, indeed, characterized by any special graces of style, and the annals of a people which has hardly known any medium between barbarism and servitude are of necessity obscure and unattractive. Many ethnological problems of great interest are nevertheless involved in the discussion of Bulgarian history, while it cannot be forgotten that the present peaceful and oppressed people seemed at one time likely to anticipate the part reserved for the Turks five centuries later. In his views respecting Bulgarian ethnology Herr Jireček principally follows those adopted by Safarik, the great Bohemian scholar, and more recently by Drinov, the most distinguished authority among the Bulgarians themselves. According to these, the Bulgarians were originally a Finnish or Tschudic tribe, who, having broken into a district inhabited by Slavonians, themselves recent immigrants, lost their nationality and language as the Normans did in France. The present Bulgarians, accordingly, are mixed in blood, but Slavonian in all essential characteristics. The fierce and turbulent spirit of the invaders was subdued by their adoption of Christianity, and after a short and brilliant period of conquest, the new kingdom began to exhibit symptoms of degeneracy and decay. One remarkable phenomenon at this period was the spread of Paulicianism, the heir of Manichæanism, among the Bulgarians, who thus remotely originated the religious revolt of the Albigenses. Herr Jireček gives an interesting account of the Paulician tenets. The Bulgarians were successively subjugated (1292–1398) by the Tartars, the Servians, and the Turks. From the date of the latter event Bulgaria almost ceases to have an independent history, but episodes of considerable interest continue to occur. Among these may be named the revolt of the Pasha Paswan Oglu at the beginning of this century, and the recent religious disputes which at one time seemed likely to drive the people into the Latin Church. The renovation of the national spirit dates, according to Herr Jirecek, from the middle of the eighteenth century. Since that period a national literature has been slowly growing up, and is fully noticed by our author, who has also devoted much attention to earlier phases of literary activity, and to the arrangement of our scanty information respecting the organization of the ancient Bulgarian kingdom.

Under the title of "Antiquity and To-day," † Professor Curtius has collected the academical discourses pronounced by him in public, with a few addresses delivered on other occasions. The greater part treat of classical subjects, a few have a bearing more or less direct upon the politics of the day. Among the most interesting may be named one on the idea of immortality among the Greeks, in which its general acceptance and its influence upon the conduct of life are strongly maintained; a pleasing dissertation on friendship in antiquity, which is represented as the great corrective of the ethical deficiencies of the popular religion; one on the use and abuse of party spirit; and another on the mutual action and reaction of Germany and Rome. All Professor Curtius's disquisitions are exceedingly elegant and polished, but are more remarkable for these qualities than for originality or profundity. They produce the impression of existing rather for the sake of display than from any urgent need for utterance, and there seems something sophistical in the dexterity with which the orator, from whatever point he may start, manages to work round to the glorification of Christianity, Prussia, or both.

Dr. Werner's monograph on "the Venerable Bede" ‡ is a most excellent and instructive, and also a very readable, account of this great intellectual luminary of one of the darkest periods in the history of Europe. It is from this point of view that Bede is here principally considered, the events of his life being but briefly related. A preliminary chapter, however, deals with the history of the English Church up to his time, and renders full justice to that spirit of propaganda of which the missionary exertions of that day are but a phase, and which was then, as now, among the principal characteristics of Englishmen. Bede's intellectual labours are distributed under four heads; his cultivation of poetry and promotion of philological studies among his countrymen; his cosmography and astronomy, the latter including his system of chronology and attempts at the settlement of the ecclesiastical calendar; his commentaries on Scripture; and his ecclesiastical histories and biographies. The whole, more especially the scientific section, affords a most lively picture of the intellectual condition of the Western world in Bede's age. Great pains have been taken to determine the extent of his obligations to classical literature, and his own literary influence on his friends and correspondents, his disciples, and subsequent writers. The volume is the first of an intended series on the illustrious writers of the middle ages.

Luther's captivity in the Wartburg is the subject of a pretty little monograph by A. Witzschel §, framed after the Reformer's own statements in his correspondence during the time. Nothing novel is elicited, of course, but the compiler has perfectly succeeded in giving a clear and consecutive detail of a very interesting episode in Luther's life. A narrative by J. Kessler of a casual encounter with Luther "at the Black Bear in Jena" is appended, which represents the Reformer in his most genial light.

Dr. Langen *, an Old Catholic theologian of great learning, has written a treatise on the question of the procession of the Holy Spirit, and on the best manner of allaying the controversy between the Eastern and Western Churches on this subject. He remarks that the New Testament is wholly silent on the matter, and that the development of dogma on the point must be traced through the writings of the Fathers. The general result of his investigation is unfavourable to the "filioque," which was, he says, introduced by Augustine as a corollary from certain assumed premisses, not as an article of faith. The present Greek position is a corresponding aberration on the other side, but cannot, any more than the Latin, be regarded as heretical. The correct formula is *διὰ τοῦ υἱοῦ*, and there is, he considers, no reason why all parties should not agree upon it.

"Seedcorns of Truth" † is the title of a series of sermons in which the cardinal points of Christian theology are successively propounded in a somewhat dry and dogmatic form, but in a very liberal spirit.

The sermons of the late Professor Vilmar‡ have, it appears, for the most part been already published, but have long since disappeared from circulation. They were worth reprinting, as well as the occasional addresses which accompany them in this edition. They are distinguished by power and animation of expression, as well as by a haughty and uncompromising championship of Lutheran orthodoxy, of which Vilmar was perhaps the most characteristic representative. An apology is offered for the republication of the last address in the volume, a eulogium on the Presbyterian system of Church government, which is stated to be at variance with the ultimate conclusions of the speaker.

Professor Bonitz's essays on Plato§ comprise thorough analyses of the Gorgias, Theætetus, Euthydemus, and Sophistes, together with less elaborate commentaries on the dialogues commonly read in German schools, the Laches, Euthyphron, Protagoras, and Phædrus. A disquisition on the nature of the argument in the Phædo for the immortality of the soul is appended. The complexion of the proof alleged, in Professor Bonitz's opinion, is not ethical, but speculative, and depends wholly on the Platonic doctrine of Ideas.

A translation of the hymns of the Rig Veda‖, if reasonably accurate, must obviously be a great boon to literature. Herr Ludwig's labours are based upon the St. Petersburg Dictionary, and what he describes as the epoch-making work of Roth. His versions, at all events, almost invariably offer a plausible and coherent sense. They are to be followed by a commentary. He has found it necessary to break up the arrangement of the original texts, and redistribute them in nine divisions. The style of his translation is dignified and unadorned; it was perhaps scarcely necessary to exaggerate its archaism by the peculiarities of his German orthography.

Philipp Spiller¶ has reproduced in an extended form his ideas on the æther as the universal principle of existence. It may be doubted whether, after all, he has more to advance on the question in its physical aspect than is implied in Sir William Thomson's pregnant remark that matter is probably not an ultimate, but a mode of motion of a primitive fluid. In its religious and ethical aspect Spiller's system agrees substantially with other varieties of Pantheism. The book manifests prodigious erudition, and a bewildering facility of reference and citation.

A collected edition of E. von Hartmann's miscellaneous essays ** begins with what will no doubt prove the most interesting of all, an autobiographic sketch. The glimpses afforded both of Prussian school-life and of garrison-life are highly graphic and suggestive. It is curious to find that the philosopher possessed such a natural gift for drawing and music as to have successively formed the project of devoting his life first to one and then to the other of these pursuits. He was deterred by the discovery of his inability to give full expression to his ideas in either. Some would say that it is easier to be an amateur in philosophy than in art; and, without going to this length, it may still be admitted that Hartmann's system in its latest phase bears the impress of cool sound sense almost as evidently as his master Schopenhauer's does of erratic genius. Hartmann's original pessimism has virtually disappeared; for practical purposes this is a great advance; but at the same time there is a total absence of the intellectual qualities which are inseparable from even the most perverse paradoxes of his predecessor.

Professor Grassman's lexicon to the Rig Veda * is principally ased on the St. Petersburg Sanskrit Dictionary, the surpassing im- ortance of which is fully acknowledged. It is evidently very refully executed, copious in the meanings of words given, and ecise in the definition of them. The Roman character is em- oyed throughout.

The intention of D. Sanders's Orthographical German Dictionary† to determine the correct spelling of words derived from foreign urces, and of others of which the orthography is irregular or ca- icious. The object is well worthy of the labour, but it may be oubted whether any authority less absolute than Prince Bis- arck's will suffice to produce the desired uniformity.

Lieutenant Hoffmeister's sketch of European Russia ‡ is chiefly epared from the military point of view. This very circumstance, owever, has led him to devote especial attention to the moral alities of the classes from which the army is chiefly recruited, d to the legislative and social arrangements by which these are fluenced, insomuch that his book comes nearer than might have en expected to a general survey of the Empire.

The "Sonzogno trial," § a recent Italian *cause célèbre*, loses no- ing of its piquancy or painfulness in the report of Herr W. Wyl, ho has, in fact, set the brethren of his craft the worst possible ample of pandering to the vulgar love of sensation and scandal. is report is by no means confined to a faithful account of the oceedings, but is seasoned with all manner of irrelevant anec- tes and gratuitous insinuations against leading public characters Italy. The case itself is singular and dramatic. Sonzogno, a an of rank and station, was a leading Italian Liberal of the most treme section, and editor of a journal at Rome particularly noxious to the Government. His political associate Luciani, ving formed a criminal connexion with his wife, procured his assination by representing that the crime would be acceptable Garibaldi. It is not much to the credit of Italian justice that uciani's dupes should have received as severe a punishment as mself.

There is more chat than hypochondria in Gerhard von Amyntor's Chats of a Hypochondriac."‖ They treat for the most part, deed, of social foibles and perversities; but there is no bitterness the writer's satire, nor austerity in his reproof. They are in neral lively and entertaining, display considerable powers of bservation, and the only thing to be said against them is that ey have hardly sufficient weight or compass to deserve collection so substantial a volume.

Professor Max Müller has made the world a charming present his neat little edition of the recently discovered correspondence Schiller with Christian, Duke of Augustenburg.¶ The charm es not so much consist in the letters themselves as in the in- dent from which they originated, and in Professor Müller's own aceful and feeling commentary. Schiller, like Wordsworth, ved exemption from the pecuniary cares which might otherwise ve stifled his genius to the generous admiration of a friend. is Raisley Calvert was the Danish Prince of Augustenburg, ho, at the instigation of the poet Baggesen, and in concert with unt Schimmelmann, offered the struggling bard support in a tter which Professor Müller justly extols as a model of liberal d delicate kindness. The restorative influence of this generosity Schiller's fortunes and energies may possibly be exaggerated, t there can be no doubt that this influence and his gratitude ere alike considerable. He repaid the obligation by a series of tters, the most important of which are at present missing. The mainder, it must be said, are chiefly valuable as the text of Pro- ssor Müller's interesting disquisition on the literary and social con- asts between the age of Goethe and Schiller and our own, and the relation of patronage to genius. The details of the fête t up by Baggesen in Schiller's honour afford a curious mixture of e admirable and the absurd. The ear of Denmark had been nkly abused by a false report of Schiller's death, and the living et was duly bewailed accordingly.

Professor Bergmann, of Strasburg, publishes a translation, with copious commentary, of three of the most mystical poems of the dda **, prophecies of the last things according to the Norse eology. The translations are very fine, inspired with the enig- atical grandeur of the original; the merits of the commentary can ly be appreciated by specialists. Professor Bergmann claims to ve materially advanced the exegesis of the Eddas, and regrets at, owing to his long residence in France, his labours should as t have attracted comparatively little attention in Germany.

"The Witch," by Arthur Fitger ††, is a stirring prose tragedy, crowded with character and incident, but too much like a dramatized novel, nor are the characters very vividly outlined. The scene is laid in North Germany about the close of the Thirty Years' War.

The February number of the *Rundschau** begins with a pretty story from the Russian of Turguenef, the most recent production of his pen. A youth receives a present of a watch, which involves him in all kinds of scrapes; the *dénouement*, however, is agreeable. In an essay on Paul Heyse as a writer of fiction, George Brandes, the eminent Danish critic, deservedly lays stress on the moral harmony of Heyse's writings, and on his constant endeavour to delineate noble characters, the object of whose lives is to win their way to internal peace. The account of Leontjeff, the author, along with his friend Katkoff, of the intellectual revolution which im- pressed a loyal instead of a democratic character on Russian journalism, is concluded. Julius Rodenberg continues his sketches of his English tour. He is especially impressed by the under- ground railway, and notices minutely such metropolitan phenomena as the regeneration of Leicester Square, the demolition of North- umberland House, and the invalid condition of Temple Bar. Herr Kapp, a high authority on shipping matters, relates the story of the *Deutschland* at considerable length, and dwells particularly on the hardship of the English system of cross-examination upon German witnesses, especially uneducated seamen.

Price 6d.

CONTENTS OF No. 1,064, MARCH 18, 1876:

The Royal Title.
Herzegovina. The Government of India.
The French Ministerial Statement. The American Presidency.
The Administration of the Navy. Landed Property in Prince Edward Island.
Amendments to the Commons Bill.

Queen or Empress.
London and the Manor of Lylleston.
Walt Whitman. Montalembert's Last Words. Servants. Heligoland.
The Coastguardsman, Past and Present. The Perils of Civilization.
Degrees in Murder.

William of Canterbury.
Life and Correspondence of General Burgoyne. The Vicar of Morwenstow.
Discoveries in New Guinea. Letters and Papers of the Reign of Henry VIII.
Tamil Proverbs. Dead Men's Shoes. Cranstoun's Propertius.
Mr. Augustus Hare and the *Saturday Review*.
German Literature.

CONTENTS OF No. 1,063, MARCH 11, 1876:

The Royal Title—Incidents of the Suez Canal Discussion—The Oxford University Bill—The New French Ministry—American Official Scandals—Italy—The Burials Agitation—The Slave Circular in the Lords.

Christianity between Two Foes—Tiger-Shooting—Inaccuracy—Death in the Phial—Undergraduates and Money-Lenders—The Fall in Silver—A Nice Irish Session—The Canadian Militia—Crowner's Quest Law.

Balm on the Emotions and the Will—Stubbs's Constitutional History, Vol. II.—The Great Divide—A German View of Junius—The One Fair Woman—Lothian's Dante and Beatrice—Davilier's Life of Fortuny—Frost's Lives of the Conjurors—Beames's Comparative Grammar of the Aryan Languages of India—Minor Notices.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

MUSICAL UNION.—THIRTY-SECOND SEASON.—H.R.H. Duke of EDINBURGH, President.—Tuesday, at Three P.M.—ST. JAMES'S HALL. April 25, May 9, 23, 30, June 13, 20, 27, and July 4.—Free Admissions (Prize exceptionally will be ——— ——. Hon. Members will receive Programmes previous to each Meeting on ——— explained. Pappi and Auer, Violinists. Madame Essipoff, Ilatti, and Antoine Ri are expected. The Record of 1875, with a List of the Artists engaged since 1844, is lished at Ridgway's, Piccadilly, price 1s. 6d. Members having Nominations to send Tickets and Addresses to the DIRECTOR. Subscription, Two Guineas, paid by Cheque before Easter, to J. ELLA, 9 Victoria Square, S.W.

THE DEATH of NELSON.—ART-UNION of LONDON.—Subscription One Guinea. Every Subscriber receives an Impression of a fine Plate, by C. W. Sharpe from the great national painting by Daniel Maclise, R.A., in the Palace of Westminster—The Death of Nelson—besides a chance of one of the numerous Prizes. The Prints, matching those of last year, are now ready.
344 West Strand, February 1, 1876. LEWIS POCOCK, EDMD. E. AN-ROBUS, } Hon. Secs.

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRETORIUM," with "Dream of Pilate's Wife," "The Night of the Crucifixion," "La Vigne," "Soldiers of the Cross," "Christian Martyrs," "Gaming Table," &c.—DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission, 1s.

CHRISTIAN WILBERG'S WATER-COLOUR DRAWINGS and SKETCHES in OIL of Italian subjects, including "A View in Venice," the property of Her Majesty the Queen. EXHIBITION now OPEN at BURLINGTON GALLERY, 191 Piccadilly. Ten to Six. Admission, including Catalogue, 1s.

CHELTENHAM COLLEGE.—TWELVE SCHOLARSHIPS. Eight £40; Four £20. Election, Second Week in May.—Apply to the SECRETARY, the College, Cheltenham.

WELLINGTON COLLEGE.—JUNIOR SCHOLARSHIPS. There will be an ELECTION to SIX in June next. They are open to all BOYS who on June 1 are between Twelve and Fourteen years of age. The Examination begins on Tuesday, June 20.—For further particulars, apply to the Rev. the BURSAR, Wellington College, Wokingham.

GERMANY.—High-class EDUCATION at the ROYAL COLLEGES, Cassel (attended by the Sons of the Crown Prince of Germany), with thorough German, French, and English Private Tuition by Resident Graduates, and a refined English home. Delightful neighbourhood of Wilhelmshohe, the Ane, Park, and the Valley of the Fulda. Prospectus, with highest references. Terms, 70 to 90 Guineas, inclusive.—Address, Dr. BAUER, M.A., Cassel (who will be in England in April).

ABINGDON SCHOOL, Berks (Six Miles from Oxford). Founded 1563.
Has New Buildings on elevated site, and gravel soil, with extensive Grounds.
A Public School Training is given at moderate cost.
For Entrance next Term, Scholarships, &c., apply to the Head-Master, Rev. E. SUMNERS.

HURSLEY, WINCHESTER.—A. M. HEATHCOTE, B.A. Oxford, prepares BOYS, between Seven and Twelve, for Public Schools. Terms, 100 and 120 Guineas. Holidays as at Winchester College. After Easter he can receive Two or Three Boys.—Address, Home Close, Hursley, Winchester.

WESTGATE-ON-SEA, Kent.—W. THORNTON BULLOCK, B.A., Oxon. (Classical Honours, Mods.), for Eight years Assistant-Master at Temple Grove, prepares BOYS for the Public Schools.—Terms, &c., on application

HOLMESDALE HOUSE, near BURGESS HILL, Sussex.—SEYMOUR MCC. HILL, M.A., Oxon, formerly Scholar of Balliol College, prepares BOYS for the Public Schools. Terms, 80 Guineas.—Further particulars on application

THE Rev. H. HAYMAN, D.D., ex-Head-Master of Rugby, has a vacancy for ONE PUPIL at Easter, at Aldingham, Ulverston, sea-coast of Lancashire. Ample grounds, excellent air, sea bathing, &c.

THE RECTOR of a COUNTRY PARISH, who can devote much time to his PUPILS, will have a Vacancy for One after Easter.—Address, The RECTOR, Frankley, Birmingham.

WOOLWICH, LINE, and UNIVERSITIES.—Rev. Dr. HUGHES (Wrang. Joh. Coll. Cam.), Rector of Perivale Ealing, W., who has passed over 300 Pupils, has VACANCIES. Ample accommodation and assistance.—Ealing, W.

EXAMINATIONS.—A GRADUATE (Honourman) of Ten years' experience, who has passed several PUPILS with distinction, receives Residents; also instruction given to Non-residents.—Address, RHO, 17 Bristol Gardens, Maida Hill, W.

THE COUNCIL of the GIRLS' PUBLIC DAY SCHOOL COMPANY, Limited, will shortly appoint HEAD-MISTRESSES for High Schools to be established at Brighton and Gateshead-on-Tyne. Salary with a Capitation Fee of 10s. per Pupil over one hundred. Applications, with testimonials, to be sent by April 15 next to the SECRETARY of the Company, 119 Brompton Road, S.W., from whom further information may be had.

EVENING EMPLOYMENT WANTED by a YOUNG MAN, Three or Four Evenings a week, addressing Envelopes, Circulars, &c., or to assist a Tradesman with his Books, or any similar capacity.—Address, G. K., 8 Canal Terrace, Camden Town, N.W.

PRIVATE LIBRARIES, and those of Colleges and Literary and Scientific Institutions, CATALOGUED and ARRANGED by W. H. AYLOTT, Librarian. References will be given to parties by whom he has been engaged.—Address, 32 Cheapside, E.C.

PRIVATE SECRETARY for the SESSION.—A CH. CH. MAN (2nd Class Honours) would be glad to act as above to a Nobleman or Member of Parliament, or to assist in any Literary capacity. Highest references and testimonials.—Address, Mr. A. N. COOPER, 20 Durham Terrace, Hyde Park, W.

TO NOBLEMEN, M.P.'s, LANDED PROPRIETORS, and CLUBS.—WANTED, by a GENTLEMAN of considerable experience, a PRIVATE SECRETARYSHIP, or Position of Trust and Confidence, the duties of which he has fulfilled, and has excellent testimonials. Will be at liberty March 25.—Address, by letter, to A. Z., Mr. M. Coones, 141 Regent Street, W.

BOURNEMOUTH.—To be LET, for a long or short time, Furnished or Unfurnished, a private HOUSE, in the best situation. Three Reception, Seven Bed Rooms. Stabling, &c.—Apply to E. H., Hurworth, Bournemouth, Hants.

INFANT ORPHAN ASYLUM, WANSTEAD.
Patron—HER MAJESTY THE QUEEN.
There are now nearly 600 fatherless children in this Institution, many mere infants.
2,813 Orphans of persons once in prosperity, gathered together from all parts of the British dominions, have been admitted.
Thirty will be Elected in May next.
Forms for nominating Candidates should be applied for at once, as the list will be closed the 25th inst.
Subscriptions and Donations, upon which the Institution is mainly dependent, are earnestly requested.
Bankers—Messrs. WILLIAMS, DEACON, & CO., 20 Birchin Lane, E.C.
Offices: 100 Fleet Street, E.C. HENRY W. GREEN, *Secretary*.

HYDROPATHY.—SUDBROOK PARK, Richmond Hill *Physician*—Dr. EDWARD LANE, M.A., M.D. Edin. For Invalids and those requiring rest and change. Turkish Baths on the premises. Private entrance to Richmond Park

THE late EMILE LESSORE.—In announcing the death of this celebrated Artist, Mr. MORTLOCK begs to state that he had made arrangements with Messrs. JOSIAH WEDGWOOD & SONS for the EXHIBITION of the WORKS PAINTED by QUEEN'S WARE which they have reserved during Mr. LESSORE'S connexion with the Firm. The whole are now ON VIEW at the Galleries, 31 Orchard Street. Catalogues, price 6d., may be obtained at the Galleries, or at Messrs. WEDGWOOD'S, Etruria, Staffordshire.

ECCLESIASTICAL COMMISSIONERS for [illegible]

REGULATIONS RESPECTING GRANTS OUT OF THE COMMON FUND.

MARCH 1876.

I. The Ecclesiastical Commissioners for England are prepared to endow a limited number of new Churches to which Districts have been or shall have been legally assigned since the Third day of April, 1871, containing in each case, at the date of such assignment, a population of not less than 4,000 persons, and not being situated within the limits of the existing Parish of Manchester (*a*), provided that the formation of any such District shall not involve the reduction below 4,000 persons of the population of any other Benefice receiving a Grant from the Commissioners on the ground of population; the Grants to Churches of this character which may be in public patronage (*b*) to be made, to the extent of £300 a year, unconditionally, and to those in private patronage, to the extent of £200 a year, upon condition that an Endowment of equal value be provided from non-ecclesiastical sources.

No application will be eligible for consideration under this Regulation, unless and until a Church, in which at least one-half of the sittings are free, shall have been built and consecrated, and a separate District shall have been legally assigned thereto, with authority to the Incumbent to perform all the offices of the Church.

N.B.—The New Districts which have been already formed in expectation of receiving endowment under such a Regulation as the foregoing, and which fulfil all the conditions attaching thereto, are sufficiently numerous to absorb the whole of the funds which the Commissioners are able to appropriate to this class of Grants during the current year.

II. The Commissioners are further prepared to receive, on or before the 30th of November 1876, offers of Benefactions of not less than £100 each in capital value towards making better provision for the cure of souls, with a view to such offers being met by the Board with Grants during the Spring of 1877.

N.B.—It must be clearly understood that the Commissioners are not pledged to meet all such offers, the means at their disposal being limited in amount.

The distribution of these Grants will be made subject to the following general Regulations:

1. A Benefaction from Trustees, or from any Diocesan or other Society or body of contributors as well as from any individual, whether such Benefaction consist of money, land, house, site for a house, tithe, or rentcharge, any or all, may be met by a Grant from the Commissioners; but neither a Site for a Church, nor a Grant from Queen Anne's Bounty, nor a Benefaction already met by such a Grant, nor money borrowed of Queen Anne's Bounty, nor a charge upon the revenues of any Ecclesiastical Corporation aggregate or sole (except as undermentioned (*c*)), nor any Endowment, Bequest, Gift, or Benefaction already secured to a Benefice or Church, nor any temporary interest in or charge upon property—can be met by a Grant from the Commissioners.
2. The Grants will consist of Perpetual Annuities in all cases, except those in which, with a view to the provision of Parsonage Houses, or for other reasons, it may appear to the Commissioners to be especially desirable that Capital should be voted.
3. No single Benefice or proposed District will be eligible to receive a Grant of a larger sum than £60 per annum, or of £1,500 in capital, and in no case will the Grant exceed in value the Benefaction offered, the Grant, if it consist of a perpetual annuity, being estimated as worth thirty years' purchase.
4. Districts proposed to be formed out of, or Chapelries proposed to be severed from, existing Cures, but the formation or severance of which shall not have been legally completed on or before the 1st of January, 1877, will not be eligible to receive Grants, except in cases where the amount of Benefaction offered would, with the Commissioners' Grant, be sufficient to provide an endowment of £150 per annum, or to raise to that amount an endowment previously secured.
5. In selecting cases priority will be given to those which, having regard to income and population, shall appear to be the most necessitous.
6. A Benefice held contrary to the provisions of the Plurality Acts as applicable to new Incumbents will not be considered eligible for a Grant.
7. A Benefice which has received a Grant is not disqualified, on the offer of a further Benefaction, from competing for a further Grant in any subsequent year.
8. The Benefaction, if in cash, and the Grant, if it consists of capital, may, in the case of existing Benefices, with the consent of the Commissioners and the Bishop of the Diocese be laid out in the purchase of land, or tithe rentcharge, within the Parish or District, in the purchase or erection of a Parsonage House.
9. Every application must contain a specific offer of a Benefaction, and must reach the Commissioners' Office on or before the 30th of November, 1876, in order to render it eligible to compete for a Grant in the Spring of 1877; and in the event of a Grant being made to a Benefice, the Benefaction, if in money, must be paid to the Commissioners on or before the 1st of May following.

All Communications should be addressed to the SECRETARY, Ecclesiastical Commissioners, 10 Whitehall Place, London, S.W., and the postage prepaid.

By Order of the Board,
GEORGE PRINGLE, *Secretary*.

a Having regard to the provisions of "The Parish of Manchester Division Act," by which a special fund is created for the endowment and augmentation of Cures within the parish of Manchester, Part I. of these Regulations will be considered as inapplicable to that parish.

b Videlicet: In the patronage of Her Majesty, either in right of the Crown or of the Duchy of Lancaster, of the Duke of Cornwall, of any Archbishop or Bishop, of any Dean and Chapter, Dean, Archdeacon, Prebendary, or other dignitary or officer in any Cathedral or Collegiate Church, or of any Rector, Vicar, or Perpetual Curate, as such, or of a body of Trustees possessing power to sell or transfer the right of presentation.

c Where the Incumbent of a Benefice is willing to surrender a portion of the Endowment such Benefice towards augmenting the Income of a District Church, such surrender will be treated as a Benefaction of a sum equal to seven years' purchase of the net annual income surrendered.

FURNISH YOUR HOUSE at DEANE & COMPANY'S

THE ROYAL TITLE.

THE history of the Royal Titles Bill has been a succession of surprises. At first Mr. DISRAELI would not say what the new title was to be. He still says that there was for his silence some reason, which, if incommunicable, had a most solemn character. He acted under the advice of the LORD CHANCELLOR, and the LORD CHANCELLOR seems to have assured him that to say the QUEEN was to be Empress would, at one point of the progress of the Bill, be a most unconstitutional proceeding, and that to say this at another point of the progress of the Bill was perfectly constitutional. It is fortunate that in ordinary civil matters the judgments of Lord CAIRNS are more lucid and intelligible. In the earlier days of the discussion Mr. DISRAELI explained that the reason for not extending the new title to the Colonies was that numerous colonial gentlemen came back to England and got as much of royalty as they could possibly wish. His last utterance on the subject was to the effect that it would be a very good thing in itself to extend the title to the Colonies, but that he really could not think of the proper word to use for the purpose. Some day, he suggested, the lacking phrase might flash on his inventive mind, but until then the Colonies must wait. It is scarcely to be expected that after the contemptuous picture drawn by the PRIME MINISTER of colonial aspirations, and after the explanation of the very peculiar reasons why a new title is to be chosen for India, the Colonies will care to move in the matter. Otherwise they would be in a very curious position, and would be always telegraphing to their agents to know how Mr. DISRAELI's mind was working, whether he looked bright and inventive, or still puzzled and dejected. But by far the greatest surprise was reserved for the last. It was only at the very close of his speech, at the very end of the debates on the Bill, that the real object of the proposed change in the Royal title was explained. The great secret was disclosed, and England was informed what was really meant. In an artistic spirit Mr. DISRAELI heightened the effect of his revelation by keeping the main part of his speech on the lowest possible level. He had taken care to go as low in point of argument as a man could go. He referred to a letter he had received from a little girl of twelve, who assured him that the QUEEN was called Empress of India in her geography book, and to another communication from a Nonconformist minister, who pointed out to him that the same addition to the Royal title was to be found in *Whitaker's Almanack*. It must have been with a pang of jealousy that Mr. DISRAELI read the bold utterances of *Whitaker*; for it appears that *Whitaker* has done what Mr. DISRAELI professes himself unable to do, and with a fine impartial liberality has coined an addition to the Royal title, specially including the Colonies. These references to little girls and almanacs seemed somewhat frivolous when Mr. DISRAELI was replying to Mr. GLADSTONE at the end of a serious and exciting debate. But there was a purpose in this trifling. A thunderclap is startling if it is expected. The true artist makes the air calm; he creates an atmosphere of weary monotonous stillness, and then he brings out his thunder. Suddenly turning from his children and his calendars, Mr. DISRAELI soared into the highest region of politics. The great revelation was made. We had learnt that the new title was to be adopted to please the QUEEN, or to please the people of India, or to introduce uniformity into Indian administration, or to mark the character of our government of India as something which Englishmen would not dream of for themselves. No; these were but the small outskirts of talk, the parade of reasons with which great men must cloak a great purpose. The true meaning of the new title is that it is a defence against Russia.

Mr. DISRAELI is responsible for the security of the QUEEN's dominions throughout the world. He has to survey the course of things on the widest scale. He has to see distant dangers and to meet them. On rare and great occasions he has to take the nation into his confidence, to rouse it from a deceptive sense of security, and to call on it to join him in carrying out those great, prompt, and effective measures by which serious and imminent evil is to be averted. What does he now find? Russia on the borders of India, Tartary prostrate, unconquered Russia conquering the ancient savage conquerors of many generations, and all this under our modern system of railways and telegraphs, known to every one of our trembling native fellow-subjects. India is filled with terror, and with legitimate terror, for Russia, that hammer of Asiatics, is already knocking at her door. Most happily we have a way of setting everything right. We can keep Russia in her proper place; we can tranquillize the fluttering spirits of the Hindoos. It is in vain that Russia is triumphant, and that India is despondent. Russia and India little know our resources. In the face of the threatening legions of Russia, and the cowering millions of India, we can do something effective, masterly, overpowering. We can give a lady a new name. How true it is that the arts of government are far simpler than the foolish world imagines! We have only to say "Empress," and Russia is checkmated and India happy. This is indeed pleasant, and it adds to our pleasure to think that the device is of almost universal application. There is China, for example. There are said to be four hundred millions of Chinese, and in China there is a general hatred of foreigners, and especially of Englishmen. If China could but collect its strength and dare to gratify its antipathies, it might make itself very disagreeable to us. The natives would know by railways and telegraphs what was impending, and Sir STAFFORD NORTHCOTE would discern "China" to be trembling on their lips. We could soon stop all that. We should at once begin to study names. We should discover that the Emperor of CHINA was called the Child of the Sun and Lord of the Flowery Land. We could soon beat that. We should call the QUEEN the Daughter of the Solar System, which would at least give us the planets to the good, and Lady of the Botanical System generally, so that we should have the non-flowering plants to our credit. China would be scared, and the natives of India would be as proud of us as peacocks are of themselves. Very sanguine persons might even anticipate that "universal gravitation" and "cryptogamus" would be seen trembling on native lips. Of course nothing great can be got without some risk. There is a chance of failure in the most statesmanlike schemes. It is not absolutely certain that our new and brilliant device will answer; and its failure, like most failures, might place us in a worse position than before. The natives may notice that sounds do not stop cannon, and that a Russian bullet will have its billet, whether the dusky sufferer who receives it calls with his dying lips on a Queen or an Empress. If the natives of India were like any other human beings, they might be expected to be thrown into a panic, rather than taken out of a panic, by Mr. DISRAELI's statement. They would say to him, or rather

murmur to him in their odd dumb way, "We understood "that Englishmen were not at all afraid of Russians, that "they thought Russia rather weakened herself than "strengthened herself by pushing forwards fast, and that "to conquer Tartars was a very different thing from "conquering Highlanders or Guardsmen. Now we find "we were wrong, and that you yourselves are very much "frightened; and when we expected that, if you said you "were frightened, we should be told not to fear, because "you would and could fight hard, we are told to be easy "because we may call the QUEEN by a new name. Alas! "this does not produce the promised effect. We make a "great effort. We actually get the word 'Empress' out "of our lips, and still we are not happy. You do not "seem the person to save us; but rather a remote, "shadowy, ineffectual sort of person, muddled in mind by "corresponding with infants and poring over almanacs. "This is bad for us and for you." Luckily, as the Ministry is able to assure us, the natives are not like any other known people, and these sad thoughts will never come into their innocent heads.

The task of the Ministry has consisted in finding very bad reasons for a very bad measure. Whether the measure is unpopular or not, we have no means of judging. We imagine the truth to be that, with most persons who know enough of history to be able to criticize the Bill, it is unpopular; to the mass of the people it is a matter of entire indifference, as much as the proper relations of the Indian Government here to the Indian Government in India. To some few who love to indulge in noisy and vulgar manifestations of what they call loyalty the measure is welcome, and it is also welcome to some Conservatives, who like any opportunity of outvoting the Opposition. Those who disapprove of the measure can only say in a quiet way what they think. They are for the most part not the sort of people who busy themselves with petitions and public meetings, and, if they were, they would feel that the QUEEN has at least deserved thus much by the many virtues of her reign, that she and her titles should not be made the theme of popular discussion. The only body in which public discussion of the subject could properly be held was Parliament, and although the Bill has been carried by large majorities, the criticism it has received has by no means been unavailing. It has more especially forced Mr. DISRAELI to declare that he will do his utmost to keep the Imperial title local. If possible, we in England are to have nothing to do with it. In the proclamation to be issued when the title is assumed an explicit declaration will be made that for every English purpose the QUEEN remains Queen. The members of the Royal Family are not to bear any addition to their titles which will refer to the new dignity of the QUEEN. Even Indian appeals are to be made to the Queen, not the Empress, in Council. There are some occasions on which even in England it will be impossible to avoid using the full title of the QUEEN, but she is for all English purposes to forget that she is Empress of India as much as for English purposes her ancestors forgot they were Electors of Hanover. These are all very wise precautions, and there is no reason to doubt that the declaration of the Ministry is sincere, and will be carried out so as, in part at least, to effect its object. The Ministry has done what it can to remedy the mischief which it chose itself to create. The gushings of Imperialism will be discouraged. The danger that was threatened will be guarded against; but it will remain, and the safeguards will, we fear, be not always operative. Mankind cannot be trusted always to refrain from vulgarity and adulation when vulgarity and adulation find a door constantly open through which they can intrude. However, the Bill has passed through the Commons, and a measure conceived in mistake, and supported by arguments sometimes frivolous and sometimes extremely dangerous, is sent to the Lords for such discussion as Bills are likely to receive in the Lords when it is a Conservative Government that submits them for consideration.

SPAIN.

THE return of King ALFONSO to Madrid commences a new period of his reign. As long as the Carlist war lasted he was assured of the support of a large part of the nation, and of abstinence from active opposition on the part of the remainder. Irregular acts of vigour, which indeed are too familiar in Spain, were readily condoned, and for an entire year no impatience was expressed for the resumption of Parliamentary government. Henceforth the KING will have to deal with the exigencies of ambitious generals and with the intrigues of veteran politicians. From the scanty accounts which have been published, it seems that the KING has been received in his capital with an enthusiasm which is naturally suggested by his good fortune in terminating the civil war. His extreme youth is calculated both to attract popular favour and to divert any resentment which may have been provoked by the Government from the KING to his Ministers. It will now become necessary to decide on the policy which is to be adopted in meeting the demands of the Church. The Italian papers which are supposed to express the opinions of the Vatican have rashly denounced the collapse of the Carlist cause as a fatal misfortune to the Church. It would have been more judicious to profess confidence in the piety of a KING who is actually seated on the throne. King ALFONSO succeeds after a short interval a mother who was as eager as the most bigoted of Pretenders to sacrifice the rights of her subjects to the pretensions of Rome. The NUNCIO and the Spanish prelates insist on acquiring the absolute control of education, and on the prohibition by law of a public profession of heresy and schism. A concession of their principal demands would be, of all measures which could be suggested, the most distasteful to the nation. The Spanish people are not at all inclined to Protestantism; but they value the right of exercising their own judgment without control from the clergy. The tyranny of the Inquisition, and the national debasement of which it was a principal cause, are not yet forgotten. On this point the middle classes are united with the fanatical Republicans who would perhaps, if they were in power, be not less intolerant than the clergy whom they detest. In Spain, as in the rest of Continental Europe, revolutionary opinions have become inseparably connected with a violent hatred of religion. It would be highly unadvisable to reinforce the most turbulent class by the educated Liberals who only wish to repress the encroachments of the clergy.

The Ministers have repeated a mistake which has often been committed by their predecessors in packing the Cortes too exclusively with their own partisans. An overwhelming majority even of friends and supporters always tends to become unmanageable. In countries where constitutional government is better understood than in Spain, judicious Ministers recognize the use of an Opposition in protecting them from the pressure of their own zealous partisans. The Upper House, which indeed has but little influence, is mainly composed of extravagant and impracticable Moderates. The same party is inconveniently powerful in the more popular Assembly; and the Ministers will have some difficulty in restraining its impolitic devotion to the interests of the Church. The President of the Council encouraged the clerical party to reckon on his aid, when at the beginning of the KING's reign he promised the NUNCIO that he would recognize the Concordat arranged by Queen ISABELLA. He has since found it necessary to retract some of the concessions which he imprudently made, but it is not known whether he considers that his temporary retirement from office relieved him from the obligation of injudicious pledges. If the Minister is well advised, he will encourage the efforts of SAGASTA to organize an Opposition. It is odd that the leader of the small Liberal section in the House should only two years ago have been regarded as a reactionary Conservative. The Progressist followers of ZORRILLA are for the present silenced and excluded from public life; and CASTELAR is the only representative of the Republicans who three years ago were paramount in Spain. The rumour of Queen ISABELLA'S return to Madrid has not been lately renewed. If she is anxious for the secure establishment of her son's dynasty, she will not hasten a visit which at the present moment would both encourage the clerical faction and alarm the best supporters of the throne. The revolution by which she was dethroned has hitherto done little good, but it has never been repudiated by the nation.

The generals who have at last put an end to the civil war will not be backward in claiming their reward. JOVELLAR, who was not long since Prime Minister and Commander-in-Chief, has been sent into honourable exile as Governor of Cuba. If, with the aid of the large reinforcements which are now at the disposal of the Government, he succeeds in suppressing the insurrection, he will have done as great a service to the State as the most successful of his rivals; but it is difficult for even the best regular

troops to deal with occasional levies which can always disband when they are in danger of being overpowered. QUESADA, who was Chief of the Staff, or virtual Commander-in-Chief, during the late campaign, finds himself overshadowed by the reputation of two of his principal lieutenants. MARTINEZ CAMPOS, in the course of last autumn, performed the important service of taking Seo de Urgel, and he contributed largely to the final defeat of the Carlists by the bold march which cut them off from their communications. PRIMO DI RIVERA in the last days of the war took the stronghold of Estella, which had been before and since the defeat and death of CONCHA the centre of the Carlist resistance. Both the generals are in the prime of life; both are supposed to be ambitious; and they have already accomplished in concert a great and successful political enterprise. But for their proclamation of Don ALFONSO as King at the beginning of 1875, the restoration, though it was inevitable, might perhaps have been effected at a less convenient time. The distribution of titles and orders will present no other difficulty than the personal jealousies which it may probably create; but the restorers of the Monarchy and the victors of the civil war will probably not be contented with honorary rewards. In the generation which is now passing away NARVAEZ, O'DONNELL, PRIM, and SERRANO founded their political power in succession on their military reputation and on their influence with the army. If their successors are not more self-denying, the era of constitutional government may still be long delayed. Time will show whether the precedents of the last reign are to be followed.

There is reason to believe that the material prospects of Spain have not been greatly affected either by incessant revolutions or by the Carlist war; but the financial deficiency which had previously been chronic has become almost hopeless. It would be unpopular and might be dangerous to increase the taxes, and the public credit is extinct. It would be possible to increase both the revenue and the general wealth by the adoption of a more liberal tariff, but the relaxation of protective duties would perhaps provoke opposition even from the complaisant nominees of the Government in the Cortes. A few years of peace and order might render it possible to re-establish in some degree the national credit. The chance of regular improvement is improved by the form of government to which the nation has perhaps finally reverted. The Spaniards have for many generations had no reason for that kind of loyalty which is founded on gratitude for services rendered by the Crown. Not a single BOURBON King, with the exception of CHARLES III. in the earlier years of his reign, has been an honest or able ruler. In the present century CHARLES IV., FERDINAND VII., and ISABELLA II. might have been expected to render royalty permanently odious to the nation; yet PRIM, who was the ablest Spanish statesman of the day, thought it worth while to import a foreign Prince, and the subsequent failure of the Republic afterwards went far to justify his policy. In a country where Ministers and military chiefs are constantly intriguing against one another for supremacy, it is something to have a permanent element in the Government, even when the power of the King is only nominal. If ALFONSO XII. should prove to be hereafter a man of character and ability, it is probable that he may exercise great influence over public affairs, and that he may become strong enough to reduce the military chiefs to their proper and subordinate position. A Republic is more at the mercy of personal ambition, because the first place, instead of the second, is the possible prize of success.

PUBLIC VIRTUE IN AMERICA.

THE Republican majority in the United States Senate has had the good sense to make a stand against the strange project of reducing the salaries of the principal officers of the Union. While thirteen Committees of the House of Representatives are investigating a much larger number of charges of corruption, it seems singularly unseasonable to increase existing causes of temptation and to diminish securities for honesty. It is not improbable that the Democratic party has remembered that, although it controls the House, its rasher proposals are likely to be corrected by the Senate. Like other legislative movements during the present year, the reduction of salaries is probably rather designed to influence the Presidential election than for its ostensible purpose. In reducing the PRESIDENT's salary once more to 5,000*l.* a year, the House of Representatives humours an ancient popular prejudice. Although the Americans are the least parsimonious of nations, they have always taken pride in the rigid economy which has been practised in the remuneration of public functionaries. The founders of the Republic had perhaps been impressed by the lavish practices which then prevailed in England; and they were certainly bent on asserting the principle that the rulers of the commonwealth were not a privileged aristocracy. It was probably an accident that some of the earlier Presidents were, like WASHINGTON, possessors of independent estates, and no preference has in later times been given to birth or fortune. The jealousy with which modern reformers affect to regard the holders of large salaries is in the present instance stimulated by the fact that all the present incumbents belong to the Republican party. The Democratic managers have not forgotten that their success in the elections of 1874 was in some degree due to the unpopularity which had been incurred by the then existing Congress. The pay of members and the salary of the PRESIDENT had been suddenly doubled; and much indignation was caused by a vote which antedated the increase, so as to give the members back pay from the beginning of their term. It is probable that the allowance to members of Congress was previously insufficient; and the increase would have been less objectionable if it had been only prospective. The present salary of the PRESIDENT is not much larger in proportion to the value of money than half the nominal amount in the early days of the Republic.

Among the proposed reductions is included a diminution in the salary of the American representatives abroad, and among them of the Minister to England. It is of course for the Americans to judge exclusively of the regulations of their diplomatic service; but they have almost always paid England the compliment of sending a Minister of position and character to represent the Union in London. Among the number there have been men of independent fortune; but there have been others of scanty means. The Minister of a great Power naturally lives in the society of persons of rank and of wealth; and it must be mortifying either to decline suitable hospitality or to be unable to return it. A recent and notorious instance has illustrated the inexpediency of exposing diplomatists to the temptations which result from insufficiency of income. General SCHENCK must at present be assumed to be innocent of all serious irregularity, but his Government has censured him and accepted his resignation on the express ground of the impropriety of his conduct in becoming director of a joint-stock mining enterprise. General SCHENCK himself alleged his want of money as an excuse for a proceeding which has for a long time past been regarded by respectable Americans as a public scandal. Where one Minister has merely been indiscreet in his eagerness to increase his means, another might perhaps pass the boundary which separates imprudence from fraud. On his return to the United States General SCHENCK will find persons as highly placed as himself who have practised gross corruption. His own conduct would perhaps not have incurred the disapproval of the PRESIDENT if he had not, as Minister in England, been exposed to the notice of foreign witnesses. General SCHENCK's miscarriage might have suggested the expediency of increasing the salary of his office; but it furnishes a whimsical reason for rendering the income of his successors still more insufficient.

General GRANT, alarmed perhaps at the recent exposures at Washington, has, in nominating a successor to General SCHENCK, left the narrow circle of his political allies and questionable friends and kinsmen. It was for once thought essential to prefer an honest and cultivated candidate to a vulgar political adventurer. The nomination of Mr. DANA was generally approved, both in itself and as an abandonment of the policy which had found expression in the dismissal of Mr. MOTLEY. Mr. DANA many years ago acquired distinction both by his spirited cruise before the mast in a whaler, and by the literary ability of the work in which his experience is recorded. He might have succeeded as an author, but he preferred the Bar, where he gradually acquired a large practice and a high character for integrity as well as ability. Although he has always belonged to the Republican party, and in former times to its Anti-Slavery section, his first appearance as a candidate for the Legislature gave deep offence to the majority of the Republicans in Massachusetts. In common with the best part of his countrymen in the State and in the Union, Mr. DANA considered the prominence and influence of

General BUTLER as disgraceful to the whole community. At an election of Representatives Mr. DANA contested with General BUTLER the Essex district of Massachusetts. At that time BUTLER was in the height of his discreditable power, having recently been the leader of the majority in the House, and being still the confidential adviser of the PRESIDENT. Among many exploits of a similar kind General BUTLER had induced the House to vote for the partial repudiation of the debt; and in his personal capacity he was strongly suspected of gross corruption at the time when he held high office during the war. An opposition to the re-election of BUTLER was an appeal to the Republicans to repudiate the most discreditable of their party leaders. As might have been expected, Mr. DANA was denounced as a traitor to the party organization, and after his defeat by an overwhelming majority he was left in an isolated position. Two years ago probably no citizen in the United States seemed less likely to receive preferment from a PRESIDENT who has habitually disregarded the personal qualifications of candidates for office.

At the election of 1874 it appeared that a reaction had taken place in Massachusetts, not in favour of Democratic doctrines, but against corrupt Republicans. To the general satisfaction of the respectable classes throughout the United States, General BUTLER lost the seat which he had so long occupied, and the PRESIDENT, who had formerly expressed profound contempt for BUTLER'S military qualities, now perhaps began to think that he was no longer worth cultivating as a political supporter. When the Washington scandals suddenly became dangerous, it was obviously prudent to fill the vacancy in the office of Minister to England with a nominee of unexceptionable character, and the sagacious instinct which the PRESIDENT has occasionally displayed led him to the sound conclusion that the opponent of BUTLER was probably an honest man. It might have been supposed that the PRESIDENT'S unusually scrupulous conduct would have met with universal approval; but it became necessary to take into calculation the audacity of BUTLER and the implacable resentment of the Republican leaders against an independent seceder from the party organization. Mr. W. B. LAWRENCE had a literary or professional feud with Mr. DANA, who had been substituted by the publishers for the former editor of WHEATON'S *International Law*. General BUTLER, in revenge for Mr. DANA'S former opposition, placed his energies at the service of Mr. LAWRENCE; and both, while they were obviously actuated by personal hostility, represented to the Foreign Committee of the Senate, ostensibly on public grounds, that Mr. DANA had been guilty of literary piracy, which is, it seems, still recognized in the States as wrongful when it is not practised at the expense of English authors. The Committee received the accusation without communicating with Mr. DANA, and it was understood that they would advise the Senate to reject the nomination. On further reflection, or probably in deference to prudent advice, the Committee offered Mr. DANA an opportunity of explanation. He has wisely refused to defend himself before his political adversaries, when they had at first been guilty of gross injustice and partisanship. At the same time he accepts, as far as he is concerned, the PRESIDENT'S nomination, and leaves to the Senate the responsibility of rejecting the nomination. It is notorious that the charge of piracy is trumped up for the occasion by General BUTLER, although Mr. LAWRENCE, as judge in his own case, may sincerely have believed himself to be wronged. If the appointment of Mr. DANA is not confirmed, the PRESIDENT will have incurred by one of his best actions a rebuke which has been often withheld when he has made objectionable appointments. Resentment against the officious interference of General BUTLER and the partisanship of the Senate will probably confirm the PRESIDENT in his novel appreciation of integrity and merit.

THE MERCHANT SHIPPING BILL.

THE extent of the reconstruction which a Bill may undergo during its passage through Committee has never been precisely ascertained, and it is possible that when the Merchant Shipping Bill comes to be read a third time it may be altered beyond the possibility of recognition. No process that falls much short of this will make it a good Bill. Indeed, if the distinction between the principle of a measure and its details were maintained with any strictness, the Bill would be beyond improvement in Committee. The chief question at issue is as to a compulsory survey of ships—that is, of course, with regard to construction, for the question of overloading cannot arise till afterwards. To allow this, it is said, would be to refuse to shipowners that amount of law which is essential to the fairness of the chase. They may build what ships they like, they may repair them or not as they like, but they make their election at their own risk. Government officials stand thick around them, and they may at any moment find their ships in the hands of a detaining officer, and themselves accused of misdemeanour. The condition of every ship is regarded by the Government in the light of a riddle, the fun of which would be gone if you knew the answer beforehand. The detaining officer sees a ship makin ready for sea, and presenting all the external signs of being seaworthy. He has the excitement of knowing that, if he lets her go, and she proves to be rotten, he will have brought his employers into ill repute; while, if he detains her, and she proves to be sound, he will have made his employers liable to costs and damages. Compulsory survey would put an end to this interesting uncertainty; but the most nervous of detaining officers will not wish to have the responsibility taken off his shoulders, since if there were compulsory survey there would be no need of detaining officers. A man must be poor-spirited indeed who does not think agitation better than annihilation. Mr. LINDSAY has described the machinery which will be required to carry out the object of the Bill in his letter to the *Times* of last Monday. It is, he says, "just such a document as the War Office would "issue if we were about to be invaded. On all parts of "the coast we are to have inspectors, surveyors, judges, "and assessors—a perfect army to watch and see that any "British merchant-ship which leaves our ports is built, "equipped, stowed, and manned according to Act of "Parliament." This is an eminently ingenious mode of getting the smallest possible return for the greatest possible expenditure to the Government and the greatest possible inconvenience to the shipowners. When a ship is detained, whether on the suspicion of the detaining officer, on the complaint of the crew, or on the remonstrance of Mr. PLIMSOLL, it is most likely to be detained just at the moment when it is going to sea. It is then that the detaining officer will have to make up his mind whether to move in the matter or not, and the decision upon a point of this kind is usually put off to the latest possible moment. It is then that the fact that their lives may be endangered if the ship sails will be most forcibly brought home to the crew, and sailors are not the class of men to trouble themselves on this head a day too soon. It is then that any reports that may be in circulation about the condition of the ship will take their most definite shape, and will be most certain to seize the attention of any philanthropic bystander. Yet at no point throughout the various processes of building, repairing, and loading can a survey with regard to construction be instituted with so little chance of its being thorough, supposing the complaints to be valid, and so great a certainty of some one being the loser, supposing them to be groundless. Had the same process been gone through when the ship was building, or when it was empty, it would have in no way interfered with its going to sea on the advertised day, and every portion of the vessel would have been open to examination. When it is postponed to a moment at which survey and detention have become identical terms, damage is certain to be incurred either by the shipowner if it is decided that the ship has to be repaired, or by the Board of Trade if it is decided that she is fit to go to sea. If the Government are bent upon doing business on this principle, it is strange that they did not go further still and station their detaining officers a hundred miles or so out at sea, with power to seize any outward-bound British ship and bring her back into port for the purpose of being surveyed. This would have involved longer detention and greater loss either to the owner or to the Board of Trade, and as these objects seem to be the only ones likely to be attained by the present Bill, they might as well have been attained with the greatest conceivable completeness.

Hitherto we have argued on the assumption that, though the inconvenience of detention at the last moment must fall on the shipowner, the damage incurred by detention will in the long run be pretty equally divided between the shipowner and the Government. But there are two alternative possibilities to be allowed for. It may be that the detaining officer will usually succeed in justifying his action in detaining a ship. The Bill, it must be remembered,

does not make the Board of Trade liable for costs and damages, unless it appears that there was not "reasonable and probable cause for the provisional detention of the ship," and the disposition of the Courts of Survey created by the Act may be to shield the Board of Trade at the expense of the shipowner. In that case the consequences to British trade may be very serious. And these consequences will be incurred without any compensating gain to British sailors. If an owner knows that his ship is to be surveyed while she is building or repairing, he has a motive for taking care that she is built or repaired properly. But if he knows that she may be surveyed just as she is about to sail, and that, whatever her condition is, the chances are that the detaining officer will be able to satisfy the Court of Survey that there was "reasonable and probable cause" for her detention, he has no motive for taking care that she is built or repaired properly. The costs and charges of detention fall equally on the just shipowner and on the unjust, and the most profitable policy on the whole is to spend little money and take the chance of the vessel escaping notice. It may be, again, that the detaining officer will be fearful of getting his employers into trouble, or that the Board of Trade will issue stringent instructions to prevent their being brought into trouble, or that the Courts of Survey will generally lean to the side of the shipowner as against the Government, and thereby make detaining officers despair of doing any good by detention. In any one of these ways the Act may at once or in the end become a dead letter. It will give sailors a form of protection; but that will be all. In short, a survey as to construction is likely to be more convenient and serviceable at the outset than afterwards; but of course there must also be some kind of subsequent supervision as to repairs and overloading.

To all appearance, the proceedings of Monday will determine whether the Bill is to be persevered with in its present shape. The amendment that stands first for discussion on that day is one which, if adopted, would change the whole character of the measure, and render nine-tenths of the subsequent clauses altogether superfluous. Mr. PLIMSOLL will propose to insert a provision that every British ship not classed in LLOYD'S Registry, or in the Liverpool Registry, or belonging to certain Companies, or specially exempted by the Board of Trade, shall, before proceeding to sea, be furnished with a certificate of her seaworthiness in hull, equipment, and machinery, and that no British ship shall without such certificate clear outwards from any port in the United Kingdom. There is no need to consider at this point whether the means by which Mr. PLIMSOLL proposes to carry out the principle of compulsory survey are the best that can be devised. They may be susceptible of great improvement, but it is to be hoped that the discussion of Monday will not turn upon mere details. Mr. PLIMSOLL'S amendment raises the question whether the protection demanded for the seaman is to be afforded by prescribing that all sea-going ships shall conform to certain conditions or by giving the Government power to detain any ship which it suspects of falling short of those conditions. We have quoted Mr. LINDSAY'S opinion of the latter expedient, and his estimate of the former is equally instructive. The principle of Mr. PLIMSOLL'S amendment, he says, "is sound and unanswerable, and it is one which the "public has a right to demand." The greater number of British ships already possess certificates of seaworthiness. They have their ascertained place at LLOYD'S or on the Liverpool Register, or they bear the Government passengers' certificate. Who are the men who object to their ships being inspected by some competent authority? Not the owners of seaworthy ships generally, for they already go to LLOYD'S or to the Liverpool Registry, and ask, not only for survey, but for classification. No doubt there are some owners of seaworthy ships who object to compulsory survey, either from some personal crotchet or from the remembrance of some old quarrel with LLOYD'S. But the great bulk of the residue will be owners who know their ships to be unseaworthy, or who so far suspect them to be unseaworthy that they think it safer not to run the risk of having them surveyed. If the owners of good ships, and especially the owners of classed ships, would dissociate themselves from this minority, and accept the principle of Mr. PLIMSOLL'S amendment, they would spare themselves infinite annoyance and not improbably very serious loss.

ITALY.

AFTER an existence of nearly three years, the MINGHETTI Ministry has fallen. That its end was approaching could scarcely be doubtful after the Opposition had succeeded in electing its candidates for Parliamentary offices, and it was only a question on what point the final contest should be fought. A motion was made for an inquiry into the incidence and operation of the Grist-tax. To attack or reflect on the Grist-tax was, as Signor MINGHETTI declared, to endanger the safety of his whole scheme of finance. The Grist-tax is as bad a tax as can possibly be imagined. It falls on one of the first necessaries of life, it is enforced with a harshness and inquisitorial urgency which are perhaps not to be wholly avoided in the collection of such a tax, and it is said to be so worked as to fall with unequal severity on different districts. Even if the tax itself is indispensable to the solvency of Italy, the Italian Parliament might very properly be invited to inquire into the possibility of so levying it as to make it a little less obnoxious than it is at present. Nor did the Ministry meet the proposal for inquiry with a direct negative. It merely asked that the proposal might be adjourned. On the question whether the Chamber should agree to this adjournment, the Ministry, having announced that it would treat the vote as a vote of confidence or of want of confidence, was beaten by a majority of sixty-one. Evidently the Ministry sought almost at hazard any means of assuring itself whether it was to live or die. It knew that its enemies had grown increasingly numerous, strong, and determined, and it was useless for it to enter on new administrative or legislative measures if its adversaries really meant, and were really able, to overturn it. The hostility of the Left was certain, not only because a Parliamentary Opposition always wishes to get the better of the Ministry, but because the Left, having enabled MINGHETTI to upset the LANZA Ministry, has seen him reap the fruits of the combination, and themselves shut out in the cold. But the Left is in a clear minority, and what the Ministry wanted to know was how many of its own supporters would join its adversaries. It turned out that the seceders were numerous, various motives actuating different bodies of men to coalesce with the Opposition. There is a small set who, even in the Italian Parliament, are the special friends of the POPE, and, although these men will not in general work with the Left, these were glad to find an occasion of repaying the MINGHETTI Cabinet for its cautious but firm discountenancing of all ecclesiastical pretensions. There are, too, some very warm Free-traders in the Italian Parliament, and they had been alarmed by the language they had heard in Ministerial circles as to the basis on which it was proposed to frame the new Treaties of Commerce, and by the scheme for buying the railways and having them worked by the State, which they consider an invasion of the principle that the State should have nothing to do with industrial enterprises. The Venetians, too, appear to have a special horror of the Grist-tax, and it was probably to catch the vote of the Venetian Ministerialists that the attack on the Ministry assumed the form which was given it. But by far the most important defection was that of the Tuscans, who had seen in some of the Ministerial proposals a desire to favour Rome at the expense of Florence. The Ministry had proposed to transfer the Court of Cassation now established at Florence to Rome, and to make Rome the seat of administration for systems of railways which are now administered from Florence. The Florentines did not like this, and rather than see Florence deprived of any sources of wealth and importance they upset the Ministry.

In his retirement from office Signor MINGHETTI may find much to console him. He leaves Italy with, for the first time, a balanced Budget. Last year there was only a deficit of a million, and this year he expects a surplus of nearly half a million, and this really has been his doing. He has steadily worked up the revenue and discouraged expenditure. Soon after he came into office he persuaded the Chamber to vote additional taxes. Nor did he shrink from proposing financial measures which he knew to be unpo[illegible]. His bill for making people really pay the stamp duties which the law imposed on them brought him into collision with the Chamber, and it was rejected in the final vote taken by the foolish process of secret ballot, although he had a majority so long as open voting compelled deputies to face the question whether they would sanction the evasion of legal obligations. The Lower House went a

step further, and insisted on voting an outlay of public money to which he strongly objected, as the money was not there to spend. Fortunately the Senate reversed this decision, and thus at the same time saved the Ministry and offered the lover of Parliamentary institutions the gratifying spectacle of a Continental Senate being for once of some use. In regard to finance Signor MINGHETTI while in office has done well, and this must be consoling to him. And he may have a further consolation which ought especially to cheer him. He may reasonably hope that his work will not be undone. He has only to recall his own history. He upset the LANZA Ministry because SELLA, when the Chamber had insisted on new military expenditure, in turn insisted on new taxation. MINGHETTI defeated him, but he did not undo SELLA's work. On the contrary, he adopted in block all SELLA's financial policy. He proposed new taxes, and he got the Senate to save him from new expenditure. He may also reflect with pleasure that he has had colleagues who have done well for the country, and whose departure from office will be universally allowed to be a public loss. VISCONTI-VENOSTA has shown great ability at the Foreign Office; has succeeded in carrying out his maxim that Italy should be independent but never isolated; has seen Germany and Austria proclaim themselves the excellent friends of Italy; has, in conjunction with Duke DECAZES, placed the relations of Italy and France on an amicable footing; and has had the pleasure of supporting the ANDRASSY Note in the quality of the representative of a Power recognized as great. General RICOTTI, the only member of the LANZA Cabinet taken over by MINGHETTI, has persevered in carrying out his comprehensive system of army reorganization, until at last the KING has emphatically declared that he has a good army; and Admiral ST. BON, although he has never been allowed much money to spend, has at least laid down a scheme of naval defence for the guidance of his countrymen, and has managed to get two ironclads partially constructed, possessed of merits which Italian officials feel certain they may safely praise, even when exposed to the hostile criticism of Mr. REED.

The new Ministry will, it appears, be taken exclusively from the Left. Great efforts have been made to secure support from some of the discontented Ministerialists. But these efforts have been in vain. The malcontents were willing to give MINGHETTI a lesson, but they are not willing to work with his opponents. The colleagues of the new Premier DEPRETIS are, for the most part, unknown beyond Italy, with the exception perhaps of MANCINI, who has a reputation as a jurist and signalized his juristical excellence by a violent opposition to the Stamp law the object of which was simply to enforce clear legal obligations. The main end of the existence of the new Ministry appears to be that the Left should have its turn of office. There seems to be a feeling in Italy, which is not unknown elsewhere, that it is not fair that one set of men should always enjoy the honours and profits of place. The Left will, it may be hoped, be the happier if they stand for a little while in the sunlight. But the Ministry rests on no solid foundations. It has no Parliamentary majority on which it can rely, and its fall is certain when the fractions of the Right choose to make up their differences. Englishmen who can recall the DERBY Ministry of 1858 will remember how it vanished into air when Lord RUSSELL and Lord PALMERSTON became friends. The present Italian Parliament has only lasted for a comparatively short time, and a dissolution would be generally unwelcome. Even if the Ministry determined to try its fortunes in a new general election, it would have nothing on which to go to the country. There can scarcely be named a point as to which it can do anything but tread in the footsteps of its predecessors. It will not venture to deprive Italy of its sweet, novel pleasure of a balanced Budget. It cannot change the foreign policy of Italy, or spoil the work of RICOTTI, or yield to Rome, or quarrel with Rome, more than its predecessors have done. It perhaps will not purchase the railways, and not move the Court of Cassation from Florence. But these are small achievements for a Ministry. To live its little day, and then die as contented as a butterfly, seems its natural fate; and Signor MINGHETTI, to his other consolations, may even now be adding the greatest of all in the conviction that before long he will be back again in office.

THE GOVERNMENT AND THE TELEGRAPHS.

THE Government judged rightly in giving Mr. GOLDSMID a Committee to inquire into the telegraph service, because it is generally more prudent to investigate complaints than to treat them with neglect. In other respects the utility of a fresh inquiry may be doubtful. No practical advantage will result from a possible conclusion that the telegraphs were in the first instance bought too dear. The bargain is finally made, the consideration has been paid, and it is not to be assumed that the terms were necessarily unfair because the purchase has hitherto been unprofitable. The conditions of a contract of sale depend on the value of the subject-matter both to the vendor and the purchaser; but it sometimes happens that on one side the property is exactly represented by the purchase money, while the other party may have been influenced by motives of convenience or of pleasure. The Telegraph Companies possessed a property of great and increasing value, created by themselves not without considerable risk. There was a certainty that they would derive large profits from their investment; and it might well have happened that it would have been for their interest to maintain a high tariff of charges. Although they were not legally entitled to a monopoly, any attempt to introduce competition would only have added an unnecessary expenditure of capital, to the eventual disadvantage of the community. The Government, on the other hand, is seldom justified in undertaking a pecuniary speculation. The services which it performs may incidentally become remunerative; but purely commercial undertakings are more properly left to the enterprise of private adventurers. The Telegraph Act of 1868 recited, not that the Government might increase the public revenue by the purchase, but that "it would be "attended with great advantage to the State, as well as to "merchants and traders and the public generally, if a "cheaper, more widely extended, and more expeditious, "system of telegraphy were established in the United "Kingdom." The main object of the measure has been in some degree attained, and it may be hoped that no false theory of economy will be allowed to impede the further progress of the experiment. There can be little doubt that the telegraphs will gradually become more profitable. The State had the advantage of securing a monopoly which had not been previously enjoyed by the Companies. Any new discoveries which may tend to reduce the cost of working the telegraphs will be a clear gain to the sole and perpetual owner.

Nearly all the members who took part in the debate on Mr. GOLDSMID's motion expressed the well-founded opinion that the slight loss which has been incurred afforded no proof that the purchase had been a blunder. The reduced and uniform tariff, with the establishment of a vast number of additional stations, has increased the annual number of messages within eight years from 6,000,000 to 20,000,000. It might have been just, if it had been possible, to throw the whole charge on the senders and receivers of messages; but it is scarcely a cause for regret that a great addition to public convenience has been made at a cost, incurred once for all, of between 100,000*l.* and 200,000*l.* A departmental Committee, appointed by the Treasury, lately examined the accounts of the telegraph administration, with the usual bias against expenditure and indifference to the return which may be obtained in general convenience. One of the recommendations of the Committee is that offices which have not thus far paid their expenses should be suppressed. It is not the business of Treasury officials to estimate the annoyance and irritation which would be caused by the withdrawal of facilities already conceded; but they might have remembered that a certain time must elapse before the habit of sending messages becomes established in a neighbourhood hitherto unaccustomed to the use of telegraphs. It would be far more advisable to extend the advantages of the telegraphic system to many places which are still distant from opportunities of communication. Every new telegraph station furnishes custom to all the existing offices with which it may exchange. Lord JOHN MANNERS has issued a letter containing several severe criticisms on the Report of the Committee, and the figures which he furnishes completely refute the fallacy of the conclusion that the number of offices should be reduced. In 1872 there were ten unremunerative stations in London alone; in 1875 there was not one. The number of 798 offices which in 187- were not earning the amount of

their expenses was reduced in 1875 to 22s. It may be reasonably expected that the small remaining deficiency will soon be covered in consequence of increasing custom. Even if a small loss is incurred, the local convenience which will have been afforded forms to some extent a set-off against the trifling burden.

The Committee made, according to Lord JOHN MANNERS, the mistake of including among working expenses charges which undoubtedly belong to capital. The sums paid in pensions to former servants of the Telegraph Companies were a part of the purchase money, and way-leaves and extensions ought certainly to be placed to capital account. A sect of blundering railway theorists sometimes urges the expediency of closing the capital account, and of paying for all future additions to the property out of revenue; but Treasury officers ought to understand the distinction between revenue and capital accounts. One of the suggestions of the Committee is to the effect that senders of messages should be required to reduce the number of words at present allowed, or should pay an additional rate. Mr. SCUDAMORE calculates that one of the schemes of the Committee would increase the charge from 1s. to 1s. 6d., a second project to 1s. 5½d., and a third to 2s. 5d. It is extremely doubtful whether so burdensome a tax would not, as in the case of other commodities, injure the revenue by diminishing consumption. A further limitation of the number of words in a shilling message would in almost every case be extremely irksome. The necessarily high charges on messages sent by under-sea telegraphs to distant countries produce inconvenience and uncertainty by compelling correspondents to use ciphers and to employ the smallest possible number of words. It requires a certain amount of skill and practice to send an ordinary message in twenty words, and the receiver as well as the sender must be supposed to possess only an ordinary amount of intelligence.

The alleged irregularity in the mode of keeping the telegraph accounts during the first years of the experiment, though it may be important in itself, has nothing to do with the question of maintaining the cheapness and efficiency of the system. There can be no doubt that Mr. SCUDAMORE at one time exceeded the license which is in some degree allowed to other departments of paying expenses out of receipts, instead of regularly transmitting the revenue to the Treasury. It is highly proper that the strictest rules of accounting should be observed by public servants; but, as long as the administration is honestly conducted, no system of book-keeping makes the State richer or poorer. If Mr. GOLDSMID can establish to the satisfaction of the Select Committee his complaints of extravagant management and excessive staffs, he will have done good service. It is satisfactory to find that the Post Office, as represented by Lord JOHN MANNERS, steadily resists all proposals for a diminution of public convenience. The POSTMASTER-GENERAL is willing to assent to some minor changes which would produce an increase of revenue. He believes, not without reason, that when the Telegraphs Bill was passed there was an understanding that press messages should be allowed special facilities. He proposes therefore to retain the charge of a shilling for seventy-five words transmitted by day, or for one hundred words transmitted by night; but he thinks that there ought to be a readjustment of the charge for forwarding by telegraph copies of the same message transmitted to different addresses. By charging full press rates for such copies he expects to obtain 30,000*l.* a year, and to gain 12,000*l.* by an additional charge for ordinary messages transmitted on Sundays or at night. Even without any addition the net revenue is slowly increasing; but it must not be expected that the experience of the penny postage will be repeated. Every addition to the number of letters reduces the proportionate cost of the service; and the same result will be produced in working the telegraphs up to the point at which the staff is fully employed. On the other hand, every message is a distinct operation, occupying as much time and labour as any previous message. As the business expands it will be necessary to increase the number of the staff, unless it is already excessive.

FRENCH POLITICS.

THE Extreme Left in the French Legislature desire to grant an amnesty to the Communists and to raise the state of siege in Paris, Lyons, and Marseilles. Though neither proposal has yet been discussed, the fate of each is already decided. The history of the Commune offers nothing that can entitle its adherents to exceptional clemency. Even in Paris an amnesty would be considered as an evidence of weakness on the part of the Government, while the rest of France would probably accept it as an invitation to replace the present Cabinet by one in which justice should be less completely subordinated to mercy. The proposal to raise the state of siege will apparently be accepted by the Government. Even the late Ministry would have found it difficult to defend the maintenance of so exceptional a precaution now that the elections are over; and as it is certain that no suggestion of its renewal after the 1st of May would have any chance of acceptance either with the Ministry or with the Chamber, the sooner it is put an end to the better. If the late Administration had had the wisdom to pass a fairly good Press law, or if the moderate Liberals in the Assembly had had the courage to reject the Bill which the late Administration did introduce, M. DUFAURE would now have found himself in a more satisfactory position. As it is, he will probably be obliged in the first Session of the new Legislature to propose to repeal a law which he was mainly instrumental in passing just before the dissolution of the Assembly.

In taking his seat as President of the Moderate Left, M. JULES FERRY contrasted the miserable condition of the Ministry under the Republic of 1848 with the happy condition of the Ministry under the Republic of 1876. The one was expected to change the whole face of society; the other is only asked to change a few functionaries. But even the change of a few functionaries seems to be less easy than M. JULES FERRY supposes. It has taken the MINISTER of the INTERIOR a fortnight to remove thirteen prefects and to give twelve more the chance of doing better in another department. It is natural that the extreme Republican party should feel angry at seeing their enemies let off thus easily. They have suffered too much annoyance at the hands of the prefects not to wish to inflict annoyance in their turn. For nearly three years a Republican in the more distant departments has been a man marked out for petty injuries of all kinds. To a prefect devoted to the cause of order no enemy was too small, and even if laziness or magnanimity made him exceptionally careless in this respect, his omissions were probably supplied by a sub-prefect of more than common activity. The days that followed the general election had long been looked forward to by the Republicans as days of vengeance. Their newspapers had been warned, suppressed, or banished from the streets; their public meetings had been forbidden or dispersed; and, while the Duke of BROGLIE or M. BUFFET remained in office, they had been forced to keep silence, lest a worst thing should happen to them. When their enemy had been rejected by four constituencies, and had thought it needless to wait for the meeting of the new Chambers to receive his dismissal, the Republican success was to many Frenchmen rather a triumph over the prefect whom they knew and hated than over the Minister whom they hated without knowing. Every hour that the prefect remained in office was so much deducted from the full measure of victory. M. RICARD would have fallen short of their expectations if he had let twenty-four hours pass without a reconstruction of his staff, and now that, at the end of a fortnight, he has only dismissed a fraction of his subordinates, he will be accounted as little better than a traitor to the Republican cause. Those who observe French affairs from a distance will be glad that no greater step has been taken towards that practice of general dismissal of subordinates on the occasion of a change of Government which has been the cause of so much mischief in the United States. After all, these sinning prefects did but carry out the will, or what they believed to be the will, of their superior officer. In so far as in doing this they offended against a positive law, they must of course take the consequences; and in so far as they confounded the wishes of their chief with his commands, they will have no right to complain if they are regarded as having more than a mere official sympathy with the particular policy with which he was identified. In so far, however, as they merely opposed Republican candidates or harassed Republican journals in obedience to directions from the MINISTER of the INTERIOR, it would be a dangerous precedent to dismiss them. It is eminently important to the stability of the Republic that there should be no association between a change of Ministry and a change of the

working administration, and the more completely the permanent staff is kept unaffected by any change in the Parliamentary staff the less inclination there will be on the part of the people to confound the two processes. Nothing is more necessary for the French people than to get rid once for all of the idea that revolutions are the ordinary means of giving effect to the national will, and nothing is more calculated to keep up this delusion than the practice of dismissing officials when a new Ministry comes into power. That practice creates in all parts of the country a body of ardent supporters of a Cabinet whose existence is threatened, and thus interposes a buffer between public disapproval and the Ministers who have incurred it, which is exceedingly hard to remove. In America at this moment the general distrust which is felt towards the Administration is almost debarred from finding effective expression by the vast body of voting strength which the Administration commands. If the defeat of General GRANT's friends did not mean the dismissal of all the subordinates he has appointed, this voting strength would probably be distributed among the several parties into which the nation is divided. No doubt there may be among the French prefects some who are too much set against the Republic to be fit exponents of M. RICARD's policy, and for these there is nothing but dismissal. But this strength of principle is probably quite exceptional. The majority, when once they know what is wanted of them, will be as obedient to M. RICARD as to M. BUFFET.

A division has arisen in the Republican party as to the propriety of keeping up the separate organizations which it has inherited from the Assembly. The Left Centre and the Republican Left are of opinion that these organizations represent real varieties of opinion, and that the concessions and arrangements which the common pursuit of a Republican policy from time to time demands of each will be best attained if they remain distinct. M. JULES FERRY's speech was in great part devoted to defending this theory. The Republican party, he argues, is not divided by being classified. On the contrary, the maintenance of Parliamentary discipline is furthered by the existence of separate political groups, each limited in number and homogeneous in composition. The mutual sacrifices to which these groups have to consent are more easily obtained when the discussions which lead up to them are carried on by delegates from each group than when they take place in the Chamber itself. The Extreme Left are not of this opinion. They argue that the distribution of the Left into three groups had an historical justification in the late Assembly, but that even there it was only a source of weakness. Now that the historical justification is gone, there can be no reason for maintaining an arrangement so entirely without any merits of its own. The more united the majority is the greater will be its power, and so long as it remains broken up into sections under different names and looking to different leaders, the appearance of unity will be wanting, even if the substance is present. The views of the several groups on this point are perfectly consistent with their general convictions. Where all the sections of a party are mixed together, the strongest section usually determines the common policy. The weaker sections may dislike the road along which they are travelling, but they have no choice but either to continue in it or to turn their backs upon the friends with whom they have been accustomed to act. If they raise any difficulty they are told that in these matters they must submit to be guided by the majority of the party. But supposing that a party is avowedly broken up into sections, the policy that is pursued in common must be a policy which has received the assent of the representatives of every section. The Left in the late Assembly, for example, could not be said to have a policy upon any question, except so far as it recommended itself to the Left Centre, the Republican Left, and the Republican Union. Any step taken by one of these alone merely implied that upon this particular point one section of the Left was not in agreement with the rest. It is natural enough that the Left Centre and the Moderate Left should wish to perpetuate this state of things. If they were merged in a common party with the Extreme Left, they would be enrolled in M. GAMBETTA's army, and any opposition they might offer to his proposals would be regarded as disloyalty to their leader. If, on the other hand, they remain distinct, opposition to M. GAMBETTA will be nothing worse than a possibly injudicious exercise of the veto which each section of the Left necessarily possesses in regard to any common action of the party. How far they will succeed in keeping themselves apart must mainly depend on the strength which they can command in the Chamber of Deputies. If they are weak as compared with the Republicans who desire to see the division into sections abolished, they will by degrees yield to the superior attraction of a larger body. If they are strong, the continuance of the separate groups will be found a convenient method of exerting a moderating influence on the more advanced members of the party.

BRITISH SUBJECTS IN PERU.

WHATEVER judgment may be passed on the general policy of the Foreign Office with regard to the imprisonment of British subjects in Peru, no reasonable person can have a moment's doubt as to the extreme impropriety of the speeches delivered on behalf of the Government in Tuesday's debate. It must strike every one as a most extraordinary spectacle to see an UNDER-SECRETARY OF STATE and the ATTORNEY-GENERAL rising one after another in the House of Commons to enforce indictments against British subjects who are still awaiting trial in a foreign country. Mr. BOURKE pleaded that, as Mr. CAMERON had brought forward the subject, "it was absolutely necessary that "the papers should be produced," and that he had no alternative but to go into all the details of the case against the officers and crew of the *Talisman*. He saw, he said, that the statement he was making met with disapproval from the House, and he knew the meaning of it, but "what was he to do, seeing that the Government "was attacked?" It is amazing that so acute an official as Mr. BOURKE did not perceive that all he had to do, under such circumstances, was to state his reasons for declining to produce evidence which might tend to injure certain of his countrymen then on trial under foreign jurisdiction, and leave the matter to the confidence of the House. There was no necessity whatever for the Government to go into the question of the evidence against the prisoners. It is admitted that there are strong grounds of suspicion against them, and no objection can possibly be raised to their being put on trial. The grievance is their long imprisonment without trial.

It is always safer in a case of this kind to turn to the official papers than to trust to the *ex parte* statements on both sides which are made in debate; and besides it is necessary to observe what has of late been the general attitude of the Peruvian authorities towards British subjects, not only in this case, to which the debate was confined, but in a variety of similar cases which have occurred within the last few years. First of all, however, we take the question of the *Talisman*. There can be no doubt that this steamer, manned in part by British sailors and commanded by British officers, was employed in assisting an insurrection in Peru, and that some of the persons connected with her must have known what sort of work she was destined for, but this knowledge has not yet been brought home distinctly to any one. The officers and crew allege that they went out innocently, without any idea of the object of the voyage, and that, on their reaching Quinteros, in Peru, forty-eight Peruvian insurgents came on board, and by force of arms and superior numbers compelled them to proceed on the voyage for the purpose of carrying out the insurrection. These are all questions for a court of law, and the Peruvian Government had clearly a right to put the men on trial. The gist of the complaint against that Government is that the men were kept in prison for twelve months without an opportunity of vindicating themselves. It was held that the question whether the vessel was a prize must first be settled, and the proceedings were very slow. When at last judgment was given against the ship, the crew were tacitly acquitted; but three officers—of whom one has since been murdered by some Peruvian fellow-prisoners—were detained for trial. An appeal was taken against this decision, during the protracted hearing of which the crew were still imprisoned, and it was not till the 17th November last, having been in durance since the previous November, that they were released. Meanwhile the captain and engineer have been for sixteen months in prison, and have not yet been tried. The latest despatch on the subject from the British Consul at Lima states that the process makes but slow progress, the Peruvian Foreign Secretary

answering every remonstrance by the stereotyped reply that "the Executive cannot interfere with the judicial "power."

Such is the position in which our Government now finds the question; and it must be admitted that it is by no means so simple and easy as some people think. It is very difficult for one foreign Government to compel another Government to accelerate its judicial proceedings; and even in our own country there are occasionally awkward delays in such matters. Allowance must also be made for the peculiar circumstances of such a country as Peru, where a high degree of judicial efficiency can perhaps hardly be expected. On the other hand, however, every State which sets up as civilized is bound to adapt its laws to the recognized principles of justice, and the question therefore is how far the Peruvian Government is in fault in this respect. Taking the case of the *Talisman* by itself, it may perhaps be thought that there was in some respects an excuse for the dilatoriness of the proceedings, as, for instance, the disordered state of the country and the consequent accumulation of criminal business, and the alleged necessity for deciding the question of prize before going on with the prosecution of the crew. But, even admitting this, the period during which the men have been kept in confinement without trial is quite unjustifiable, and there is reason to believe that much of the delay was intentional. Indeed Mr. ST. JOHN, British Consul, remarks that the more he interfered to prevent unnecessary delay, the more determined the judges seemed to be to waste time. The impression that the administration of justice in Peru is conducted in a manner extremely unfair and oppressive to foreigners is strongly confirmed by the official despatches which have just been published, and which include other cases besides that of the *Talisman*. Mr. MARCH, another Consul, informs Lord DERBY, in the plainest language, that "prisoners are taken into "custody and lodged in gaol upon charges which the simplest "examination would at once show were unfounded or unworthy of notice; any ill-disposed person, by having recourse to the authorities, can satisfy his vindictive feelings by causing the arrest and imprisonment of the object of his dislike, or inflicting other serious inconveniences." Another time he says, "It is a notorious fact that accused persons are thrown into prison and remain incarcerated for unreasonable periods without any opportunity of defending themselves." A number of cases of this kind are mentioned. Thus two English boys, BELL and STERLING, having heedlessly joined a mob in chase of a native who had just stabbed an Englishman, and who either jumped or was pushed into a river and drowned, were imprisoned for eleven months in a "pestilential dungeon" awaiting trial, and then sentenced to six years' penal servitude, which was afterwards changed, first to fifteen and then to nine years' imprisonment, while the ringleaders of the riot were allowed to escape all punishment. Again, the captain of one of the Pacific Steam Navigation Company's steamers was kept a prisoner for six months on a false complaint which might at once have been disposed of. Mr. MARCH also mentions other cases in which British subjects had been incarcerated for various periods—in one case for two years—without trial or sentence. On the other hand, when an Englishman was murdered, the murderer mysteriously escaped from prison. Mr. MARCH assures Lord DERBY that, "whatever may be the cause of "these delays, it is evident that grievous injustice and untold suffering, both mental and physical, are inflicted upon "British subjects"; and this letter is dated as late as February last year. Mr. ST. JOHN corroborates this testimony. "MORRIS," he says, "remained in prison above two years, "and was then acquitted, there being really no evidence "against him." Again, in last September he tells Lord DERBY, as an illustration of what goes on in Peru, that five men who are named "were kept in prison for terms varying from two "years to ten months, and then discharged for want of proof "of their criminality." All this would seem to prove that the delays in the *Talisman* case were by no means exceptional, and that British subjects in Peru are constantly in danger of being illegally imprisoned. There is a secondary question as to the manner in which the prisons are managed. The official evidence seems to show that the treatment of the officers and crew of the *Talisman* was not worse than that of native prisoners, but this seems from all accounts to be bad enough. In the case of the two boys BELL and STERLING, Colonel HARRIS describes the overcrowded dungeon cut out of the rock in which they were confined for ten or eleven months as "a disgrace to humanity; horrid, "foul, and stinking," so that he could not approach it without vomiting. Mr. NUGENT also says that "no language is "sufficient to convey an adequate idea of this filthy and pestilential hole"; and he adds that "even the best prisons in "this country are far below anything you can conceive in "England." Mr. JERNINGHAM gives similar testimony. According to the Constitution of Peru, he says, prisons are places of detention, not of punishment, but "very often "they are so bad that they are just the contrary."

What did not come out sufficiently in the debate in the House of Commons, but is shown very strikingly in the official papers, is that the case of the *Talisman* is not an isolated case, but only one of many cases, and certainly not the worst. During the whole of the last two years the Foreign Office has been continually receiving complaints of the disgraceful way in which the Peruvian authorities were treating British subjects, and has, to do it justice, been ready enough to approve remonstrances on the spot, but only as long as nothing serious was contemplated. In one case we find Lord DERBY, in a despatch in October 1874, condemning the illegal seizure of a British subject on board a British ship, and his further illegal detention on shore, "as a gross outrage"; and then in June last, when there was a question of enforcing compensation, he suddenly discovered that the Government was precluded from insisting further upon an apology and indemnity from the Peruvian Government. Yet the Court at Callao had actually declared itself incompetent to try the case, and the Government of Peru had also acknowledged that no authority for the arrest could be shown. And we find the same timid shrinking from responsibility in other cases. The Foreign Office has no objection to any amount of verbal protest, but stops there. This is also conspicuous in one of the incidents of the *Talisman* case. After capturing the vessel, the Peruvian Government pretended that the crew must wait for trial till the Prize Court had given its decision; but in the meanwhile they took the liberty of hoisting their own flag and making use of the ship and part of the crew for the purposes of the war. Mr. MARCH very properly protested against this outrage; but the only answer was that the Peruvian Government at the time wanted a ship very badly, and this was the only one it could lay hands on. Lord DERBY "approved" Mr. MARCH's remonstrances, and then the question was allowed to drop. Yet there can be no question as to the gross and impudent illegality of the act committed by the Peruvians. Although the *Talisman* sailors were arrested in September 1874, it was not till the following September that Lord DERBY "at length," as he said, "felt compelled to remonstrate with the Government "of Peru"; and thus the matter stands. It is said indeed that the Government has determined to insist on the immediate trial of the captain and engineer; but if it confines itself to the ordinary kind of remonstrance, it is not likely to produce much effect. The general impression derived from the correspondence is certainly that there has been a want of vigour in the action of the Foreign Office, which encouraged the Peruvian Government to treat its verbal protests as little more than a matter of form. On the whole, it must be thought that in this case, as in some others, the Ministry has not adhered to the traditional spirit of its party; and it is certainly startling to find it exposing itself in this respect to Mr. GLADSTONE's criticisms.

ELECTIONEERING AT NORWICH.

"THE price of votes has declined, but corrupt practices "at election times are spread over a much wider "area of electors." This is substantially the result of the inquiry by the Royal Commission into electoral corruption at Norwich. The Commissioners find that corrupt practices extensively prevailed both at the election of 1874 and that of 1875, and that there is a hopelessly corrupt and depraved electoral element largely existing at Norwich. It appears that for a number of years past there has seldom been an election there which has not been followed by a petition and the unseating of a member. Sir H. STRACEY, for instance, who was elected in 1868, was immediately unseated; Mr. TILLETT, who secured the vacant seat, was also unseated; then there was a lull until Mr. TILLETT was again elected, on the promotion of Mr. HUDDLESTON to the Bench, and again unseated; and, in consequence of the report of the Judge on this case, a Commission was appointed. The Report now made "states that the political

"traditions of the city carry back the corrupt inclin-
"ations of the constituency to an almost remote period." Some witnesses, however, think there has been an improvement "within the last forty years"; and the Commissioners are disposed to accept this view to the extent that "direct "cash-in-hand bribery, once so prevalent, has been almost "superseded." The bribes, in short, are less per head, though, being spread over a larger area, they swell to a heavy sum in the aggregate, and it is thought worth while to invest them in a flimsy disguise. The prevailing form of corruption at the elections of 1874 and 1875 was the engaging of men at so much a day under the names of messengers, bill-posters, watchers, special watchers, night watchers, protectors and procession men, door-keepers, &c.; and the Commissioners add that there can be little doubt that this kind of employment has existed in Norwich to a considerable extent for many years both at Parliamentary and municipal elections. The class which is subject to this kind of bribery is said to be very numerous, but not exorbitant in its demands. What is called the regulation scale is 3*s.* 6*d.* a day during the canvass, with a bonus of 1*s.* 6*d.* extra for the polling-day. One of the witnesses had the impudence to tell the Commissioners that, in order to do justice to the distribution of circulars, it was necessary to send out two men at a time with four or five circulars between them; otherwise, if more were given, they would very likely be burned instead of delivered; and, besides, there was the advantage that two men could divide the labour—one reading the voter's address, and the other looking out for the house. It is stated that no fewer than 3,058 paid agents were employed at the election in 1875, and it may be assumed that most, if not all, of them were electors, and used their privilege of voting. A hundred public-houses were also enlisted in the service of candidates under the name of Committee-rooms. The Commissioners point out that this system of bribery is not confined to the Parliamentary elections, but is also practised in those of the municipality. The latter, in fact, are used as a kind of drill or rehearsal for the more important contests. In this way the corrupt body of electors are kept well in hand and regularly exercised, so that when a Parliamentary election comes round the managers on each side know where to lay hands on their men, and how far they can trust them. The Sheriff happily described the municipal elections as schools for the education of the people in corrupt practices at Parliamentary elections.

An analysis of the electoral roll of Norwich sufficiently explains the prevalence of corruption and its principal source. The freemen number 1,674, which is some three hundred less than their strength ten years ago; the freeholders are 13,331, which is much the same as before; and the householders have risen from 2,607 to 11,941. This increase is of course mainly due to the Reform Act of 1867, which at once made an addition of 7,000 voters, and the number has since been increased by growth of population. It is easy to trace the course of corruption through such a constituency. The old freemen here, as elsewhere, were naturally corrupt, and made a regular market of their votes. The trade has been kept up through generations, and every freeman when he reached the legal age looked forward to a steady income from this source. The Act of 1867 suddenly added to the constituency a large body of people of much the same social standing as the freemen, and with the same appetites and ideas of the value of the franchise—those, in fact, who had been standing outside the pale and envying the gains which men of their own stamp were pocketing inside on account of ancient privilege. The newcomers were perfectly ripe for competition with the old freemen, and the range of corruption was thus enlarged. The economical law of supply and demand, however, here comes into operation, and, the number of voters ready to be bought having been greatly increased, it naturally followed that they could not succeed in keeping up the old standard of prices. The money spent in bribery had now to be shared among a larger class, the cash-in-hand system died out, and a fictitious system of employment was introduced instead. The sums paid to electors were less than before, but then the money devoted to such purposes had to be spread over a wider area. Both the old freemen and a large proportion of the new householders now combine to form the class of voters who are described by the Commissioners as flocking in crowds at election times to the various committee-rooms throughout the city, besieging the managers, and clamouring for an engagement on any pretext or under any name. The general character of the population and industry of Norwich naturally tends to a large deposit of what Mr. Bright has euphuistically termed the residuum; and there can be no doubt that, like other unsavoury deposits, it is very bad for the general health of the community. It is calculated that there are in Norwich from three to four thousand people who are regularly bribed at an election on one side or the other; and it might perhaps be thought that the other eleven thousand, who are supposed to be honest and respectable, might be able to counterbalance the residuum, and preserve the reputation of the city. If the honest men held together, they would no doubt neutralize the corrupt element to a certain extent; but then they are divided on all sorts of questions; each side has its own end to gain in an election; and whatever body turns the scale at a critical moment necessarily acquires a hold upon the rest. When the Commissioners inquired whether an agreement to abstain from paying for votes in any shape could not be maintained, they were assured that it was impossible to prevent bribery by such means, as the class open to bribery was "so "numerous and accessible, and its political views so un-"settled," that it would always be a temptation to some one to come in and take advantage of its venality.

This, however, is not the only noxious effect of the existence in a constituency of a large element of corruption. It creates a bad atmosphere all over. It is obvious that the existence of a multitude ready to be bribed implies to a certain extent the existence of candidates who have no scruple as to getting into Parliament by such means; and when a candidate goes into this kind of traffic, there are many other ways of bribery than the good old cash-in-hand system or the modern device of giving wages for fictitious work. The public patronage of members of Parliament has been sadly diminished in modern days; but still it has not entirely disappeared. A member can do a good deal both for the town at large and for his supporters personally; and if he happens to be also a large proprietor, or manufacturer, or railway director, he has other means of obliging his friends. People in a town are apt to find their level as water does. It seems hard that the pot-wallopers should get their 3*s.* 6*d.* a day, and that other folks should get nothing. It has also been observed that candidates and members at Norwich have thought it worth while to be very public-spirited and charitable, and to spend money freely at odd times in a sudden scattering of coals or handsome subscriptions to public institutions. And thus the poison is gradually disseminated through the whole of the society which is exposed to its contagious influence, and it becomes rotten to the core. Norwich is a shocking and frightful example of this sort of putridity.

The logical conclusion from the Report of the Commissioners is of course obvious enough. The gangrened part of the constituency, which infects the rest of it, should be at once cut out. Here are some three thousand persons who are so lost to all sense of the obligations of citizenship that they are ready to sell their votes for the moderate figure of 3*s.* 6*d.* a day when an election comes round; and as long as this element remains in the constituency, it cannot possibly be in a healthy condition. Everybody knows this, but few people, we suspect, have the courage to face the legitimate conclusion. The corrupt voters have got their votes, and while Norwich remains a constituency it is supposed that they must necessarily remain a part of it. This, of course, is pure superstition, but we are aware of the influence which such superstitions exercise, and know what to expect. The Commissioners themselves are content to publish their voluminous Report and schedules, and propose nothing in the way of remedy. The only alternative to excising the unsound part of the constituency is to disfranchise the whole of it, thus bringing down on the heads of all the penalty of the sins of a minority. Since it is quite clear that Norwich in its present condition is hopelessly corrupt, and, if let alone, will naturally continue so, this draconic treatment would no doubt be justifiable; but some sentimental regret may be permitted that the common-sense course cannot be taken, and the corruption got rid of by itself, so as to allow the honest part of the community a fair start.

THE PARAMOUNT POWER.

WHEN an ex-Premier talks about the "political supremacy" of certain important native States in India, and uses terms which imply that we are about to assume there some dominion which we do not properly possess, it is scarcely necessary to speculate on the amount of knowledge which meaner men are likely to possess on the subject. Mr. Gladstone has been so captivated by the fascination of Homeric studies that he has evidently had no time to master the leading principles of an Empire which has been entrusted to men who were his colleagues, friends, and associates, and over which one of his own disciples still presides. We shall now endeavour to show that there is not, and has not been for many years, any "political supremacy" in India except our own; that this doctrine has been prominently asserted on scores of occasions by all the eminent men of both parties who have contributed to build up and consolidate our Indian Empire; that it has long animated the despatches and the treaties of the Indian Foreign Office; that it has never been seriously questioned by the leading princes of India during the last fifty years; and that it was as clearly enforced by the Governor-General who still signed himself the servant of the East India Company as it is now inherited by the nominee and delegate of the Crown.

The germ of this theory might be traced so far back as the vigorous administration of Warren Hastings. When he discontinued the payment of tribute to the Emperor of Delhi, when he would have cancelled a treaty entered into by the Government of Bombay, when he imposed a fine on Cheyte Sing at Benares, when he interfered roughly in the affairs of Oudh, Hastings merely foreshadowed an ascendency which was more and more developed as one native Power after another sought our protection or succumbed to our arms. It would be difficult to prove the prevalence of this idea by an appeal to the acts of Lord Cornwallis or Lord Teignmouth. But there can be no doubt that it flavoured the despatches and inspired the councils of Wellesley; it stands out unmistakably in the policy pursued by the Marquess of Hastings towards the heads of the Mahratta Confederacy; it probably passed through the mind of the humane and philanthropic Bentinck when he doubted about assuming the administration of Oudh; it was publicly announced a score of times in the manifestoes and minutes which flowed in a continuous stream from the pen of Lord Dalhousie; it coloured those stately addresses with which Lord Canning, after the Mutiny, sought to calm the apprehensions or to animate the loyalty of Nawabs and Rajas; and it is the core of his celebrated State paper on adoption. Some readers, who may not choose to place implicit confidence in the arguments of Lord George Hamilton, will hardly refuse credit to the statements of Mr. Grant Duff. The arrangements by which we regulate our dealings with native Courts have been the subject of hundreds of despatches, and of State documents which now fill seven volumes of print. Sometimes these contracts are called Treaties; sometimes they take the form of *sunnuds* or grants. Here and there they are termed *Ikrar-namahs*, or *Kaul-namahs*, *i.e.* engagements in which all pretence of equality of position disappears. But there cannot be any reasonable doubt that, whatever they are called, these documents express the equity, the generous forbearance, the politic sagacity, the graceful concession, the determination that anarchy shall cease and that wars shall not even be contemplated, of the British Government, and not the shadowy claims or pretensions of either Rajpoot, Mahratta, Mahommedan, or Sikh.

We shall give instances to bear out these assertions. To put the matter briefly, there is no independent sovereign in India at all. Nepaul may be excepted, but the rule of Jung Bahadur hardly extends to the plains, nor do the Goorkhas in their hills form part of any great Indian confederacy or family of chiefs. And even Nepaul is prevented from taking into its service any British subject, any American, or the subject of any European State, while it is bound to submit to our arbitration any differences which may arise with the Raja of Sikkim. Taking, then, the other chiefs according to their size and importance, we begin with the Nizam and the Mahratta Houses. The former, it is well known, represents the Subhabdar of the Deccan, who once was to the Emperor of Delhi pretty much what a Lieutenant-Governor is now to a Viceroy. For years the Nizam had to maintain for us a separate army, which was regularly officered by our own military servants, and for which he was bound to supply sufficient funds. In 1853 a considerable portion of territory was transferred to our management, simply because the Nizam had neglected to pay these allowances, and had got into arrears. Subsequently the debt was cancelled, and other arrangements were adopted. Pensions to widows at Hyderabad have been actually guaranteed by the British Government out of the Nizam's revenues. Some years ago the late ruler was not allowed to dismiss his own Minister when he desired it; and if these proofs of dependence are not thought sufficient, what can be said about the rule as to succession to the State, which, if in accordance with custom and Mahommedan law, has been offered by the British Government, and gratefully accepted by the Nizam? Still more marked proofs of inferiority run through all our engagements with Scindia, beginning from the year 1804. His claims to tribute from other chiefs have been disallowed. The number of his forces of all arms has been minutely defined. Exchanges of certain districts and villages with other minor Powers have been peremptorily exacted. The right of adoption has been conferred on this ruler in virtue of "services" rendered by him to us in the Mutiny. The government, during the minority of the ruler, was for years conducted according to the advice of the British Resident. Scindia pays a subsidy towards the construction and repairs of a road which passes through Central India; and British guns and bayonets occupy a fort in a strong position at Gwalior itself, so that in the course of half an hour we could demolish the palace and blow up the native bazaar. Holkar, the inferior of Scindia in wealth, in military forces, in extent of possessions, fares no differently. He has received permission to adopt, and on his own accession he actually had to present a *nuzzur*—that is, a tribute from an inferior to a superior—to the British representative. It is needless to pursue the conditions under which smaller Mahratta chieftains hold their possessions. Our dealings with Baroda can scarcely have passed out of mind. We turn to princes of less importance but of higher lineage and unbroken descent, who are constitutionally brave, and whose history and personal adventures have been occasionally characterized by what we may fairly term a chivalrous spirit. They pass before us, eighteen in number, of which fifteen are Rajpoot, two are Jat, and one is Mahommedan. Ten of them, including Oodeypore, Joypore, and Joudhpore, pay sums as tribute which, if not of great significance to the Imperial Budget, are by no means trifling. All have thankfully received Lord Canning's permission to adopt. In some of them a Council regulates internal affairs, with the aid and advice of the Political Agent. None can enter into any negotiations with other petty States. The British Government has again and again interfered with advice and remonstrance whenever any Rajpoot prince has claimed too much or has got too little from his *thakoors* or nobles. Some of these proud and sensitive princes have signed separate papers expressing contrition for past misconduct and promising amendment for the future, in language which would have satisfied a Tudor or a Stuart. All are quite sensible that they owe their preservation in the eventful period of 1817 to the intervention of the British Government. And even the mild and unaggressive Lord Auckland was compelled in 1839 to occupy the capital and country of Joudhpore with a considerable force, for the space of five months. Instances where the Paramount Power has not only been restrictive but creative can be adduced. The Hindoo dynasty which had been supplanted by the grandson of a Lahore trooper was actually called by us out of obscurity to sit on the throne of Mysore. At the present time, during minority, the whole province is administered by British officers. The same line of argument applies to Kashmir. The Maharajah of Jummoo is a literal creation of the British Government, and governs territories which nominally were subject to the Lahore Durbar before the Sikh campaigns. A still more pertinent example of king-making is to be found so far back as the treatment of the Vizier of Oudh. Even Lord Teignmouth could set aside one claimant in favour of another, and invent for him the title of King; but oddly enough, on the other hand, the native population never chose to adopt the loftier phrase. Up to the day of annexation the ruler of the country was talked of as the *Nawab*, and his dominions as the *Nawabi*.

We have neither time nor space to go into the circumstances of whole classes of those minor, or mediatized, or unimportant chiefs who impart variety to the map of India, and present a lively contrast to the regularity and method of our rule. In Bundelcund alone there are thirty-six chiefs, only four of whom have the power of inflicting capital punishment. And, even in their cases, this exercise of one of the attributes of internal dominion is a distinct acknowledgment of the right of the Paramount Power to withhold as well as to grant it. It is a fact, remarkable even in the long catalogue of acts which prove concessions on the one hand and feudal obedience on the other, that the Raja of one of these four prominent Bundela States is said to have presented a *nuzzur* to Lord Hastings in 1817, with the observation that it was the first occasion that his family had acknowledged the supremacy of any other Power. It can scarcely be argued that there is any pretence of independence in the tributary *mahals* of Orissa, in the Cossyah and Jyntia chiefs on our North-East frontier, in the congeries of States which intervene between Bombay and Central and Upper India; in the Rao of Kutch, or the Nawab of Bahawulpore. They exist because their existence concerns the good faith and equity as well as the sound policy of the Queen's Government. They govern; but even their rude notions of kingcraft are moulded imperceptibly by the influence of a higher standard and a purer faith. They are administered temporarily whenever financial ruin, feminine intrigue, or the personal ascendency of some unprincipled counsellor renders our interference indispensable. And they descend or "change from hand to hand," because we have agreed to recognize that extraordinary sentiment of the Hindoos which regards an adopted son as no whit inferior in any one respect to a son of the body.

It is perfectly true that in certain matters a considerable amount of independent action is conceded to these rulers, and that it is not very easy to find out the exact points of inferiority which would warrant us in thinking the Duke of Argyll to be a bigger person than Scindia or Oodeypore. These potentates have mints of their own and coin money of divers standards. They collect and spend their own revenues; they levy certain transit duties; they ordinarily appoint and remove their own Ministers; they establish courts of criminal and civil justice, police-stations in the country, and superintendents of bazaars and of police in the towns. There is no check on their liberality, their predilections, or their caprices, within certain decent limits. One Raja is a strict game preserver and has divers royal chases or parks swarming with deer, wild hog, jungle fowl, and

peacocks. Another has a prejudice in favour of orthodox Brahmans of the old school. A third has a mania for erecting summer palaces. A fourth has an arsenal filled with discredited muskets and honeycombed pieces of artillery, with which he plays at soldiers. Here may be seen a native Ministry not much changed in nomenclature from the days of Vikramaditya. There it has pleased the ruler to mimic the titles and additions of the Imperial Government and to dub one functionary by the title of Legal Member, and another by that of Financial Member of Council. In one principality much of the revenue is spent on the restoration of old temples and the rewarding of swarms of jugglers and dancing-girls. In another it is partially devoted to a new hospital and to an English school. To all these fancies the British Government says nothing, except now and then by quiet remonstrance, by genial encouragement, or by stern rebuke. But, for all this, it is certain that we are always ready to interpose with something beyond vague phrases, whenever peace and tranquillity are concerned, or evil example spreads a little too far. There are a quantity of things which natives are permitted and even encouraged to do. There are certain things which they cannot do, and which they know perfectly well that they will never be allowed to do. We come down on them high-handed, in a way of which even Prince Bismarck would never dream, and write despatches which would be too strong for his pen of steel. Besides certain things to be done and other things to be let alone, as specified in solemn treaties and engagements, all princes, whether sprung from the mythical Rama or the robber Sevaje, know perfectly well that they must not make war on each other, nor exchange territory without reference to higher authorities; still less could they sell one foot of land to the representative of any Continental Power, or make a concession to Baron Reuter. They are told explicitly that they must put down suttee, the practice of burying lepers, the swinging witches to death, the dragging criminals through the streets at the feet of elephants, impalement, torture, and the like. It is no use to search for European analogies, or even to lay stress on the precedents afforded by the Mogul Emperors. Every Viceroy of real capacity and strength of will has assumed and acted on this doctrine. Lord Dalhousie was perhaps more explicit than others, and constantly brandished the Paramount Power in the face of the Court of Directors and the princes of India. Some may think this a proof of his sagacity and clear-sightedness, and may fairly say that Lord Canning's graceful and well-timed policy was only possible because way had been made for it by the vigour of his predecessor. But even those who think otherwise must admit that what Lord Dalhousie did he did openly, and that for eight years he boldly promulgated this doctrine at all times, while neither the Press, nor the Parliament, nor the Ministry of the day ever seriously tried to stop him. The Paramount Power at his time had passed out of the region of discussion. Amongst the latest acts of Lord Lawrence's Government were two despatches precisely in point. In one he told the Rao of Kutch that he must not allow his subjects to traffic in human flesh, even when they were across the seas and out of his dominions. In another he plainly intimated to the Maharajah of Joudhpore that he could have no reason to complain if he were set aside for maladministration and a force were quartered on the capital to prevent bloodshed between him and his nobles. In short, it may fairly be asked, can "supremacy" or even "independence" consistently be predicated of rulers who cannot add a soldier to their army, part with a few yards of territory, impale criminals, or let widows burn in conformity with a couplet from the Shastras, insult their nobles, torture their ryots, repudiate their creditors, disinherit their successors, or even ill-treat their wives? There is, in fact, one motive and one restrictive power in all British and native India; it has been exercised by a series of Viceroys; and whether it be thought politic or impolitic to reduce it to a formula, it is destined, we believe, to survive the doubts of Mr. Gladstone and to defy the predictions of Mr. Lowe.

SOME PARIS FASHIONS.

"LADY G——, elle, en sa qualité d'Anglaise, a trouvé moyen de mettre de l'originalité jusque dans sa charité. Voulant soulager la misère des ouvriers des chantiers de Depfort, elle a loué pour un certain temps les salons de rafraîchissement du théâtre de Greenwich, et tous les soirs on pouvait la voir, assistée de deux pages, servant les verres de limonade ou de brandy à ceux qui se présentaient. Vous jugez si l'affluence fut considérable." It must always be matter for regret that this fact was not more widely known at the time, whenever that may have been, of its occurrence. Lady G—— was perhaps afraid that, if the English public heard of her undertaking, the "affluence" might become even too considerable. The incident is related by the clever French author who writes under the name of Bachaumont, and who assumes to be particularly well versed in the ways and technicalities of English life. Some little time ago he and M. "Fervacques" produced together a novel, with the English scenes of which he was credited. In one of these the characters went off to see a cricket match in which the celebrated club of John Zingari took part. The origin of this mistake is obvious; but it is a good illustration of the marvellous self-confidence with which Frenchmen who have a certain acquaintance with English society jump to a conclusion which seems to them inevitable. The book (*Les Femmes du Monde*) from which we quote the remarkable anecdote given above contains various other examples of the strangely wilful ignorance of foreign names and customs displayed by French writers. There is a conversation between two ladies who are discussing the misfortunes of "ce pauvre prince X——." "It is terrible," says one; "Lord Lyons assures me that he is reduced to giving music lessons in London," and she goes on to reflect how embarrassing the payment must be to his pupils. Here the other's superior knowledge asserts itself. "Lady Nawkins has found out a way of getting over the difficulty. When the lesson is finished she places a flower in the prince's button-hole. Its stalk contains a bank-note." "Ah! an English edition—essentially practical—of Maison-Rouge's communication with Marie Antoinette." Most teachers of music, when they hear of a lesson being paid for with a bank-note, will wish that there were more such "essentially practical" pupils as Lady Nawkins. The habits of American life are less kindly treated than our own by this author. "Je pourrais citer," he writes, carefully marking his knowledge of English with italics, "telle comtesse—*sportwoman* émérite—qui, sous prétexte d'américanisme, couche, vingt nuits sur trente, étendue sur le tapis de son boudoir, terrassée par les flacons de gin et de brandy avec lesquels elle s'enferme pour *to yet tipsy* à la mode de Boston." It is perhaps newer to hear of Boston as the home of drawing-room drunkenness than of the spectres at the *polytecnic hall*, which are elsewhere introduced as a novelty by the writer.

Although a Frenchman could hardly learn much of value concerning the ways of strange lands from M. Bachaumont, it is possible for a foreigner to find a good deal of amusement and interest in his writings so long as they deal with the affairs of his own capital. It is not long since M. Fervacques, of whom we have spoken as M. Bachaumont's associate in one literary venture, produced a novel on his own account, with which the Parisian critics very justly found fault, because, like M. Dumas's comedies, it was too didactic. But M. Dumas's object is, if we are to believe him, to instruct the world on the broad principles of right and wrong. M. Fervacques aimed only at showing what excellent things were the Second Empire and submission to priestly tyranny. Something of this intention is evident also in M. Bachaumont's writing, so that when he touches upon the advantages of convent life, and speaks of the thousand threads which start from the doors of a fashionable convent frequented by "nos croyantes de qualité," and form themselves into benevolent nets, one sees the partisan too clearly under the mask of the writer of amusing trifles. In one such convent, for which M. Bachaumont has a special esteem, the sisters devote a good deal of time and energy to making up desirable society marriages.

In another part of his theme the writer tells us of an effect of the late war which is not generally known. It seems that during it the Parisian ladies grew so accustomed to the smell of powder that, in default of more serious occasions for its use, they find themselves obliged to employ it against hares and partridges. The greater number of these *sportwomen* go out shooting in a short skirt and tall boots; but there are some who have adopted a special costume, consisting of a coloured velvet blouse, bound by a morocco belt adorned with metal plates, and a pair of wide Zouave trousers tucked into long buttoned boots, which boots, we learn, are in themselves worth a whole poem. But it is not the boots alone which make the presence of ladies at a day's shooting desirable. They compel the party to a moderation of language and behaviour which, it seems, is quite unknown when no ladies are there. The best-bred men are in the habit of making the shooting of rabbits or birds an excuse for assuming the aspect of "communards en confection de barricades," and adopting a method of speech as appalling as their costume. While they are employed in shooting it is impossible to engage them in conversation upon any other subject, and this is not to English ideas such a grievance as M. Bachaumont makes of it. But we can sympathize with his indignation at the "repas de chasse" with which the party ends, where, with the excuse that only men are present, the conversation always, according to his account, becomes horribly gross. Whether his statements are somewhat exaggerated or not, there is no doubt a basis of truth in this remark:—"Il en est toujours ainsi en France, d'ailleurs, chaque fois que le sexe qui porte la barbe se trouve seul à une table." The writer has thought it necessary to add, "Vienne au contraire s'y asseoir une femme, et tout change"; and he could hardly have given a more striking proof that the tendency he deplores does exist among Frenchmen, as indeed it also does among other Continental peoples, and especially among the Germans, who for some unexplained reason have acquired a reputation for immaculate respectability.

Another subject for indignation is found in the extreme tolerance extended nowadays to smokers in most Parisian salons. The prevalence of this fashion, of which the result is that after dinner all the men rush off to smoke together, and talk in the same way which they affect at a "repas de chasse," is attributed to the importation of barbarous customs from other nations. In the eyes of a Frenchman of the old school it is a barbarous custom which in England separates men and women after dinner; and no doubt a yet more savage element is introduced when the men return, having "satisfied their mania," and bring with them the poisonous odour of cigars and cigarettes. We should be inclined to think that this extreme tolerance may be a reaction against the formality and distance which are to a great extent observed in the intercourse of men and women in France. The inevitable result of too much repression is license. It is instructive to note the Parisian's

alarm at the slight invasion of ceremonious respect for women implied in men going off to the smoking-room after dinner. If they were to stay and make love to their friends' wives all would be in proper course. True to his Imperial colours, our author is careful to observe that the Empress did all she could in the latter days of the Empire to combat the barbarous fashions introduced by the foreign hordes who came to flash their rude splendours in Paris; but it was too late. "Tipplings" *à l'américaine*, and the habit introduced by a Russian princess of smoking cigars as thick as one's arm, had taken root too deeply. An evil in Parisian society for which no extraneous cause is assigned is found in the quantity of fat young men who are to be observed in the drawing-rooms of the great. *Le high life* presents an exhibition of monstrosities, Cherubinos "avec du ventre," Don Juans and Romeos who look like barrels dressed out by Poole or Alfred. To make up for this, the fashion of wasp-like waists has returned in full force among Parisian young women. Troops of girls may be seen in society whose object seems to appear as transparent as ghosts. They never eat soup lest they should disturb the aristocratic pallor of their faces, and they never eat meat for fear they should grow less thin. They support life on sweetmeats and kickshaws—a phantom life which fades away before any trial. As to the sweetmeats, it may be noted that girls who live upon them to avoid fatness are singularly ill advised. There seems some likelihood of this form of dangerous folly spreading, so far at least as the small waists are concerned, to England, where another evil fashion of which M. Bachaumont complains has to some extent prevailed for a long time. The indifference of theatrical audiences in Paris has, he says, grown remarkable. The public remain impassive in spite of the manager's efforts to rouse them into life. They look without seeing, and listen without hearing. Now and then the most violently excited spectators interchange expressive looks, and that is all; they never give an audible form to their feelings. This listlessness began by being a matter of fashion, but has by this time passed into the blood. This statement, if it have any truth, is enormously exaggerated, and we are disposed to think that when it was penned its writer must have been still smarting under the just sense of another and a different injury caused by consideration of the monstrous custom of *étrennes*, that social black-mail which is execrated by everybody except the shopkeepers, and of which the odious existence becomes nevertheless more lively every year. When one calls on a lady at the New Year with a grudgingly purchased offering in one's pocket, and she says with a gracious smile, "Je vous la souhaite bonne," the temptation is great to reply, "Mais pourquoi donc me la rendre chère et malheureuse?" Perhaps, however, the most distasteful feature of the Parisian New Year's Day is that upon which M. Bachaumont dwells—the expensive and complicated toys presented to children, and immediately taken out of their hands again for fear they should spoil them. "Polichinelle a cessé d'être un bon homme dont on perçait la bosse pour voir ce qu'il y avait dedans, c'est un artiste aussi expert que le pensionnaire des *Burattini*." As for dolls, they have grown into tall waxen girls, dressed according to Worth's latest devices, who walk about and say papa and mamma more plainly than their little owners. The result of this mistaken generosity is that when a girl grows up she finds herself embarrassed with a kind of miniature Madame Tussaud's, composed of all the dolls which were saved from her childish hands. Yet more objectionable is the practice of giving *étrennes* to little children in the form of money, and we could certainly wish with M. Bachaumont that all such presents were treated like that of a rich banker who gave his little grandson a note for a thousand francs in exchange for his good wishes for the year. Presently the mother, going to look for the child, found him in tears. "What is it, my darling?" she cried. "Did grandpapa give it nothing?" "Yes, yes." "What was it then?" "He gave me that nasty old picture that I've thrown into the fire."

Our author is loud in regrets for the old custom of merely interchanging visiting cards at the New Year. Perhaps there is something insipid in this, and the English Christmas and New Year's cards, some of which are very graceful and pretty, are an improvement upon the bare inscription of names; but either fashion is better than the ridiculous tax of the *étrennes*.

ST. PATRICK.

OUR Irish fellow-subjects have been engaged, both here and elsewhere, in their accustomed demonstrative celebration of St. Patrick's Day, though, we may hope, here at least—through Cardinal Manning's active exertions in the cause of temperance—with something less than their accustomed excess of inebriation. One advantage certainly the Celt may claim over the Saxon in the matter of his patron Saint. The history of St. Patrick is no doubt shrouded or illuminated by a haze of mythological splendour; but still there remains at bottom a substratum of solid fact. We wish as much could fairly be said for the legends of our own heroic patron. There is, or was, a story current at Rome, the accuracy of which we cannot guarantee, and which we trust may be fabulous, for the sake of "St. George of merry England." It is said that on St. George's Day a meditation used to be read out in the Chapel of the English College, divided into three parts or points, which ran as follows:—"Point I. Let us consider that we know very little indeed about St. George." After due time had been given for a devout apprehension of this fundamental verity, which may perhaps have suggested the consoling reflection "omne ignotum *pro mirifico*," followed "Point II. Let us consider that the little we do know is very doubtful." To say nothing of the somewhat Hibernian method of conveying this supplementary information, it does seem hard that, when there was so little to begin with, that little should not be left alone. But, to clinch matters by excluding once for all any illusory anticipations of future enlightenment, the meditation closed with a third and last point:—"Let us consider that it is quite certain we shall never know anything more about St. George." Now, whatever becomes of the story, it is only too true that our knowledge of the life of St. George is very limited, though there is no reason to question the personal existence of the martyr, who suffered under Diocletian, and still less excuse for Gibbon's impudent but highly characteristic device, which Dean Stanley has so characteristically adopted, of identifying him with George of Cappadocia, the brutal Arian persecutor of the fourth century. The Irish are more fortunate here, for, after making all deductions for a rank overgrowth of fables, and admitting that the current Lives are late compositions and quite untrustworthy, there still remains a considerable nucleus of authentic information, partly derived from writings of the Saint himself, partly from other contemporary fragments. And the story, even when divested of all adventitious adjuncts, is not without a romance and pathos of its own which must naturally appeal to the fervid imagination—we cannot say of his countrymen, for St. Patrick was not an Irishman—but of his adopted countrymen and children in the Christian faith.

St. Patrick may fairly be called the Apostle of Ireland, as St. Augustine may fairly be called the Apostle of England, though neither of them was the first to introduce the Gospel into the country. Palladius, who seems to have been a Briton, went over to preach in Ireland about 430, and is said to have built three churches there, besides baptizing a large number of converts. But his success alarmed the heathen, and the king of the province in which he was at work ordered him to quit the country, and he therefore returned to Britain. Hence it came to be a proverb—"Not to Palladius, but Patrick, God granted the conversion of Ireland." The first advent of Patrick, however, was not very like that of a preacher or apostle. His birth—about 387—has been variously assigned to Scotland and France. He himself tells us that his father was Calpurnius, a deacon, who also held the office of decurion, and his grandfather the priest Potitus. When he was sixteen, an Irish king who was ravaging that part of the coast where he was carried him off with several other youths, and he became the slave of a man named Milcho, who is variously described as a prince or a magician, or merely a wealthy landowner. Patrick was employed in looking after his sheep, and he tells us that, having before been careless about religion, he now in his exile and slavery turned to God, and used to rise very early in the morning to pray before daylight. He does not tell us, what later hagiographers have added, that he used to repeat the whole psalter every day, which, considering that he was not likely to find breviaries on the Irish bogs, would have been a feat little short of miraculous. After six years he fled, in consequence, he tells us, of a vision, and found a ship on the coast which carried him back to France. They landed in Brittany, and Patrick set off on foot for his home. He tells us a story of how on the road he had eaten some pork after a long abstinence from food, and the result, as might have been expected, was a bad attack of nightmare, in which he fancied Satan was rolling stones over his chest. He cried out, "Elias, Elias!" whereupon the sun shone out upon him, and he awoke. Here again his biographers find an edifying example of his invocation of saints. No doubt he did invoke them according to the usual practice of the age, but it is much more probable that his sleeping adjurations were addressed in this case not to saints, Hebrew or Christian, but to the Pagan deity "Helios," or the sun, who seems to have promptly responded to them. Some time after his return home he had another vision, apparently suggested by the account of the man of Macedonia in the Acts. A man appeared to him in a dream bringing a letter, on which was written "the voice of the Irish," and then came a sound of many voices from an Irish forest, "O holy boy! come over, and dwell again among us." Patrick awoke greatly affected, but it was many years before he obeyed the mysterious call. Most of the intervening period he appears to have spent under the guidance of St. Germain of Auxerre, whom he accompanied in 429 on his expedition into Britain to put down the Pelagian heresy. In 431 Germain sent him to Rome, where the legendary lives make him receive episcopal consecration from Pope Celestine; but of this there is no evidence whatever, and his own statements are inconsistent with it. He was really consecrated at Eboria, or Evreux, after learning the failure of the mission of Palladius.

It was in 432, nearly thirty years after he was first brought to Ireland as a slave, that the shepherd boy returned as a Christian bishop to his adopted country. His first convert was a chief in the county of Down, but he set off thence to find his old master. Milcho, however, refused to listen to him, and, according to the later legends, could find no available method of resisting the force of his eloquence except to burn down his house and perish in the flames. On the following Easter Day Patrick had an opportunity of preaching to an assembly of native kings and *magi*, who were assembled for a religious solemnity at Slane, and on this occasion he plucked a shamrock to symbolize the mystery of the Trinity. We cannot linger over the remarkable miracles recorded on this occasion, in one of which the Saint's chasuble played a conspicuous part. The result of his discourses was that he gained per-

mission to preach the Gospel freely in Ireland, and a great number of baptisms took place during Easter week, whence originated the festival of "St. Patrick's Baptism," anciently observed in Ireland on April 5. We next hear of his christening the daughters of King Leogre at Cruachan (Clogher), and then seven princes in Mayo. After ten years he left Northern Ireland under the episcopal charge of Secundinus, and went on a mission through Leinster and Munster, where he spent several years, and made many converts, including Aenger, the king's son, whom he baptized at Cashel. At length he fixed the site of his metropolitan see at Armagh, where we come across one of those touching stories of sympathy with the lower animals so often occurring in the lives of the Saints. On mounting the hill he had chosen for building upon, Patrick found a roe with her fawn lying on the spot where the altar of the cathedral now stands. His companions would have killed it, but he took the fawn on his shoulders to a place of safety, and the roe trotted after him. The foundation of the primatial see was his last public act. It need hardly be added that the story first promulgated by Jocelyn seven centuries afterwards of his making a pilgrimage to Rome to obtain the *pallium* and the confirmation of the Holy See is purely fabulous. He tells us himself in his Confession, written in his old age, that he had been expressly commanded by Christ never to leave Ireland, and would not even be absent for the purpose of visiting his relations. He speaks in his Confession of the greater part of the population as Christian, and of having ordained clergy everywhere. He died at Saul on March 17, 465, according to Dr. Lanigan, which would make him seventy-eight. Dr. Todd's date of 493 is certainly incorrect. Some of his biographers chose to extend his life in order to carry out the analogy with Moses suggested to their minds by his contest with the *magi*, which they had surrounded with various miraculous incidents, and there is a confusion in the catalogue of Archbishops preserved at Armagh between him and a namesake of his surnamed *Senior*. As St. George slew the dragon, so the St. Patrick of legendary renown cleared Ireland of serpents, and he is accordingly represented in pictures expelling them with his pastoral staff, probably designed as a symbolical record of his expelling evil spirits by the conversion of the heathen.

So far the legend has a sound historical basis. St. Patrick, as has been already observed, occupies the same position towards Irish, as St. Augustine of Canterbury towards English, Christianity. He is very far indeed from being a mythical personage, but he lives and moves in popular hagiology in an atmosphere of miracle and myth, and many of the ancient traditions about him are of the quaintest. The heathen *magi* who oppose him are struck down by the angels with snowballs out of heaven; he hears his goat which had been stolen bleating out of the belly of the robber; his chasuble remains unconsumed, while the heathen priest who had ventured to put it on is burnt to death. But on these marvels we need not dwell. Those who are curious in such matters may find them in any of the current biographies. But the real interest of his life and his abiding claim on the grateful veneration of Irishmen rest on better grounds than these. It is true after all that the schoolboy of sixteen, who was torn from his distant home and set to watch his master's sheep on the moors of Antrim, returned in his maturer age as a missionary bishop, and spent over thirty years in travelling up and down the country to preach the Gospel, and there he laid his bones, though the exact spot of his burial has been disputed. It is unfortunate that it did not fall within the scheme of Montalembert's *Western Monks*—for Patrick had no monastic character—to do for him what he has done for St. Columba. But his best record is to be found in the national Christianity which he first established in Ireland, and which has survived, amid all subsequent convulsions or corruptions, from his day to our own.

TEWKESBURY AND WORCESTER.

OF the great churches on the Severn, one has lately undergone the process called "restoration," while at another it is only just beginning. At Worcester the minster stands almost like a new thing from one end to the other; at Tewkesbury the work has as yet got only a very little way. And at Tewkesbury zealous friends of the work have been known to augur that it will come to something better than the work has come to at Worcester, because Tewkesbury has less money to spend than Worcester had. The promoters of the restoration at Tewkesbury have not got more than enough for the mere necessary purposes of making the church sound and fit for its use; we suspect that they have not got nearly enough for that; certainly they have nothing to spend on the mere luxury of wiping out the history of the building. Not long ago we heard of a church in the same part of England, whose name and the name of whose pastor we have forgotten; but we remember the main point that the pastor was threatening to "bring the church into harmony." We forget whether the older parts were to be brought into harmony with the newer, or the newer into harmony with the older; nor does it in the least matter. Harmony was to be brought about somehow; that is to say, the history of the building was to be got rid of. Now the dæmon of harmony has had considerable sacrifices made to his *cultus* at Worcester; at Tewkesbury there seems to be no fear of his thrusting himself into the sanctuary. There seems as yet to be every hope of starving him out; the wolf is kept from the door by an opposite process to that which that proverb commonly expresses. Dropping metaphors, at Worcester the large inserted windows whose insertion was part of the history of the building have been made away with, simply because they were insertions, something later and less beautiful in themselves than what they supplanted. It is a pity that they were ever put in; but, when they once were in, it was a destroying of history to turn them out again. At Tewkesbury a votary of harmony would be at once tempted to make an assault on the west front. What business has that huge late Perpendicular window, what business has that poor doorway below, thrust in under that noblest of Norman arches? Absolutely none; but there they are, and there they must stay. The very extremity of the mischief that they have done of itself makes it necessary that they should stay. For what should anybody put instead of them? Every architectural student knows that the west front of Tewkesbury is one of the greatest of architectural puzzles. The design was clearly changed during the building of the church; but what was the original design, and what was the design into which it was changed? That stately arch must have been meant to open into something within or without; but into what was it meant to open? We might have known something more about it, if these insertions of the sixteenth century had never been made. But, for that very reason, they must stay in the place where they never ought to have been put. They are safe, because they hinder us from knowing what to put in their stead. There they are, a part, though certainly not an attractive part, of the history of the minster. If they were taken away, there would be nothing to succeed them but some modern guesswork or other which to the historical mind would be less attractive still.

At the other end of the minster no one would probably carry love of harmony so far as to propose to bring back the apse—one of our very few polygonal apses—to its original state before the changes of the fourteenth century. Yet even here one could almost wish that we had the building as it was finished early in the twelfth. The Romanesque design is otherwise so perfect from one end of the church to the other. Even in the apse, the ground-plan is not touched; the massive Norman piers were simply a little raised to carry the pointed arches. As it is, with the large clerestory windows and elaborate vaulted roof coming down at once on these massive arcades, the eastern limb looks low, which most likely was not the case while the Norman design remained untouched. For, just as in the neighbouring Abbey of Gloucester, which was begun a little before Tewkesbury, the design of the early limb must have been far more satisfactory than that of the nave. In the nave of Tewkesbury the fault of Gloucester, the exaggerated height of the piers, swallowing up the triforium and clerestory, is exaggerated further still. The eastern limb in both cases followed the more usual proportion, and must have been a more pleasing design.

At Tewkesbury all that is needed is simple preservation, restoration in the true conservative sense which that unlucky word has almost lost. It is to be hoped that those who have taken the matter in hand may be at once able to do thus much, and may not be tempted to do more. In such a work as this they may fairly look for help beyond their own neighbourhood. Such a church as that of Tewkesbury is a national monument, and in any country but England it would be formally recognized as such. Neither the scale of the minster itself, great as it is, nor its historical associations, varied and interesting as they are, can put Tewkesbury quite on a level with St. Albans. Still the work at Tewkesbury may be looked on as holding on the western side of England a position answering to that held by the work at St. Albans on the eastern side. And both raise, nearly but not quite, the same question of internal arrangement. At Worcester the final result of discussions on this point is a state of things which is eminently a halting between two opinions. At Lichfield, Hereford, Chichester, Llandaff, the nave has again become the nave and the choir the choir. We cannot say that this is altogether so at Worcester; and yet there is not the same utter blocking up which there was in the days of ignorance. The thing is half done; there is nothing between nave and choir but a light screen; yet there is provision for a congregation in the choir, and provision for a choir in the nave. Yet Worcester is not of the vast size of York; nor is its choir lifted up like that of Canterbury; nor had it a magnificent ancient screen like that of Exeter; in all which cases we fully allow that there is a real difficulty in putting each part of the church to its proper use. It looks as if at Worcester things were half understood, but only half. What has been done at Lichfield might have been done there; but it has not. Now on this point there is a good deal of difficulty at St. Albans; there is none at Tewkesbury. Tewkesbury, there is no doubt, was of old a divided or double church, with the parish church in the constructive nave. The church which Henry the Eighth's commissioners "deemed superfluous," and which the parishioners with so praiseworthy a spirit bought of the King, was, beyond all doubt, only the monastic portion to the east of their own parish church. But whatever barrier once parted the two has been altogether swept away, and the minster can be laid out as a whole from one end to the other. There can be no doubt that the right thing will be to place the choir where the monastic choir was, to occupy as a choir the full length which, as in most of the Romanesque minsters, has clear preparation made for it in the building itself. Doubtless Tewkesbury Abbey is now formally a mere parish church; but it is impossible to look on one of these great minsters as that and nothing more. Some day they may be something more; if not cathedral, at least collegiate, practically, if not formally. Even as it is, they are often the scene of ecclesiastical gatherings of various kinds, when, if at no other time, nave and

choir can discharge their several functions. And anyhow the more building demands that its arrangement shall be in some kind of proportion to its architectural majesty. We believe that there is little doubt that at Tewkesbury the right arrangement will be carried out, that the choir will be in its right place towards the mid-tower, and will occupy the whole space marked out for it in the plan of the building.

Now at Tewkesbury this can be done, because the minster is, after all, of no gigantic size, and because whatever barrier there was between the monastic and parochial portions has vanished. Even if it were a screen as noble as Alby we cannot weep for it; if it were standing now, we could not bring ourselves to destroy it; but we cannot feel sorry that somebody did destroy it, we know not when, without our knowing anything about it. But at St. Albans both the vast scale of the building, and the existence of the grand screen which divided the two parts of the church, make the case much harder. We believe that St. Albans never was strictly a divided church like Tewkesbury; whatever rights any laylolk had in the minster were by sufferance; still, whatever was the legal aspect of the case, the actual arrangements are the same as those of the churches which were really two distinct properties. There is the screen forming the reredos to what was practically, if not legally, the parish church to the west of it. There it is, and its existence would seem to involve "service in the nave." But then the vast size of the building brings the remedy. There is the reredos ready; choir, nave, everything may be made to the west of it; there is plenty of room for all. The only way out of the difficulty seems to be to treat Tewkesbury as one church, but boldly to treat St. Albans as two. At Worcester an unhappy mean has been hit on which is neither the one nor the other.

The church of Worcester stands out in English history as the church of three great prelates, each the fellow-worker of the lay hero of his time. It is the church of Lyfing, of Wulfstan, and of Walter of Cantilupe, the comrades of Godwine, of Harold, and of Simon. Of these three great names, that of Wulfstan stands out as the builder of the earlier remaining parts of the existing church. But it is sad to see his work all scraped and made new. May the nearly contemporary work at Tewkesbury be spared such a fate! The work of the conqueror of Glamorgan does not indeed speak to us like the work of the saint who helped Harold to win the hearts of the men of Northumberland. Yet the historical associations of Tewkesbury are not small, and they need no tricking out of legend to adorn them. Brihtric and Earl Robert, and a crowd of later Earls, are all at home there, to say nothing of the days when the Yorkist conqueror broke his faith to the man who had taken shelter within the abbey walls. The present west front too has one feature of special interest, one which strangely connects Worcester, Tewkesbury, and St. Albans. In all these, in the turrets at Tewkesbury, in the tower at St. Albans, in the slype at Worcester, we see abundant proof that, even after the Norman Conquest, the older arts of England did in some measure affect the style which came in from beyond sea. Not only English Wulfstan, who wept on destroying the works of his predecessors, but Paul of St. Albans himself, the special despiser of Englishmen, could not help, in building upon English ground, borrowing some touches from the works of the elder day. The balusters in the turrets at Tewkesbury are perhaps the very latest instances in a church of any size of Norman work distinctly retaining marks of Old-English influence. Such a feature does not badly express in stone the character of the time when the front arose. The Lion of Justice was on the throne, the King under whom Normans and English became one, the King whose son was to take his place among the lords of Tewkesbury. Would that, besides the minster of his father-in-law, we had the "magnifica domus" which Earl Robert owned at Tewkesbury, to tell us as much of the domestic art of the time as the minster does of its ecclesiastical art.

MISSIONARY ZEAL ACCORDING TO MODERN LIGHTS.

THE Rev. S. M'Farlane, a missionary in New Guinea, has just sent home a curious account of what he calls "an interesting trip" up the Fly River, which was no doubt very interesting to the explorers, and had also an interest, though of a different kind, for the people visited. The party started in a steamer from Cape York on the 3rd December last, and was accompanied by some of the chiefs of Katau and Turituri—two villages on the mainland, the people of which were on friendly terms with those at the mouth of the river—who were to act as introducers and interpreters. The Katau natives described the people of the Fly River as being very numerous and great warriors, and declared that they were more afraid of them than of white men with guns. When the expedition got into the river, a number of natives in canoes put off from one of the banks, waving green boughs as a sign of peace, and apparently intending to go to the steamer, but were obliged to give up the attempt on account of the strong tide. Next morning five canoes came off, with six men in each, carrying green boughs, and yams for sale. The men went on board the steamer, and were very friendly; but Mr. M'Farlane had his suspicions. On the following morning the expedition started with the tide, but neither the friendly chief nor any of his people came to see them off. When, however, they had steamed about six miles further on, they saw five large canoes filled with armed men put off from an island a few miles ahead, and enter a creek on the opposite side, while shortly afterwards four others issued from the same place and bore down upon the vessel. Mr. M'Farlane suspected that this was an attempt to surprise his party in the middle of the river, where they would be exposed to arrows from both sides. Under such circumstances it might have seemed natural either to pause or go back a little, until some parley could be had with the natives, in order to ascertain their intentions. But Mr. M'Farlane is evidently a man who dislikes temporizing, and prefers bold and decisive action. "To steam away was out of the question," because in the first place there would be a difficulty in keeping to the channel, and the canoes might overtake the steamer, and in the next place because—and this was no doubt the decisive reason—"We had made our minds not to return on account of the hostility of the natives." The writer appears to be himself dimly conscious that this "may at first sight appear a strange resolution for a missionary to make"; but he thinks that "a little consideration will prove, even to the satisfaction of the Peace Society, that it is humane." His argument on this point is highly characteristic, though whether it will be quite satisfactory to the Peace Society remains to be seen. "If," he says, "we had left the natives with the impression that they had driven us away, they would certainly have attacked the next vessel visiting the Fly with, if possible, greater confidence than they attacked us, and the result to themselves especially would have been most fatal." It was necessary, in the opinion of this messenger of peace and good will, that the natives should receive an important lesson:—"They had to learn the superiority of European weapons and the folly of attempting to capture European vessels, and we felt that it would be decidedly to their advantage to learn the lesson from the deck of a missionary vessel, where we hoped to teach it without loss of life. So our duty seemed to be to stand and fight, rather than run away, and the result will prove that we did right."

Mr. M'Farlane then gives a very graphic and lively narrative of the way in which, from the missionary point of view, he and his friends inculcated the necessary lesson. We are not told that, up to this point, any attempt was made to come to an understanding with the natives. It was assumed from the "war costume" of the people in canoes, and their "yells and gesticulations"—a phrase which perhaps only means that the Englishmen could not make out what was said—that they were bent upon war. Some of the natives approached in a boat, and then one of the friendly chiefs on board was told to shout that the strangers did not want to fight; but the natives, according to Mr. M'Farlane, laughed mockingly, and asked why we had come to their land? "They seemed," he adds, "delighted at the prospect of our capture, and from their jeering attitude were evidently confident of success." It is just possible, however, that the natives did not understand what was shouted to them; and it does not appear that any flag of truce was shown, or other distinct intimation of peaceful intentions made by the missionary vessel. Mr. M'Farlane had evidently made up his mind from the first that they meant mischief, and that he would have to give them a lesson—not exactly in the way of turning the other cheek—and he did not think it necessary to waste any time in preliminaries. "They were counting their chickens before they were hatched," he pleasantly says; "but, although we did not desire war, we were quite prepared for it, believing that our heads will be of more service to the mission cause on our shoulders than on a pole in the middle of a heathen village up the Fly River." This view of the matter, however, leaves out of account that the missionary need not have provoked a fight, and could have gone back with his head on his shoulders as he came. But his blood was evidently up, and he sniffed the battle in the air. "The war party," as he calls the people whose country he was invading by armed force, "came on shouting and yelling." "We therefore fired across the bows of the first canoe, which caused them to hesitate for the moment; it was but for a moment, however; for on they came again more furiously than before." "Bang! bang!" cries the reverend gentleman in a sort of ecstasy at the recollection of the fusillade; "ten bullets struck the bow of one of the canoes. Instantly the warriors"—this is apparently a sneer—"dropped their bows and arrows and seized their paddles, which they seemed to think would render them better service, and pulled as for life." And then he chuckles the poor creatures in retreat. "They could not possibly have been more united in the attack than they were in the retreat, and never did their canoes fly over the calm surface of the river so swiftly." In his glee he even forgets himself so far as to exclaim "It was like a regatta."

This apostle of peace finds it necessary, before proceeding further with his narrative, to vindicate the military prowess of his expedition. "Of course we could easily have shot a number of them"—that is, the natives—"had we desired to do so, but it was quite unnecessary: doubtless they had reasoning powers sufficient to convince them that what would go through a canoe might easily go through their bodies." Still, as a Christian man, he was anxious to do them another good turn; so, "in order to deepen the impression we had made, we sent several bullets beyond them as they pulled away." When they were about a mile off, they had slackened a little, and then "Mr. Smethurst, our engineer, who has a good ride, and is a good shot, dropped a bullet near them, which started them off again." There can be no doubt that Mr. M'Farlane is perfectly honest in his impression that the natives had planned an attack; but it is at least certain that the actual hostilities were entirely on his own side. The natives had not shot a single arrow,

and were received with a discharge of musketry. Mr. M'Farlane, notwithstanding his military ardour, probably does not know much about shooting, or he would understand that random shots, though meant only to frighten, and not to kill, are apt to be dangerous even when fired by the best marksmen. The only excuse which is offered for opening fire on the natives is that they might possibly have sent a shower of poisoned arrows on board, and in that case "it might have been difficult to restrain the crew from firing on the natives" in earnest; but this is a purely hypothetical difficulty, and there is no proof either that the natives intended to use their bows or that their arrows were poisoned. The result of this attack was that the natives obtained reinforcements and returned to see what was going on. They were "shouting and yelling" as before, much to the missionary's disgust, and had their bows ready; but again, without waiting to see whether they would attack, he gave them "a few shots," which caused them to sheer off. Some of the crew then went off in a boat and followed them, driving them on to the mainland, and capturing one of their canoes, which was cut up for fuel, "as a punishment for their unprovoked attack." In point of fact, it appears that it was not the natives who made an unprovoked attack, but the missionary.

On the following day the expedition espied several large canoes, filled with armed men in war costume, pulling along the bank of the river, "evidently trying to get ahead, which led us to suspect treachery." Soon after the party found the mosquitoes and other insects a terrible pest, and also began to suffer from dropsy in the legs; and so they resolved to return. As they passed down, "the howlers," as Mr. M'Farlane contemptuously calls them, came on the beach, and also sent some canoes off; and he adds, "We waved them towards us with a piece of red calico, and made other friendly demonstrations." We should doubt, however, whether a red rag would naturally be understood by the natives as a signal of peace, and the other friendly demonstrations may have been equally unintelligible. At least, the result was that some one, after "gesticulating"—Mr. M'Farlane cannot excuse this sad habit—shot an arrow, which, however, fell short of the steamer. Upon which "we replied with a bullet, which dropped near his canoe, leading him to abandon his intention and weapons." Then, "in order to show them how completely they were in our power, and how easily we might injure them if we desired, we sent a bullet near them after they had landed on the bank, and thought themselves safe, upon which they took to the bush, no doubt feeling that it was better to be friendly with such people than to attack them." Perhaps they might also feel that it would be better to have nothing to do with such people than to have them for spiritual pastors and masters. Subsequently quite a fleet of canoes appeared, and Mr. M'Farlane makes the following philosophical though ungrammatical reflection:—"Having seen the power of our weapons, we had reason to fear that the attack, if made, would be a most determined one, as their only hope of success lay in their boarding and overpowering us, so we prepared for defence." It should here be observed that, in the first instance, the notion was that the natives might easily be frightened; now it was apprehended that they would be exasperated, which was perhaps a more reasonable expectation. It would seem, however, that Mr. M'Farlane was not very confident as to his position, and at length, instead of opening fire, he tried the plan of conciliating his supposed enemies, assuring them through an interpreter that "we did not want to fight and had come to be their friends." But strange to say—"still they would not come near the vessel." Again, he says, "We made all sorts of friendly demonstrations without apparently producing any effect, at least any favourable impression." There is something almost amusing in the innocent simplicity with which Mr. M'Farlane, who was always ready to fire at the natives without giving them any warning, or waiting for an attack, professes to be amazed at the suspicion which the natives entertained of him and his friends. When the latter found that the friendly demonstrations did not answer, they "threw a charge of dynamite overboard, with a long fuse, which would allow it to sink to the bottom, and then (the natives) to approach it before exploding." This frightened the natives very much, but they do not seem to have been revengeful; for when the missionary vessel stuck fast on a bank of a river, with a falling tide, and the "prospect was anything but cheerful," those on board tried to coax the natives with soft words and presents, and found them very friendly. "The natives," we are told, "had evidently abandoned the idea of attacking us, and were disposed to be friendly"; the truth being that the natives had apparently never attacked them at all, except that one let off an ineffectual arrow, while the missionary had been persistently peppering the natives with bullets, and scattering them with dynamite. It seems, in fact, more likely than not that the natives would have been friendly from the first if the missionary had not begun by shooting at them.

Mr. M'Farlane winds up his stirring narrative of this glorious expedition by stating that he is "prepared to make another trip next season," if the directors of his Society approve. Perhaps, however, the directors, after studying this despatch, may think twice before they permit a repetition of the hostile operations which Mr. M'Farlane apparently takes so much pleasure in directing and describing. It is stated that "several important ends" have been gained by this visit, such as proving that there is really a navigable river there, teaching "notorious savages" the "folly and danger of attacking European vessels," establishing a "genuine and firm friendship with the natives," and—last not least—obtaining "a considerable number of specimens of birds, beetles, &c." This catalogue of the fruits of Mr. M'Farlane's ministry is certainly an odd variation on an old and familiar theme. Whether a friendship cultivated in Mr. M'Farlane's fashion is likely to prove genuine and firm may be imagined. It must also be remembered that, though no one seems to have been killed, his bullets might have proved fatal, with the result of exasperating the natives, as he himself at one time feared, and that when he and his party were helpless and in danger the natives took pity on them and came to their assistance. On the whole, it is not clear that this enterprising missionary may not have something to learn from these "notorious, howling savages" in the matter of Christian love and charity. Mr. M'Farlane's story of apostolic labour is perhaps curious rather than edifying; and it will be interesting to see whether the Missionary Society which employs him will invite him to undertake another military trip on its behalf.

THE QUEEN'S INDIAN TITLE.

WHILE there is a wide divergence of opinion as to the respective fitness of the titles "Empress" and "Queen" as best suited for expressing the Queen's power and authority over India, a still more puzzling question has been raised as to the form in which the new title is to be presented to the people of that country. Is the title itself to be simply put before them and introduced into their languages, or is it to be translated? and, if translated, what is to be the word? We will leave the first question for a while and consider the latter one. Sir George Campbell asserted in the debate, with a thoughtlessness surprising in a man of his knowledge and experience, that Queen or Empress must be alike translated by one word, *Bádsháh* or *Pádshah*. It has since, however, been made clearly manifest that there is no such limitation in the choice of terms.

The languages of India are numerous, but they are reducible to three classes—Dravidian, Hindu, and Mahomedan. The Dravidian languages, as earliest in date and occupation, have been so deeply influenced by Hindu supremacy, and Sanskrit words have been so thoroughly engrafted upon them, that any good and appropriate Sanskrit word would in all probability be acceptable to the races speaking Tamil, Telugu, or other Dravidian tongues. What Sanskrit word then can be found to represent adequately the dignity about to be conferred upon Her Majesty? There is no lack of titles in Sanskrit for lord and ruler, but they are chiefly descriptive compounds, such as *adhipati*, "over-lord"; *bhú-pati*, "lord of the earth," and numbers of others; but these must all be cast aside in favour of the various forms of the word *rája*, derived from the root *rájˇ*, to rule. Does then the title *rája*, or any of its compound forms, convey a full and distinct idea of the exalted dignity of the monarch of Great Britain, Ireland, and India? Professor Max Müller, in a letter to the *Times*, has urged the adoption of the words *adhirája*, "supreme king," or *Rájádhirája*, "king over kings," as being not only in every way suitable, but as likely to be "appreciated and loved by every true son of India." It is pleasant to see the Professor's devotion to his beloved Sanskrit, and if the titles he proposes conveyed now the same sense of dignity and authority as in Vedic days, not a word could be said against them. But the question is not what these words meant two or three thousand years ago, but what meaning is now attached to them. It is hardly necessary to say that the word *Rája* has fallen from its high estate—fallen with a greater fall even than Esquire in England. *Rájas* everywhere abound. *Mahárájas*, or great *Rájas*, are, or may at any time be, as numerous; for there is nothing to prevent any *Rája* from increasing his dignity by prefixing the word "great." There are hundreds of *Mahárájas*. The form *Adhirája*, "supreme rája," is not much affected; but the term *Rájádhirája*, or "king over kings," the title which Professor Müller prefers, is one very commonly met with. It is assumed by great zemindars and men of territorial possessions who have no pretensions to princely authority. Even this grand title is surpassed by one more imposing, and *Mahárájádhirája*, "great king over kings," is familiar enough under its ordinary form of *Maha Rája Dhee Rájˇ*, often with the incongruous addition of the Mahomedan title *Bahádur*, "the brave." The word *Rája* in its simple and all its intensified forms has become too cheap. None of them carry with them any higher idea than that of a great, rich, and powerful country magnate. Sovereigns like Scindia and Holkar may bear them, but these potentates add lustre to the titles, and derive no dignity from them. The title which perhaps stands highest in Hindu estimation is that of *Ráná*, not in virtue of any merits of its own, but as being the distinctive title of the ancient house of Oodeypore. It is unnecessary to say anything about the word *Ráni*, "queen," for that has met with much the same fate as *Rája*. In one sense indeed it has fallen lower, for it is said to be applied to a class, a very limited class, of women—imported Circassians—and, as applied to them, it comes far nearer to "quean" than "queen." Even before the days of the Mahomedan invasion the title *Rája* had fallen from its pristine dignity; and during the long centuries of Mussulman rule, little or no check was placed upon its adoption. The reigning Sultan might gratify a deserving Hindu adherent by conferring upon him the title of *Rái* or *Rája*, but the newly ennobled chief often found that an indolent neighbour who stayed at home, nursed his money-bags, and extended his possessions, quietly took to himself the same title without any trouble, and without any service rendered to the State. Contemporaries might honour

the one and despise the other, but the lapse of a few generations wiped away the difference, and the descendants of both held themselves upon an equality. As the word *Rája* in all its compounds is used thus commonly by subjects of Her Majesty, it will not and cannot convey that idea of supreme power which the new title must distinctly assert.

The Mahomedan regal titles stand upon a different basis, for they have retained their dignity. Mahmúd of Ghazni bore the title of Sultán, and that title was continued through the long line of his successors, down to the last of the Moghul emperors. All, or at any rate the great majority, of these sovereigns called themselves also *Bádshdh* (or *Pádshdh*, a mere variety of spelling). In their inscriptions they frequently took the high-sounding title of *Shdhan-shdh*. The term *Malik* was rarely used in India, but was common enough in other Mahomedan countries. The word *Sultán* is of Arabic origin, and conveys a clear and distinct idea of kingly rule. One writer in the daily press has asserted that it is a delegated title; but as it was borne by Baber, Akber, and Aurangzob, and as we now have the Sultan of Turkey, the reputed head of the Mussulman world, it is difficult to see where the notion of delegation comes from. It would be hard to find an Oriental word which more unequivocally signifies ruler; but it is the title of a well-known potentate, and it would be hardly agreeable to English feeling to extend the list of the Sultans of India by the addition of our Queen's name. *Shdh* and *Bádshdh* are Persian titles, both signifying "king." The meaning of the prefix *Bád* is not very clear, so it may be passed over. The word *Bádshdh* is clearly understood, and maintains its dignity in India, but it has been shorn of somewhat of its length and dignity in more Western lands under the forms of Bashaw and Pasha. *Shdhan-shdh*, not *Shdh i Shdh*, as some have made it, is an old Persian Sassanian title, which comes down to us from the days of Sapor and Ardashír. The Sassanian monarchs used to assert their supremacy by calling themselves *Malkán-malká* and *Shdhan-shdh*, that is "king of kings," expressed in two forms of words, one of Arabic, the other of Zend or Persian origin. *Shdhan-shdh* has survived in modern Persian with its old case formation, like as the old form *Pater familias* survives in Latin. The title *Shdhan-shdh* forms part of the royal name and style of the Shdh of Persia, who is the head of the Shía division of Mussulmans. It has therefore been said to be a Shía title, and objectionable to the Sunnis of India. But, though borne by a Shía, there is nothing exclusively Shía about the title; and the fact of its having been constantly applied to that bigoted Sunni, the Emperor Aurangzeb, ought to have saved it from such a sectarian aspersion. It was often used by the sovereigns of India in their formal documents, and was employed by the native press of India to designate the late Emperor Napoleon. This title certainly comes very near to, if even it does not fully express, the idea usually attached to the word Emperor. The title *Malik* or *Melik* is Arabic, and is identical with the Hebrew word Melech, which we find in Biblical names, as in Abimelech. The form *Malik* or *Melik*, "king," must not be confounded with the word *málik*, developed under a rule of Arabic grammar from the same root, and signifying "proprietor." This royal title has met with a chequered fate. Some great monarchs have borne it, so have many petty chieftains, and it has been used also as a mere complimentary title. The feminine of the word *Malik* is *Malikah*, and this has been the word employed in official documents and by the native Hindustani press to designate Her Majesty. Some grand laudatory epithet is frequently added to it. The word *Bádshdh* is, so far as we are aware, not employed as a title of our Queen. But it might well be so used, and we abstain from asserting that it is never so employed. The preference shown for *Malikah* over *Bádshdh* may perhaps be explained. *Malikah* is Arabic, *Bádshdh* is Persian; and Mahomedan Hindustani writers, from religious motives probably, display a marked preference for Arabic words, just as ecclesiastical writers in England have often shown a preference for words of Latin origin.

One curious fact about the terms *Sultán* and *Malikah* may be noticed. In the thirteenth century a woman, the celebrated Queen Raziya, ascended the throne of Delhi and reigned for the brief space of four years. She bore the title of *Sultán* and was sometimes called *Bádshdh*. Her coins give her the titles of *Sultán* and *Malikah*, but her anomalous position as a Queen regnant is indicated by the omission of her name; her style being "the great and glorious Sultán of the World and the Faith, the Malikah (queen) daughter of Sultán Altamsh."

It thus appears that there is no real Hindu word which would adequately and distinctly express the dignity of a Queen or King of India. A choice might be made from the Mahomedan titles which might fairly answer the purpose. It may be argued also that, as the English rule succeeded to the Mahomedan, it took over all titles and dignities of the dynasty, and that therefore it would be well to adopt the title of *Malikah* or *Malikah muazzamah*, which the Mahomedan native press with one accord has assigned to Her Majesty. But India is a country of many languages and many religions, and the Mahomedans are far less numerous than the Hindus. The Hindustani language is pushing its way, but no one can look forward to its becoming universal. If the Queen is to assume a title gratifying to her Indian subjects, it must be one acceptable to all, not simply to a class or a religion. The most desirable course would therefore seem to be that of using the actual title adopted, and of showing Her Majesty's individuality by a word which the natives would look upon as belonging to her and to her alone. English words easily make their way into the languages of India, and "Queen" or any other [illegible] in a few years become as familiar as "Governor-General" and many other words have long since become.

Indeed, the word "Queen" is not altogether unknown. The Rao of Kachh has placed it on his coins, and it is occasionally met with in books and periodicals. The native papers in their accounts of the visit of the Prince have called him *Shdh-zádah*, "King's-son," "prince," but they have retained his real title "Prince of Wales," and under that title he will no doubt henceforth be known there.

PASTORAL FELICITY.

A SHEPHERD'S life is not a very easy one at the best of times, in spite of all that poets have sung or artists painted. The classical personages who passed their elegant leisure in lounging in the shade of the beech-trees by the side of murmuring streams, sighing over their mistresses or making sonnets to them, went out with the Golden Age. The shepherd of our modern experience has, generally speaking, too weighty a load of care to carry to have much time to waste on the fine arts or the tender passion; and if his fare is something more nourishing than acorns, his labours are often hard enough. It is true that in the more genial climates of the East or South his lot may seem a not unenviable one to the enthusiastic or æsthetic traveller. In Syria or Asia Minor you remark a picturesque figure in the foreground of some enchanting landscape that is hallowed by sacred or classical associations, lighted up, as it leans on a long crook, with a blaze of glory from the vanishing sunlight. The flowing garment of ragged sheepskin, at once open to ventilation and impervious to damp, appears to be the very thing to keep off the night dews, and serves its owner for bedclothes if he sleeps in the open air. Oppressed as you are by the warm night air of the valleys, when the interior of the native houses becomes insupportable, and even the light canvas of your tent suggests a disagreeable sense of confinement, you are inclined to envy him the fresher atmosphere of his hills, nor does it strike you as a hardship that he should have to lie on the ground under the flimsy reed-booth which he has run up for himself. When you watch him strolling along the flowery slopes of the hills, or fording the shallow watercourses with his docile flock cropping the herbage behind him, you are irresistibly reminded of Biblical metaphors expressive of peace and perfect happiness. And perhaps the unconscious object of your admiration is tolerably contented with his lot, having had no experience of anything more agreeable, and accepting its sorrows and anxieties as inevitable. But troubles and anxieties are by no means wanting to him. His master is harsh and arbitrary, and holds him responsible for all the sheep he has in charge. By night and by day he must mount guard over them unremittingly, for there are ravening beasts of the forest and fowls of the air who are even more watchful than he. When the flocks are penned at night, and painfully counted over—for the shepherd must be something of an arithmetician—he and his dogs enjoy but fitful slumbers. They lie down to a concert of howling wolves and hyænas, and, if those restless prowlers should be pressed by starvation, they may perchance make a dash at the slight enclosures. Then there are occasional visits to be looked for from the bears or the leopards, who seldom stand upon trifles and are always ready to show fight. More dangerous still are the roving Bedouin robbers. If the master is prudent, he probably pays black-mail to some neighbouring sheikh; but the flocks are always shifting their pastures, and as they wander away into some remote district, they may fall into the clutches of some roving band who have no pecuniary reasons for sparing them. These sudden changes of pasture, too, mean most trying transitions from heat to cold. One day in the early spring the flocks may be feeding in the warm valleys, where the fiery sun that beats down from a cloudless sky leaves the ground glowing like the air from nightfall to daybreak. The herbage is all burned up, and the order to move is given. Then, by an ascent of a few hundred feet on the hill-sides, the shepherd finds himself in a region of keen night frosts, where even in the daytime icy winds come howling down the converging wadies from the table-lands of the neighbouring mountains. In such circumstances the most vigorous constitution, when indifferently nourished on the coarsest fare, is liable to a variety of ailments for which there are neither physicians nor parish dispensaries. *Mutatis mutandis*, the shepherd's life is much the same in all those sunny countries where it seems so agreeable in the summer. On the thyme-covered hills of Greece, where you may pass in a single day through the extremes of heat and cold, the shepherds become the bond-slaves of the neighbouring banditti, and are appointed honorary butchers to the lawless fraternity, the ceremony of paying bills being generally dispensed with. In the Apennines, on the contrary, though they are bound to supply the bandits with information as well as mutton, it has been the custom to pay them, and to pay them liberally. But then, again, they earn the money dearly, seeing that they are shot by the King's troops if they are suspected of receiving it, and murdered with ingenious tortures by the brigands on any trifling misconception. The forms one sees in the Roman Campagna, stalking over its rolling wastes or posing themselves under its umbrageous stone-pines, draped in their sad-coloured cloaks with the graceful dignity of ancient Romans, show on closer inspection sunken cheeks and eyes, the complexion of corpses, and the frames of living skeletons. For the air they breathe is charged with the

pestilence that reeks from each tangled coppice and reed-covered pool. Their Northern brethren from the Bergamo country have also, like the shepherds of the East, to migrate in course of the seasons, setting the inclemency of the skies at defiance. We have seen them shivering through their sheepskin cloaks and wrappings as they crawled at a slow footpace over the windy passes and snowfields of the Alps, on the way from their hot plains and close valleys to the wintry pastures of the Grisons. And we have marvelled how nature could support it at all, condemned as they were to lounge away the day on the mountains among the fogs and rains, and to sleep through the night in some draughty châlet where a thermometer might possibly be marking some twenty degrees of frost.

Although there is much in habit and hereditary use, we may take it for granted that in the lives of all these men the rough predominates over the smooth. Yet in such a spring as the present we doubt whether our own shepherds have not reason, on the whole, to envy many of them, unless indeed it be the victims who are dying by inches in the malaria of the plague-stricken Campagna. We do not speak now of those lucky lowlanders who look after manageable handfuls of sheep on the downs and enclosed farms of the southern counties. About the worst that can happen to them is to have to sit up night after night through the lambing season, which is no worse than the fate of many sick nurses and parish doctors. But the genuine shepherd life in the Scotch highlands and on the border hills is a very peculiar and trying one all the year round. You are shooting over some wild grouse moor, and have started from a shooting-box which, though it certainly stands on a carriage road, seems to all intents and purposes at the very back of the world. The church, the post-office, and the public-house are a dozen of miles away; there is not even "a merchant's shop" within a radius of three times the distance. You have got to the end of your most remote beat after several hours of severe exertion, and, having climbed to the summit of some heathery Pisgah, you rest upon your gun to contemplate the landscape. A thread of white smoke, one of the rare signs of the presence of man in those solitudes, catches your eye in one of the valleys at your feet. It goes up from the chimney of a thatched shealing which is scarcely distinguishable from the long peat stack beside it, being built of precisely the same material. There is a strip of kale-yard, carefully fenced in against the red-deer, and a patch of natural meadow running down to the burn before the door. You may distinguish a dwarf cow picking up a subsistence on the grassland, and, were you to make a nearer approach to the place, you would be welcomed by a chorus of collies yelping at you from the roof as the most convenient vantage-ground. It is one of those shepherds' cots so much in favour with our poets, and, with the exception of his wife, his children, and his sheep, the cow and the collies are pretty nearly all the society the occupant has from one year's end to the other. From time to time he may take a child to the kirk to be christened, or he may indulge himself in a pilgrimage of many a weary mile to the public-house on his own account, or he may exchange an occasional greeting with the keeper, although more probably he is at feud with keeper and gillies on some difficulty about the marauding of his collies. He has tolerably good wages, no doubt; he may be warmly clothed and bountifully fed, and, having no means of getting rid of his money, may have put by a snug sum in the savings bank. But he is condemned to lead the life of a hermit, with next to no intellectual resources, although, as likely as not, he is an intelligent man who has come northward with one of those great Southland sheepowners who are now monopolizing the Highland grazings. Very possibly he has been fairly educated, which is what his children can scarcely aspire to be, all Educational Acts to the contrary; for you cannot legislate them into walking four-and-twenty miles a day to and fro from the parish school. During the fine weather he is by no means badly off, physically, although he has so much time for meditation that it must often hang heavy on his hands. He lies basking on the heather in the sun when there is any, and leaves his dogs to do his work. But as the days shorten and the snow-storms set in, things become very different. Searching and scraping for the food which is somehow to keep the breath in their bodies, the flocks scatter and stray into the most out-of-the-way nooks and corners. Their instinct sometimes serves them only too well in seeking out a refuge in the most sheltered places. Their guardian has been lying all through the night listening to the howling of the storm; when he has got up to peer anxiously from the little casement, he has distinguished nothing but a grey quivering darkness that might be felt. He has risen with the earliest glimmer of the dawn to find his doorway heaped with snow-wreaths that must be dug through. Stumbling out into the open, he sees just a glimmer of light as yet, and that is all. For the air is thick with the broad floating snowflakes and blinding drift. The biting wind, twisted in the glens and valleys into eddies, has been capriciously heaping up the fresh fallen snow. The storm-swept hill-sides would be safe enough lying for the sheep if they could only keep in the animal warmth by huddling themselves together. But unluckily they have wandered into those more protected corners where the snow has been settling down in thickening layers; and when they have at last been discovered in their lairs by the instinct of the sheep-dogs, they have to be extricated with infinite pains and labour. When these excavating operations have to be repeated again and again through the short winter's day, it is evident that many of the sheep must be dead or missing at the end of it, the shepherd's best exertions notwithstanding. Nor need we say anything here of the destruction wrought by sheer starvation, or of casualties in the flooded streams when the melting snows have changed them into torrents. Against such misfortunes as these the shepherd is almost powerless. But what comes by far the hardest on him—and on his master too—is such tremendous and unseasonable snow-storms as we have been experiencing during the last week or two. By this time the lambing ought to be well forward, and every hour of the day and night is adding fast to the new arrivals. In southern lands it is a time of pleasant congratulation, to be celebrated at the finish by a joyous festival. In our climate, however, and especially in years like this, we fear it must be a time of melancholy anxiety, and all the care that is bestowed on the flocks can hardly save them from serious losses. We can imagine the shepherds' cottages and outhouses turned into so many foundling hospitals, where there is no room for the bleating orphans, although many must have perished at the birth. The men will be out in the worst of the weather, and it is not easy to conceive what it is to turn one's back on the warm cottage and cheerful fire and set your face to the snow fields and the bitter blasts when you have been worn out with incessant watching, and when the heart is heavy with the apprehension of worse misfortunes to come. Our hill-shepherds always lead trying lives; but when winter persists in coming back upon them even in the lambing season, it is almost impossible to realize all that they must go through.

EXPERTS.

A CASE lately tried raises the important question whether judges, counsel, or witnesses can be made liable by action for injurious words spoken by them in the course of legal proceedings; and it may be contended either that their "privilege" is absolute, or that it exists only so long as it is exercised in good faith and without malice. In the case of Hodgson *v.* Scarlett, the complaint was that the defendant, a barrister, had said in addressing a jury that the plaintiff was a "fraudulent and wicked attorney." If it be true that counsel have been sometimes instructed with the formula, "No case, but abuse plaintiff's attorney," it would seem to follow that law or practice has always allowed considerable latitude in remarks on character or conduct which are relevant to the case. It is of course the Judge's duty to restrain irrelevant or excessive language, and with that control it is probably better to concede an absolute privilege against a sort of action which must necessarily involve trying over again a decided question. The public interest *ut sit finis litium* is opposed to the maintenance of such actions, but nevertheless the Courts have hardly gone the length of saying that they shall in no case be maintained. Thus, in Hodgson *v.* Scarlett, Lord Ellenborough says that a counsel entrusted with the interests of others, and speaking from their information, for the sake of public convenience is privileged in commenting fairly and *bonâ fide* on the circumstances of the case, and in making observations on the parties concerned and their instruments or agents in bringing the cause into Court. In the case before the Court the plaintiff was mixed up with the transactions out of which the original cause arose. The defendant therefore had a right to comment on his conduct, and the words he spoke "were not used at random and unnecessary," but were a comment on the plaintiff's conduct as attorney. "Perhaps they were too strong. . . . The expression in the exercise of a candour fit to be adopted might have been spared." But still a counsel might *bonâ fide* think such an expression justifiable under the circumstances. The words were uttered in the original cause, and were relevant and pertinent to it, and therefore the Court thought that the action was not maintainable. In the same case Mr. Justice Abbott said that, in his opinion, no action can be maintained, unless it can be shown that the counsel availed himself of his situation maliciously to utter words wholly unjustifiable. "The words were pertinent, and there is no pretence for saying that the defendant maliciously availed himself of his situation to utter them."

In a later case, of Revis *v.* Smith, a suit was pending in Chancery, and it had been proposed to appoint the plaintiff, who was an auctioneer, to sell certain property under order of the Court, and the plaintiff alleged that the defendant, who was party to the suit, "falsely, maliciously, and without reasonable or probable cause," swore an affidavit containing words defamatory of the plaintiff in his business of an auctioneer. It was held that on this allegation the action could not be maintained. "The world," said one of the Judges, "has gone on very well without any such action as this, and I doubt whether it would go on so well if such actions were to be introduced. It would be very mischievous if witnesses giving evidence relevant to the case were liable to actions." It will be observed that the question pending in Chancery was as to the plaintiff's fitness to be employed to sell certain property, and the defendant, who had an interest in the suit, made an affidavit as to his fitness, so that the affidavit was strictly relevant.

We come now to the recent case of Dawkins *v.* Lord Rokeby, in which the principle established in reference to ordinary courts of law was applied to a court of military inquiry. The Commander-in-Chief directed a court of inquiry to be assembled in accordance with the Queen's Regulations to inquire into certain charges brought by Colonel Dawkins against his superior officers. The Court met, the defendant Lord Rokeby appeared before it as a witness, and was orally examined, and also handed in a written statement. The action was brought for alleged libel contained in

this statement, and the plaintiff offered evidence to prove that the statement was made *maliciously* and with actual malice, and without any reasonable or probable cause, and with knowledge on the defendant's part that it was false. The Judge held that this evidence was immaterial and irrelevant, and that if the statement was made by the defendant, a military man, in the course of a military inquiry in reference to the conduct of the plaintiff, a military man, and in reference to the subject of inquiry, the action could not be supported, even though the defendant should prove all that he undertook to prove. The Judge therefore directed the jury to find a verdict for the defendant, and this direction was upheld in the Exchequer Chamber and afterwards in the House of Lords.

Coming now to the case which suggested these remarks, we find that the plaintiff, Mr. Seaman, was attesting witness to the will of one Davis, which the defendant, Mr. Netherclift, the well-known "expert" in handwriting, undertook to pronounce a forgery. There was a suit in the Probate Court, in which appeared on one side witnesses who stated that they saw the testator execute the will, and on the other side Mr. Netherclift and a brother "expert" Mr. Chabot, who declared their opinion that he did not execute it. The jury, without troubling the Judge to sum up, gave a verdict for the validity of the will, and the Judge declared his opinion that an unfounded and reckless charge of forgery had been preferred. It was painful, said the Judge, to reflect on the enormous expense that had been incurred because the "experts" thought that their opinion that a man did not make a particular signature ought to outweigh any amount of positive testimony that he did so. It would not surprise us that in any case where it was desired to discredit the testimony of "experts," these remarks of the Judge of the Probate Court should be referred to; and accordingly we find that at the Guildhall Police Court, on Mr. Netherclift giving his opinion that the signatures to certain cheques were genuine, counsel proceeded to cross-examine him as to what had been said by Sir James Hannen in reference to Davis's will. Mr. Netherclift answered that he had read the remarks of Sir James Hannen, and he wished to say something thereupon. The magistrate said he must decline to hear anything about any case that was not before the Court; but Mr. Netherclift persevered, and said that he believed the signature to that will to be "a rank forgery," and he should believe so to the day of his death. Mr. Seaman, having been an attesting witness to the will, appropriated these words, perhaps unnecessarily, to himself, and brought an action of slander for them, alleging that their meaning was that he had been guilty of forging the signature to the will, or of aiding and abetting that offence. This brief statement of the nature of the action seems almost sufficient to dispose of it. If "experts" are to be called by one side on a question of handwriting, it must be open to the other side to discredit their testimony, and an obvious means of doing this is to show that in other cases they have been mistaken. In the case of Davis's will, a judge and jury thought that Mr. Netherclift was conspicuously mistaken, and when he next gives his opinion as an "expert" this instance is produced to show the fallibility of his judgment. It is not wonderful that Mr. Netherclift should be of the same opinion still, and should desire to proclaim it; and if the questions were rightly put to him, it seems to follow that what he said in explanation or completion of his answers would be rightly received in evidence. It might have made a difference if he had introduced Mr. Seaman's name; but as his words stand, they fairly arose out of the question put to him, and if that question was irrelevant to the issue before the Court, the blame was not with him, but with the counsel who put the question. A man is entitled to believe in his own accuracy, however absurd his belief may appear to other people.

It was urged by Mr. Netherclift's counsel that, under the circumstances, no action could be maintained, and therefore that the Judge ought to direct a verdict for the defendant, as was done in the case of Dawkins *v.* Lord Rokeby. But Lord Coleridge preferred to let the case go to the jury, who found for the plaintiff with 50*l.* damages, leave being reserved to the defendant to move the full Court to set aside this verdict. The Judge put to the jury the question whether the words complained of were spoken "in the course of giving evidence," or whether the defendant's evidence was really over, and he made the statement "as a mere volunteer." The jury found against the defendant on this question, which was treated as decisive of the case; yet we cannot help doubting whether the question should have been thus put to them. It may be conceded that, although the reported cases lay down the privileges of witnesses in very broad terms, yet this language is to be construed with reference to the particular circumstances of these cases. There might be a case which would show a clear excess of privilege, but we do not think such a case is satisfactorily made out by calling Mr. Netherclift "a mere volunteer." A witness is always allowed to explain any answer that he gives to a question put to him by counsel; and, laying aside some slight excess of language, Mr. Netherclift in effect said, "It is true that a judge and jury declared that I was wrong, but I believe that I was right." To say that he was obstinate and perverse in this opinion is only saying that which may be said of many other persons who appear in courts of justice. He might have added that not he only, but a brother expert, gave the evidence which a judge and jury disregarded. Upon the question of malice, which Lord Coleridge also left to the jury, it is important to observe that the name of the plaintiff was not mentioned by the defendant. It appears that Mr. Netherclift came from Ireland, looked at the will, and went into the witness-box and gave his opinion that the signature was not genuine, without inquiring as to evidence of the attesting witnesses. He would probably say that he was guided by what he would call science, and that, if the facts were opposed to him, so much the worse for the facts. Lord Coleridge's remarks on the reckless way in which "experts" sometimes give opinions are in themselves just, but they appear to us rather remote from the question before the Court. The question was, whether the words spoken by Mr. Netherclift were relevant to the issue which the police magistrate had to try, and unless these words were clearly irrelevant the verdict should have been for the defendant.

THE FIRE BRIGADE.

THE inevitable result of any inquiry into the condition of the Metropolitan Fire Brigade must be to increase its strength. In the House of Commons, when Sir J. Hogg showed how the force increased in numbers and cost from 1866 to 1876, he demonstrated the necessity of at least equal augmentation in the next ten years. Ratepayers ought not to object to an increased charge, but, whether they object or not, they must submit to it. The Board of Works has hitherto made a good bargain with the Fire Brigade, and Sir James Hogg mentioned with satisfaction that a public subscription was raised for the widow of a deceased fireman, and thus the Board was relieved from the necessity of granting her a pension; but whether the subscribers contemplated this result is perhaps doubtful. As Sir James Hogg oddly puts it, The widow was thus practically placed in as good a position as she occupied in her husband's lifetime"; but she had lost her husband, and that, we suppose, the speaker considered to be a gain, or at least not "practically" a loss. It is apparently in connexion with the same view of matrimonial happiness that Sir James Hogg contemplates with equanimity the condition of a fireman on duty ten successive nights. In a fire-escape sentry-box, he says, a man can rest comfortably until he is aroused by an alarm of fire, and perhaps he can rest all the more comfortably because "practically" he is a widower, and cannot get a curtain lecture in his sentry-box. Sir James Hogg's comparison to his own fifteen days' continuous duty in the army is inappropriate, because probably he was then a young unmarried man, and the service may have been of a special nature promising promotion and distinction. If firemen have acquired the habit of doing without sleep in bed, that is very convenient for their employers, only we should fear that overtasked nature would fail just when energy was required. The famous Higginbotham of song, whose fireman's soul was all on fire, had not, we may be sure, done ten nights' duty "comfortably" in a sentry-box when he rushed to the rescue of Drury Lane Theatre. A fireman is said to carry his life in his hand, and if he were sleepy, he might drop it. These men are overworked, as railway signalmen are overworked, in order to save the pockets of a numerous and influential class, and the only difference is that a fireman's business is necessarily more awakening than a signalman's. The metropolis pays a rate of a halfpenny in the pound for the Fire Brigade, and Captain Shaw's duty is to provide as much rescue as he can for the money. Whether he provides enough is a question that must be simply put aside, because the rate cannot be raised above this halfpenny. If this principle be sound, it ought to be applied more widely. So much money might be allowed to Mr. Ward Hunt or Mr. Gathorne Hardy to provide for naval or military defence, and indeed, under the Tudor sovereigns some such practice was adopted, with the convenient addition that the Minister who undertook such a contract was held personally liable for failure. Formerly the protection of London against fire was left to a voluntary organization of the Insurance Offices, and when this was coming to an end, the idea naturally occurred that firemen ought to be policemen. But the Home Office seems to have apprehended that, if the Fire Brigade were united to the police, the Treasury would be made responsible for the cost of it, and so it was shunted upon the Metropolitan Board of Works. When this arrangement was in progress, Captain Shaw prepared an estimate of numbers and cost of what he would consider an efficient service; but his figures were too large, and he had to cut them down twice. The Home Secretary said that, unless the cost of the Brigade could be reduced to 50,000*l.*, he feared the whole thing must fall to the ground, or, in other words, that London would be left without any protection against fire, which, looking to the value of property in London, would have been scarcely a business-like proceeding. Besides the rate of a halfpenny in the pound, Government undertook to pay 10,000*l.* a year, and there were also to be contributions from the Insurance Offices. Since this arrangement was made, the area and population of the metropolis have largely increased, and we assume that the produce of the rate has increased also, although probably not in proportion to the increased necessity for protection. It may be allowed that the use of steam-pumping engines and of the telegraph have economized labour, and a further saving might be effected by providing more abundant supplies of water. Nevertheless, it must be allowed that the establishment of the Fire Brigade is strangely inadequate to the magnitude and wealth of London. As Sir J. Hogg put it, "The force has been found sufficient to cope with any conflagration," but that has only been because conflagration has been kind enough to come for the most part singly. Mr. Ritchie, who opened the discussion, tells us that the number of men available for duty has

lately been 395, but 106 of them have been employed on fire-escapes, so that only 289 have remained for duty with the engines, and after deductions for men sick or absent on leave, only 164 men have been actually available for night duty. When the Pantechnicon was burnt 120 men were employed in what Sir J. Hogg calls coping with the conflagration, so that only forty or fifty men would be available for all the rest of London. This seems dangerously few, because firemen cannot be extemporized, as police may in some sense be, by employing special constables.

Until lately the fire-escapes were maintained by a voluntary association, and there is still a Salvage Corps, independent of the Fire Brigade. It was an improvement to place the fire-escapes in the hands of the Brigade, but this new work seems to have been undertaken without any special fund to pay for it. The subscriptions were, we suppose, discontinued, and the Board of Works continued to be limited to the halfpenny rate. In 1872 Captain Shaw estimated that 931 men were required for the protection of London, at a cost of 120,000*l.*, and it would be rash to call this estimate excessive. But we are content to remain undefended alike against foreign and domestic enemies. Even Mr. Cross, on behalf of Government, admits that the condition of London in regard to fires is not satisfactory, and although he lays most stress on the want of water, that defect proceeds from the same cause as the want of men, engines, or stations. We are content to take our chance, and choose to undervalue dangers which do not thrust themselves perpetually on our notice. We forget that the fireman's is a special business requiring thorough teaching, and that amateurs are likely to do more harm in it than good. The complaint against the Board of Works for failing to establish a system of pensions would affect us more strongly if we did not think that, if they had done anything, it would have been inadequate. In the favourite official phrase, an inquiry is needed into the whole subject, and, when it has been held, there will be no excuse for further delaying adequate organization. It may be conceded that the modern growth of London does not add greatly to the fireman's difficulties. We build many square miles of small, slight houses, each with its bit of court or garden at the back, and at the worst it would be easy to isolate a fire by destroying a few houses of no great value. It is in the older and more populous and valuable parts of London that danger lies against which we take no adequate precautions, and trust to supposed precautions which are worse than none. It cannot be too often repeated that so-called fire-proofs are for the most part worse than useless, because they produce confidence for which there is no adequate foundation. As regards theatres we are in a helpless and hopeless state, and the rapid destruction of the Alexandra Palace shows what may happen any day or night, with possibly more disastrous consequences. The Brigade, which undertakes these responsibilities, feels the same difficulty as other branches of the public service in getting and keeping the sort of men it wants. Since 1868 it has parted with 637 men, and, if the cost of training be taken at 100*l.* per man, that would represent a loss of 63,000*l.* Without adopting this calculation in its full extent, it shows in a striking way the false economy which drives men, after a few years' service in the Brigade, to look about to better themselves. We are told that formerly there were a thousand sailors on the list seeking for employment, whereas now there is difficulty in keeping up the corps to its inadequate strength. The water supply is confessed to be inadequate, and the turncock who controls it does not always turn up when wanted. The Water Companies offered to place a turncock at every station of the Brigade, but that offer has not been accepted. Then, it is said that the firemen have keys, and can turn on the water; but the difficulty is in knowing what particular main to turn on; and here another authority, the Water Companies, intervenes, and this is not likely to promote simplicity or economy of administration. It is intelligible that there should be difficulty as to the supply of water, because there can be only one supply for extinction of fires and for domestic use, and that which is suitable for the former may be dangerous for the latter.

It must be remembered that, notwithstanding the experience on which Sir James Hogg relies, a conflagration with which the existing Brigade could not cope is always possible in London. That which has happened in other cities might happen here, and we might find ourselves reduced to a condition not much less helpless than that which Dryden celebrates. It is to be feared that, like Dryden in his poem, we should find in real life that it is easier to light a fire than to put it out. He was reduced to employ what may be called *machina ex Deo*, or, in other words, a heaven-sent extinguisher; and it is impossible to say how we should put out a fire if it once gained a really formidable head. The Guards would blow up houses with gunpowder as they did under King Charles II., and if they blew up houses enough and soon enough, that would probably stop the fire. If prompt and vigorous measures be taken, the mischief can generally be kept in bounds, and on this principle the present organization rests, and it is excellent as far as it goes, but miserably inadequate. It is to be hoped that, by the compilation of a Blue-book or otherwise, this truth may be fixed in the public mind, and may be carried into practical effect, even at the price of an increase of local or general taxation.

REVIEWS.

THE VAUX-DE-VIRE.*

THIS is an edition of an old French poet, with an English translation on the opposite page. The book is got up with a good deal of taste in imitation of recent French editions of old poets, and is very beautifully printed on Dutch paper, or a good imitation of it. The volume is one of those which always tempt people of cultivated taste at first sight, because they see that such editions are intended specially for them. In the present instance they will not be disappointed; but we should like to make one or two remarks on minor matters before passing to the merits of the poet and his translator. Let us protest, in the first place, against the revival of the long *s*. We believed that abomination to have been happily abandoned even in what is called old-faced type. It is not prettier than the other, it is utterly superfluous, and there is no reason in the world for using it except that it gives rather an archaic look at the expense of the reader's convenience. Again, there was no real necessity for printing the letter *v* always as *u* when it occurs in the middle of a word. It is only an embarrassment the more for the reader, who ought to be placed as near to the original author as possible, and not separated from him by peculiarities which can be easily avoided. We do not wish to have old authors modernized, but the simple adoption of the letter which everybody uses in the present day would remove a very appreciable obstacle without in the least depriving the old author of the essential characteristics of his time. Indeed it may be very reasonably argued that a letter which has been disused strikes us as the author never intended it to strike us; for he certainly did not wish to be quaint and archaic in using it; he simply spelled as accurately as his own education and the custom of the time permitted. The publishers have done well to give the portrait of the French poet as a frontispiece. It is engraved with much taste and skill from an old miniature, and the engraver has done well in this instance to represent the oval frame also, which has an excellent effect, and is almost necessary, there being so little background about the head. The face, at least to our taste, is exceedingly refined and handsome, the eyes large and beautiful, the expression rather sad and thoughtful, the air that of a gentleman. We are sorry not to be able to speak so favourably of the landscape illustrations, engraved on wood by Mr. Whymper from drawings made on the spot by Mr. Lionel Muirhead. The subjects are evidently interesting, but the artist (we presume an amateur artist) is not yet sufficiently sensitive and cultivated to seize upon those refinements of line and light upon which the beauty and interest of a drawing so much depend. We do not wish to be harshly critical. Mr. Muirhead has no doubt intended simply to add to the interest of the volume by letting us see in what an interesting place the old French poet lived; but it seems to us rather a pity that, in a volume to which so much loving care has evidently been devoted, the illustrations should not be as perfect as the rest. Mr. Muirhead draws quite well enough to make illustrations to an ordinary book of travel, but here we should like to find the taste and skill of a highly cultivated artist. Even in what may seem little things that could easily have been managed otherwise, the illustrator has not done what would have been best. In the printed pages there is always a fair margin to the text, and many of the poems, with short verses, run down the middle of the page like a rivulet in a broad meadow. Evidently, then, the illustrations should have had a good margin; yet the woodcut of the Château de Vire has scarcely any margin at all, and the cut of the church of Notre Dame is nearly an inch wider than the prose text on the opposite page. Again, the quality of the paper is very dissonant with that on which the text is printed. The cuts are printed on hot-pressed tinted paper, the text on white Dutch paper, with a decided wire-mark and grain. The worst of the cuts is the bridge over the Vire with Basselin's house. It is just on a level with the unpretending woodcuts in the canoe-books, and one expects to see Mr. Macgregor coming round the corner in the *Rob Roy*. We will not, however, quit the illustrations without complimenting Mr. Muirhead on his emblematic device, which is printed in black on the last leaf of the volume and in gold upon the cover, and thus described:—"On Shield suspended from Apple-tree, the armorial bearings of the town of Vire; suspended from Vine, a Pilgrim's Calabash Bottle, antique Inkhorn, and MS. of the 'Vaux-de-Vire,' on scroll intertwined with the branches 'ΠΑΝ ΔΕΝΔΡΟΝ ΑΓΑΘΟΝ ΚΑΡΠΟΥΣ ΚΑΛΟΥΣ ΠΟΙΕΙ.'" This design is excellent of its kind, and very appropriate. The plants are rightly used and rightly conventionalized.

The Introduction gives a description of Vire and its neighbourhood, and an account of the poet Jean le Houx, who wrote the songs which, from the place where he lived, have been called the Vaux-de-Vire, or Songs of the Vau-de-Vire. The reader will find Vire on the map in the department of Calvados:—

> Of beautiful Normandy one of the most lovely districts is that known as Le Bocage; and of that Norman Bocage the principal, as well as the most picturesque town, is Vire, the chief town of Lower Normandy, and charmingly situated on the slopes of several hills, and in the valleys which they enclose; it is surrounded by a wide expanse of richly wooded heights, fruitful orchards, undulating upland pastures, romantic copses, and high and

* *The Vaux-de-Vire of Maistre Jean le [illegible] bourgeois of Vire.* Edited and Translated by James Patrick Muirhead, M.A. With a Portrait and other Illustrations. London: Murray. 1875.

rocky crags; while the streams of the river Vire and its tributaries wind below, adding fresh verdure to the landscape, and supplying water power to many mills situated on their banks.

A little above the junction of the Vire with the Virene, the former river sweeps boldly round a lofty and very precipitous granite rock, on which stands the partially ruined donjon-tower of the ancient castle of Vire, finely dominating the position of the town and its environs. The scene, one of very peculiar and varied beauty, has long been famous as Les Vaux-de-Vire.

Many different witnesses unite in bearing testimony to the loveliness and especial charm of these valleys. Mrs. Macquoid says that it seemed to her "as if weeks might be spent in exploring the loveliness of these Vaux-de-Vire." Miss Costello says that "words can but feebly convey the impression made on the mind by scenery such as awaits the wanderer amongst the deep dells and hills studded with grey rocks and short brushwood which enclose them." Mr. Musgrave said that the ancient Greeks would have identified so fascinating a region with Arcadia, a land of shepherds and of pastoral song, and peopled with fawns, satyrs, and nymphs, with Pan enthroned upon some moss-clad rock or fallen pine, as their presiding leader and deity. Mr. Muirhead quotes Horace (the Ode to Bacchus) *apropos* of the Vaux-de Vire, and very appositely with reference at once to the scenery and the topics of the songs:—

Bacchum in remotis carmina rupibus
Vidi docentem (credite, posteri!)
Nymphasque discentes, et aures
Capripedum Satyrorum acutas.

* * * * *

Fas pervivaces est mihi Thyiadas,
Vinique fontem, lactis et uberes
Cantare rivos, atque truncis
Lapsa cavis iterare mella.

But Mr. Muirhead tells us that the interest which attaches to the town, river, and environs of Vire is not limited to the loveliness of landscape, the quaint antiquity of buildings, or the animation of historical incident. Sainte-Beuve said that Vire is one of those few small provincial towns in which from the fifteenth century literary pursuits have never flagged, and poetry, in particular, has ever been held in high honour. M. Cazin has given a list of more than sixty natives of Vire more or less distinguished as authors. Some of our readers may be already aware that the class of theatrical compositions called "Vaudevilles" take their name from the old songs called "Vaux-de-Vire," and these in turn are named from the pretty valleys of the river Vire. This is certainly one of the curiosities of etymology. It is strange enough that a popular kind of play should take its name from a landscape remembered only by the learned. Most people fancy that Vaudeville means something about the "ville," but they feel puzzled about the first syllable. Certainly the vaudevilles of the present day have much more to do with the life of the city than with the quieter existence of the people who dwell by the river Vire. In England and America the little that is generally known about the Vire and its poetry is derived from a poem of Longfellow, called "Oliver Basselin," which was published along with the *Courtship of Miles Standish*. The poem begins thus:—

In the Valley of the Vire
Still is seen an ancient mill,
With its gables quaint and queer,
And beneath the window-sill
On the stone
These words alone,
"Oliver Basselin lived here."

This Basselin, who lived in the fifteenth century, was a fuller by trade, and a composer of drinking-songs; he was killed at the battle of Formigny, in 1450. Basselin being one of the earliest poets of Vire, and one of the best known, the consequence has been, as in so many other similar cases, that he has got the credit of compositions which did not really belong to him. It is difficult, at this distance of time, to identify Basselin's work; and in the earlier part of the present century the belief prevailing amongst French scholars was that Basselin's songs were corrected in the sixteenth century by Jean le Houx, who was an advocate of Vire. Jean le Houx was born somewhere about 1545, and he died in 1616. About the year 1570 he is believed to have prepared for the press the first edition of *Le livre des chants nouveaux de Vaude-Vire*. Not a single copy of this edition is now known to be in existence. The author had the priests against him; they refused him absolution, and he had to make a pilgrimage to Rome before he could get delivered from this stigma. No other edition of the songs was published in the lifetime of Le Houx. They were still circulated in manuscript, however; and we may presume that they were still sung by the author's friends and companions when no priests were present. In 1669 the Vaux-de-Vire were reprinted at Vire by Jean de Cesne. Two copies of this edition have survived to our own times, and one of these has now disappeared, the only remaining copy being in the National Library at Paris. In 1811 a new edition of the poems was privately printed by some gentlemen of Vire. Besides these editions, there exists a manuscript, probably contemporary with Jean le Houx, and of this MS. Mr. Muirhead is the happy possessor. The edition of 1811 perpetuated the belief that the poems were by Basselin. In 1833, however, the librarian of the public library at Caen obtained a MS. for the library, which, for reasons which we have not space to give in detail, is believed to settle the question in favour of Jean le Houx. In the title of this MS. the contents are plainly said to be by Le Houx, and these contents include eighty-nine Vaux-de-Vire, besides a second series of twenty-seven Vaux-de-Vire and thirty-two Noëls:—

Further, M. Gasté has also clearly shown, not only that the Vaux-de-Vire and the Noëls of the MS. of Caen are altogether in the handwriting of Jean le Houx, but also that they are his own compositions, described, and treated, and referred to by him as such, and by him inscribed with his own name and with his initials.

In the prose translation of his book to Bacchus, in his sonnet to his book, in his address to the critics, as well as in his Latin elegiacs, he always writes in the first person as being the author of the poems, responsible for them, and the only one who could truly describe the feelings under which they were composed.

We are quite persuaded that Le Houx, and not Basselin, was the author of the songs in the volume before us, and we should need very little external evidence to lead us to that conclusion. These songs, with all their simplicity of style, total absence of pedantry, and constant recurrence to a subject so familiar as the praise of wine, are still evidently the productions of a delicate and cultivated intelligence. No one but an educated man could have written them. Olivier Basselin, the fuller, is believed to have been, and most probably was, an illiterate boon companion who had a natural talent for rhyming. In these songs there is more than natural talent, there is the *finesse* of culture, there is a refined art of expression. Looking at the intelligent delicate face which is the frontispiece to the volume, we at once believe that the man there represented could have written the songs. Besides this we have the age of the language. The French used in these poems is of a comparatively late date; it is already modern, in spite of some quaintness of diction and some peculiarities of spelling. Lastly, the poet himself speaks of Basselin as a predecessor in danger of being forgotten, and proposes to drink to his memory:—

Si nos malheurs bien tost ne prennent fin,
Tristes malheurs qui travaillent la France,
J'ay peur, Olivier Basselin,
Qu'on ne te mette en oubliance.

Las! Basselin avecques le bon temps
Que tu avois, faisant tes Vau de Vire,
S'en sont allez les bonnes gens
Lesquels les souloient si bien dire.

The very next song alludes to the author's Latin, of which the fuller would probably have been quite ignorant. The author implies that he sometimes spoke Latin, as cultivated people did in those days:—

Si voulez que je cause et presche,
Et parle Latin proprement,
Tenez ma bouche tousiours fraische,
De bon vin l'arrosant souvent;
Car je vous dis certeinement,
Quand j'ay seche la bouche
Je n'ai pas plus d'entendement
Ny d'esprit qu'une souche.

The qualities of Jean le Houx as a poet may be described in a few words. He has an easy and simple egotism, reminding us of that of Montaigne, and he pleases himself by making verses in praise of wine without pitching his note too high, or aspiring to the rank of a great poet. Like Montaigne, he tells us very frankly what his defects are, but at the same time avoids the affectation of pretending to vices which are not his. Thus, with all his praise of wine, he dislikes drunkenness and avoids excess. With the good taste of a cultivated gentleman, he enjoys wine so far as it helps him to be cheerful and intelligent, but not when it would begin to make him sottish and stupid. He likes the poetry of wine-bibbing, but that only. Not being physically strong, as he frankly tells us, he requires to be cheered sometimes, and finds that good wine does this for him. He is a lawyer, but hates the wrangling of the courts, and prefers a song and a glass by the side of the river Vire. He avows a certain indifference to the fair sex, and is equally indifferent to the satisfactions of wealth and ambition:—

L'amour je laisserai faire
Et les dames courtizer.
Il ne me faut plus qu'à boire
D'autant, et me reposer.

Such is the keynote of one of the *chansons*, and what follows is the keynote of another:—

Laissons vivre malheureuses
Ces ames ambitieuses,
Et joyeusement vivons
De si peu que nous avons.

There is a great deal of quiet humour in many of the songs; for example, in the first stanza of No. III.:—

Adam, c'est chose tres notoire,
Ne nous eust mis en tel danger,
Si, au lieu du fatal manger,
Il se fust plustost mis a boire.

C'est la cause pourquoy j'évitte
D'estre sur le manger gourmand;
Il est vrai que je suis friand
De vin, quand c'est vin qui merite.

When he refers to the popular belief that wine is bad for the eyes, he meets the objection with happy audacity:—

On dict qu'il nuist aux yeux. Mais seront-ils les maistres?
Le vin est garison
De mes maux. J'ayme mieux perdre les deux fenestres
Que toute la mesnie.

He says that it is a cure for care and melancholy to drink as many glasses of good wine as one has letters in his name; but that when

the wine is indifferent he would have a short name, whereas when it is good he would like a long one:—

Boire autant de fois du bon
Qu'a de lettres nostre nom,
Cela garit nostre vie
De soing et melancholie.
* * * *
Si le breuvage n'est bon
Jan simplement j'auray nom;
Mais s'il est plaisant et digne,
Mon nom sera *Marc Anthoine*.

One of the most perfect songs in the collection is No. LV. The singer begins by describing, in few words, a little domestic scene. His wife scolds in the house, loudly, and without ceasing. To get away from this misery he feels the need of communication with his neighbour. He is well received, by a good fire, whilst it is raining out of doors. There is a roast, and hot chestnuts, and good wine, and dessert, and his neighbour's wife is in a good temper, and everything goes on most happily till he returns home, where a curtain lecture awaits him. All this is told in short and very perfectly tuned verses.

Mr. Muirhead's translations are as well done as such things can be; but of all poetry, lyrical poetry in very short, pithy verses is the most difficult to render, and it is almost impossible in modern English to convey the real spirit of a French song-maker of the sixteenth century. The original is so concise that the slightest amplification spoils it, and yet without amplification there is no room to stir in another language. For example, Le Houx writes:—

Nous sommes une grande trouppe
D'infortunez.

This Mr. Muirhead translates thus:—

We're a great troop, alas!
Oppressed by many woes.

The original writer says nothing whatever about woes, or about being oppressed, nor does he cry alas! Many of Mr. Muirhead's renderings are much better than this, and some are remarkably good; but there is not, and there cannot be, anything like equality of good workmanship throughout. A more important matter than the translation is to keep the original text free from misprints. It is evident that Mr. Muirhead has been very careful about this, and we are grateful to him for it; yet there are oversights here and there. For example, on p. lxxii *on* is twice printed for *ou* in the first two lines.

PAUSANIAS THE SPARTAN.*

THIS volume contains the scant half of a romance which, had it been finished, would doubtless have afforded scope for all the strength, and not improbably for some of the weaknesses, of the author's writing. The present Lord Lytton, assisted by Professor Kennedy, to whom are addressed by way of dedication the introductory pages that conveniently explain the state of the work, has brought together in a continuous form so much of the plan as had been executed at the time of his father's death, and has also laid before the public what little materials exist for judging of what the whole was intended to be. The sense of editorial duty, reinforced as it is in this instance by filial piety, has induced him also to exercise considerable ingenuity in composing an argument for the historical plausibility, if not probability, of the view of Pausanias's character and actions required by the plot and presented at some length in the chapters which should have formed the first volume. Under the circumstances this was natural; but if one is to approach the matter in an historical frame of mind at all, it is hardly possible to look upon either the father's romance or the son's introduction as anything else than a brilliant *tour de force*. The task which Lord Lytton had set himself was to raise to the heroic stature one of the most vulgar and least estimable personages in Greek history. The best thing that could have happened to the commander of the allied Greeks at Platæa would have been to fall in the moment of victory. Pausanias, as history presents him to us, is simply one of the earlier specimens of a type which occurs afterwards only too often; a man equally devoid of principle and judgment, exalted to the height of power by fortune beyond his desert, and using that power as a stepping-stone for treasonable ambition which, after the failure of his first daring schemes, consumed the rest of his life in obscure intrigues, and finally brought him to a dishonourable death. One sees no reason for ascribing to him any remarkable strength of character, or any conspicuous qualities other than the exaggeration of the faults which were common to his countrymen. His overbearing and tyrannical conduct towards the Greek allies was simply the conduct to be expected from a Spartan, and such as was in fact displayed by other Spartan commanders, with a few honourable exceptions, whenever they had the opportunity. It is permissible, of course, in a novelist to find in this the hints of a subtler and wider policy. But, as far as actual explanation is concerned, any such conjecture is gratuitous.

The novelist has in this case taken the precaution of making the explanation appear as if it were called for by the favourable colour he has given to the Spartan character in general. Lord Lytton's Sparta is not the Sparta of history, but the half-fabulous Sparta which was current in the commonplaces of the later philosophical schools, depicted in the lively colours of Plutarch, and from Plutarch and the philosophers dispersed abroad into the modern world through the medium of endless later writings and allusions, among which we can hardly be wrong in giving a prominent place to Montaigne. When we go back to contemporary authorities we find wonderfully little foundation in substance for the belief about the Lacedæmonians which until of late years was to be found in most books, except the authorities themselves, and in which many of us were brought up. It was usual to exhibit Sparta as an unsullied model of all the most heroic, if not of the more attractive, virtues; the Athenians being represented, by way of a foil to the brightness of this picture, as a frivolous, fickle, disreputable sort of people, who spent most of their time in heaping every kind of ingratitude on all the eminent men who, by a series of extraordinary accidents, happened to be produced among them. It is not our business at present to vindicate the fellow-citizens of Sophocles and Pericles; but the Dorian models of all the virtues with whom we are now concerned appear in the light of the real events, so far as we can judge of them by the behaviour of their public men, as a selfish, narrow-minded, and tyrannical community. We see them but once showing any sense of enlarged Hellenic patriotism or any aptitude for disinterested action for the common good, and that once only when they were under Athenian influence, and not without the need of frequent exhortation and remonstrance to keep them from falling back into short-sighted isolation; at other times a force tending merely to disruption and disturbance, incapable of political progress themselves, and a standing menace to it in their neighbours. It would be difficult to name any good the Spartans did to mankind either before or after the Persian war. They contributed nothing to arts, commerce, or politics; and they did not even make up for this for their own purposes by securing any corresponding advantage in the knowledge and practice of warfare to which they sacrificed everything else. Not only their enemy Pericles (if we may credit the words put into his mouth by Thucydides, himself no violent anti-Laconian), but a perfectly impartial witness, Aristotle, has observed that their affectation of austerity and parade of peculiar discipline failed after all to compass the desired ends, and that other people, when they chose to turn an equally serious attention to the art of war, obtained equally good results in the same department without the aid of Lacedæmonian manners. Individual valour and steadiness they doubtless had in a high degree; but there is little or nothing to show that they excelled other Greeks in tactics or strategy, such as they then were, and we know that in some points they were positively backward. It would hardly be too much to add to what we have already said that they contributed nothing even to the art which they exclusively professed. There is no Spartan improvement on record to match those of Iphicrates and Epaminondas. Altogether it would seem that the Lacedæmonians may be set down as among the most remarkable and the most successful of historical impostors. Having delivered ourselves, however, of this general warning to the reader, we cannot deny that, according to the highly elastic common law which may be supposed to govern romance-writing of the historical kind, Lord Lytton was fairly entitled to take the rose-coloured and romantic view of the Spartan character, and it is matter for commendation that he secured a comparative life and freshness for it by taking it straight from Plutarch. The result is such as to fit in well enough—perhaps better than the very truth of history would have done—into the kind of world which it was eminently Lord Lytton's faculty to create. It is a world neither in itself credible, nor for itself desirable, but which nevertheless imposes on us when we enter it, and to a certain extent keeps us spellbound while we are in it. The Spartan scenes of this fragment are pleasing if not probable, and the minor characters introduced into them, notwithstanding that they are hampered with a certain air as of Jacobins playing at Greeks—a species, one need hardly remark, infinitely remoter from the real Greeks than any honest barbarian—are drawn with a skilful hand and attract us by human qualities.

To return to Pausanias himself, it was no small feat of imagination to find a theme for romantic treatment in such unpromising material. The editor's suggestion that he may really have been better than he seems, as we have to depend on Athenian writers strongly prejudiced against him, will scarcely bear examination. Plutarch was sufficiently free from Athenian partisanship, and the death of Cleonice—the worst thing to English as well as to Greek ideas that we know against Pausanias in detail—is confirmed by his namesake the traveller from independent local tradition. Enough remains of the novel to show that Lord Lytton was prepared to face this incident, and that it was intended to be somehow dealt with. The precise turn that would have been given to it is left doubtful; but the ghost mentioned by Plutarch would certainly not have been omitted, and we should have had a vague supernatural element interwoven with the latter part of the plot in the manner especially affected by the author of *Zanoni*. We do not know that there is very much to regret as regards this part of the unfinished plan; for the introduction of such machinery in the modern novel, unless with a most delicate and sparing hand, appears to us for many reasons to be a grave artistic mistake. The general character of Pausanias as here presented is a brilliant anachronism. He is urged by a lofty discontent and aspiration hardly possible to a Greek of his time, and least of all to a Spartan, though the vulgar ambition which we have above assigned as his only real motive was of

* *Pausanias the Spartan: an unfinished Historical Romance.* By the late Lord Lytton. Edited by his Son. London: George Routledge & Sons. 1876.

course possible without limit at that as at most other times. As a natural accompaniment to this anachronism of character, we find a corresponding tone of exaltation in the *other* personages; and one long passage of elevated dialogue contains political and philosophical speculations which to some extent import Platonic and even modern ways of thinking into the doctrines of the earlier Ionian school. An extract from the passage in question will give some notion of this aspect of the work, which one may presume would have come into greater prominence in the subsequent parts:—

"Master," returned the singer, "can the good come without a struggle? Is the beautiful accomplished without strife? Recall the tales of primeval chaos, when, as sang the Ascræan singer, love first darted into the midst; imagine the heave and throe of joining elements; conjure up the first living shapes, born of the fluctuating slime and vapour. Surely they were things incomplete, deformed ghastly fragments of being, as are the dreams of a maniac. Had creative Love stopped there, and then, standing on the height of some fair completed world, had viewed the warring portents, wouldst thou not have said—But these are the works of Evil and Hate? Love did not stop there, it worked on; and out of the chaos once ensouled, this glorious world sprung itself into ether, the completed sister of the stars."

The unrhymed verses which occur in several places, and which have a certain beauty of their own, belong in the same kind of way to a world of the romancer's own devising. They avoid being modern English in tone, but do not attain to being Greek; they read almost like translations from some German imitation of the antique.

We find in the general style of these chapters, as it is but natural that one should find, various indications that they awaited further revision. There are some overloaded descriptions of persons and characters, and one insufferable verbal barbarism—*womanize*—occurs in two several places at a long interval. "No Spartan can *womanize* himself by ease" is the last instance, and the other is much like it. The author would not, of course, have allowed such a monster to stand in his final text; he had a good English word at hand in *unman*, or he might even have lawfully coined *be-woman*. On the whole, *Pausanias the Spartan* is a suggestive and curious fragment, showing the beginnings of a considerable work of its kind; but we must confess that the kind is not one in which our own taste delights.

STIGAND'S LIFE OF HEINE.*

IT would be difficult to find a biographical subject presenting a larger number of distinct points of attraction than Heinrich Heine. If we look merely at his temperament and character, we find a theme for the most subtle and patient psychological analysis; if we reflect on the strange nomadic kind of literary life he led, there unfolds itself a subject for a highly attractive narrative; or, finally, if we confine our attention to his numerous and varied writings, we have a rich mine from which we may extract gems of beautiful sentiment and graceful fancy. Mr. Stigand attempts in the two volumes before us to supply us at once with this threefold gratification. Heine was a man of an exceedingly rare temperament even among poets. With a nervous system so delicately pitched that he was exposed to forms of misery, such as sleeplessness under the least disturbing sound, to which most persons are probably strangers, he nevertheless possessed a buoyancy and a childish gaiety of spirit which makes Mr. Stigand's epithet "an elfish nature" not inappropriate. On the one side, he was quickly responsive to every tone of gladness that fell on his ear, full of *Lebenslust*, and brimming over with playful impulses; on the other side, keenly alive to the defects and woes of life, deeply affected with the *Weltschmerz*, and wilfully rebellious against the stern necessities and limitations of existence. This double root of his existence showed itself in his humour, which was wont to be bright and kindly, but could readily become caustic enough, and in his poetic fancy, which loved most of all to revel among the beautiful valleys, woods, and streams with their happy elf-population, but which could no less easily sit brooding over the weird, gloomy aspects of the world. It reveals itself unmistakably in that deep struggle between the real and the ideal which fills so conspicuous a place in his life, and which is so graphically portrayed in the poem published as a preface to the third edition of the *Buch der Lieder*. It is in the light of this conflict, too, that we may best understand his social relations. Heine was essentially sociable and convivial, needing companionship, indeed, as all glad natures need it, as may be plainly seen in his numerous friendships in Germany, no less than in his happy intercourse with the lighter-hearted French. Yet his exquisitely fine sensibilities, which shrank back from every disagreeable impression and uncongenial quality, rendered him easily antipathetic and quarrelsome. Though, as he himself well knew, a true German in poetic sentiment and imagination, his susceptible nature was quickly wounded by contact with the rougher and coarser material of his average fellow-countryman; nor did it escape contusion during his brief sojourn among the severely preoccupied, self-contained inhabitants of our own metropolis. Finally, the same opposition is traceable in his not very deep, though genuine, religiosity. While the laughter of life made him for the most part deaf to the voices of spiritual aspiration, he betrayed especially in his later years a true instinct for religion, even though his unalterably gay and playful character lent an odd appearance of irreverence to his treatment of the subject. The explanation of Heine's deepest trait was an antagonism between the two impulses to enjoy the real and to yearn after the unrealised; and the rarity of his character is due to the clearness and fulness with which each of these tendencies manifested itself, as well as to the rich assemblage of intellectual and emotional attributes in and through which it expressed itself. Of these last the most striking qualities are certainly, first of all, the singular fancy which, though truly German in its affinity with all that is mysterious and weird in nature, has a swiftness of movement, a grace of play, and a lightness of touch which are anything but German; and, secondly, the no less characteristic humour, which is exquisitely refined, tender, and sportive, and only rarely manifests the grimness and caustic dryness with which we are more familiar in German literature.

Heine's life, too, studied in connexion with this rare temperament, has a singular charm. From the very first he came under influences which prevented him from becoming simply a German in sentiment. Born of a Jewish family, he was nurtured in a strong antipathy towards that vulgar spirit of contempt for his race from which his own kindred, along with others, had frequently suffered. Then, too, as a young boy, he came in very agreeable contact with French influences, his native town of Düsseldorf being at this time included in a duchy made over by Napoleon I. to his brother-in-law Joachim Murat. Heine's ardent mind was excited to enthusiasm for Napoleon and his *régime*, one important element of which was an honourable treatment of his Jewish subjects. Thus it happened that, though Heine's genius was largely moulded by the traditions of German poetry, his early intercourse with the French, and his acquaintance with their language and literature, gave a decided bent to his artistic tastes. His exquisite feeling for form and style, in prose no less than in poetry, must probably be ascribed in part to this influence. Heine's life was by no means a sunny one externally, and the fact that he retained so much buoyancy, and even hilarity, of spirit to its close shows plainly enough the innate quality of his disposition. First of all he had, like many other youthful aspirants to literary fame, to force his way through numerous family objections before he could take up his chosen profession. Then his Jewish extraction proved a hindrance to his pecuniary and social advancement; and, with much bitterness of heart, he renounced the creed of his fathers, and formally adopted that of Christianity. Even when he left Germany in despair of Government recognition, and found a highly congenial residence in Paris, his troubles did not end. Quarrels with German refugees of the ultra-Radical sort lacking all refinement, repeated disappointments and pecuniary losses through the narrow and severe censorship of the German press, petty disputes with jealous and exacting relatives concerning money matters, and finally seven years of intense bodily suffering in a "mattress grave," served to surround the latter part of his life with many gloomy shadows. Yet his experiences in Paris were, on the whole, happy ones. In the first years of his residence there he enjoyed with his natural intensity the brilliant social intercourse which the city provided him, and entered with characteristic ardour into its stirring artistic and political activity. And through the period of his suffering his home was made glad for him by the presence of his beloved grisette wife.

A brief glance at Heine's writings will suffice to show the manysidedness of the poet's mind. Englishmen who know only his lyric poems, and perhaps the more familiar portions of the *Harzreise*, will be surprised to see from Mr. Stigand's work what a profusion and variety of literary productions flowed from his pen. His poems are no doubt his best and most durable work; but much besides has a real value. Whether he took up as a subject his travels, or the history of German literature, or the political movements of his time as he witnessed them not only in Germany but in France, and for a short period too in England, or, finally, contemporary music and painting, he shows clearness and penetration of mind, fineness of sensibility, and an irrepressible fund of gay humour. His literary criticisms deserve special mention on account of the breadth and catholicity of taste which they betray. Heine appears to stand almost alone among German critics as one who was able not only to render their due to German poets, to Goethe and Schiller, to Novalis and Jean Paul, but also to recognize the peculiar stately grace of the French classical poets. In his musical criticisms, too, Heine showed a large and refined musical susceptibility. His accounts of Liszt, Chopin, Rossini, Mendelssohn, Berlioz, and others are very graceful and discriminating. Among many other striking criticisms we may mention his comparison of Berlioz to Martin the "wild Briton" in pictorial art, in "his feeling for the monstrous, the gigantic—for material immensity." Though Heine attentively watched the progress of French politics during the reign of the "Citizen King," and sent full reports of his observations to the *Allgemeine Zeitung*, he was not a profound politician. His sympathies were mainly with intellectual and artistic progress, and he estimated the value of political parties and forms of government according as they seemed to him to be in harmony with this spiritual movement.

Such, then, is the very attractive material which Mr. Stigand has chosen to treat. The ground, moreover, selected is comparatively virgin soil so far as English writers are concerned. Excepting a few translations of Heine's poems, and very fragmentary notices of his life and reviews of his writings, no account of this fascinating poet existed in our language. Finally Heine's own countrymen have supplied ample data for such a history as Mr. Stigand here undertakes, the excellent work of Adolf Strodtmann, *Heinrich Heine's Leben und Werke*, being a very full and complete account

* *The Life, Work, and Opinions of Heinrich Heine.* By William Stigand, Author of "Athenais: or, the First Crusade." London: Longmans & Co. 1875.

of the poet. It is natural therefore to inquire whether Mr. Stigand has made the most of his opportunity, and has really supplied English readers with a clear and adequate record of Heine's life and writings. Notwithstanding the fulness and the interest of Mr. Stigand's work, it cannot, we fear, be regarded as a literary success. It is rather a copious selection of material for a critical biography than such a biography itself. First of all, the work of selection has not been carried far enough. Heine wrote very rapidly, especially in his more ephemeral productions, and though these nearly always contain brilliant strokes of wit and choice conceits of fancy, they do not merit full reproduction. The many lengthy translations from letters, newspaper articles, &c., sometimes extending to several pages, are really so much padding, serving simply to fill up Mr. Stigand's two large volumes. So, too, we could well dispense with the long account of the satirical poem *Atta Troll*, which was called forth by the vagaries of a little group of obscure German poets styling themselves the Tendency poets, and has really lost nearly all its interest. In addition to this absence of a just discrimination between the important and the unimportant, there is a conspicuous want of arrangement of material. Mr. Stigand frequently returns to the same subject, and even quotes repeatedly from the same works. But the worst element of disorder in the book is the amount of digression. Anybody who comes into brief contact with Heine must have his portrait taken, and the accounts of events, political and other, which happened to be contemporaneous with Heine's life and work are expanded to quite tedious dimensions.

Moreover, apart from this want of due selection and arrangement, Mr. Stigand's account of Heine suffers from the constant intrusion of a very uncritical element of powerful sentiment. We look, of course, for a certain amount of enthusiasm in a biographer, and Mr. Stigand's admiration for Heine's personality and creative genius does not exceed the bounds of propriety. Indeed he manifests on the whole great fairness of judgment in dealing with his hero; his remarks on Heine's so-called immorality and on his apparent irreverence in dealing with religion being quite temperate in tone. It is when touching on national traits that the author shows a seemingly ungovernable element of feeling. Mr. Stigand evidently dislikes Germany and the Germans with a cordial antipathy, and in no less a degree he is enamoured of France and the French. Accordingly he devotes many pages to enumerating the deformities and vices of the former, and the charms and amiabilities of the latter, with a view apparently of delivering Englishmen from their present prejudice in favour of Germany. Now this is not only a great blemish in a biographical work, but is a particularly unhappy feature in an account of Heine. It is quite erroneous to suppose that the poet really became a violent foe of Germany when he adopted France as his home. So far from this, Heine, as Mr. Stigand himself points out, insisted to the end on being regarded as a German poet. It is one delightful feature of Heine's character that he at once appreciated and assimilated the best qualities of the German and the French mind, and while he pokes fun at the clumsiness of the German intellect and the heaviness of style of most German writers, he does not refrain from pointing out the limitations of the French mind—as when, for example, he refers their political weakness to their faculty of forgetfulness. Heine would never have said anything so silly as this:—"What can be thought of a people's capacity for wit and humour who have not produced one single comedy which can be called tolerable?" (Vol. I. p. 257). Heine was philosopher enough to know how the forms of humour vary with national temperament. One is inclined to ask, too, whether Mr. Stigand has ever seen *Minna von Barnhelm* fairly put on the stage. Indeed, in one case his anti-Teutonic mania leads him to make assertions which are clearly opposed to the opinions of Heine himself. He gives us a quotation of nearly three pages from the infallible utterances of a correspondent in the *Daily Telegraph*, who seeks to show that, since young Germans do not indulge in open-air games, there is no love of amusement in the German nature. Let the reader, after perusing this cogent argument, read what Heine writes during his brief sojourn in London on the heaviness, the gloom, the stern severity of our English life, and the effect will be not a little droll. Mr. Stigand appears not to know that the Germans, like the French, regard Englishmen (not wholly without reason perhaps) as incapable of pure amusement; and might they not point to our vaunted national games—for example, our University boat-races, with their preliminary training—as illustrating the fact that sport only becomes interesting to us when it is transformed into a solemn business?

A word must be said in conclusion on Mr. Stigand's literary style. He comes before us as a profuse translator of Heine's poems and prose, and it is natural to ask how he has accomplished his purpose. We cannot, on the whole, congratulate him. Heine is no doubt one of the most difficult poets for translation, his charm residing so much in an exquisite choice of words, many of which have no exact equivalents in our language. Yet the achievements of previous translators, among whom Mr. Leland deserves special mention, clearly show that something better is attainable than, for example, the following rendering of the first verse of the well-known song beginning "Ich weiss nicht was soll es bedeuten":—

> This sadness what doth it betoken,
> This sadness which weighs on my brain?
> A weird tale, with glamour unbroken,
> Keeps haunting my soul with its strain.

It is only fair to add that this is one of the worst specimens; at the same time, the want of ear for Heine's music, and of for his simple, forcible ideas, which we see here, is to in different degrees in nearly all the translations. In his own prose Mr. Stigand is for the most part clear, direct, and vigorous. Sometimes a very thin thought is clothed in language disproportionately massive and ornate. The worst faults of Mr. Stigand's style are certain Continental and other forms of speech clearly opposed to the English idiom. Among a host of these we may mention—"I remember me"; "I am in the country since"; "but need only"; "the conversation rolled upon" a subject; "imaginational" (for imaginative); and errors in spelling, as "Galeotti" for Galotti, which occurs more than once.

STUBBS'S CONSTITUTIONAL HISTORY.—VOL. II.*

(*Second Notice.*)

THE second volume of Mr. Stubbs's great work forms four chapters, divided according to the two periods which, as we have already pointed out, are embraced by his present subject. In each a chapter of narrative—of constitutional narrative, that is—is followed by a chapter of comment. The titles of these chapters are significant. Mr. Stubbs is not a man to give his chapters sensational headings; but, in the case of the earlier narrative chapter, a heading which is almost sensational makes itself. The narrative chapter of Mr. Stubbs's heroic period is headed, "The Struggle for the Charters." Great as were the men of that time, the events were greater still, and the chapter is called from the events. But the second narrative chapter has nothing in the same way to mark it. Though the men are smaller, there is nothing but the men to call it after, and Mr. Stubbs's sixteenth chapter has to be called nothing better than "Edward II., Edward III., and Richard II." But, when we come to the chapters of comment, it is the other way; a personal name comes in the earlier one, while there is none in the later. The fifteenth chapter is headed "The System of Estates and the Constitution under Edward I.," while the seventeenth is headed "Royal Prerogative and Parliamentary Authority." In the former case we see the distinct personal agency of a single man. In the second case, though both men and events are on a smaller scale, yet the results are greater. These four chapters make up the present volume, which opens with a vigorous sketch of the eighty years which followed the Great Charter, that Great Charter which, in Mr. Stubbs's words, "closes one period and begins another." The reign of Henry the Third has often been dealt with before in its general outlines, and those general outlines may be summed up in a few words with enough of truth for ordinary purposes. But there is always a temptation to run on to the later stages of the reign, to the career of Simon, to the Parliament of Oxford, to the warfare of Lewes and Evesham and Kenilworth. There is a temptation to pass over the long and, it must be allowed, from some points of view, dreary years which slip away, one hardly knows how, before Simon becomes the chief actor. Dr. Shirley, in his preface to the Royal and Historical Letters, called attention to the real constitutional importance of this time. It is now worked out more fully by Mr. Stubbs. The early years of Henry the Third were the second minority in English history, the first since the Norman Conquest. Dr. Shirley enlarges mainly on the extraordinary powers exercised during this time by the Papal Legates Walo and Pandulf—Legates, it must be remembered, of the lord whose man John had become. Mr. Stubbs seems to dwell by preference on the English statesmen of the same day, the great Earl Marshal and Hubert of Burgh, and on the constitutional principles which first came to the front during a minority. We now first come across "an inner royal council, distinct from the curia regis as it existed under Henry II., and from the common council of the realm." We now first hear the claim of the common council of the realm distinctly to elect the great officers of state:—

> It is probable then that the events of Henry's minority had a considerable effect in creating the idea of limited monarchy, which almost immediately springs into existence. It is at all events not improbable that the constitutional doctrine that the king can do no wrong, and that his ministers are responsible to the nation, sprang up whilst the king was a child, and the choice of his ministers was actually determined by the national council.

Mr. Stubbs also brings out the acts of some men of this period who are apt to be passed by. He makes us remember that Richard King of the Romans had once, as Earl of Cornwall, been an English patriot. He shows us good Archbishop Edmund in his true light—a light very unlike that in which he seemed to the blinded pilgrims of Pontigny a year or two back. And he brings out a hero who was so early cut off that it is not wonderful if he is forgotten, the Earl Marshal Richard, who "might, if he had lived, have anticipated some of the glories of Simon de Montfort." In this part of the book Mr. Stubbs has some fine epigrammatic points which ought to be remembered:—

> Hubert taught the boy that personal gratitude must give way to state policy. Henry was an apt scholar in learning the lesson of ingratitude; policy he could not learn.

> Like Hubert Walter and Geoffrey Fitz Peter, Hubert de Burgh had served the king too well to please the nation, and had spared the nation too much to please the king.

A little later our author brings prominently forward the scheme

* *The Constitutional History of England in its Origin and Development.* By William Stubbs, M.A. Oxford: at the Clarendon Press. 1875.

of reform in 1244, which "whether or no it were more than a paper constitution, anticipates several of the points of the later programme of Simon de Montfort, and some at least of those which for centuries afterwards were the chief subject of contention between king and people." This scheme appointed four councillors chosen in Parliament, to whom the royal power was to be practically handed over. That is to say, as in so many other of these early schemes of reform, it was proposed to do openly and directly what in later times we have found a way of doing stealthily and indirectly. At this time, says Mr. Stubbs, "no great signs are apparent of the action of any one leader; Simon de Montfort may have taken part in the councils of Grossetesto, who, both in his writings and in Parliament, constantly opposed the tyranny of the king and pope alike; but he must have led a quiet life on his own estates until 1248, when Henry sent him to govern Gascony." But if Mr. Stubbs takes pains to make out clearly what the great Earl did and what he did not do, it must not be thought that he is in any way unjust to him. Perhaps his praises do not come quite so naturally to Mr. Stubbs's mouth as the praises of Edward the First; but there is nothing that any one can quarrel with. Unlike Edward's special panegyrist, Mr. Stubbs sees that admiration for the two is perfectly consistent, and he brings out how truly Edward carried out what Simon began. What Simon really did is well expressed also. Mr. Stubbs says:—

> The idea of representative government had, however, ripened in his hand; and although the germ of the growth lay in the primitive institutions of the land, Simon has the merit of having been one of the first to see the uses and the glories to which it would ultimately grow.

It is with Edward the First, both personally and politically, that Mr. Stubbs is most thoroughly at home. Here he has at least come to a King of whom he can not only draw the portrait, but can unreservedly admire the portrait when he has drawn it. In painting the great King, his thoughts naturally go back to the greatest subject of his earlier portraits. Edward "had all the powers of Henry II. without his vices, and he had too that sympathy with the people he ruled, the want of which alone would have robbed the character of Henry II. of the title of greatness." "He was a law-abiding king, one who kept his word." Yet Mr. Stubbs does not fail to mark the spirit of over-legality which was the weak point of Edward's character; he asks, however, in fairness, that he should be compared with the Kings who went before him and who came after him. If so,

> we shall see cause not so much to justify his conduct as to wonder at the greatness of his moderation, at the wise and temperate use of the position which he had made for himself.

There is something striking in a history of the reign of Edward the First in which there is hardly any mention of Scotland or Wales. But this is in truth just as it should be. It is highly important to have the strictly English place, the strictly constitutional place, of Edward thoroughly drawn out, as it is here drawn out by Mr. Stubbs. Hallam quite failed to do justice to Edward; and, on a smaller scale, the writer of the *Annals of England* shows a special and bitter prejudice against him. On the other hand, the sworn panegyrist of Edward, the author of the *Greatest of the Plantagenets*, though his books form a useful answer to many popular errors and calumnies, certainly goes too far the other way, and will hardly allow any merit in any man who withstood Edward. Even in Mr. Stubbs's narrative we do not feel quite comfortable over the part where he deals with the Earls of Norfolk and Hereford; we must venture to think that he is a little hard upon them. Still we have here the constitutional work of Edward, the work which it is hardly an exaggeration to call the completion of the English Constitution, traced out in a fulness and with a strength such as have never been brought to bear upon it before. The great merit of Mr. Stubbs's treatment of such a subject as this is the combined breadth and calmness of the view with which he looks at it. With him it is not merely that such or such an enactment was made, that such or such a gradual change took place in England, in such a year or such a century. In discussing such matters, Mr. Stubbs looks backwards and forwards and round about. He shows how the state of things at this particular time rose out of the state of things in times that went before, and bore on the state of things in times which came after. He deals primarily with England; but he compares the working of causes and their effects in England with the working of causes and their effects in other countries. He compares the development of the representative system under Edward with the development of the representative system in France, Spain, and elsewhere, and he traces out the causes which made the later history of those countries to be so different from that of England. He shows how, though the main principles of the Constitution were laid down under Edward, yet it was only by a very gradual process that every detail was fixed, and that every element in the State finally settled down into its proper place. He traces out the gradual growth of the two orders of peerage and commons, by what delicate steps the barons drew near to the earls and parted off from the knights, and how by steps equally delicate the knights drew near to the citizens and parted off from the barons. He shows how near we were more than once were to having distinct orders of merchants and of lawyers; and he works hard at the hardest of all branches of his subject, the anomalous position of the clergy in their Convocation. Very feeble is the glimmering of light which even Mr. Stubbs is able to throw on this darkest of all subjects; but it is at least light as far as it goes, in contrast to the blackness of darkness in which every one before him has left us. We do begin to see, if we have not misunderstood Mr. Stubbs's meaning, that Convocation is strictly an ecclesiastical synod, which became clothed with some Parliamentary powers because the clergy obstinately refused to act in their strictly Parliamentary character of an estate of the realm. We cannot, of course, undertake to abridge the whole of Mr. Stubbs's exposition of all these constitutional points; but we may remark that some of the most valuable things in his book come out in the form of small casual remarks. Thus he tells us in a note:—

> Many of the lines of distinction which separated the baron from the knight, such as relief and other matters of taxation, might have been made to separate the earls from the barons, but these points become more prominent as the ranks of the lords are marked out by new titles, duke, marquess, viscount.

So, again, he remarks that the knights of the shires "formed a compact body, which neither the Crown nor the sheriff could diminish as they could diminish the number of barons summoned or of the representatives of the towns." This is really a most important point. We must, as we remarked in our former article, always bear in mind the fluctuating condition of things in these times. Some barons were always summoned in their own persons; some towns were always called on to send representatives; but it did not follow that the list of barons so summoned, or of towns so called on, would be exactly the same in every Parliament. The sheriff was bidden to cause members to be sent by each city and borough in his shire, a formula which different sheriffs interpreted according to different circumstances; but the shires themselves were a fixed number which everybody knew. The barons and the towns might fluctuate, but a shire could be no more deprived of its representative knights than an earl or a bishop could be deprived of his personal summons. Mr. Stubbs strongly brings out the great truth that there is in a legal sense no nobility in England, and the vast importance of this distinction between England and Continental countries:—

> The hereditary summoning of a large proportion of great vassals was a middle course between the very limited peerage which in France co-existed with an enormous mass of privileged nobility, and the unmanageable, ever varying, assembly of the whole mass of feudal tenants as prescribed in Magna Carta.

Another point which Mr. Stubbs brings out, and which he may be said to have set at rest, is that the knights of the shire were elected in full county court, and not only by the tenants in chief of the Crown. He shows how the election of knights of the shire for Parliamentary purposes was merely one application of the earlier custom of choosing select knights for various local purposes, and in these cases it was always the full county court which chose.

To follow Mr. Stubbs through the whole of his volume would be beyond our space. It may be better to confine ourselves to the two earlier chapters which deal with the time which has evidently been most of a labour of love with the writer, and which is likely to be so with his reader. As we ended our former article by calling attention to the eloquent, but solemn and almost sad, pages which end the whole volume, we will end this article by calling attention to the pages, no less eloquent, but this time not sad or solemn but brilliant, with which Mr. Stubbs winds up his great chapter on the Constitution under Edward the First. The policy of Edward is there discussed, and the points of likeness and unlikeness between him and the other great royal lawgivers of his day are commented on. We see how our Edward rises, not only above Alfonso of Castile, but above the Wonder of the World, above St. Louis himself. Then comes the survey of the baronage, the baronial families, the earls in their own persons, Simon, "the genius, the hero of romance saved by his good faith and righteous zeal," hovering above them all. Then comes the action of the clergy in that thirteenth century which "is the golden age of English churchmanship." Mr. Stubbs tells us with evident satisfaction that "the age that produced among the earls one Simon produced among the bishops Stephen Langton, St. Edmund, Grosseteste, and the Cantilupes." He vindicates—yet surely at this time of day it was hardly needful to vindicate—the great churchmen of that day from the charge of seeking nothing but the selfish aggrandizement of their own order. By this time Englishmen have surely learned that men like those on Mr. Stubbs's list had their place alongside of barons and commons, almost before barons or commons, in building up the freedom and greatness of England. Of the commons, from the knights downwards, there is naturally less to say personally. Their work we see mainly as the work of masses. The time had hardly yet come for their leaders to stand out alongside of bishops and barons. But we see that they had leaders both in the knightly and in the burgher class, and the action of knights and burghers as classes stand out in every page of the history of the struggle. The harmonious working of all classes of Englishmen in the same cause is well brought out in a passage with which we will wind up our notice of the great work before us:—

> It was well that the barons and the bishops should furnish the schemes of reform, and most fortunate that barons and bishops were found to furnish such schemes as the people could safely accept. The jealousy of class privilege was avoided and personal influences helped to promote a general sympathy. The real share of the commons in the reformed and remodelled constitution is proved by the success of its working, by the growth of the third estate into power and capacity for political action through the discipline of the parliamentary system; and the growth of the parliamentary system itself is due to the faithful adhesion and the growing intelligence of the third estate.

TAYLOR'S DRAMATIC POEMS.*

SIR HENRY TAYLOR, though he has always had friends among the critics, and indeed commands the sincere respect of intellectual readers, has never attained to the position of a popular poet; and it will be interesting to observe whether the republication of his works will have any effect in extending the circulation of his writings. The mere popularity of a poet is in itself no doubt a very imperfect, and often misleading, test of his poetical capacity; otherwise we should have to place Mr. Tupper in the first rank of modern bards. At the same time it may reasonably be doubted whether any one can be reckoned a successful poet whose works, if they have had anything like a fair chance of attracting attention, do not excite that general sympathy which makes them what in the common phrase is called popular. Whatever may be the fate of Sir Henry Taylor's poems in the future, it must be admitted that, in spite of the honour which is paid to them in certain quarters, they have as yet failed to acquire popularity; and it therefore becomes an interesting question whether this is due to any defect of public taste, or to something wanting in the poems themselves. For our own part we are disposed to think that the form in which they have been cast rather stands in the way of an appreciation of their best qualities; and also that a prejudice has been created against them by the dogmatic tone in which they have occasionally been praised for merits which do not belong to them. It is not every man who is a judge of where his strength lies. The tragedian sometimes yields to the delusion that his chief power is in comedy, and comedians have been known to make a similar mistake. This is very much what has happened to Sir H. Taylor. He has chosen the dramatic form as the favourite vehicle of his muse, and he could scarcely have chosen one in which it would move less naturally and do less justice to his peculiar genius. *Philip von Artevelde* is called a dramatic romance, *Isaac Comnenus* "a play," and *Edwin the Fair* a "drama," while *St. Clement's Eve* and *A Sicilian Summer* are left to be classed by the reader at his own discretion. All these pieces are cast in the shape of plays, with scenes and characters, and raise an expectation of that vivid and passionate representation of human nature in its external workings, which is supposed to be the special function of a play. If this were not insisted on, and promised by the fashion of the works, it would not be looked for, and so far, therefore, disappointment would be avoided. There are no doubt dramatic passages in *Von Artevelde*, and also in *Isaac Comnenus*, but, as a rule, it is just in this respect that the writer most signally fails. Dramatic effect, if it means anything, must mean, not merely a philosophical analysis of character, but the exhibition of character as if in actual movement and vitality. It is not enough to show by explanatory talk what sort of a character is meant, or what kind of act is being performed; but the reader must be put in the position of an eye-witness, who is not merely told, but sees what is happening. In order that this may be thoroughly accomplished, attention must be concentrated on one or more principal figures and lines of incident, for the simple reason that to distribute the interest over a number of detached or accidentally connected objects is necessarily to break it up and dissipate it. Hence a dramatic work in order to fulfil its object must contain some strong central idea which is carefully kept in view throughout, dominating and colouring even those scenes in which it is not directly exposed.

When we apply these principles to Sir H. Taylor's dramatic poems it will be seen at once why their hold on the reader is so feeble notwithstanding the high intellectual qualities which characterize them. *Von Artevelde* was once played for a few nights by Macready, but it was from the outset an obvious failure; and none of the other pieces have ever been attempted on the stage, though perhaps *Isaac Comnenus* is, on the whole, less unsuitable for such a use than *Von Artevelde*. It is true, however, that a play may not be fit for theatrical purposes and may yet be thoroughly dramatic, although meant only to be read. But Sir Henry Taylor does not succeed even here, simply because his treatment is not sufficiently objective, and the reader is annoyed by stage directions which serve only to remind him of the deficiencies of the artist. In Von Artevelde we have a picture of a mind rather than of a man; his soul is laid bare, and his most secret, subtle impulses are subjected to a searching analysis. This is no doubt admirable in itself, only it is not dramatic. In a drama people expect to see the characters moving about in the flesh, not trepanned and dissected on the operating-table for the purposes of philosophical instruction.

Isaac Comnenus is, we should say, on the whole, decidedly the most complete and successful work which Sir H. Taylor has produced. The central figure is steadily and consistently portrayed, and stands out in bold, clear lines. As a study of character nothing can be better; but here again, except perhaps in some of the earlier scenes, the dramatic element is conspicuously weak. We get only glimpses of the shadowy creatures who surround Prince Isaac, and the Prince himself is too introspective for the stage. *Edwin the Fair* presents a vivid idea of the conflict between the monks and the secular power; but though we catch the general lights and shadows of the time, there is a want of that clear and well-marked personality which is essential to dramatic effect. Edwin and Elgiva, Athulf and Leolf, and even Dunstan himself, are rather described than exhibited; and there is so much overcrowding and confusion that individual character is lost. There is, however, one part of this so-called drama which indicates that the author is not without dramatic instincts, though he is apparently unable to give form to them in a sustained manner. We mean the seventh and eighth scenes, in the first of which the members of the Synod, ecclesiastical and secular, are seen passing into the chamber, the chief figures being touched off in a running commentary by some of the lookers-on, while the next scene shows the Synod in hot debate. All this is worked out with spirit, and general dramatic animation; and if the writer had concentrated his powers on compressing the whole piece into half-a-dozen scenes of a similar kind, he might have achieved a triumph even on the stage. As it is, however, he sacrifices personal interest to general impressions, and we have a sort of historical panorama rather than a play. What must strike any one who studies Sir H. Taylor's writings from this point of view is the fluctuating and unequal manner in which he draws his characters. They are either elaborated by long soliloquies or descriptions, excellent as poetry but unsuitable for the stage, or they are shown for a moment in a dim, blurred way, and then suddenly withdrawn. In *Isaac Comnenus*, for instance, the author expends all his force on Isaac, and it may even be said on one aspect of Isaac's character, leaving the rest in shadow. No attempt is made to do more than just to indicate the tigerish passion of the Caesarissa, without making it clear whether it is love or policy which moves her, the proud confidence of Isaac's sister, or the devoted love of his cousin, Numa. In *Edwin the Fair* some good characters are utterly thrown away by the hasty, fragmentary manner in which they are treated.

It appears from the preface to the *Sicilian Summer* that it was written with a view, not to repeat the form of the Elizabethan comedy, but to revive the romantic and poetic spirit which animated it. The poet turned, as he confides to us, with some sense of pain from the "oppressiveness of pure tragedy," and, on the other hand, he found the comedy of manners and repartee too narrow and artificial as a representative of human life. His conception of the highest comedy was that, without losing a prevailing character of "lightness and sweetness"—an anticipation of Mr. Matthew Arnold's characteristic worship—it should be in turn serious, pathetic, and, still more, "eminently wise." Hence the experiment of *A Sicilian Summer*, which, however, though full of charming passages, cannot be said to be satisfactory from a dramatic point of view. The story is loose and scattered, the characters are too numerous and sketchy, and the incidents are often hurried on without sufficient preparation or development. There is no central idea in the piece, and several plots are mixed up together. Wisdom and pleasantry are no doubt there, but the work wants the straightforward simplicity and directness of a drama. *St. Clement's Eve* is perhaps less known, or at least less spoken of, than his other works, yet it is in some respects one of Sir H. Taylor's best. It is a graceful and romantic story, illustrating the disordered condition of France under Charles VI. The King suffered from intermittent madness, and the affairs of the country were practically swayed by his brother, the Duke of Orleans, and his uncle, the Duke of Burgundy, between whom there was perpetual rivalry and strife. Among other expedients to relieve his affliction it was proposed, in accordance with an old tradition, that a virgin to whom no sinful thought had ever occurred should cross his brow with water from a holy reliquaire. In this instance, however, the remedy fails, because the young nun who is chosen to apply it has happened to be befriended by the Duke of Orleans, and, without knowing who he is, or that he is married, has conceived an affection for him; and, to appease public clamour at the failure, she is condemned to the stake. There is here no doubt some of the oppressiveness of tragedy, but the subject is certainly not treated in a harrowing manner. Indeed the main incident may be said to be subordinated to the general picture of the period which the author has in view.

It is unfortunate that a writer of so much intellectual power and literary culture should have so persistently adhered to a form of writing which, from what it promises, naturally produces disappointment. An appreciative reader, however, will find ample compensation in the high poetical qualities of Sir H. Taylor's works. He has the genius of a philosophical poet, if not the especial gift of the dramatist; and, though he is in some degree deficient in the fresh spontaneity of song, this is atoned for by matured thoughtfulness, keen insight into character, graceful humour, and large and manly eloquence. Any one who is content to take these writings as they are, and for what they are worth, without caring whether they are dramatic or not, will have reason to be abundantly satisfied. He will find the essence of history compressed into graphic and vivid verse, a profound analysis of human nature and emotion, and much wise philosophy. The poem in blank verse called the *Eve of the Conquest*, in which Harold reviews his career on the night before the fatal battle, is marked by nobility of thought and chastened vigour of expression, and makes one regret that the poet did not adopt more generally the form of composition in which he is most at home. In these days of hasty and superficial literature, a special value attaches to poems which, if less sparkling than current wares, are of richer and more genuine ore.

SCOTTISH EPITAPHS AND INSCRIPTIONS.*

CHURCHYARDS, tombstones, and the tales they tell, cast a never-failing spell over minds of a reflective and melancholy cast. They furnish perpetual themes to the moralist and the poet, and have inspired a style of literature quite their own, of which *Meditations among the Tombs* and Gray's *Elegy* are at once, though in widely different ways, the masterpieces and the types. But even less celebrated persons than Hervey and Gray find a certain melancholy pleasure in strolling through a churchyard or cemetery and making themselves acquainted with the names, ages, and special virtues of persons to whose existence during life they were quite indifferent. The craving for gossip inborn in every human mind finds food in each commonplace detail, while vanity suggests that virtues and gifts of which we are at present quite unconscious may one day be thus made patent to the world by our admiring and sorrowing survivors. The same sort of interest, though in a less degree, we feel in turning over the leaves of a printed collection of epitaphs. It is like looking through a friend's album, where we are brought face to face with strangers on every page. Yet we cannot get rid of the notion that the originals of both epitaphs and photographs were probably strikingly unlike their pictured or lettered semblances. Mr. Jervise's book, however, is no mere barren collection of epitaphs. It contains also many topographical and archæological notes, of which we need only say that they are as interesting as the reputation of the writer, and his thorough knowledge of the antiquities and local history of the district here treated of, would lead us to expect. It was intended in the first place to be a reprint of a series of articles which appeared in the *Montrose Standard*. To these Mr. Jervise has, however, added corrections and additions, and many curious particulars concerning several well-known families; these have been chiefly obtained from the hitherto unpublished papers of the Panmure family.

The epitaphs and inscriptions, which are the main features of the book, are comparatively modern in date, and range over the sixteenth, seventeenth, and eighteenth centuries. Mr. Jervise does not enter into the vexed question of the meaning of the symbols on the sculptured standing stones, or of the Ogham inscriptions found on some of them. Setting these aside, the oldest inscribed stone which he has found is a slab in the church at Insch, on which is a cross, and in Irish characters the words "✠ Orate . pro . anima . radulfi : sacerdotis." As a certain Radulph, chaplain to the Bishop of Aberdeen, witnessed a grant of land to the monks of Melrose somewhere about the year 1172, he may very probably be the priest here commemorated. If so, the stone must date from the twelfth century, and is one of the oldest of the kind to be found in Scotland. No other inscription in Mr. Jervise's collection can lay claim to such antiquity. The next in order of age are on the monuments of the Hays and Montifixes at Cupar-Angus, which Mr. Jervise ascribes to the fourteenth century. But, as Mr. Jervise himself draws the reader's attention to these and other monuments of special interest in the preface, we need not dwell further upon them.

The punning and humorous epitaphs retailed by would-be wits along with good stories and repartees will be sought for in vain in this collection. The Scotch national feeling as to the sanctity of all the adjuncts of death is far too strong to encourage such ill-timed jesting. The churchyard which contains the ashes of their ancestors is to them in a twofold sense hallowed ground, and the Jews themselves could not cling with a more superstitious reverence to the custom of having family bury-places. Even the very poor will bring the bodies of their kindred great distances that they may be gathered to their forefathers. We have known instances of the "Scot abroad" who carried about with him a handful of earth from the family bury-ground to the intent that wherever he died it might be sprinkled on his coffin. With a people to whom the idea of death is at once so familiar and so sacred, anything like a joke upon a "head-stane" would be looked on as profane. Still the inscriptions to their relations not unfrequently provoke a smile from their very solemnity, long words and hard to be understood being as much in favour on tombstones as in sermons. "Here lies the *mortal* remains of as much as could die" is a very favourite formula in most churchyards, although we have not met with it in Mr. Jervise's book. This reverent spirit, however, is shown only towards the "yaird," and does not extend to the inside of the church, for nearly all the racy anecdotes of which every district of Scotland has an endless store centre round the pulpit and the minister. Mr. Jervise enlivens his pages with some of the best of their sort. He tells us how, when the bell of Mary Kirk was cracked by Cumberland's soldiers, the precentor in the middle of the service handed a slip of paper to the minister, who unsuspectingly gave out that "the prayers of the congregation were requested for Mary Bell in great distress." Still better is the story of the old minister who took a fearful revenge on one of his heritors who had spoken of him as too infirm for the parish. The very next Sunday he preached "two turns of the hour-glass," and was beginning a third when the offender rose to go. "Will ye say noo, Tilwilly, that I canna insist?" (Anglicé preach), shouted the old man after him as he left the church.

But the minister was not always allowed to have his say without protest, if it happened that he and his flock were not of like mind. One Royalist divine, who during "the Forty-five" was praying "that the rebels might be scattered like mist upon the mountains," was stopped by the laird's wife, who started up and shook her fist at him, calling out, "Will ye say that, and my Charlie amang them?" What the state of feeling between Highlanders and Lowlanders in the beginning of the last century was, we gather from the account of the death of Michael Dunbar in 1722. Michael had been captain of his parish and the head of the league, offensive and defensive, against the Caterans:—

> When upon his death-bed, Mr. Miln, the parish minister, paid him a visit; and, while exhorting Michael upon the rough life he had led, and that he had much need to repent of his sins, Michael replied—"Repent o' my sins! What the deevil cou'd I doe whan thae Heelan' thieves cam' doun to take awa' our nowt?" "Ah, but Michael," said the parson, "that'll a' stand against them at the day o' Judgment." "Weel, weel," quo' Michael, "ilka chiel' 'll get's ain then!" And, grasping a dirk which lay beside him in the bed, he exclaimed, to the terror of the minister, who, it is said, made a quick retreat—"That's the hand, an' that's the dirk that loot oot fifteen sauls o' them a' in ae nicht!"

Yet this man was a Romanist and a staunch supporter of the Stuarts, and, had he lived long enough, would have been "out" in "the Forty-five" fighting side by side with those very Caterans.

From the Panmure papers Mr. Jervise gives some very curious letters, interesting from the light which they throw on the social state of the country in the seventeenth century. There is also an inventory of the "furnishings" supplied to the young Earl of Kinghorn when a student at St. Andrews. "The turkie carpet," "velvet cusshens," "imbroudered velvet courtaines," and other articles enumerated, show that all Scotch students did not, even at that early date, cultivate Greek upon a little oatmeal. More curious still is the account of the expenses incurred at the funeral of Miss Arbuthnott of Findourie, in 1704. The funeral must have been one of the most fashionable of the day, and the amount of money spent in flesh and fowl, ale and wine, plum-cakes, sweetmeats and spices, shows how much eating and drinking the mourners required to enable them to support the burden of their grief. Indeed the long list of delicacies provided at once suggests that only a change of name was needed to make the "funeral baked meats" very fitly "furnish forth a marriage table." If such entertainment was common at funerals, we cannot wonder at such stories as the one Mr. Jervise gives of a funeral which had reached the churchyard before it was found out that the coffin had been left at home. The poor woman who thus almost missed being buried had been the victim of a mishap somewhat of the same sort on her wedding-day, when the bridegroom brought her home on a pillion after the fashion of those times:—

> When the bridegroom arrived at his house, he called to the friends, who had assembled to welcome the pair home—"Tak' doun the gudewife, sirs!" "There's nae gudewife here!" was the reply, to which the bridegroom, after a short pause, answered—"I'll wager yon was her 'at gaed kloit i' the burn o' Aul' Rayne!" Messengers were despatched in search of the lost bride, who was found in a house, near the scene of the disaster, drying her garments by the side of "a blazin' ingle!"

As the district over which Mr. Jervise ranged in the present volume was the stronghold of episcopacy, we have the sufferings of the episcopal ministers after the "troubles" brought out in strong relief. The fortitude with which the clergy of that persecuted Church endured their trials was truly heroic, though it is to be hoped that not many of them showed their martial spirit in the same way as Mr. Troup, of Muchalls, who, when arrested for reading the service in defiance of the prohibitory Act, took his bagpipes with him, and marched to prison, playing "O'er the Water to Charlie" as he went. But Mr. Jervise does full justice to all denominations, and we find in his pages the epitaphs of the martyrs of Dunottar, and of the Apologist for the Quakers, as well as those of Romanists and Episcopalians. What sect he himself belongs to we are at a loss to determine, when we find him writing, with reference to an extract from a baptismal register, that this

> is a noticeable instance of the curious custom which prevailed in Scotland during Episcopal, and even in later times, of having godfathers and godmothers present at baptisms, who bore the same Christian name as was conferred upon the child.

We can assure Mr. Jervise that this curious custom may still be witnessed daily in every Christian country.

Mr. Jervise has lighted on a curious prophecy, which he quotes in connexion with the Tait family monuments. It was written by Richard Burbage in 1601, and is certainly literally fulfilled in our own day:—

> A Scot our King? The limping State
> That day must need a crutch.
> What next? In time a Scot will prate
> As Primate of our Church.
>
> When such shall be, why then you'll see,
> That day it will be found,
> The Saxon down through London town,
> Shall burrow under ground.

We cannot part from Mr. Jervise without expressing a hope that he may be induced to publish the rest of his collection of epitaphs, of which he tells us the present volume contains less than a fourth. At the cost of much labour he has here given us a book which is at once interesting to the historian and to the antiquary, and is likely to be extremely useful to all persons interested in family history, as a help towards tracing the history of collateral relations whom they have lost sight of.

* *Epitaphs and Inscriptions from Burial Grounds and old Buildings in the North-East of Scotland.* By Andrew Jervise, F.S.A. Scot. Edinburgh: Edmonston & Douglas. 1875.

THE CHRONICLE OF SIR HARRY EARLSLEIGH, BART.*

THERE is one characteristic which is in some sort common to the many varieties of novels that cumber our tables in these days, and that is want of simplicity. The writers of fiction, whose name is legion, seem all to agree with the most popular playwright of modern France, that the time for turning the inventive faculties to so trivial a purpose as that of recreation is past. It is no longer the novelist's mission to give relaxation to tired brains; he deems it rather his business to stir his readers to fresh efforts of thought, either in following involved analyses of character or in making a way through a maze of bad grammar, according to his calibre. In the many cases where merely bad writing is a stumbling-block to readers, it may be that the trouble given to them is unintentional, but the effect of finding a work of labour where one hoped for a solace from care is the same whether the book is overweighted with purpose or entirely destitute of thought. The anonymous writer of *Sir Harry Earlsleigh* has been singularly unhappy in combining an evident moral purpose with an equally evident want of the commonest requirements of a novelist. The book aims at showing that it would be an excellent thing if marriage with a deceased wife's sister were rendered legal; and it is no doubt possible to find some amusement, though hardly of the kind intended, in the means by which it is attempted to convey this moral lesson.

The writer has been lavish in the matter of lively incident wherewith to attract the reader's attention to the graver questions which he is to consider. In the first chapter there is a hairbreadth escape from death threatened by fiery and unmanageable steeds, which reminds one of a like incident in *Lewis Arundel*. In the third there is an encounter with an angry bull, followed by one with two yet more angry dogs. The fourth, which contains a daring leap on a dangerous horse over a closed gate, recalls the adventures of Charles O'Malley and other heroes of Lever, in whose works the author seems to be particularly well read. In the eighth we have a rescue of the heroine from the dangers of drowning, and in the tenth a severe fall punishes the hero for trying to gather a fern for her from an insecure piece of rock. All these adventures, which take place in the first volume, are mere excrescences on a plot which is as striking and original as they are. A prologue to the novel represents a wife dying in the presence of her husband and her sister, of whom these words are written: —"Is that an angel's face? she is not an angel; but if chastity, if virtue, if intense affection, go for aught, she is not far from being an angel. And very shortly she will perform an act of self-devotion which, placed in her place, an archangel could not excel." We are presently told what this act of self-devotion is. It consists in yielding to a request made by the dying wife, "a request as natural as woman can make to woman, a sacrifice as great as soul can ask of soul." This request which is so natural is that the surviving sister should marry the widower, and be a mother to his orphan child. Cases have, we believe, been known of women taking care of their sisters' children without marrying their sisters' husbands; but in this particular instance no such way out of the difficulty occurs to the people concerned; and the result, which we cannot but deplore, of this "sacrifice" being demanded and made, was that it became possible to write the *Chronicle of Sir Harry Earlsleigh, Bart.*

This young man appears in the first chapter of the novel when the prologue is over, as Mr. Earlsleigh, a barrister, who, in language which seems meant to be humorous, tells an imaginary person, whom he constantly addresses as "Sir," how hot he was on a summer evening in the Temple, and how he received a letter from an old friend, a landowner at Killarney. This letter begins with a phrase from which one may guess pretty clearly that the novel is the work of a woman's pen. "What in the name of mystery have you been doing with that dear old self of yours for the last twelve months?" There is no reason why women should not write novels. It has been said, in the main with truth, that this is the one branch of art in which they have excelled. But there is every reason why, in the first place, they should learn that the art of writing does not come by nature as the practice of domestic duties does; and in the second, that if they must write novels, they should deal with matters of which they have some actual or acquired experience. Such considerations as these have apparently not troubled the writer of this particular novel. Its hero accepts the invitation given to him in the letter just quoted to go and stay with his old friend Seymour at Killarney, and there the remarkable adventures of which we have spoken befall him. He meets there a Miss Harcourt, who is the other principal figure in these perils. After the first of them—the upset of a carriage—which occurs immediately after their first meeting, he, after he has been employed in "disengaging her robe from the vehicle," and has taken her out of the car, "could not forbear pressing the dear girl to his heart for one short moment." In the course of his next adventure, with the angry bull, he says to her, "I shall always be delighted to afford Miss Harcourt amusement, even if it be at the risk of being gored to death by an infuriated bullock"; and the same tone of light and graceful gallantry is kept up between them for some time. A little while after this, Mr. Earlsleigh is bitten by a dog, when, in order to bandage the wound, "with a gentleness that was most truly womanly, the dear girl rolled up the sleeves of my tattered coat and shirt. A bright blush overspread her beautiful face as she disclosed my somewhat muscular arm." This is an unusually favourable specimen of the love-making carried on in the book, in the course of which it may be noted that the heroine is in the habit of addressing the hero by his surname alone. Things would probably have gone on happily enough but that the hero's cousin, Sir Alfred Earlsleigh, an aristocratic villain of the transpontine type, appears on the scene, and immediately devotes himself to compassing everybody's ruin. He first attempts to kill his cousin, and then, when his intended victim attempts to interfere between him and a peasant girl, threatens him with "crushing damning humiliation." This threat receives additional point from an old crone in whose hut the hero and heroine take shelter during a storm, and who curses them both with great vigour, prophesying to the hero, whom she addresses as "boy," that the worm now feeding on his happiness will eat its way slowly to his heart, after which, by some hitherto unknown process, his heart is to turn to stone. This incident, which again recalls Mr. Lever's novels, makes such an impression on Mr. Earlsleigh, that, having been employed till then in making desperate love to Miss Harcourt, he immediately asks her to forget him. His subsequent explanation of this conduct, which is due to his suddenly remembering the misfortune of his birth, has the merit of being remarkably plainspoken. Unluckily, during his period of forgetfulness, Mr. Earlsleigh has drawn his coat-of-arms in an album on Seymour's drawing-room table, and this gives an opportunity for the "crushing damning humiliation" with which Sir Alfred has threatened him. Sir Alfred observes that there is an omission in the shield, and on Earlsleigh saying with singular denseness, "I must confess I fail to perceive to what you allude," replies, "I will show you":—

> So saying, he drew a small and elegantly-jewelled pencilcase from his pocket, and with a bold hand began some alteration of the shield which I could not see, remarking while he did so, "A distinction so remarkable should scarcely be left out, good coz."
>
> Wondering to what distinction he could allude in a tone so bitterly sarcastic I did not answer. I had not long to wait, for almost immediately after his pencil had touched the paper he handed the book back for our inspection, remarking as he did so, "I think, good coz, I would advise you to change the motto also, for, with that appendage, it is slightly anomalous."
>
> As my eyes fell upon the book the blood rushed to my face; every vein I had seemed bursting, and with hands clenched, and bosom heaving as though from some great exertion, I gasped for breath. There, drawn diagonally across the face of the escutcheon, was a broad, deeply-pencilled line, a sign in heraldry known as "The Baton Sinister," the mark of illegitimacy, the badge of shame.

The result of Sir Alfred's pleasantry is that his "good coz" nearly strangles him, and then, having beaten him with a whip, runs out into the fields and faints, after which he makes his way back to London, where yet more adventures await him. He gets the reputation of having ruined the peasant girl whom he has tried to save from his cousin, and, having taken no steps to clear himself from the charge, is greatly surprised at finding himself cut by his old friends. He becomes a successful advocate by one of those happy chances which more frequently occur to brietless barristers in novels than in real life. The reader is treated to an account of a debate in the House of Commons on the question of marriage with a deceased wife's sister which no doubt resembles some real debates in its extraordinary dulness. It is perhaps needless to say that at the end virtue, in the person of the hero, is rewarded; but the way in which this is brought about is peculiar. It consists of proof being forthcoming that his father's first marriage was void, and that he is therefore a legitimate son. The writer has attempted to relieve this singularly unpleasant and silly story with what are intended to be humorous passages. These in great measure consist of old stories gathered from various sources and spoilt in the telling. One of them is a reduction to the imbecile of a really funny anecdote of an electioneering trick told by Lever in *Charles O'Malley*. Another is a long drawn-out and ill-managed version of an incident, which in itself has no great merit, to be found in a novel by Cockton, called *Sylvester Sound*. Of those stories which seem to owe their existence to the writer it is enough to say that their feebleness is matched by their vulgarity.

* *The Chronicle of Sir Harry Earlsleigh, Bart.* 3 vols. London: Sampson Low & Co. 1876.

OLD DERBY CHINA.*

THE author of this book has the great advantage of being himself a china-painter by profession. He is consequently an authority upon the subject of glazes, marks, imitations, paste, and firing, and writes from the point of view of an adept as well as that of a collector. Notwithstanding Mr. Haslem's careful researches, the early history of Derby china still remains very incomplete. What is known on the subject is chiefly derived from the recollections of the late Samuel Key, who in 1785 was apprenticed to William Duesbury, the founder of the manufactory. The works had then probably been in existence about thirty years. At that time ceramic art had attained a high point of excellence on the Continent. The Furstenburg manufactory had been established, and at Florence the beautiful specimens of Doccia ware had attracted much attention. The celebrated Capo di Monti china was gaining a well-deserved reputation under the patronage of Charles III., and much fine porcelain was produced in France, although the royal establishment of Sèvres had not yet been founded. William Duesbury was an energetic man, and made rapid progress in his works. He bought up the "plant" at Chelsea and at Bow, when the manufactories there were discontinued, and transferred some of the best

* *The Old Derby China Factory; the Workmen and their Productions.* By John Haslem. London: George Bell & Sons.

hands to Derby. He seems to have spared no trouble or expense to procure good modellers, designers, and painters. In 1773 he opened a depôt in London at 1 Bedford Street, Covent Garden, and in the same year published a catalogue in which are enumerated two hundred different articles, some of them useful and some ornamental. We find mention made of "choice biscuit groups and figures in a grotesque style," of "a pair of Mazarine blue and gold Chelsea jars," as well as of horns, altars, tripods, and cats. Boswell tells of a visit which he and Dr. Johnson made to the factory in 1777. They were delighted with what they saw both in the moulding and painting rooms, but Johnson complains that the china, though very beautiful, was too dear, for it cost its weight in silver. At the present day the pieces he saw would bring their weight in gold, if they could be identified. William Duesbury died in 1786, and his son, who was also named William, reigned in his stead. The second Duesbury inherited much of his father's talent and industry; but his health was not equal to the strain of superintending so large an undertaking, and he was obliged to seek for a working partner. This he found in Michael Kean, who seems to have been a very successful miniature-painter. He was an Irishman, but had come to London, and there found plenty of employment. In some ways the partnership did not turn out well, as family feuds arose out of it, and in 1797 Duesbury died, leaving a son William, who, being only ten years old, was incapable of taking part in the affairs of the firm. Michael Kean, who is credited with the invention of the celebrated "biscuit body," married the widow, and the works were carried on for some years under the name of Duesbury and Kean. William the third did not inherit his father and grandfather's tastes, and, although he was a clever landscape-painter, and discovered the use of baryta as a substitute for white lead, he never took to the business of porcelain-making. When he was three-and-twenty the works were sold to Robert Bloor, who, besides certain annuities to the family of the late proprietor, agreed to give 5,000*l.* in instalments. The new owner had not the technical knowledge or artistic talent of his predecessors; but he determined to make money. The patterns became more gaudy, and large quantities of ornaments were made in imitation of Japanese designs. A great number of pieces which had been put aside as imperfect were brought into the market, and sold by auction. The novelty of the thing took, and they realized large prices, in some cases more than would have been charged at the manufactory for similar specimens in perfect condition. After working incessantly for about seventeen years, Bloor became deranged, and then for twenty years the business was carried on by a manager; but it was finally given up in 1848, and the plant removed to the Staffordshire Potteries.

Mr. Haslem has taken up the greater part of his book with biographies of the different artists who were employed in designing and painting the china. Many of them are extremely interesting, for a certain singularity of temperament seems to have been not uncommon, and several of these men were remarkable in their own way. Billingsley was perhaps on the whole the most skilful designer of groups of flowers, and he was certainly unrivalled in the painting of roses, which he executed in a way peculiarly his own. There was some mystery about his life, and he assumed the name of Beeley for about twenty years. His great talent never enriched him, and he had many domestic sorrows, amongst others the loss of both his daughters in the same year. He worked at Derby from 1774 until 1796, when he entered into partnership with Mr. John Coke, and started the Pinxton works. Then we find him superintending the porcelain at Nantgarw, now so much prized, and afterwards at Coalport, Worcester, Chelsea, and other places. He does not seem to have done much painting after he left Derby, but was mainly occupied in overseeing others. His style was correct and delicate in drawing and pure and sweet in colour, but he was never satisfied with anything he did, and always saw before him an ideal to which, with all his efforts, he never attained. But William Pegg, the man who replaced him at Derby, was a still more remarkable person. He was the son of a gardener, and evidently a lover of natural beauty. As a child of eleven he had listened to Wesley, who was then eighty-three. His father brought him up in the most gloomy Calvinism, and could afford him but a very meagre education. At ten he went to work in the pottery, and at sixteen was toiling fifteen hours a day at china-painting, and trying to improve his mind and compose poetry in the few spare hours he could snatch from his busy days and tired nights. His mind was a morbidly religious one, and in after years he chronicles his regrets that his youth had not been better employed:—

> Worship, of whatever kind,
> Oft was banished from my mind.
> Then I broke my old connexions,
> Placed on drawing my affections;
> Dedicated all my powers
> To the arts in leisure hours;
> And in times of relaxation
> Painting still engross'd my passion.

Many were the vicissitudes in the forms of his belief. He left the Calvinists to turn Baptist, and afterwards became a strict Quaker, but in all these changes he remained a God-fearing and conscientious man. After having spent about five years at Derby and there executed some beautiful work, he became convinced that his profession was a sinful one. In reading Foxe's *Book of Doctrinals* he came upon a passage in which the commands given to the Jews in the fourth chapter of Deuteronomy are spoken of, and it appeared to him that it conclusively proved that it is forbidden to Christians to make the likeness of anything in heaven or earth, or under the earth. He burned all his drawings except a few flower pieces, committed even Watts's hymns and psalms to the fire, considering them to be "engines of will-worship," and then betook himself to the business of making stockings. But even that apparently harmless employment brought no peace to his sensitive soul, and he complains:—

> I was employed in making neat silk stockings, but I felt uneasie at that kind of work, because the hose were more for show than use. I often blush'd with guilt when I reflected on it, considering that I was as much wrong in that kind of work as in painting china. But I gave it up and took to cotton-work, in that I was more easy, but I had to put some ornaments (for what was called clocks) in the cotton hose, that gave me uneasiness, but I prevailed on my employers to let me make the stockings without the clocks, and that gave me relief.

Unfortunately stocking-making was at best but very poorly paid, and the cotton hose which William Pegg could alone conscientiously make brought him but starvation wages. His mother, who had been accustomed to be supported in comfort on the fruits of his china-painting, rebelled, and led her poor son a dreadful life. In 1806 he determined to go and see London, and walked there all the way. He was delighted, and calls it a "paradisiacal" place. Kensington Gardens particularly charmed him, for there, he says, "One may enjoy such retirement without being interrupted with the foolish and unmeaning expressions of 'How do you do?' 'Good morning!' 'Good night!' &c." The visit seems to have been as inexpensive as it was pleasant, for Pegg only spent two pounds during the twenty-one days he remained in town. But the expedition appears to have again unsettled his mind, and when he returned to Hinckley he tried several ways of bettering his condition. First, he employed people to work for him in the stocking trade, but they cheated him and stole his cotton. Next, he set up a school in which he taught reading, writing, and spelling for the sum of threepence halfpenny for each pupil per week; but even this he was not paid, and he says, "I have not less than thirty names on my list, but half of them do not attend regularly, and the other half do not come at all." After this he suffered from another season of great mental depression and well nigh despair. Death became more desirable than life, and the buffetings of Satan were almost more than he could bear. For a year or two longer he struggled with poverty, mental anguish, the coldness of friends, and the reproaches of his mother. At last his views modified a little, and he determined to return to his old work at Derby. But his drawings had been burnt, his hand had lost its cunning, and his health was impaired by semi-starvation. After losing twelve of the best years of his life, he had to begin anew without hope, youth, or peace of mind. He married, but neither did this bring him happiness; and no sooner was he again getting on well than doubts began to assail his mind as they had formerly done. His wife was now a thorn in his flesh, as his mother had been, and could not any better understand his scruples. His eyesight began to fail, and finally in 1820 he for ever relinquished the profession in which he was so well calculated to succeed. The miserable pair set up a small huckster shop, and struggled on through many years of poverty, and sometimes of absolute want. William Pegg did not die until 1851, aged seventy-six years; he had no children. As a painter of flowers he was unsurpassed. A specimen of his work may be seen on a large oval-shaped soup tureen now in the Geological Museum. Perhaps the fact of his having been brought up amongst flowers enabled him to give to his designs the simple and natural grace for which they were remarkable. One day when taking a walk on the Nun's Green he saw a thistle which took his fancy and of which he made a careful drawing. This he afterwards reproduced in a plate which was kept at the Derby manufactory until it closed, as a model of masterly design and execution. This plate was to be seen at South Kensington last year, but it was in a very battered condition, from constant use in the painting room. William Pegg was likewise very successful in his rendering of autumn foliage, and his colouring was singularly delicate and true; his feathers and insects were also much admired from the firm free way in which they were handled.

There is one chapter in this pleasant book which we cannot recommend to collectors. It will give them indigestion, and destroy their happy confidence in those precious marked specimens of which they are so proud. It is the one on imitations and marks, from which it seems that only a china-maker ought to be a china collector, for he alone can detect the clever impositions now so common. Mr. Haslem tells how, two years ago, he saw in a shop in London a tea service painted with landscapes and small insects. The ware itself was Old Derby, and had the conventional mark in red, but the painting had been done quite lately, and the pieces bore proof of recent refiring. A large price was asked for this coarse and slovenly attempt at deception. Mr. Haslem also tells how he once painted some miniatures in the style of Petitot, and afterwards saw them exhibited at South Kensington as being genuine examples of that artist's work. There is scarcely any china for which a large price is offered that is not imitated so as to deceive any one except a person who thoroughly understands the subject of pottery and porcelain. It is not possible here to follow Mr. Haslem through all the intricacies of marks and imitation marks, or to go into the subject of the prices given for pieces of china when they were made and when they had acquired the factitious value of rarity. We need only say that those who want information on the subject will find it in this book, as well as a great many details about the different

methods of gilding, firing, modelling, and colouring practised in the manufactory at Derby.

The workmen were as a rule Liberals, so much so that when in 1813 the "True Blue" club of the town wanted a handsome jug made, they would not employ such "a set of radicals," but sent to the rival manufactory of Worcester. This jug was exhibited at Derby in 1870, but is of more value historically than as a specimen of ceramic art. After the passing of the Reform Bill the workmen clubbed together to present a pair of fine royal purple jars decorated with views of Windsor Castle to William IV., as a "testimony of their affection and loyalty." But although the vases were made and the inscription written, they were never presented, His Majesty's Ministers deeming them to be an expression of political sentiment. They were sold, and the money was returned to the men. A portion of one of them may now be seen at the Geological Museum. The chromo-lithographs from Old Derby pattern-books are very good, and will be of interest to those who already possess specimens of the ware. The book concludes with an excellent index.

AMERICAN LITERATURE.

IN *The American State* * Mr. Dix has elaborated a paradox which may perhaps find some believers among a certain class of English admirers of democracy. There are those who know enough of American constitutional law to be aware that the State, and not the Union, is actually and legally the fountain of authority, and the possessor of immediate and practical sovereignty, but who from strong party feeling refuse to accept the logical consequences of this fact. They will not admit that the interference of the North with slavery, and its determination to compel the seceding States to submit to Federal authority and to treat their citizens as rebels, were aggressions pure and simple, aggravated by distinct violations of public faith. But few of the admirers of Northern institutions have taken the trouble to acquaint themselves with the real bearing and history of the American Constitution; and those who have not will be dismayed and repelled by Mr. Dix's clear admission that it is a Federal, and not a national, bond. Americans who will welcome his vigorous assertion of American nationality will be still more revolted by this confession; for they know that the Union exists only in virtue of the acceptance of the Constitution by the several States which were in existence when it was framed, and cannot venture to rest their claim to be a nation on the repudiation of the very bond which holds them together. Mr. Dix's theory is that the colonies were a nation before the War of Independence, that they waged that war as a nation, and that they were recognized as a nation and not as a Confederacy. Yet no one who reads the story of Washington's difficulties, of the independent action and perverse disloyalty to the common cause of many of the States under the original Confederacy, and of the impotence of Congress, can fail to see that the Thirteen States were less closely united than the German Bund before 1866. The history of the struggle clearly shows that each colony or State acted as a single and sovereign Power. The treaty which terminated the war did not recognize the Union as a sovereign Power, but the United States as thirteen sovereign States, each of which was named as such, the Union being a matter of arrangement among themselves with which we had no concern. And when the Confederacy was dissolved by the secession of the States which formed the new Union, the sovereign and independent character of the States was distinctly acknowledged by the clause providing that the new Constitution should take effect as soon as nine States had agreed to it, but only as between those nine, the other four being left outside as long as they pleased in absolute isolation. Two States did so remain outside for some time. Mr. Dix has misrepresented history, therefore, and could not have ventured to present his theory without directly mis-stating the form of the treaty which recognized the Thirteen States. But his interpretation of the Constitution is frank and honest, and is well worth the attention of the English believers in that "national" doctrine which he upholds; especially as he shows—what many writers on this side of the water have repeatedly pointed out in vain—that the theory of State sovereignty was held not in the South only, but in the North also, by an overwhelming majority, and was asserted in turn by all parties, and not least by that Republican faction which only became Unionist when the Union became a convenient plea for waging war on the South. It follows that the only "rebels" in the South were the Unionists of Western Virginia and Eastern Tennessee; that, whether or not, Virginia and her sister States had a right to secede, they had, according to the Constitution and the invariable traditions of the people of both sections, a paramount claim to the allegiance of their citizens, as the King of Prussia had to the obedience of his subjects when he revolted from and waged war upon the German Bund.

Van Horne's *History of the Army of the Cumberland* †, though disfigured by the usual misrepresentations of Southern members and the usual libels on Southern generals and statesmen, is a valuable contribution to the military history of the Civil War; and its interest and the convenience of its readers are greatly promoted by the collection, in a thin additional volume, of all the plans and maps needed to illustrate the operations described in the text. The army of the Cumberland formed a very important part of the Western forces of the Union; and though its own separate operations were of minor consequence, it was included in the greater army which, under the command of Grant, drove the Confederates from Kentucky, captured Fort Donnelson and Island Number 10, gained the fruits, if not the honour, of victory at Shiloh, and gave a death-blow to the Southern cause by the capture of Vicksburg; and which afterwards, under Sherman, broke up the "shell of the Confederacy" and prevented the possibility of maintaining the contest after the fall of Richmond. It is a pity that the generally accepted history of such a force should give currency to a wanton calumny on the unfortunate chief of the Confederates. Every one, unless we are to except the author, knows that the motive of Mr. Davis in quitting the army of General Johnstone, where he would have been protected by the capitulation, was not personal but public; that he thought it possible to make head against the enemy beyond the Mississippi, and to extort terms for his country, if not to prolong the struggle. We should have thought it impossible that party spite should at this date have deliberately suppressed this obvious and notorious explanation, and represented Mr. Davis's flight as directed simply to procure his own safety which it evidently imperilled and actually sacrificed.

The principal purpose of Mr. Goodrich's Life of Columbus * seems to be the destruction of the fame of its subject. It purports to show that the Genoese mariner was in no sense the discoverer of America, and that, on the whole, the European opinion of his own age, which named the continent of the New World after Vespucci rather than after Columbus, was just and reasonable. That the Northmen of the middle ages did penetrate, by way of Iceland and Greenland, to the coasts of America is quite possible; but the tradition on which their alleged discovery rests is somewhat dubious, inasmuch as it brings them to a country whose reported character argues a much lower latitude than any they were likely in the first instance to reach, and suggests that they founded a colony there. Now it is obvious that sailing north-westwards, or even due west, the Northmen would come on the ice-bound coasts of Labrador or Hudson's Bay; and not until they had sailed along that frozen coast, utterly unpromising as it was, for hundreds of miles, would they come to any country that can be identified with their delightful "Vinland," which resembles Southern France more than England, and Virginia more than Canada or New England. And the total disappearance of the alleged colony is in itself a suspicious point. But even if the story were true, it hardly seems to detract from the honour due to the later adventurers, as they certainly did not know of it. There is more force in Mr. Goodrich's argument that Columbus was in possession of suggestive hints, if not of actual information, respecting the existence of land to the west of the Canaries, and in his attempt to prove that the part of the Pinzons in the expedition has been grossly underrated. It is also obvious that Columbus entirely mistook his position. He fancied that he had reached India or China, an idea which shows that he utterly misconceived the size of the globe. Mathematicians and astronomers had by that time acquired a knowledge of the truth which suggested the great probability that a continent might lie between China (Cathay) and Spain, and rumours of its existence were floating in the air. Again, Columbus only discovered the West Indies, not America. And, finally, Mr. Goodrich points out that the peculiar relations of Ferdinand and Isabella, the close alliance between his patroness, the Queen, and the monks who were the chief historians of the time, and the course of Columbus himself, secured for him the favour of those who had in their hands the distribution of posthumous fame, if not of immediate honours, and gave him a tremendous advantage over his rivals. To these latter Mr. Goodrich devotes the larger part of his space, and there is certainly much in their character and in their achievements that excites the sympathy and admiration of Englishmen far more than the easier performances, the more boastful and less simple nature, and the very dubious conduct of Columbus himself. The book, like most books of controversy, is somewhat dry and sometimes tedious reading, and can by no means be skimmed, but it is on the whole worth the study it demands. Still Mr. Goodrich and one or two other writers who have recently taken the same view write as the partisans of a new theory; it would be desirable to have the history of the Spanish, Portuguese, and English discoveries of the sixteenth century rewritten by some impartial inquirer in the light of late investigations.

Mr. Julian Hawthorne's *Saxon Studies* †, having already appeared in an English periodical, are probably well known to our readers. We need not describe his treatment of the subjects, or rather victims, of his merciless vivisection; it is enough to say that the book might be more fitly entitled, "Follies, Vices, and Meannesses of the Saxon Character." The entire volume is one long tirade against a people who are probably fair average representatives of the German nation, whose love of flowers and

† *History of the Army of the Cumberland; its Organization, Campaigns, and Battles.* Written at the request of Major-General George H. Thomas, chiefly from his private Military Journal and other Documents furnished by him. By Thomas B. Van Horne, U.S.A. Illustrated with Campaign and Battle Maps. Compiled by Edward Ruger, late Superintendent Topographical Engineer Office, Headquarters Department of the Cumberland. 2 Vols. and Atlas. Cincinnati: Clarke & Co. London: Lockwood & Co. 1875.

* *A History of the Character and Achievements of the so-called Christopher Columbus.* By Aaron Goodrich. With numerous Illustrations and an Appendix. New York: Appleton & Co. London: Trübner & Co.

† *Saxon Studies.* By Julian Hawthorne. Boston: Osgood & Co. London: Trübner & Co. 1876.

appreciation of scenery prove them by no means inferior in æsthetic sensibility to Mr. Hawthorne's own countrymen, and whose military prowess is a strong proof that neither beer, nor the habit of throwing much hard work on women, has impaired their manhood. We incline to suspect that Mr. Hawthorne has acquired in his own country a strong antipathy to the "Dutch," and has never attempted to judge the Saxons by any but American standards of taste and feeling, nor yet to realize the conditions of life in a poor and overcrowded agricultural country.

A vehement denunciation of Opium-eating*, coupled with a fierce protest against De Quincey and a disposition to make all possible and impossible excuses for Coleridge, proceeds from a writer who has neither medical knowledge nor wide experience to make his opinions valuable. The most interesting part of his work is that which relates his sufferings in Confederate prisons; but there is so little detail and precision in this part of the book that it might just as well be pure invention as cruel reality. We fear, however, that it is the latter; especially as the author's fearful sufferings under over-doses of opium and morphine appear to indicate a shattered constitution. The value of his experience is almost *nil*; for he evidently belongs to that class of persons to whom opium is altogether poisonous, and these very rarely become opium-eaters. Not only does he know nothing of the more usual course of opium-poisoning—at first apparently harmless and pleasant, afterwards growing on the victim, so as to lead him to excesses which then exact a terrible retribution—but he seems never to have tried it in any but the common American form, sulphate of morphia, which is to many opium-eaters almost as intolerable as to himself; and he has never tried to relieve himself from its tyranny in the most obvious way—namely, by gradual reduction, not by sudden disuse. His relation, truthful and frightful as it is, is too obviously that of an exceptional case to be effectively deterrent; whereas De Quincey's book, which he denounces, serves to warn the reader how dreadful are the ultimate consequences of the habit even in a specially favourable case, and therefore is about the most telling work of the kind that we know.

Miss Dickinson, at less length and with tenfold more common sense than usual, urges on the American people that intelligent attention to national and local politics, to the reform of obvious practical abuses, and the completion of the system of national education, would prove a *Paying Investment*.† It is shown that, besides negroes and foreign-born citizens, there is a vast body of illiterate native Americans, and that, without the excuses which exist in Europe, American parents are as prone as Europeans to profit by their children's work rather than pay for their children's schooling. Also, that the state of the county gaols is scandalous, and that the confinement therein for long periods—sometimes twelve months—of untried prisoners and distrusted witnesses is carried to a point far beyond anything that we could have conceived, while men of means have seldom any difficulty in getting out on bail, or in escaping by forfeiting their pledge. On politics proper Miss Dickinson has nothing to say that is not notorious, but she says it strongly and well. Her plea that a majority of women should be allowed to rule a minority of men, who of course neither admit their right nor need fear their power, is utterly silly; she might have learnt by experience that no laws can be enforced which have not on their side an overwhelming superiority of physical strength, energized by moral determination. Even a Maine Law passed by men for men is broken down by the resistance of the few and the indifference of the many. What would become of a Maine Law passed by women over the heads of five-sixths of the men, if it were conceivable that women would be allowed to make such use of their votes against the will of those who support them, and will always in the last resort claim therefore to control them?

Childhood ‡ is a very amusing and readable collection of anecdotes of the sharpest and the most naïve sayings heard from or ascribed to clever children, *enfants terribles*, and simple-minded children whose literal interpretation of metaphorical phrases or explanations intended to put off or silence, not to solve, the questions they have asked is perhaps more puzzling and awkward to the adult offenders against their simplicity than the wilful wit or misplaced frankness of either of the former classes. The moral of many of these stories is appropriate and true; that of many others is foolish and impertinent, especially those favourite anecdotes of a certain class of preachers in which the conversion of intellectual sceptics—that is, the solution of historical or ethical perplexities—is imputed to some simple outburst of childish piety. In particular, the folly of giving untrue or evasive answers to troublesome inquiries is illustrated by a few really childlike and probable objections. But the essays and comments whereby this readable collection of infantile *bons mots* is converted into a pretended didactic work, decorated with the ridiculous second title which calls the childhood therein displayed "the Text-book of the Age," are little better than rubbish, which people will do well to skip.

Footnotes * relate some of the experiences and impressions of that very exceptional character, an American walker. The author is chiefly familiar with the scenery and people of New England, and his notes are readable enough. If he had given us rather more facts and a good deal less of sentimental reflection and description, they would have been much better.

An elaborate and well-illustrated description of the Centennial Exhibition of Philadelphia † is probably meant as a public record of the work and a sort of anticipatory monument of the celebration rather than a readable and saleable account of the intended performances or guide to the building. Its form, elaboration, and costliness render it wholly unsuitable for the latter purpose, as it is very large, much wider than it is long, and unbound, while printed and illustrated in the most effective style, evidently "regardless of expense."

A descriptive book on American Interiors‡, contrasting some of the finest libraries and dining-rooms of American gentlemen with the old halls and rooms of mediæval Europe (chiefly English), is professedly meant to improve by example the popular taste in decoration and furniture. But it is not likely to be much read by the public; to architects and upholsterers, and to a few men of fortune, with good but uninstructed taste, intending to build or improve their mansions, it may be welcome and useful. To reach the many, even of the richer classes, it should have been much smaller, simpler, and cheaper. One or two of the plates are interesting, on account of the names with which they are connected.

A much more practical and immediately useful treatise is a collection of Essays on Hospital Construction§, sent in to and published by the Trustees of the Johns Hopkins Fund for the building and endowment of a great hospital at Baltimore. As most American hospitals, in common with all old, and most new, English ones, are scandalously ill constructed, both as regards convenience and sanitary considerations, as the principles of construction are clear and simple, but the details to be studied many, and not always quite easy to reconcile, a variety of counsels and a multitude of counsellors may well be of service, provided it be left to one man finally to profit by all the suggestions, and embody them in a single and original conception.

We need do no more than mention the Transactions of the New York Medical Society for 1875‖; a large and carefully edited volume. Two minor medical books are intended for popular use. That on the Care of the Sick¶ is compiled in the form of a sort of dictionary or directory, explaining the symptoms and treatment of trifling disorders, the value of sanitary precautions and the consequences of their neglect, the action of various poisons and chemical substances in common use, and generally the proper course to be taken by laymen in case of accident or illness where a doctor cannot, or until he can, be called in.

A so-called Anglo-Saxon Grammar ** would be more promising, and probably more useful, if its author had that perception of the real history of his native tongue, and the relation of the English of Alfred to the English of Victoria, which would have prevented his giving his work a popular, but not the less erroneous, name.

A new and cheap edition of Agassiz's *Geological Sketches*†† deserves mention; as also a number of fresh volumes of the excellent duodecimo series of American classics (so to speak) brought out in rapid succession by Messrs. Osgood.‡‡ In a similar form appears the first volume of a series of selections from the works of Swedenborg§§, freely translated, and arranged with a care and judgment wanting to the original.

A Guide to Seaside Resorts‖‖, Canadian and American, will be useful to a people so much given to this kind of holiday-making as the Americans; and some of the visitors to the Philadelphia Exhibition will probably find something useful in a multitude of

William of Canterbury—Life and Correspondence of General Burgoyne—The Vicar of Morwenstow—Discoveries in New Guinea—Letters and Papers of the Reign of Henry VIII.—Tamil Proverbs—Dead Men's Shoes—Cranstoun's Propertius—Mr. Augustus Hare and the *Saturday Review*—German Literature.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRÆTORIUM," with "Dream of Pilate's Wife," "The Night of the Crucifixion," "La Vigne," "Soldiers of the Cross," "Christian Martyrs," "Gaming Table," &c.—DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission, 1s.

CHRISTIAN WILBERG'S WATER-COLOUR DRAWINGS and SKETCHES in OIL of Italian subjects, including "A View in Venice," the property of Her Majesty the Queen. EXHIBITION now OPEN at BURLINGTON GALLERY, 191 Piccadilly. Ten to Six. Admission, including Catalogue, 1s.

WELLINGTON COLLEGE.—JUNIOR SCHOLARSHIPS. There will be an ELECTION to SIX in June next. They are open to all BOYS who on June 1 are between Twelve and Fourteen years of age. The Examination begins on Tuesday, June 20.—For further particulars apply to the Rev. the BURSAR, Wellington College, Wokingham.

POWIS EXHIBITIONS.—ONE EXHIBITION, of the value of £80 a year, tenable at any College or Hall at either of the Universities of Oxford or Cambridge, is intended to be filled up after an examination of the Candidates, which will take place at Birmingham, on an early day in September.

Candidates are requested to send their Names, Addresses, and Certificates of Baptism, with Testimonials of Conduct and Character, on or before August 1, to CHARLES SHAW, Esq., 2 Essex Court, Temple, London, E.C. Candidates must be Members of the Church of England, Natives of Wales, or of one of the four Welsh Dioceses, under Twenty years of age upon October 10 next, acquainted with the Welsh Language, and intending to become Candidates for Holy Orders.

The Candidates will be examined in Welsh Reading, Composition, and Speaking; the Gospel according to St. Luke and the Acts of the Apostles in Greek; the Fifth and Sixth Books of the Iliad; the First Book of Thucydides; the Tenth Book of the Æneid; Xenophon's Anabasis; Cicero de Officiis; and Latin Prose Composition. Those who fail in Welsh will not be further examined.

The Exhibition will be tenable (during Residence) for Four years, by an Exhibitioner who at the time of his Election is not legally a Member of either University, and will in his case date from Matriculation; and by an Exhibitioner who at the time of his Election is legally a Member of either University, till the close of the Term in which the Degree of Bachelor of Arts is due to the Holder.

CHELTENHAM COLLEGE.—TWELVE SCHOLARSHIPS. Eight £40; Four £20. Election, Second Week in May.—Apply to the SECRETARY, the College, Cheltenham.

HIGHGATE SCHOOL.—ELECTION to FOUR SCHOLARSHIPS, £75, £50, £40, £40, in June.—Application to be made to the HEAD-MASTER, School House, Highgate N.

HYDE PARK COLLEGE for LADIES, 115 Gloucester Terrace, Hyde Park.

The JUNIOR TERM begins April 1.
The SENIOR TERM April 29.

Prospectuses, giving full particulars, can be had on application to the LADY-RESIDENT.

MALVERN COLLEGE.

This COLLEGE contains THREE DEPARTMENTS—the CLASSICAL, MODERN, and PREPARATORY LOWER SCHOOL.

Boarding and Tuition, under Fourteen, £80; over Fourteen, £90. Non-Shareholders pay an extra fee of £5. Special advantages for Sons of Clergymen and Home Boarders.

For further information, apply to the Rev. ARTHUR FAUSET, M.A., Head-Master, late Fellow and Tutor of New College, Oxford.

GERMANY.—High-class EDUCATION at the ROYAL COLLEGES, Cassel (attended by the Sons of the Crown Prince of Germany), with thorough German, French, and English Private Tuition by Resident Graduates, and a refined English home. Delightful neighbourhood of Wilhelmshohe, the Aue, Park, and the Valley of the Fulda. Prospectus, with highest references. Terms, 70 to 90 Guineas, inclusive.—Address, Dr. SACHS, M.A., Cassel (who will be in England in April).

SEDBERGH SCHOOL, Yorkshire.—Governors well known for their interest in Education. New Cubicles, Lavatories, Bath-room, and Fives-courts. Country very healthy. Exhibitions and Scholarships. New Scheme 1875. Head-Master—Rev. F. HEPPENSTALL, M.A.

ABINGDON SCHOOL, Berks (Six Miles from Oxford). Founded 1563.

Has New Buildings on elevated site, and gravel soil, with extensive Grounds.
A Public School Training is given at moderate cost.
For Entrance next Term, Scholarships, &c., apply to the Head-Master, Rev. E. SUMNERS.

HURSLEY, WINCHESTER.—A. M. HEATHCOTE, B.A. Oxford, prepares BOYS, between Seven and Twelve, for Public Schools. Terms, 100 and 120 Guineas. Holidays as at Winchester College. After Easter he can receive Two or Three Boys.—Address, Home Close, Hursley, Winchester.

WESTGATE-ON-SEA, Kent.—W. THORNTON BULLOCK, B.A., Oxon. (Classical Honours, Mods.), for Eight years Assistant-Master at Temple Grove, prepares BOYS for the Public Schools.—Terms, &c., on application.

FOLKESTONE.—Mr. W. J. JEAFFRESON, M.A. (Scholar) Oxon, assisted by a Cambridge Honourman and a competent staff of Teachers, prepares for the Universities and for all Competitive Examinations. Pupils successful at the last Nine [illegible] the List.

WOOLWICH, LINE, and UNIVERSITIES.—Rev. Dr. HUGHES (Wrang. Joh. Coll. Cam.), Rector of Perivale, Ealing, W., who has passed over 100 Pupils, has VACANCIES. Ample accommodation and assistance.—Ealing, W.

HOLMESDALE HOUSE, near BURGESS HILL, Sussex.—SEYMOUR McC. HILL, M.A., O[illegible], formerly Scholar of Balliol College, prepares BOYS for the Public Schools. Terms, 80 Gs. Further particulars on application.

BUTE HOUSE, RICHMOND, Surrey.—*Principal*, C. V. GODBY, M.A., New Coll. Oxon. (1st Class Classic). *Mathematical Master*—JOHN WHITT, M.A., Cambridge (7th Wrangler). Adjoins Richmond Park. Twelve acres of Private Grounds, covered Gymnasium, good Cricket-field, detached Sanatorium. Preparation for Public Schools and Army Examinations. Eight recently successful. Next Term begins May 9. Large staff of competent Masters. Apply for Prospectus.

PARK HILL, CARSHALTON, Surrey.—A CAMBRIDGE M.A. takes a few PUPILS, to be prepared for the Line, Woolwich, Cooper's Hill, Forest Service. A List of successful Pupils, one of whom gained the First Place in the Army Examination, August 1875, forwarded on application. Terms moderate.—Address, R. S. CARPENTER, Carshalton.

THE Rev. H. HAYMAN, D.D., ex-Head-Master of Rugby, has a vacancy for ONE PUPIL, at Easter, at Aldingham, Ulverston, sea-coast of Lancashire.

THE Rev. R. A. RAM, M.A., Graduate in Classical Honours, Cambridge, Successor to the Rev. W. H. Johnstone, M.A., takes a few PUPILS, to prepare for the Woolwich, Army, Control, Cooper's Hill, and other Examinations. Bromley-grove House, Croydon.

REV. H. GRAHAM receives TWELVE PUPILS, to prepare for School, at Aldhampstead Vicarage, Pangbourne, Berks.

KING EDWARD'S SCHOOL, BATH.

There will be a VACANCY at Easter for an ASSISTANT-MASTER (non-resident) to teach Mathematics and Low Classics. Stipend, £150. A Graduate of Cambridge will be preferred. Applications to be sent to the Rev. H. L. SANDERSON, M.A., Head Master, School House, Bath, on or before April 8, 1876.

By Order,
March 16, 1876. E. TURNER PAYNE, *Clerk*.

WANTED, by a GRADUATE of Brasenose College, Oxford, an appointment as PRIVATE SECRETARY to a Nobleman, Member of Parliament, or Literary Society. First-class references and testimonials.—Address, Z., 77 St. George's Road, S.W.

A LADY, fond of Children, is wishing to take CHARGE of a delicate CHILD, or one whose society is not appreciated at home. Good references given and required.—Address, HERTFORDSHIRE, Post Office, Bishop's Stortford, Herts.

PRIVATE LIBRARIES, and those of Colleges and Literary and Scientific Institutions, CATALOGUED and ARRANGED by W. H. AYLOTT, Librarian. Reference will be given to parties by whom he has been engaged.—Address, 32 Cheapside, E.C.

PARENTS desiring to start their SONS in a healthy Out-door OCCUPATION may arrange for them to buy and cultivate, under suitable instruction, some rich Agricultural Lands, in a well-settled State. The investment of £1,000 or more will yield an excellent income.—Address H. P. S., 138 Fleet Street, London, E.C.

TO NOBLEMEN, M.P.'s, LANDED PROPRIETORS, and CLUBS.—WANTED, by a GENTLEMAN of considerable experience, a PRIVATE SECRETARYSHIP, or Position of Trust and Confidence, the duties of which he has fulfilled and has excellent testimonials. Will be at liberty March 25.—Address, by letter, to A. Z., Mr. M. Cooke, 141 Regent Street, W.

MINING PROPERTY.—The SOLE PROPRIETOR of an extensive Mineral Sett in the Western District of Cornwall, and which is furnished with all necessary Mechanical Appliances for its further development, is desirous of meeting with a GENTLEMAN who would take a HALF SHARE of the same; from £5,000 to £3,500 is required, which would return [illegible] ...nerative Dividend; the strictest investigation invited.—Address, by letter, to M. H., Sybor's House, Lea Bridge Road, Leyton, E.

THE ASSOCIATION of LAND FINANCIERS, Limited, 7 Whitehall Place, London, S.W.

NOTICE is hereby given that, pursuant to the Notification, dated February 22, 1876, the whole of the DEBENTURE BONDS thereby announced for Pre-redemption on August 31 next,

HAVE BEEN REDEEMED and CANCELLED.

By order,
London, March 21, 1876. R. H. LANGRIDGE, *Secretary*.

VILLA, DRESDEN, owned by a Dutch family, containing Original Renaissance Furniture, is TO BE LET. Nine Rooms, Stabling for Two Horses.—Address, SCHOBER, Dresden, Hohestrasse 7b.

BOURNEMOUTH.—To be LET, for a long or short time, Furnished or Unfurnished, a private HOUSE, in the best situation. Three Reception, Seven Bed Rooms. Stabling, &c.—Apply to E. H., Burworth, Bournemouth, Hants.

INFANT ORPHAN ASYLUM, WANSTEAD.

Patron—HER MAJESTY THE QUEEN.

There are now nearly 600 fatherless children in this Institution, many mere infants.
2,913 Orphans of persons once in prosperity, gathered together from all parts of the British dominions, have been admitted.
Thirty will be Elected in May next.
Forms for nominating Candidates should be applied for at once, as the list will be closed on the 25th inst.
Subscriptions and Donations, upon which the Institution is mainly dependent, are earnestly requested.
Bankers—Messrs. WILLIAMS, DEACON, & Co., 20 Birchin Lane, E.C.
Offices: 100 Fleet Street, E.C. HENRY W. GREEN, *Secretary*.

HYDROPATHY.—SUDBROOK PARK, Richmond Hill. *Physicians*—Dr. EDWARD LANE, M.A., M.D. Edin. For Invalids and those requiring rest and change. Turkish Baths on the premises. Private entrance to Richmond Park.

BRIGHTON.—BEDFORD HOTEL.—Facing Sea and Esplanade. Near the West Pier. Central and quiet. Long established. Suites of Rooms. Spacious Coffee-room for Ladies and Gentlemen. Sea-Water Service in the Hotel.
F. G. BICKARDS, *Manager*.

THE GOVERNMENT AND MR. CAVE'S MISSION.

MR. DISRAELI'S careless answer to Mr. CARTWRIGHT'S question as to Mr. CAVE'S Report probably ruined a considerable number of speculators. It is true that in Stock Exchange gambling the loss of the seller is generally the gain of the buyer, and that a discouraging statement in many cases only precipitates a fall in prices which was already inevitable. Nevertheless a prudent Minister would not willingly cause a disturbance of the money market, or incur the resentment of losers, which is not balanced by any gratitude on the part of the winners. The most irritating circumstance in the whole transaction consisted in Mr. DISRAELI'S evident unconsciousness that his statement could have serious consequences. It may be doubted whether his excuse for withholding the Report was literally exact. According to Mr. DISRAELI, the Government, on seeing the Report, thought that in some respects the publication of the document might be disagreeable to the KHEDIVE. On inquiry this suspicion proved to be well founded; and it would evidently have been impossible, after asking the KHEDIVE'S consent, to disregard his protest. Dealers in Egyptian stocks not unnaturally formed the conclusion that the most objectionable part of the Report was not any criticism which may have been passed on the KHEDIVE'S administration, but the balance sheet by which the credit of his Government might have been tested. It seems improbable that the scruple as to publication originated with the English Government. Nothing would have been easier than to edit the Report in accordance with the everyday practice of the Foreign Office and of other public departments. Mr. CAVE, who has both official experience and knowledge of business, can scarcely have included in a document intended for publication any scandal which it might perhaps be his duty to communicate confidentially to the Government. There can be little doubt that the KHEDIVE himself raised the objection which he is supposed to have only adopted; and his demand for secresy is the more unsatisfactory because the facts which are withheld from the House of Commons are not improbably known to some of the financiers with whom he has lately been negotiating.

No explanation which may be devised will acquit the Government of imprudence. The CHANCELLOR of the EXCHEQUER, who in such matters commands more serious attention than the PRIME MINISTER, had already stated that the Report proved the solvency of the Egyptian Government. It is impossible to defend the non-publication of the details which prove the truth of an official declaration. It is certain that a fortnight ago the Government had not considered that the results of Mr. CAVE'S mission were in any degree the property of the KHEDIVE, either to publish or to suppress. Any mistake on the subject must have been caused by failure in the first instance to arrive at a clear understanding with the Egyptian Government. In the early debates of the Session the Government explained the origin of Mr. CAVE'S mission. The KHEDIVE had asked for the assistance of two English experts in finance; and it was not understood why a simple request might not have been granted or refused. Mr. DISRAELI and Sir STAFFORD NORTHCOTE were unable to understand the exact position which a couple of Treasury clerks might hold in Egypt; and they consequently sent a colleague of their own to Egypt with a regular and numerous staff. For that time the Stock Exchanges of London and Paris have devoted themselves to the collection of gossip and of rumours about Mr. CAVE'S relations with the KHEDIVE, and afterwards about his own financial conclusions. The Report has been conjecturally discounted again and again on the general understanding that it was to be published, either as soon as it was received or on Mr. CAVE'S arrival in England. If there was really any sufficient reason for withholding the result, the Government ought to have anticipated inquiry by giving some plausible explanation of their change of policy. The unfavourable inferences which were drawn from Mr. DISRAELI'S injudicious language were inevitable, even if they were not well founded. A potentate much in want of a loan could, it might have been thought, scarcely object to an independent and trustworthy certificate that his creditors might safely trust him. If Mr. CAVE had arrived at an opposite conclusion, the objection of the KHEDIVE to publicity would be intelligible; but the English Government ought to have reserved its liberty of publication.

Although the Report itself is now treated as private and confidential, Mr. CAVE some time since communicated its substance to the CHANCELLOR of the EXCHEQUER, who considers himself at liberty to state in the House of Commons his general conclusion. On Monday last he repeated the declaration that the condition of Egyptian finance was not irretrievable, and that the necessary practice of economy would insure the KHEDIVE'S solvency for the future. Sir STAFFORD NORTHCOTE added the remark that some change might have taken place since the date of Mr. CAVE'S Report; but the only serious cause of fresh embarrassment must have been the high rate at which money may have been borrowed in the meantime. In this respect also the English Government would have done a service to the KHEDIVE by an early publication of the Report. It is true that no advantage which could have been obtained would justify a violation of confidence; but there would probably have been little difficulty in obtaining the KHEDIVE'S previous consent to publication if the Report proved to be on the whole satisfactory. It is now stated that the KHEDIVE is prepared to withdraw his objection if the English Government will consent to be represented on the Finance Commission. It is highly improbable that any negotiation on this subject will be encouraged by the English Government. The mischief which followed from the announcement of publication and from Mr. DISRAELI'S subsequent statement has by this time been done. It is not the duty of the Government to provide information for speculators, or even to facilitate the contraction of loans which may perhaps increase the dependence of the KHEDIVE on French financiers. It may be conjectured that Mr. DISRAELI, when the mission of Mr. CAVE was first proposed, vaguely expected that the result would be an increase of English influence over the financial transactions of Egypt. The popularity which his Government had acquired by the Suez Canal purchase may have suggested further interference in Egyptian affairs.

More than one recent miscarriage in the conduct of Parliamentary business raises a doubt whether Mr. DISRAELI'S influence in the House of Commons may not be seriously impaired. He has for many years deserved the favour of the House by his tact, his temper, and his skill in the management of a party; but till his last accession to office he had never found himself, whether in or out of office, charged with the direction of a majority. His want of knowledge of details, and his imperfect sympathy with

public feeling, have become more prominent as his responsibility has increased. The strange series of blunders which he committed during the debates on the Royal Titles Bill indicated a fundamental defect of knowledge and judgment. It was peculiarly unfortunate that he should have disregarded the established understanding that the Opposition should to a certain extent be taken into council in questions affecting the Crown. In the discussion of the Bill Mr. DISRAELI had the good fortune of being encountered by adversaries who were themselves singularly wanting in discretion; but, except at the division, he derived no advantage from the general irritation against Mr. GLADSTONE and Mr. LOWE. Mr. DISRAELI's speech on the third reading of the Bill was at the same time frivolous and rash, nor was it certain that he was more serious in his wanton challenge to Russia than in his reference to school-girls and almanacs. In answering questions on Egyptian finance he has been equally trivial and equally imprudent. It would have been sufficient to state to the House that the proposal of a Joint Commission had been rejected, without adding the vague declaration that a more active form of interference might perhaps not have been equally objectionable. A more judicious Minister would have answered Mr. CARTWRIGHT's question by a simple statement that the publication was delayed until the KHEDIVE's consent had been obtained. Although the Session has lasted only six weeks, the popularity of the Government has declined, almost entirely through Mr. DISRAELI's fault. If he is well advised he will entrust to his colleagues the duty of answering questions on matters which they understand better than himself. The extraordinary mismanagement of the Royal Titles Bill, commencing with Mr. DISRAELI's neglect of the usual communication with the leader of the Opposition, could not have been avoided by any delegation of duties.

THE ROYAL TITLES BILL.

IT was impossible that anything very new could be said on the title of Empress in the Lords. Efforts were made by more than one peer to show that party spirit had nothing to do with his opposition, and Lord GREY has certainly earned the right to say that for twenty years he has blamed every Ministry with inflexible impartiality. Still, in point of fact, the debate was a party one, and Lord SALISBURY, with his usual incisive clearness, stated why the Ministry consider the opposition to be a mere party move. As very many of those who are most adverse to the assumption of the new title are not conscious of any party bias, and are not in the habit of approving or finding fault with successive Ministries merely because they do or do not belong to a particular political section, it is not uninteresting to understand why Lord SALISBURY considers their opinion in the present case to be of not the smallest importance. That the country is not adverse to the change Lord SALISBURY argued very legitimately from the very large majority by which the Bill had been supported in the Commons, and from the absence of petitions against it, or the artificial character of such petitions as have been presented. But then, as Lord GREY had said, any one mixing in society would find that nine men out of ten were against it. That this was true, or at least true to a very great extent, Lord SALISBURY admitted. But, he asked, why should a Ministry take any notice of what society thinks? Society, as its scornful critic says, is a very interesting body, but it has the characteristic of being in need of excitement. It happens that it is a dull time of the year just now, and so society has invented for itself the amusement of being pane-stricken by the notion of the QUEEN being called Empress. The whole imagination of harm arising from the change of title is the creature of the busy brains of club gossips. It may be useful to realize how much truth there is in this. It is not true as a description of the people who object to the title of Empress, but it is true of their number and importance. Those who object to the new title on the grounds of history and of remote political consequences are not at all fairly described as club gossips, or as mere echoes of a society in search of excitement. But it is quite true that the number of those who care about a measure being unconstitutional, and who attempt to look forward and see the distant fruits of bad precedents, is comparatively small. Lord SALISBURY is only using language which was freely used by Mr. GLADSTONE in the days of his supremacy. The number of those who objected to the use of the prerogative to reverse the decision of the Legislature as to the abolition of purchase was small, and their criticisms were wholly ineffectual. The country did not in the least mind, as it did not in the least understand, that exercise of high-handed power. A part of the London press might object, but, as Mr. GLADSTONE said, he did not care about the London press. It was the provincial press which was the true and only guide of Ministries, and all he could say was that he was just as much the "People's WILLIAM" after the Royal Warrant as before. In the present case we may go further, and say that with a large class in the country the Bill is distinctly popular. The main objection to the Bill is that the title will soon extend to England; but very many people wish that it should extend to England, and will set themselves to make it extend as soon as possible. The LORD MAYOR has already begun to call the QUEEN Empress. There are many ways of earning a baronetcy, and this may be one of them. Portsmouth has signalized itself by an illumination in honour of the PRINCE OF WALES as our future Emperor. The clergy seem on the alert, and are beginning to enjoy the tickling pleasure of calling the QUEEN by a double title, as if they had got two half-crowns in their pocket instead of one. The very danger of the Bill lies in the title which it sanctions becoming popular. If people like to call the QUEEN Empress, and to give themselves the gratification of speaking of the Royal Family as Imperial, why, it may be asked, should they not be allowed to do so? In the same way it may be asked why, if people choose to live on their capital instead of their income, should they not do so? The only objection is that present ease will entail future pain. This is the objection to the Titles Bill. The Crown will be living on its capital. There will be more effusive loyalty than ever; adulation will delight itself with Imperialism; and even society, in search of a new excitement, may amuse itself with increasing fervour of prostration before its Czar. It will be thought natural that an Emperor should do things denied to a King. But then there will come a reaction. An Englishman is at once the most obsequious and the most independent of human beings. If encouraged to set up an idol, he will first get the handsomest idol that money can buy, and then burn it. Imperialism will be confronted with democracy, and it is not Imperialism that always wins. These are the objections to the Bill, and persons who have no party ties whatever think them serious and well-grounded objections. But, as Lord SALISBURY suggested with much truth, those who care whether at some period after their death England may be the battle-ground of a struggle between Imperialism and democracy are few, and the mayors and the clergy and the illumination-makers are many.

It was to be expected that some light would be thrown in the Lords on the effect which the Bill will have in India. There are members of the House of Lords who are specially qualified to speak of India, and both Lord NAPIER and Lord LAWRENCE took part in the debate. Both agreed that it was desirable that a new title should be assumed, to mark the paramount authority of England, that this was a suitable moment for the change, and that the change would be acceptable alike to the princes and the people of India. On the other hand, both agreed that it was quite unnecessary that Empress should be the title, and that it was a mistake to choose a title which excited opposition in England. But they differed as to the best substitute. Lord LAWRENCE adhered to what certainly seems the simple and effectual means of escaping all difficulty—namely, that the title which most properly, in the most appropriate Oriental language, designates paramount sovereignty should be selected, and that the QUEEN should be called by this title in India. Lord NAPIER objected to this on the singular ground that it was somehow unchristian. The QUEEN would be thought to be abandoning her religion if she took a title that had ever been borne by a Mussulman. But the QUEEN's new title must be translated somehow. It may be an objection to the particular word Padishah that the title was borne by such a creature as the last King of OUDE, or it may be thought that the natives would soon forget Oude and think only of England. But if Padishah is rejected, it must be rejected in favour of some better word; and whatever is the best word as a translation of Empress might have been used as a substitute for it. But, in point of fact, the question has got beyond the stage of argument. The Ministry hardly condescends now to reason at all. No references to the grand secret motive of the Bill as a challenge to Russia could provoke any

reply from a Minister in the Lords. It was perfectly immaterial to the Cabinet whether, for the passing amusement of the House of Commons, the PRIME MINISTER had invented one fantastic argument for the Bill or another. Perhaps the new title was a challenge to Russia, and perhaps it was not; but at any rate the Bill had been brought in by a Conservative Ministry, and was beyond discussion by any Conservative who did not mean to forsake his party. The most effective part of Lord GRANVILLE'S speech, which throughout was marked by great tact, good sense, and good feeling, was a demonstration that it would be entirely impossible to keep the Indian title out of English official life. Every writ, every order to the most petty municipality, must run in the name of the Empress of India. There was no attempt to meet this statement. The CHANCELLOR merely contented himself with repeating the general assertion that it would be only in formal documents that the QUEEN would be designated as Empress. That these formal documents would penetrate into every region of public life was a statement undeniable perhaps in point of argument, but one which might easily be passed over in contemptuous silence. Turks strangle consuls while they prate, and majorities can silence arguments by votes. We must, we suppose, take human nature as we find it, and own that all Ministries are very much alike. The Titles Bill is the Royal Warrant of the Conservatives. Unfortunately there is one difference between the two cases. The issue of the Royal Warrant was an isolated act, and its repetition can be prevented. The mischief of the Titles Bill will be permanent and continuous, and will not offer any one point at which it can be resisted.

A subsidiary discussion has been started in the Commons as to the absence of the QUEEN on the Continent during the sitting of Parliament, and it is so far connected with the Titles Bill that the spirit which appeared in the questions addressed to Mr. DISRAELI probably borrowed some of its asperity from the excited feeling which the discussion of the Title Bill has provoked. This is unavoidable. Imperialism has its losses as well as its gains. It has its unpopularity as well as its popularity. The exultations of mayors and clerical toasts and flattering illuminations will be answered by sharpened criticism; and sharpened criticism will be met less and less by appeals to affectionate reverence, and more and more by appeals to the necessity of swimming with the tide. The precedents for the absence of the Sovereign on the Continent during the Session of Parliament are so very few and of such slight value that no weight could be attached to them if the absence really needed justification. The objections to this absence are two. One is that the Sovereign, as a branch of the Legislature, and in order to aid in the due despatch of public business, ought to be at hand while Parliament is sitting. But this objection applies even more strongly to the QUEEN'S residence at Balmoral during what is always the busiest and often the most critical time of the Session. Balmoral causes all the inconveniences of Baden, and the QUEEN habitually goes there in May, whereas she is not likely to go often abroad. It is generally remembered that the QUEEN is not only a Queen, but a woman, and has to lead a burdensome life as well as she can, and that if her health requires her to go to Scotland in May, her subjects can only acquiesce in respectful silence. The other objection is founded on the old feeling that it is a bad thing for the Sovereign to be much on the Continent, lest alien habits of thought should be formed; and in the early days of the Hanoverian dynasty there was a constant fear lest the King, being a German Prince, should, by residing in Germany, become too German. This objection applies equally strongly to the visits of the QUEEN to the Continent at any time of the year, and has nothing to do with the sitting of Parliament. It may now be considered a pure anachronism. The QUEEN is not in the remotest degree more likely to become less English in feeling whether she goes to Baden or not. The very mention of such a notion shows its absurdity. That there are many inconveniences in the absence of the QUEEN during the sitting of Parliament from London or its neighbourhood is unquestionable, but it must be taken for granted that the QUEEN has some good reason for going, and the assurance of this ends discussion.

GERMANY AND RUSSIA.

THE German press has in the last few days been much exercised by the news received from Russia. It finds reasons, and perhaps valid reasons, for uneasiness. It is indeed the thought of Russia that weighs down the spirit of every German who tries to forecast the future of his country. Over France and Austria Germany exercises perpetually something of the influence of a conqueror. They have felt her strength, and have no mind to provoke a new contest unless under conditions far more favourable than those under which they suffered defeat. With England and Italy Germany may hope to preserve a not very ardent, but still steady, friendship of that solid sort which is founded on permanent identity of interests. But Russia is at once a very close neighbour and an unconquered rival. There is a general presentiment in Germany that a Russian war will one day come, and that, if it does come, it will tax the resources of Germany very severely, while even victory can offer no prospect of advantage. For the moment, however, a war with Russia may be regarded as too remote an evil to press heavily on the German mind. Nor is it any prospect of the kind that now disquiets the German press. What is thought of is not a state of war, but the state of Europe while peace is preserved. The one absorbing aim of Germany is to keep intact that settlement of European affairs which she was able to establish by her victories of 1870. The great instrument of upholding this settlement, as Prince BISMARCK has over and over again declared, is the alliance of the three EMPERORS. Conflicts, and even differences, were all to be avoided by personal and friendly arrangements between the chiefs of the three EMPERORS. This system has been put in practice, and has proved by no means unsuccessful. There have, indeed, been some little ruffings of the smooth surface. The German press was last autumn allowed to menace Austria with rather more freedom than seemed compatible with a friendly and equal alliance; and Prince GORTCHAKOFF went a little out of his way to claim the success of the efforts made by Russia to preserve peace last May as a diplomatic victory over Prince BISMARCK. But these are slight things, and Prince BISMARCK has been able to announce to his countrymen at periodical intervals that everything was going on well, that the EMPERORS were the best friends in the world, and that peace was assured. The ANDRASSY Note may be looked on as the latest embodiment of the policy on which the Alliance was founded. Difficulties were to be avoided by the three allied Powers taking the matter of the Turkish insurrection into their own hands, settling precisely what was to be done, and then announcing their decision to the Porte, after inviting the assent of the more remote Powers. Sensible Germans did not of course expect that a mere Note and a few Turkish promises would end an insurrection. That must really depend on what those on the scene or near it were prepared practically to do. But the concert of the allies which had enabled them to decide on one common step might enable them to take others also as events might require. Provided that the pillar of German policy as guided by Prince BISMARCK, the Triple Alliance, stood firm, it did not seem to make much difference how the quarrel between the Porte and the insurgents ended.

Suddenly a piece of news has arrived which has deeply agitated Germany. It is said that the Emperor ALEXANDER is weary of the heavy burden of power, and wishes to resign his sovereignty into the hands of his son. As a preliminary it is stated that he will shortly leave Russia for Ems, and make his son Regent during his absence, with full powers. What makes this important to Germany is that the Triple Alliance was in a great measure based on the personal regard of the CZAR for the German EMPEROR, to whom he is connected by family ties the force of which cannot be equally felt by a member of another generation. The Emperor ALEXANDER, too, is believed to hate war. He began his reign amid the miseries of the Crimean struggle, and he learnt the lesson of moderation which the war was meant to teach his father. He has indeed found an outlet for the energies and ambition of his subjects in the extension of his Asiatic territories; but the great events of his reign have been peaceful changes and internal reforms. His son, on the other hand, is commonly supposed to incline to what are called the views of Young Russia—that is, to a policy which aims at crushing into a common form of complete Russification all the few remains of

internal independence, and at extending by all means, and even at the risk of war, the paramount influence, and perhaps the direct dominion, of Russia over the Christian populations in the Turkish Empire. How keenly the Germans feel the possible consequences of a change in the direction of Russian policy may be gathered from the feverish eagerness with which it is debated whether the CZAREWITCH is really so much the enemy of Germany as is supposed; and it has even been discussed what amount of influence his wife is likely to exercise over him, and whether the Princess DAGMAR will set herself to redress the wrongs and avenge the humiliation of Denmark. These are in part the idle disquisitions of people in a panic. Great nations do not suddenly change their policy because a lady is sorry for the misfortunes of her father; and heirs-apparent, as long experience may have convinced Englishmen, by no means follow on the throne the counsels to which they listened with pleasure in their days of expectancy. Even if the Young Russians are the friends of the CZAREWITCH now, he may hereafter throw them over as quietly and completely as GEORGE IV. threw over the Whigs. But the Germans are probably right in attaching much more importance to personal influence in the countries with which they have immediately to deal than we should be inclined to do with our modern English notions. The Emperor NICHOLAS personally invented the Crimean War, just as the Emperor NAPOLEON personally invented the War of 1870. The alliance of the three EMPERORS is no doubt founded in a great measure on the real interests of the three nations concerned; but it is also in a great degree founded on the personal influence of Prince BISMARCK and the personal dispositions of the Emperor ALEXANDER. If the alliance were endangered, and were found not to be answering its purposes, Prince BISMARCK would have to look out for a new basis for his foreign policy; and the mere notion of Prince BISMARCK looking out for a new basis of foreign policy is enough to make Germans apprehend that a time of trouble and anxiety may be at hand.

It is impossible, too, for Germans, or for any one else, not to notice that, just at the moment when the news of the CZAR'S retirement, whether temporary or permanent, from the conduct of public affairs has been announced, a most remarkable change has come over the utterances of the Russian press as to the Turkish insurrection. It would seem as if Russia now meant to say that her patience was exhausted, and that she really must at length show herself in her real character as the one trustworthy friend of oppressed Turkish Christians. Even an official paper announces that the dangerous position of the insurgents is to be attributed to Austria's unhappy partiality for Turkey. This certainly is not much in keeping with the spirit of the great alliance of which Austria was supposed to be acting as the authorized organ. What would Prince BISMARCK say if an Austrian official journal announced that the difficulties of the situation were much aggravated by the unhappy solicitude of Germany for the interests of Prince CHARLES of Roumania? When a Russian official paper speaks in this way, it is not surprising that journals which less compromise the Government should follow eagerly in the same path. One journal proposes that the Turks should retire from Herzegovina, and the province be handed over to Montenegro, and it very kindly invites the co-operation of England for the attainment of this desirable end. We may remark in passing that the Russian press still speaks with studied admiration of the boldness of England in what is called laying its hands on Egypt, as this is thought to be a good precedent for other people to follow; but it is considered to be a sad descent when it is proposed to frighten Russia by calling the QUEEN an Empress. Other journals assure those subjects of Turkey who have not as yet joined the insurrection, but may feel inclined to do so, that although Russia may not for the moment see its way to giving them active assistance, it will take care that no other Power interferes with them. In other words, the natural desire of Austria to keep things quiet shall be effectually controlled, so far as they are concerned. This may be a mere momentary and insignificant effervescence of the Russian press; but it is also possible that it may mean much more. It may be an indication that Russia is prepared to break away from the alliance and act for herself. Russian journals could not say such things unless they were permitted to say them, and it would not be possible to say them unless some persons with great influence wished they should be said. As this has taken place at the moment when the withdrawal of the EMPEROR from the seat of Government is announced, it cannot be called unnatural or fanciful in Germany to connect the two things together, and to suppose that the EMPEROR retires because he finds he cannot combat a policy to which he is opposed, or which he is personally engaged not to favour; and if this supposition is correct, it must be admitted that the Germans are quite right in apprehending that events of a very serious character may be at hand.

THE IRISH DEBATES OF THE WEEK.

THE division on the Irish Borough Franchise Resolution was more instructive than the debate. The 166 members who voted with Mr. MELDON probably included in their number all, and more than all, of those who approved of the motion. The Government was only able to command the petty majority of 13 against a measure which is disliked by all their supporters and by a large section of the Opposition. Since the intermittent process of reduction of the franchise first commenced, it has been difficult and invidious to resist each successive change; and in the present case the demand for an assimilation of the Irish to the English franchise is both plausible and scarcely susceptible of a plausible answer. In reply to one of the opponents of the motion Mr. BRIGHT said, with perfect truth, that the same reasons have been urged against household suffrage in England. It had in the controversy of 1866 and 1867 often been observed that an existing constituency was in a certain sense disfranchised when it was reinforced by a larger number of voters of a class previously excluded from voting. It is also fair to ask Parliament to maintain its consistency by once more overruling an unpopular argument. One of the Irish speakers in the debate felicitously referred to Norwich in illustration of the advantage of promiscuous enfranchisement. As he forcibly contended, the Irish householders could not be more corrupt than the new electors of Norwich; and it was at least possible that they might be less eager to sell their votes. The utter indifference with which the proposal is apparently regarded by the small borough householders of Ireland proves that they have not, up to this time, looked forward to a profitable mode of exercising the franchise. Commonplaces about the integrity of the poor are not especially convincing; but few members like to denounce, especially without proof, the weaknesses of any class of the community. It is possible that bribery may not be the evil which is most to be apprehended from an extension of the borough constituencies of Ireland.

Lord MAYO in his Irish Reform Bill of 1868 adopted the 4*l.* rating franchise with the approval or acquiescence of both Parliamentary parties. The difference between the Irish and the English franchise was defended on the ground that the poorer residents of Irish boroughs are lower in the social scale than ordinary English householders. Mr. BRIGHT indeed ingeniously argued that, in consequence of the low rents of Irish houses in towns, a house rated at 4*l.* might be as good as a 6*l.* or 8*l.* house in an English borough. If the majority of the unenfranchised householders were actually rented at 4*l.*, Mr. BRIGHT'S argument would be difficult to answer; but a previous speaker had explained that houses ranged downward from 4*l.* to rents of a few shillings. It is impossible to deny that all considerations of symmetry are on the side of Mr. MELDON and his allies; nor is ostensible equality or uniformity a small merit in legislation. It is necessary in a free country not only to pass good laws, but to make their goodness generally intelligible. As household suffrage is irrevocably established in England until it is superseded by some wider franchise, the Irish may be easily persuaded that their more limited suffrage involves an injustice to those who are excluded. It is only surprising that the Home Rule members have not raised a more formidable agitation against an ostensible anomaly. One explanation of their neglect or failure may be the comparative insignificance of Irish boroughs. There are only three or four large towns in Ireland; and it was stated in the course of the debate that they contain an overwhelming proportion of the whole borough constituency. The proportion of voters in the large towns and the rest of the boroughs would not be greatly altered if household suffrage were substituted for the present rating; but the borough constituencies, which would long since have been abolished if

they had been in England, may perhaps look more presentable when their actual numbers are increased.

It has been not unreasonably suggested that the best mode of removing the anomalies disclosed in the debate would be to abolish borough representation in Ireland, except for three or four towns; and to merge the constituencies in the counties. The defect of the scheme is that it would involve larger changes than those which were proposed by Mr. MELDON. It would also create a remarkable contrast between Great Britain and Ireland; and the Home Rule party would consequently be furnished with a new pretext for agitation. Half the population of England live in towns, and the boroughs are represented more largely than the counties. Conventional justice requires the assumption that there is the same proportion of towns in Ireland; and, by lowering the franchise, they may be made to appear comparatively populous. If the counties returned nearly all the members, the borough constituencies would complain that their former franchise was raised, unless, indeed, household suffrage were extended to the counties, while it is not yet established in England. A simpler mode of satisfying the demand of the Home Rule members would be to grant their request. The narrow majority of Tuesday last against the motion of a private member may be considered as a defeat of the opponents of the proposal; and if the opinion of the House is not changed when it is again introduced in a future Session, the Government of the day may fairly give way. It is consoling to reflect that the borough representation cannot be greatly deteriorated, except perhaps in two or three constituencies where the lower class of the population includes a large proportion of Roman Catholics. It matters little whether the Home Rule party is reinforced by a few recruits, while, on the other hand, it would be deprived of an ostensible grievance. The whole question would be uninteresting if the division were not ominous of the future reception by Parliament of more serious proposals for rendering the electoral system more democratic. Members are always unwilling to profess an unfavourable opinion of the electoral qualifications of a possible constituency.

The question whether the extension of the franchise would raise the character of the representatives or promote the good government of the kingdom had little interest for the supporters of the motion. Mr. BRIGHT, indeed, believes in the comfortable doctrine that the suffrage is good for the electors, if not for the country which they indirectly govern; but, on the whole, the value of machinery is most satisfactorily tested by investigation of its fitness for its purpose. That toothed wheels and cylinders and levers are interesting or beautiful in themselves is to a scientific observer a secondary consideration. The motion and debate of Wednesday furnished a valuable illustration of the tendency of the proposal of Tuesday. There is no doubt that every householder who would be enfranchised by Mr. MELDON'S project would support candidates pledged to Mr. BUTT'S scheme of spoliation and to its future extension. The poorer classes, indeed, in Irish boroughs are not generally occupiers of land; and their chances of obtaining farms, if they desire them, would be greatly diminished by the abolition of leasehold tenure; but whether the petty borough householders might be directed by the priest or by the demagogue, all their sympathies would be on the side of their social equals, and they would regard the landlords as legitimate objects of plunder. Mr. BUTT proposes to exaggerate Mr. GLADSTONE'S interference with property by a measure which is altogether inconsistent with the rights of ownership. The danger of the precedent established by the Irish Land Bill was generally recognized but a large Parliamentary majority, with the approval of the country, held that the evils to be mitigated by agrarian legislation outweighed the possible mischief which might result from a partial limitation of the landlord's rights. Mr. BUTT asserts, probably with truth, that the occupiers are still discontented; and he proposes to satisfy them by transferring the freehold in every instance from the landlord to the tenant. For the present, the owner is to be allowed to receive his rent, and even to recover it by legal proceedings in case of dispute; but no tenant is henceforth to be evicted, and the former owner will merely retain a kind of rent-charge on the land. It may be hoped that the Opposition will assist the Government in resisting a project which must be decided by votes rather than by arguments. No specious demonstration that a redistribution of land or other property would be beneficial can alter the convictions of those who regard property as an ultimate fact. Communist institutions may perhaps be practicable, but they are not consistent with the laws and customs on which existing society is founded. Mr. BUTT and his opponents waste their time in controversy because they have no common basis on which they can reason.

THE FRENCH LEGISLATURE AND THE CLERGY.

THE elections have worked a greater change in the ecclesiastical than in the political temper of the French Legislature. As probabilities go at present, the new Government will have little difficulty in securing a working majority in the Chamber of Deputies as well as in the Senate. The revolutionary passions of which M. BUFFET stood so much in terror have been glutted by the appointment of M. DUFAURE as Vice-President of the Council, and of M. RICARD as Minister of the Interior, and it will be generally conceded that an appetite which is so easily appeased can never have been really ravenous. But though the Chamber of Deputies promises, socially and politically speaking, to be scarcely less Conservative than the Assembly, there is a marked difference between the two in their attitude towards the Church. In the Assembly the Left was as much hated on the score of its religious opinions as on the score of its political opinions. In the Chamber of Deputies the majority seem ready to take M. GAMBETTA as their ecclesiastical leader. The Government has already shown its appreciation of this fact by introducing a Bill to modify the law establishing free Universities, and in the debate on the Pontivy election the Chamber itself has gladly accepted his guidance. M. DE MUN, the successful candidate at that election, has been variously described as a Roman Catholic counterpart of HEDLEY VICARS and of WILLIAM WILBERFORCE. He is admitted to be extremely eloquent, and some even of his enemies would probably be sorry if the inquiry which has been ordered should result in the loss of his seat. It does not appear whether the clerical pressure which was undoubtedly brought to bear during the election was really needed to ensure M. DE MUN'S return. It is not improbable that it was exercised *ex abundanti cautelâ*, in the conviction that if a thing is worth doing at all it is worth doing well. Perhaps the fact that his adversary was a priest made it the more incumbent on the ecclesiastical authorities to prevent their simple flocks from being misled by an impudent pretender. But for this M. DE MUN'S name might have been well enough known to good Catholics to make his election certain; but when the Abbé CADORET came into the field the electors might have been puzzled to know on which side the sympathies of the bishop and clergy really lay. As it was, they were not long left in doubt. The bishop of the diocese canvassed for M. DE MUN in person; the Archbishop of PARIS canvassed for him by letter; even the POPE himself seems to have been appealed to, and to have allowed it to be understood that, in voting for M. DE MUN, the Catholics of Pontivy would be doing their best to soothe his voluntary captivity. M. DE MUN, who, as is the custom in the French Legislature when the validity of an election is impugned, defended his own cause, seems to have puzzled the Chamber by the excessive frankness of his admissions. To every accusation of having won his election by clerical influence he replied, in effect, Certainly; why not? The Bishop of VANNES had done no more than was necessary to point out to the electors which of the two candidates had his support. The Archbishop of PARIS had intervened in his favour, just as M. GAMBETTA had intervened in the return of one of the candidates for Paris. If the fact that he wore a decoration conferred by the POPE influenced the electors to vote for him, were not the walls of Paris still placarded with letters from GARIBALDI recommending his official candidates to Radical support, and might not the POPE'S name be invoked in an election as innocently as GARIBALDI'S? The French clergy, he contended, are not mere functionaries of the State. They are paid for the services they render, but they have not sacrificed their independence, and they had a right to accept M. GAMBETTA'S challenge delivered before the elections, and to prove that Pontivy, at all events, is still thoroughly Catholic. The Church has been threatened on every side, and she has a right to defend herself with the weapons that lie nearest to her hand. In this case the weapons were Catholic votes, and it was

nothing more than natural that the clergy should do their utmost to ensure that these should be given to a thoroughly Catholic candidate.

M. DE MUN made a very favourable impression on his hearers, whose breath seems for the moment to have been taken away by the boldness of his line of defence. As the *Journal des Débats* says, the Left had not calculated on this entire forgetfulness of laws, of Concordats, of Organic Articles, of pledges given by the Holy See—this assumption, in fact, that a bishop is no more a public personage than M. GAMBETTA himself—and their want of preparation showed itself in their first attempt at an answer. If the vote could have been taken when M. DE MUN sat down, it is possible that the proposal for an inquiry into the circumstances of the election might have been rejected. M. DE MUN had managed to present the issue as a conflict between the friends and the enemies of religion, and though the new Chamber is very much less influenced by the clergy than the Assembly was, its members are not prepared to hear themselves denounced as Free-thinkers or Atheists. Even among the Republicans there must have been many who felt that to accept M. DE MUN's association of the Republic with irreligion would be exceedingly injurious to the success of their cause, since it would be to admit the very charge which their enemies are most accustomed to bring against them. There was scarcely a married deputy in the Chamber who would not have felt that there was discomfort in store for him at home if he had to tell his wife that the issue between the Republic and religion had been fairly raised, and that he had given his vote against religion. M. GAMBETTA'S speech was exactly fitted to meet this temper. He argued in favour of the proposed inquiry with so much moderation, with so much courtesy towards M. DE MUN, and with such a careful determination not to confound religion with the clergy, or the French clergy as a body with the Ultramontane minority, that the anti-clerical deputies at once saw their way made plain for them. No one, said M. GAMBETTA, need defend religion, for no one has either attacked or threatened it. When the Left speak of the clerical party they have in view neither religion nor those who sincerely practise religion. Even among the clergy themselves there are many who regret that the defences which former Legislatures have set up against the usurpation of the Vatican should have been allowed to fall into disuse. It is not of these men, the true French clergy, that politicians are afraid, but of that ecclesiastical party which has Rome, not France, for its centre. In the Pontivy election the question of religion was not even raised. Both the candidates were Catholics; one was a priest, the other was worthy to be a priest. But the Chamber had a right to know, and was bound to inquire in order to know, whether these two candidates solicited the votes of their fellow-citizens with entire liberty and entire equality. By showing a calm determination to restrict the clergy within the limits proper to their functions, and to no longer allow them to make the pulpit a political engine, the Chamber would assert freedom of election, and restore peace to those who at present import into politics the party passions derived from their religious divisions.

If M. GAMBETTA could really effect the object which he thus held up to the Chamber, it would be cheaply bought by the invalidation of any number of elections. It must be remembered, however, that this object is very much more difficult of attainment than the apparently parallel one which Parliaments and Judges have from time to time endeavoured to secure in Ireland. It does not seem to have been alleged in this debate that any coercion was used at the Pontivy election. The grievance of the Left is not that the priests forced the electors to vote against their consciences or their wishes, but simply that they, being priests, did what is only permissible to laymen. They behaved themselves as thoroughly energetic partisans, and this, according to the principle which M. GAMBETTA wishes the Chamber to take as its guide, cannot be tolerated in men who have no concern with the affairs of the world. But unless M. GAMBETTA can succeed in moderating the language often used by members of his party, there is not much chance that the French clergy will keep themselves completely apart from politics. The distinction which he draws between attacking religion and attacking the political influence of the Church is as much disregarded by the Extreme Left as by the Extreme Right. It is possible that the clergy may be originally to blame for this confusion, and that it is their unscrupulous use of political weapons that has made religion so hated by certain politicians. But this does not alter the fact that the clergy have at present good grounds for believing that, if the extreme Republican party were at the head of affairs, their religious liberty would be curtailed as well as their political liberty. Before M. GAMBETTA can make them contented with the part which he wishes to assign them, he must at least convince them that, if they do not meddle with politics, politicians will not meddle with religion; and in order to do this he must impose on the anti-clerical passion of his followers a bridle to which as yet they show but little disposition to submit.

LORD CARNARVON'S SOUTH AFRICAN POLICY.

LORD CARNARVON'S courteous and argumentative despatch to the Government of the Cape will not convert the local Ministers, because it is impossible to conciliate opponents who are bent on a quarrel. Mr. MOLTENO is consciously or unconsciously employed in reducing the difficult and novel theory of the internal independence of colonies to a practical absurdity or dead-lock. The experiment has only been tried within the last quarter of a century, and it has hitherto succeeded as well as could be expected; but a responsible Minister who devotes his energies to the object of taunting and thwarting the Imperial Government enjoys, among other facilities, the advantage of absolute impunity. Lord CARNARVON may satisfy impartial critics that Mr. MOLTENO is neither wise nor well bred, but until the majority of the Colonial Parliament is shifted, the Ministers may set both the Governor and the SECRETARY of STATE at defiance. The anomaly of a vote of censure on the Home Government proposed by the local Ministry is censured with dignified moderation in Lord CARNARVON'S despatch. After paying Mr. MOLTENO a personal compliment, Lord CARNARVON expresses his opinion "that it can only have been from a failure to understand "the relations which must, both in language and in "practice, subsist between the Imperial Government "and the officers of a Colonial Government, that "he overlooked the fact that the terms of his motion "were such as are, to the best of my belief, without parallel or precedent even in cases which have "been far more open to controversy than this can be said "to be, and for obvious reasons are not adopted by persons "continuing to hold office in the colonies under the representatives of the QUEEN." Nevertheless Mr. MOLTENO will probably persevere; and there is no reason to suppose that his majority will decline to follow him. His complaint is in substance that Mr. FROUDE on many occasions attacked the policy of the local Government, while he was known to enjoy Lord CARNARVON'S confidence. It is useless to explain to angry politicians that, in consequence of the failure of the project of a Conference, Mr. FROUDE bore no official character. Lord CARNARVON reminds the malcontent Ministers that all his own despatches were addressed exclusively to the Governor; but he is not careful to disguise his full approval of the measures which were eloquently advocated by Mr. FROUDE. Opinion in the colony is divided on the important subject of South African confederation, and it will not be known before the next election whether the Cape is in favour of union. Mr. MOLTENO has exhibited some adroitness in substituting the issue between himself and Lord CARNARVON for the more important question of forming a Confederacy.

It will be a cause of regret if the most important of the South African communities continues to reject Lord CARNARVON'S moderate proposals. There is reason to hope that Natal, Griqualand, and the two outlying Republics will send delegates to the Conference which is invited to meet in London. It is not intended that the representatives should have power to pledge their constituents to any measure of which they may themselves approve; but Lord CARNARVON hopes that misunderstandings may be removed and difficulties smoothed by preliminary discussion. Although the various Legislatures will reserve the right of independent action, the nomination of delegates may perhaps be considered to involve an admission of the principle of confederation. If the Government of the Cape thinks fit to abandon its attitude of opposition, it may at any time take part in the Conference; but as long as Mr. MOLTENO remains in office he is not likely to profit by the opportunity. One important adherent to the plan of a Conference has been already secured. Mr. BRAND, President of the Orange Free State, is about to visit England, having obtained from

the Volkraad, or Assembly, full powers to act according to his judgment on behalf of his State. Lord CARNARVON openly declares his wish that "the two Republics may see "their way on fair and honourable terms to resume their con- "nexion with the British Crown, from which they were unfor- "tunately separated many years since." The Imperial Govern- ment perhaps attached too little importance at the time to the ominous commencement of the process of curtailing the frontiers of the Empire; but the secession of the Dutch communities which now constitute the two Repub- lics could probably not have been prevented. When the farmers first left the English territory attempts were made to follow them with a claim of continued allegiance, but their answer to the proclamations of the Colonial Govern- ment was a further withdrawal. The causes of the irrita- tion which then prevailed have become obsolete, and expe- rience has shown that all the South African settlements have interests in common. If all the provinces were independent States, they would almost certainly find it expedient to unite for various purposes, and especially for the adoption of a common policy towards the for- midable tribes of the interior. The union may be as easily and as usefully accomplished under the British Crown, and, as long the colonies maintain a nominal dependence, it can be effected in no other form. Mr. MOLTENO'S proceedings may satisfy the authorities of the Free States that the Minister of a colony is as fully at liberty to use strong language as if he were President of a Republic.

One among many reasons for urging confederation at the present time is founded on the untoward result of Marshal MACMAHON'S award as to Delagoa Bay. It is believed that the Portuguese Government will make offers to the Free States for an access to the Eastern coast which would render their trade in a great measure independent of the neighbouring colonies. If a convenient route by Delagoa Bay is established, it would be desirable in the interest of all parties that it should be used by the in- habitants of all the neighbouring provinces. Although new democratic communities in all parts of the world seem to have an invincible antipathy to free trade, any in- fluence which the Imperial Government may possess will be exercised in accordance with sound economic prin- ciples. Even protective duties will be less mis- chievous in proportion to the extent of territory which may be included within a common frontier. Large areas of country can bear vicious tariffs with com- parative immunity from suffering, because internal trade is absolutely free. There are many objections to the juxtaposition of independent European settlements in new countries. The acquisition of the Dutch settlements on the Gold Coast, and the proposed exchange of territory with France in the same region, were suggested by experience of the difficulties which sometimes arise from too close neighbourhood when it is also necessary to deal with un- civilized races. The Kafirs of South Africa are warlike, and naturally intelligent; and their numbers are unknown. Their friendly or hostile relations with the Free States necessarily affect the interests of the adjacent colonies. Other causes of dissension have already arisen. The dis- covery of the diamond fields has given rise to a territorial dispute which urgently requires a settlement. The Government of the Cape has supported the occupation by English immigrants of lands which are claimed by the Free State. As Mr. MOLTENO and his colleagues impute the blame of encroachment to the Imperial Government, it may be inferred that the Free State has really suffered a grievance. Lord CARNARVON may perhaps succeed in effect- ing a compromise; and confederation would go far to render future collisions innocuous.

At home there will be little difference of judgment on Lord CARNARVON'S South African policy. A Secretary of State for the Colonies who is only anxious to lead a quiet life may avoid or adjourn troublesome questions if he de- termines habitually to abstain from interference. Some of Lord CARNARVON'S predecessors have encountered the oc- casional petulance of colonists by intimations that the mother-country could dispense with a connexion which caused more trouble than advantage. Others have, like Lord CARNARVON himself, encouraged a genuine, if capricious, loyalty by expressing on all suitable occasions the pride which an Imperial Government ought to feel in regarding prosperous and growing dependencies. Lord CARNARVON, not content with the mere forms of courtesy, has desired to mark his term of office by the promotion of a scheme which conduces greatly to the benefit of the South African Colonies. The attempt to unite a number of provinces into a dominion which may hereafter become powerful and independent is not a proof of the zealous and usurping policy which Mr. MOLTENO perversely attributes to the SECRETARY of STATE. In ancient times it was thought that division facilitated external control. The charge of unconstitutional conduct which is preferred by the Cape Government shows how soon political systems may be acclimatized and taken for granted. Mr. MOLTENO perhaps fancies that the relations of a Colonial Secretary to a self- governing colony are as fully ascertained and understood as the traditional rules of the English Constitution. It seldom occurs to impatient colonial patriots that, as long as any trace of dependence remains, the Imperial Government must sometimes make its authority felt. It is still uncer- tain whether it will be possible permanently to govern great colonies and at the same time to let them govern themselves. The justification of a system which may seem paradoxical is that there is no practicable alternative. The control which still remains to the Crown must be suspended whenever it is seriously resisted. Long before responsible government was established at the Cape the Colony peremptorily and successfully refused to admit transported convicts. It will be still more easy to reject a beneficial scheme of confederation; nor has the Imperial Government any selfish interest of its own in securing a great advantage to the South African Colonies.

THE MERCHANT SHIPPING BILL.

IF divisions went by argument, the success of Mr. PLIMSOLL'S proposal to substitute a system of com- pulsory survey of merchant ships for the system of optional detention which the Government wishes to make perpetual would have been secured by Mr. REED'S speech on Monday. The real distinction between the two pro- posals is, that the Bill does at haphazard, and with the maximum of inconvenience to all concerned, what com- pulsory survey would do regularly, and with the minimum of inconvenience. The distinction which the Government tried to set up between making themselves responsible for the seaworthiness of ships and leaving the owners respon- sible has no existence. The Bill is a Bill empowering the Board of Trade "to detain ships provisionally for the "purpose of being surveyed." If the owners are to remain responsible for the soundness of the ships they send to sea, what business has the Board of Trade either to detain or survey them? To hold a man responsible for what he does is to say to him, Do this or that if you like, but remember that you do it at your peril. If the Government care about consistency, they ought to strike out the clauses giving their officers power to detain unsafe ships, and pre- scribing a procedure for regulating their detention, and trust entirely to the operation of the clause which makes it a misdemeanour to send an unseaworthy ship to sea. All that the officers of the Board of Trade would then have to do would be to remind the owner of a suspected ship that, if he persisted in sending it to sea, and it was afterwards proved to have been in an unseaworthy state, he would incur certain penalties. To do the Government justice, they have too much regard for the lives of sailors to leave ship- owners alone in this fashion. Accordingly, they take the re- sponsibility of a suspected ship off the shipowner's shoulders and lay it on their own. It is true that they proclaim all the time that no such transfer is being effected, and protest against the notion of compulsory survey as something altogether destructive of the principle of their measure. But the survey of a ship under the provisions of the Bill is in all respects as compulsory as it would be under Mr. PLIMSOLL'S Amendment. The detaining officer gives the shipowner no choice in the matter. He does not go to him and say, I believe that your ship is not fit to go to sea; will you let her go, and take the responsibility of what- ever befalls her, or will you make over the responsibility to me, and let me decide whether she is fit to sail? On the contrary, in the case of every ship which a detaining officer chooses to survey the owner has no choice whether he will have his ship surveyed or not. In fact, it is inaccurate, though convenient, to speak of compulsory survey in con- tradistinction to the survey provided for in the Bill. We ought rather to speak of systematic survey as opposed to random survey. As Mr. REED put it, "The Government

"do not say, We decline to survey ships and determine their "seaworthiness. They undertake this duty; but, instead of "taking the initiative, they wait till somebody brings to "their notice the fact that a ship alleged to be unseaworthy "is proceeding to sea, and then the Government, who now "say it is not their duty to do these things, readily and "cheerfully step in and do them." They will not relieve shipowners of responsibility of their own mere motion, but they are perfectly willing to relieve them of it at the suggestion of the man in the street. Why the Government should have taken up this position is incomprehensible. They can hardly hope to have conciliated both the shipowners and the public, inasmuch as, if the Bill is really carried out, the former will be subjected to all manner of annoyance; while, if it is not really carried out, the latter are certain to be dissatisfied. The only explanation is that they have a genuine admiration for the symmetry of their proposed legislation, which sustains them against criticism. It is to be hoped that it will prove equally efficacious in sustaining them against the unpopularity which is certain to follow upon criticism.

The means by which the Government propose to prevent unseaworthy ships from being sent to sea have now been in operation for about half a year, and the same newspapers which report the debate on the clause of the Bill which makes sending an unseaworthy ship to sea a misdemeanour report a trial under the identical clause in the temporary Act of last year. From the proceedings in this case, therefore, we may learn what kind of influence this threat which the Government think so terrible is calculated to exercise on shipowners. The prosecution was instituted by the Board of Trade against one HOWELL for sending a ship called the *Leader* from Plymouth to the Mersey on the 19th of November, 1875. The ship reached the Mersey in safety, but the Board of Trade thought they had reason for suspecting her seaworthiness, and caused her to be surveyed. She was then found to be "utterly rotten "wherever she was opened," and the surveyors gave evidence which induced the counsel for the defence to say that he would not attempt to contend that she was seaworthy. The facts on which the prosecution relied to bring home guilty knowledge of the ship's condition to the owner were that the master and crew had been held blameless for abandoning the *Leader* at sea in July 1875, on the score of the proved rottenness of her masts and rigging, and that after this report HOWELL had never employed any surveyor to examine her, but had been content with spending some 50*l.* in repairs, which, as the event proved, were utterly insufficient. In fact, as the ship, after being surveyed by the Board of Trade, was sold at the "break-"ing-up price" of 105*l.*, it may be surmised that she was really not capable of being repaired. If these facts had been stated hypothetically in the House of Commons on Thursday night, we imagine that Sir CHARLES ADDERLEY would have said that this was precisely one of the cases against which the Bill is intended to guard. But the precisely similar Act of last year is plainly insufficient to guard against them, for the jury found HOWELL not guilty. Whether, in spite of the testimony of the surveyors, they believed that the *Leader* was seaworthy, or whether they believed that HOWELL had used all reasonable means to insure her seaworthiness, does not appear; but on one ground or another the prosecution broke down. And as this prosecution failed, the majority of them will probably fail. Perhaps this may be some comfort to Lord ESLINGTON under the rejection of his Amendment on Thursday. The clause, as it stands, makes the sender of an unseaworthy ship to sea guilty of a misdemeanour, "unless he proves" that he used all reasonable means to make her seaworthy. Lord ESLINGTON proposed to make him guilty of a misdemeanour "if it be "proved that he made default in using" such reasonable means. The adoption of this Amendment would have destroyed even that semblance of efficiency which the Bill now possesses. The fact that a ship has been found to be unseaworthy is, as Sir CHARLES ADDERLEY said, strong presumptive proof against the owner, and it is no hardship to call on him to rebut this presumptive proof. If a shipowner is so unfortunate as to possess unseaworthy ships which he believes to be thoroughly seaworthy, it will no doubt be difficult for him to prove that he used all reasonable means to correct a defect of the existence of which he had no suspicion. But there are probably few shipowners in this melancholy position, and if there be any, the effect of the Act will be to encourage more frequent surveys. As regards the owner who knows that his ship is unseaworthy and makes what he thinks to be sufficient repairs in her, it will be very much more easy for him to prove that he did such and such things than for the prosecution to prove that he did not do them. The bills for the work done will remain, and from them it will be possible to form a fairly accurate estimate of the extent to which the ship was repaired. If the work thus shown to have been done was obviously inadequate to the needs of the ship, there will be no injustice in condemning the owner. If it was presumably adequate to those needs, he may confidently count on an acquittal.

It is difficult to feel much interest in the further progress of a measure which is plainly doomed to be inoperative. We do not say that, if the Board of Trade are prepared to prosecute every owner of a ship which is proved to have gone to sea in an unseaworthy state, and to detain every ship preparing to go to sea which is suspected of being in an unseaworthy state, something will not have been done even by this Bill to protect sailors against avoidable loss of life. But it will have been done in the most cumbrous and costly manner, and even then the principal value of the Act will be that it has demonstrated the necessity for an Act of a different character. When the Board of Trade have grown tired of striving to obtain impossible convictions, and of wasting money on conjectural surveys, they will at last come to the conclusion that the easiest way of preventing unseaworthy ships from going to sea is to prevent ships from becoming unseaworthy.

NOXIOUS VAPOURS.

THE Duke of NORTHUMBERLAND has rendered an important public service in moving an address for a Royal Commission to inquire into the working and arrangement of works and manufactories from which sulphurous acids, sulphuretted hydrogen, and ammoniacal or other vapours and gases are given off; to ascertain the effect produced thereby on animal or vegetable life, and to report on the means to be adopted for the prevention of injury thereto arising from the exhalations of such acids, vapours, and gases, and upon the legislative measures required for that purpose. It is satisfactory to know that the Government is prepared to act upon this Resolution, with the exception of the part relating to legislative measures. The Duke of RICHMOND was very indignant at the idea of a Royal Commission invading the province of the Government in regard to proposing any new legislation; but he perhaps forgot the great number of Royal Commissions which are at present in existence for the express purpose of devising a policy for a Government which has got none of its own. The Slave Circular Commission is a striking illustration of this weakness of the Ministry, and it is certainly curious that, while so abjectly dependent on outsiders for advice on great questions, it should be so sensitive as to receiving a hint or two on little ones. It is needless to say that the Report of a Royal Commission does not commit the Government in the slightest degree. The advice may be taken or left, but it is usually that of a competent adviser who at least deserves to be heard. The Duke of RICHMOND perhaps thinks that on occasions when the Government is represented by three Dukes rolled into one it ought to be treated with more awe than when represented only by a Minister in the Lower House. Happily, however, it is not of much consequence whether the Royal Commission makes any suggestions or not as to changes in the law. The main thing at present is that there should be a thorough inquiry, and that the facts should be ascertained in such a way as to form a basis for legislation. It seems that in the first instance the Duke of NORTHUMBERLAND intended to confine his proposal to the Tyne district, which is no doubt bad enough; but he found that the complaints of poisonous atmosphere were so wide and extended to so many different kinds of works, that it was necessary to enlarge the terms of his motion. The Archbishop of CANTERBURY, who followed in the debate, was able from his own experience at Lambeth to give ample confirmation of the necessity for an extension of the inquiry. He anticipated the criticism that he was speaking for himself by remarking that he was not confined to residence at Lambeth, but could go elsewhere, and that it was the poor, and not the rich, who were the real sufferers in such a case. This is a very important observation, and goes to the root of the whole question. It is quite certain that no person of means who could afford to live anywhere else

would choose Lambeth for a residence; but there is unfortunately a very large class of poor people who cannot find accommodation anywhere else, and who have a right to claim some consideration. The ARCHBISHOP explained that he had nothing to say against the potteries, which supply a livelihood to a large number of the inhabitants; but he contended that manure-heaps, though right enough in their place, ought not to be piled up in the midst of a dense population to sicken and poison them.

This was a subject in which the late Lord DERBY took a great interest, and he was instrumental in setting on foot some useful legislation. He only started the subject, however, and it has since been found to require more stringent treatment. The Duke of RICHMOND, speaking on behalf of the Local Government Board, stated his belief that the local and sanitary authorities throughout the country already possess sufficient power to deal with such cases, and that, on complaint being made from any place, it is the duty of the Board to order an inspection to be made, and, if there is cause, to have the law put in force. There is, however, the DUKE explained, sometimes a difficulty in discovering exactly what gas or emanation it is that corrupts the air, and who is responsible for it. He also stated that, in various ways something has been done to render the operation of the law both more specific and comprehensive. For instance, the amount of muriatic acid allowed to be emitted has been diminished, and a competent inquirer has been directed to ascertain generally what nuisances arising from manufactures are dangerous to health, and how they can be abated. This inquiry is not yet concluded, and it is reasonable that the Government should wait for it before doing anything. At the same time, it is obvious that, if a process of manufacture is shown to have results detrimental to public health, there is always one way in which it can be at once abated, and that is by simply suppressing it; and there ought to be no hesitation in doing so when the case is clear. There is an idea widely prevalent among trading bodies, such as manure-mongers, bone-boilers, knackers, and other dealers in filthy refuse, that they have a right to carry on their business irrespectively of public convenience, simply because it is one which is profitable to themselves. The Railway Companies have in like manner an idea that the question of not killing people on their lines is to be determined by their own financial necessities. It is very much to be wished that Parliament should take up a strong and resolute position on these questions, and make people understand that no one has a right to jeopardize the lives or health of the community for his own private advantage, and that if his business infringes on public rights of this kind, he must either give it up or take it where he can carry it on under harmless conditions. It is a common plea in cases of nuisance that the nuisance was on the spot first, and population came afterwards; but it should be held to be a fixed principle that the population has a right to settle where it can, and that if population comes the nuisance must go. It is obvious that the conditions upon which alone a nuisance can be tolerated—that it is carried on in such a way that it does no injury to any one—cease to exist as soon as it becomes the centre of a crowded neighbourhood. Any one who goes by railway to a Greenwich dinner must know the atmosphere which is created by the bone-boilers and filth-collectors of Bermondsey, and which outdoes the wildest fancies of DANTE'S Hell. It is quite intelligible that at one time, when Bermondsey and that region was comparatively open, it was a very good place for such abominations. But when the claim is set up that population makes no difference to the rights of the proprietors of these places, it is necessary to ask what these rights amount to. Can it be contended that because a man becomes possessed of a particular bit of property he is entitled to use that property so as to render uninhabitable a large area of land around it, which belongs to other people, and with which he has nothing whatever to do? It is impossible to imagine a more preposterous proposition; yet it is a plea which is constantly advanced by persons interested in operations which are injurious to public health. It is surely no violation of the rights of property in land to say that such a use shall not be made of it as to be directly offensive and hurtful to the public. Even where bad smells do not kill people, they cause an annoyance which makes life miserable. It is usually only a question of expense whether there shall be any nuisance in this way or not, and it is no answer to say that the profits of trade will be reduced if measures have to be taken to mitigate or remove the evil.

Lord ABERDARE, who hankers after what he calls a middle course, admitted that a case had been made out for inquiry, but remarked that he should be glad to hear that the inquiry was to be conducted by persons competent to deal with it. This of course is an obviously essential condition of any interference, and there is no reason why it should not be fulfilled. At the present moment the difficulty is that, though the law condemns nuisances, there is great difficulty and expense in putting the law into operation, and nothing effectual will be done until some machinery is devised for enabling private persons to compete with the rich persons who have a commercial interest in perpetuating these abominations. Lord WINMARLEIGH pointed out, as the Archbishop of CANTERBURY had done before, that the chief sufferers are the poor, who have to live where they can. He said he could mention instances where whole villages and towns were covered with these noxious vapours, but the wealthier part of the inhabitants, who profited by the labour of the workpeople, were able to build villas in healthy spots away from the miasma, while the humbler classes were exposed to the poison.

MR. LOWE AND THE CIVIL ENGINEERS.

IT is to be hoped that the House of Commons fully appreciates the compliment which is implied in the fact that, when Mr. Lowe has anything sensible to say, he chooses the House as the place to say it in, while, when he has a display of ignorance or absurdity of any kind to make, he commonly chooses some other field. But it is hardly respectful to the Civil Engineers to pick them out as a class of hearers to whom any kind of fallacy may be safely addressed year after year. A Civil Engineer need not, as a Civil Engineer, have gone through the kind of research which is needed fully to expose the grotesque shallowness of Mr. Lowe's talk; but we might suppose that a man of eminence in any profession must have mother wit enough to see how one fallacy of Mr. Lowe's contradicts another. Mr. Lowe's hatred of sound learning reaches such a pitch that, so that he can say something to its discredit, something in praise of his beloved ignorance, it is wholly indifferent to him if the *Encomium Moriæ* of one year supplies the readiest of answers to the *Encomium Moriæ* of another year. It is not so long ago that Mr. Lowe was full of contempt for ancient Greece, and of admiration for modern Europe. This time he is all for ancient Greece, except so far as he is for ancient Rome, while he looks on the events which called modern Europe into being as a "hideous catastrophe," "a frightful gulf in the history of mankind." England, France, Germany, America, do unhappily exist; that Mr. Lowe cannot hinder; his only comfort is that "such a calamity" as that which created them "can never overtake mankind again." We certainly hope that Mr. Lowe is right; but we cannot share his seeming regrets that the state of things which existed in the third or fourth century of our era did not go on to our own time. As King Alfonso wished that he had had to arrange the creation of the world, so Mr. Lowe would have been well pleased to have been intrusted with managing the history of the world. On the whole, judging by the result, we are inclined to think that things have been managed better than Mr. Lowe would have managed them. We cannot calmly acquiesce in an arrangement of history which would have shut ourselves out from all share in it. We—we, that is, in a very wide sense—we, the nations of modern Europe and America, are, we freely confess it, mere barbarians. We did—we cannot deny it—come in like a "cataclysm" (we copy the hard word humbly) on that ancient and better state of things which Mr. Lowe would have liked to keep on. Still we have done something in our time. We have at least produced Mr. Lowe. And we have also produced the House of Commons and the Institution of Civil Engineers, in order that Mr. Lowe may have fitting fields for the display alike of his wisdom and his folly.

Let us then turn aside for a moment from the sad prospect of that modern world whose existence Mr. Lowe has not been able to hinder, and look back to those brighter times which have so lately won Mr. Lowe as their votary. Not a word now about the folly of thinking about things that happened so long ago; not a word by way of despising petty States; not a word about the insignificance of the petty slaughter at Marathon compared with the glorious destruction done by a "good railway accident." Mr. Lowe has turned Greek; to be sure, he has become a Greek of rather an odd school; still, he has become a Greek of some kind. He has found his hero, and his hero is one who was received with such worship at Athens that Mr. Lowe can certainly never speak disrespectfully of Athens again. Mr. Lowe will have nothing in any case of "small grammatical researches" of "bad poetry," of "execrable histories and biographies." "All this" is "rubbish to be read by the few and thrown aside by the many"; all the rubbish, we may guess, of Athens in the days of her glory. But Mr. Lowe looks with respect on the "extraordinary development of engineering talent" of which he takes Demetrius—we assume that Poliorkêtês is meant—and Archimedes as his examples. To be sure Mr. Lowe may seem to ordinary minds to be

a little confused as to his chronology; but a man who thinks that the whole course of human affairs has gone wrong may perhaps have the right of rearranging the particular centuries in any order which he may like best. Otherwise we might have thought it an execrable history, rubbish which did not deserve to be read even by the few, which should place Demetrius and Archimedes after Socrates and Plato. Yet this would seem to be the arrangement of things contemplated by Mr. Lowe—a better arrangement possibly than that which really happened, but still one which, when stated as a matter of fact, sounds a little startling. "It looked," Mr. Lowe tells us, "at one time as if the physical philosophers were about to carry the day. There was an extraordinary development of engineering talent in the ancient world—witness the names of Demetrius and Archimedes. But somehow the personal character of Socrates and the eloquence of Plato overpowered the tendency towards physical science, and people gave themselves up to hazy metaphysics instead of looking into the sources of nature to better the condition of the human race."

One might ask at this stage what Mr. Lowe has now to say about one writer of whom he certainly once knew something, one who managed to combine the study of nature with that study of mind which Mr. Lowe so despises, and to add some attention to poetry, which Mr. Lowe may perhaps set down as bad, and to history, which he no doubt scorns as execrable. Ethics, politics, rhetoric, logic, physics, metaphysics, even small grammatical researches, were none of them either above or below the mind of Aristotle. But, leaving this parenthetical question, leaving too the chronological puzzle, it is something to know the kind of man whom Mr. Lowe delighteth to honour, the kind of man whom he looks upon as likely to better the condition of the human race. We have him in Demetrius Poliorkétés. Well, Mr. Lowe might have made a worse choice among all the Macedonian captains; he might have taken Kassandros, or Polysperchôn, or Ptolemy the Thunderbolt. Still, on the whole, one might think that Socrates did more in the way of bettering the condition of mankind than the great Besieger. There is no doubt that Demetrius was a man of engineering genius; so—to leap on to days after the sad cataclysm—was Richard the Lion-Hearted. As for their bettering the condition of mankind, we get a little puzzled, till the remembrance of Mr. Lowe's favourite railway accident again comes to our help. Men like Demetrius and Richard, in common with good railway accidents, certainly do a good deal in the way of bettering the condition of mankind, if by bettering their condition is to be understood improving them off the face of the earth.

But now comes the unlucky thing of all. Just as the world had this one happy chance of flourishing under the care of Demetrius and Archimedes, Socrates and Plato stepped in with their barren study of mind; and Socrates and Plato seem, in some strange way, to have been in league with Attila, Genseric, Alaric, and such like barbarians. This odd union of Attila and Alaric seems to be modelled after the type of Mr. Layard's classification of "Goths, Huns, and Vandals." Before we come to them let us try to make out into what age of the world—the world, as unluckily it really was, not as Mr. Lowe would have reconstructed it for the better—Mr. Lowe has brought us. He tells us that "it is not too much to say that, if the school of Archimedes had triumphed over the school of Plato, the frightful catastrophe which overthrew the Roman Empire and condemned mankind to a thousand years of barbarism and misery would have been averted." Applause naturally followed this; Englishmen are so fond of wiping themselves out of history that this proposal to get rid of them altogether by the help of Archimedes could not fail to draw forth the loudest of cheers. When people deal with millenniums, we must not ask too minutely about the years or the centuries; but we should like to have some little notion when the thousand years began and ended. But from the flourish about Attila, Genseric, and Alaric, we may guess that they began somewhere about the fifth century. Mankind then were in darkness and misery from the fifth century till the fifteenth, perhaps till the Medici and Pope Alexander the Sixth came to make them happier and better. Lord Chatham said long ago that the words "omnis liber homo" in the Great Charter were worth "all the classics." Mr. Lowe seems to be coming round to "the classics"; but he only comes round to the classics at the expense of the Great Charter. From that and other like works of ignorance and misery a greater predominance of the school of Archimedes might have saved the world. Mankind might have gone on under the beneficent despotism of the Roman Cæsars; the art, the literature, the political growth, of European nations and European colonies might all have been checked, and Mr. Lowe, if in such a state of things there could have been such a being as Mr. Lowe, would have been quite happy. Mr. Lowe believes that, if there had only been enough engineering, "that hideous catastrophe," the birth of modern Europe, "would have been avoided, that frightful gulf in the history of mankind" which contains, among other things, the birth of the English nation, the English language, and the English constitution, "would never have opened up." No man who has given any attention to those execrable histories which Mr. Lowe so despises will think this kind of talk worthy of any other thought than a passing wonder that a man of his ability can take a pleasure in thus making a jest of himself and his hearers. That Mr. Lowe can really have reached the portentous depth of ignorance which his words, taken literally, would imply, is simply impossible. The state of mind is a strange one for the student of human nature to muse upon, and that is all that can be said.

Still it is always pleasant in these cases to see a man fall into his own trap. Mr. Lowe would, by help of engineering, have kept the nations of modern Europe out of the field of history. Now a little study of execrable histories might have taught him that engineering was just the thing which was tried against those nations, and which failed to keep them out. Did Mr. Lowe ever see a Roman aqueduct, a Roman wall, a Roman road, a Roman bridge? Till he arose to teach us better we had always thought that in the whole life of the Roman Commonwealth and the Roman Empire, down at least to the beginning of the thousand years of misery, there was a good deal more of the old school of Demetrius and Archimedes in the world than there was of the school of Socrates and Plato. The lessons which those times teach is exactly the opposite to that which is drawn from them by Mr. Lowe. If engineering, if material force and mechanical skill, was all that was needed to keep an empire safe, the Roman power might have gone on for ever, and the sad sight in Mr. Lowe's eyes of modern European civilization might never have cumbered the world. According to Mr. Lowe, matter is everything and mind nothing. Yet the moral force of the so-called barbarians contrived to overcome the material force of the Empire, and, where it was not so, the consequences were hardly for the advantage of mankind. To Mr. Lowe Attila, Genseric, and Alaric are all the same. Yet one might ask whether it was for the general good of mankind when the Vandal kingdom in Africa was overthrown by Belisarius. A Teutonic kingdom at Carthage might have been better able to withstand the Saracen than an outlying Imperial province. The greater part of Spain was doubtless conquered far more quickly than Africa; but, while all civilization, Roman and Teutonic, was swept away from the African province, in the Gothic kingdom of Spain a remnant lived on which in the end won the land back again. We ourselves may perhaps ask, without the risk of being misunderstood, whether Mr. Lowe thinks the history of Eastern Europe a brighter and happier one than that of Western Europe. In the East the cataclysm was put off till the end of Mr. Lowe's thousand years, and then it came, not in the form of the Goth and the Frank, but in the form of the Turk. Here the very thing happened which Mr. Lowe wishes to have happened all over the world. The material strength, the engineering skill, the strong walls, and the Greek fire, preserved the Roman dominion, and kept off the hideous catastrophe, the gulf, the cataclysm, and all Mr. Lowe's other metaphors. Yet, if we are to amuse ourselves with his diversion of reconstructing the history of the world, it might perhaps have been better if the material and mechanical skill of the Eastern Rome had been somewhat less. If so, she might have received a Teutonic or Slavonic conqueror, who might have united the material force of the old Empire to the moral force of the younger nations, and so have kept out the common enemy of all. According to Mr. Lowe, the profession which he is extolling "has not only benefited its members by the riches they have derived from its pursuit"—how contemptible, then, by the side of it are the small grammatical researches, the bad poetry, the execrable histories and biographies, which do not so directly lead to riches!—"but has been the means of securing the world against the most awful calamity that could befall it, after a far advance in civilization a relapse into barbarism." Loud applause of course greeted this eloquent wind-up. And the loud applause doubtless drowned the thought, if it occurred to the mind of any one there, that the material "science, skill, and intelligence" which prolong the life of a decaying power may sometimes, by checking the advance of that healthy barbarism which is the infancy of the highest civilization, pave the way for the triumph of the darkest and most hopeless barbarism of all.

PRIVATE VIEWS.

TWO days of this week are annually devoted in London to the visitation of the minor studios. This yearly custom is very strictly observed, and people who have not the fear of the Decalogue before their eyes add a third day to the programme. Sabbath-breaking in studios is a shade less sinful than sabbath-breaking on the river. No awful warnings can be drawn for the Sunday school from the artist's atelier, as they can from the ball-room or the rowing-boat. No one has been drowned in Mr. Hook's most tempestuous sea. No one has fallen from Mr. Crowe's longest ladder. No painted ships have sunk in a painted ocean. But to our country cousins these visits are occasions of great enjoyment. When a little innocent wickedness can be combined with sight-seeing, so much the better. Sunday in a studio will have an almost tragic significance as described amid the depths of rural piety at home. Those dear, naughty artists in their velvet jackets and their short pipes will figure in many a fireside romance. Strange visions of Bohemian life, with its happiness, have flitted before eyes hitherto unsophisticated. Odd devices for tables and chairs, unlooked-for things of beauty, rare embroideries and ancient lace contrasting with old clothes and theatrical properties—here a half-burnt G. B. D. stuck in the ghastly jaws of a skull, there a daffodil hanging down its head from the edge of a piece of delicate crackle—such wealth, such poverty, such untidiness, such taste, are all new and wonderful to the country cousin. Private views cannot be had in the country. We may hunt there, and shoot, but we cannot see pictures before they are sent in. Pursuing wild animals pales beside the gratification of making a round

of the studios. The Kensington country, with its maze of newly-named streets; St. John's Wood, where every second villa is an artist's; the dingy but productive neighbourhood of Fitzroy Square—all these have to be mapped out, the exact addresses carefully noted, and traps of deep ingenuity laid for introductions, so that the day's round may be as complete as possible. No artist is so obscure that he may not be surprised by a visit, none so great that an introduction may not be obtained. Sometimes it is the prosperous man whose hit two or three years ago has secured him notice and commissions, whose house is daintily furnished, whose wife drives her carriage, whose children are walking models, and look as if they had stepped straight off his canvas. Sometimes the visitor is ushered into a great uncared-for room, warmed by a stove and lighted by a skylight, which serves as dining-room, dressing-room, and studio all together, and in which the great easel helps to conceal the camp bedstead. Woe unto the young man who has still a finishing touch to add. What terrors invade the rash painter who put out the face of his principal figure yesterday, and whom the fog has robbed of his last moments of work! Troops of strangers tramp through his gallery and shake his easel. Heedless ladies get into his light. The day is short in any case, and it is further shortened by his visitors. Few artists attempt to work, except in secret, during these last days, and it may be charitably hoped that all like the cessation of labour and enjoy the pleasure of seeing their friends and patrons.

With that delicate regard for the feelings of its clients which has always distinguished the Royal Academy above all other bodies corporate, little or no public notice is given of the important functions upon which the Committee entered last Monday. The artists, however, well knew that the first two days of last week were appointed for receiving the pictures of outsiders, and deep and loud was the wail with which this year the announcement was received. A week earlier than usual was the time appointed. A precious week of work was cut off. Much despair has been the result. Perhaps a few imprecations were even launched by misguided youths at the loved and venerable heads of their profession. But by Tuesday night it is probable that some four thousand pictures were safely lodged in Burlington House, and some eight or nine hundred artists entered on a period of comparative idleness and intense anxiety. It is well for those who turn at once to fresh work. In perhaps as many as three cases out of four, anxiety will only be relieved by disappointment; but the man who has least time for indulging hope, who is most occupied with new employment, and who is soonest back at his easel, will suffer the least when the arbitrary, and, it must be allowed, sometimes apparently unjust, decree is known. It is mortifying to the man who believes in his own powers to see inferior work preferred by the judges. It is hard for a young artist to show any independence or originality, knowing as he does that it will be called "eccentricity," and that his pictures will be rejected. He may know that he is right. He may choose rather to starve than to paint "pot-boilers"; but his strong consolation is in the private view. Then his friends and admirers circle about him; he hears candid opinions, sometimes praise, sometimes criticism; and, if he is earnest in his art, the sympathy and encouragement of those whose tastes he can trust is a full set-off against official obtuseness. It may be asked why does he send to the Academy at all? And, as a matter of fact, the greater men of the so-called "eccentric" schools do not send; and some of our ablest living artists, men to whom our posterity will point as conspicuous representatives of a great revival of art among us, never exhibit except in "private views," and are less known to the general public than if their lives had been passed in the seclusion of a cloister. It is, indeed, a subject of constant regret to all those who have the interests of our insular school at heart, that some of our best painters should hold aloof from the national Academy; nay, that if they could be persuaded to come forward, it is more than a question whether they would be received.

But the privilege of visiting these studios is one accorded very sparingly. The ordinary round of the present occasion comprises pictures of a very different character. The artists, too, differ like their pictures, and the studios differ like the artists. Here is the great Stodge, so celebrated by *Punch*. He has built himself a picturesque pavilion in a garden. Its walls are gorgeous with the tapestry of ancient looms, its beams bristle with mediæval armour. The family ensigns of the Stodges—for Stodge is an aristocrat and boasts of blue blood—are blazoned in every window but that from which the easel is lighted, and the great man himself receives you at the garden door, offers you refreshment, gives you the titles of his pictures, introduces you to his daughter, and finally dismisses you with the air of an earl who had condescended to show you over Barearcres Castle. Of quite another class is Mr. Chrome Green. He paints landscapes in the country, and only comes to town for a few days for the private views. His house is almost bare of furniture, and you ascend what seems an interminable staircase. At the top Mrs. Green receives you. Green has grown faint with the smoky air and has run away into Wales, leaving his wife to do the honours. The studio is absolutely without ornament. No artist's properties are necessary for pure landscape. The fossil skeleton of an umbrella sketching tent lies in the corner. On the chimney-piece is a view of Llangollen painted during a shower. Beside it on the wall is chalked a sunset effect in black and white. The same scarecrow figure has served Green faithfully for many years, and he has no idea of discarding him now; and if you wonder to see so little comfort in the studio, you must remember that Green has acquired his greatness by abolishing comfort, by being able to paint in a snow storm, or on the summit of a Scottish coach, or while sitting up to his waist in water, or on an Antrim peak in a north-east wind. At little Inigo Brown's, again, in Fitzroy Street, all is changed. Our friend has afternoon tea ready for us in cups of the most wonderful blue. Burnt sack in Venetian glasses with jewelled stems is offered as an alternative to the tea. The talk is all of rare hangings and embroidery, of precious enamelling and wrought-iron. You sit on a divan of the latest Parisian upholstery in a frame of the stiffest "Queen Anne." A heavy odour of perfumed cigarettes pervades the apartment in which neither easel nor pictures can be seen. A few dark screens are artfully disposed; and before you take your leave Inigo languidly, and as it were quite incidentally, wonders whether you would care to see what he intends to send in. Then you are shown the pictures you came to see; but the host has left you to receive another visitor, and you seek in vain for the interpretation of some profound allegory, and weary your eyes gazing into mysterious depths of dark colour and treble coats of varnish. Still more amusing, especially if you care to see pretty faces, is a visit to the fashionable portrait-painter. Not a rush through his rooms, with a glance at the pictures; here you must stay and wait till a few of his lovely sitters have come and gone, so that you may judge for yourself of his amazing talent in a most difficult walk of art, that of making a flattering likeness. The sweet young viscountesses want dignity. Dignity he gives them, enough for duchesses. Their mammas want youth and amiable looks. He makes them Madonnas. Of course he succeeds, and he deserves his success; but here, perhaps more than in all your visits, have you to encounter one constantly recurring difficulty. You must "say something." If through any defect of early education, or otherwise, you have the misfortune to be ruled by a conscience, "saying something" is often painful. If you are a country cousin you suffer doubly in this way. Country folk are supposed to be devoted to truth. How then can you tell Stodge or Inigo Brown that you like his pictures? You do not in the very least understand them. They are awfully mysterious to you, perhaps awfully ugly. It is well if you have no views on the subject of art. Then, indeed, you can take refuge in a new interpretation of the formula, "Omne ignotum pro magnifico." But should you unfortunately know your own mind, should you indulge in an opinion on art, should you think, as some do, that ugliness is sinful, or should you have an eye sensitive to want of harmony in colour—or above all, should you have been brought up with old-fashioned notions about pictures being painted to give pleasure rather than to give displeasure—it may be better for you to perform your usual devotions on Sunday morning, and to avoid the private views.

CAMBRIDGE ON ITS OWN STUDIES.

AT the close of the academical year 1875 a Syndicate was appointed at Cambridge to consider "the requirements of the University in different departments of study." Its Report has just appeared, and contains much important matter in the shape of appendices, in which the various Boards of Studies state their requirements in the way both of public teachers and of buildings. Without entering upon a detailed examination of the requirements specified by the Boards, the Syndicate think that they may be partially met (1) by an improved organization of the present intercollegiate system; and (2) by the establishment of a new class of University teachers. We here see how widely and rapidly the system of intercollegiate teaching has grown, and we find some intimations of the course which is likely to be taken to give it greater organization. We must say, however, that what has most struck us in reading the appendices, which are full of information, is that the efficiency of the system has come very much from its freedom, and from the fact that those who are interested in the welfare of the men, the College tutors, have been left at liberty to work in an informal way. The teaching in a University must be such as the Undergraduates accept as giving them what they want; and what they want is determined by examinations. Hence it will be most important to bring the teaching and examinations into accord. The private tutor has come into existence by recognizing this need. The College lecturer takes rather higher ground, but he has to acknowledge the University examinations as embodying the intentions of the University. Professors have sometimes ignored the public examinations, but then they are themselves ignored by the students, except in the case of the natural and experimental sciences, where there is something to show. Looking at the elaborate system of lectures proposed by some of the less practical Boards of Studies, we think they must either have conceived that they could make students attend lectures by Act of Parliament, or else they must have considered the endowments only as professorships for men of learning, who in many cases, if the plan were carried out, would, so far as teaching engagements might go, be as little occupied as any of the holders of those idle fellowships who are shortly to cease to exist.

Each Board, except those of classics and mathematics, recommends a teacher of every separate department, whether there is any demand for such teaching or not. A conversation class may answer in some subjects, like History; but students seem to have lost the power of listening to a formal sermon-like lecture. Germany is cited by outsiders as a place where what is called the professorial system flourishes; but a little investigation on the spot dissipates the idea, and shows that there, as here, an experimental pro-

fessor of great skill obtains a class, while the literary professors are scantily attended. "I have usually a dozen or more students," said Professor Delius, the great Shakspearian scholar at Bonn near ten years ago, "but they are seldom the same two days running"; and Bonn students have got the same idea that prevails in England. "We can get all we want in half the time," say they, "from a *répétiteur*." It may be well to maintain in the University some person as an authority in each special branch of learning; but he must not expect to have a class. He must consider himself a *savant*, not a teacher, and should be chosen for his science, rather than for his capacity of teaching. These qualities are by no means commonly found together.

The organization of the system of teachers is only lightly touched on in the Report; but on this the practical success of the arrangement must depend. The weak point of what is called a professorial as opposed to a tutorial system is that the teacher has no personal responsibility for the pupil; he does not care whether he learns or not; he has done his duty in telling him what he ought to know, and he has done with him. The tutor (according to the Cambridge idea of the office) has an interest in his pupil; he has received him from his parents' hands; he or the college incurs disgrace from his failure, credit from his success. Hence, in any Board providing, teaching, or organizing study, those who care for the pupils—namely, the tutors—must be largely represented. The Boards which make these Reports have as yet been ineffective from failing in this respect. They have done as little as they could, and we can hardly hope that their present suggestions will go far to set up their reputation for practical wisdom. Their deficiency arises in part from their knowing nothing of the wants and ways of an undergraduate, and not caring much about him; what they understand is *learning*, not *learners*. It does not seem to have struck them that they are going to set up "mills without markets." The University is really a place where intellectual articles are fabricated to meet public wants. But the University can no more turn out a number of Naturalists or Orientalists when they are not wanted than a mill can turn out fabrics for which there is no sale. The abler men wish to dispose of their abilities to the best advantage. If the youths do not themselves consider this, their parents do. They invest so much money in sending them to the University, and they look for a return. The tutor may say, "Your son has a great turn for geology"; and the parents will say, "How is he to get his bread by being a geologist?" The University to a certain degree makes its own market by its reward. You must pay people to learn, or they will not learn anything not wanted for professional practice. All this looks very mercenary. Young men, it is said, should love learning for its own sake; but young men are like their elders—they must have a motive. Do lawyers or physicians pursue their science for its own sake without regard to the profits? There may be one who does so out of a thousand, and so there will be one undergraduate in a thousand who loves learning for itself, apart from the interest of conflict and the hope of getting on by its means. Why should we expect more from young people than from old ones? From this it must follow that, if the Universities cease to make their own market by giving prizes, there will be no high, liberal cultivation in the Universities or the schools which are led by them, unless perhaps in the case of a few persons of private means; and the effects of this paralysis of culture will be no less calamitous to the country in general than to the places directly damaged by the change.

Whatever, then, the Commissions which are to override the Universities may do, they must see that a reward for cultivation is to be got somewhere sufficient to induce young men to do their best with their faculties. This is for the increase of the intellectual wealth of the country, and is therefore a legitimate application of endowments. The existing rewards are excessive in amount, but too few in number as compared with the large number of Honour Schools. Indeed some Boards demand such for their special studies. With some ten different branches, or Triposes, the rewards, even at the moderate rate of (say) 200*l.* a year for five years, must be alike numerous and costly on the sum total.

Money, however, will not be so abundant as is expected, unless the College system be altogether crippled. Very large sums are wanted in the Universities for building. The lecture-room accommodation for the present Intercollegiate Lecturers is insufficient, and the University towns are now so crammed with students that the lodging-house-keepers are in a degree masters of the situation; and the lodging system is showing its mischief more and more every day. To save money and build rooms on a cheap plan would be a far better use of college funds for some years to come than to retain about the Universities proficients in various outlying branches of science merely for show. Moreover, the grave question of "retirements" has not yet been considered. Tutors are no longer clergymen, and therefore they do not look to livings. They rate their expectations higher than they did; they will often be married men, and will not stay in the University unless they see their way to a good permanent provision. There may be no need of their beginning at so high an income as they now get soon after taking their degree; but they will look to receiving as much eventually as they would get at a public school, and, if there be not a comfortable retirement provided, the tutor will hang on after he is incapable.

The growth and success of the lectures given by Colleges in common show what may be done in a college—in fact, what cannot be done without something like it. There must be provision for directing the student's course and for seeing that he has learnt what he professes to have been learning from the Intercollegiate Lecturer. The professor or lecturer does not know the undergraduate by sight, does not care for him, has no responsibility for him. The tutor has a personal interest in the youths who stand, or should stand, in a family relation to him. Hence in every college there must be, besides persons to maintain moral discipline and influence, others to whom the students can have free access, who can help them by advice as to their reading, who can resolve their difficulties, and who should give them papers to answer or essays to write, so as to see how they are getting on. In each of the disciplinal studies every college will want some such person, and each college should take one or more specialities, and provide a tutor to take charge of the studies of the pupils in the subject chosen. Moreover, the college must take full charge of the passmen. Without some such provision as this being supplied by the college, the students will get out of hand altogether; some will read in absurd ways, and many will turn absolutely idle—as must have been strongly felt and remarked upon by those who care to ascertain what has gone on in Germany. Such functionaries, we hold, ought to be actually resident in the college, and accessible of an evening, the only part of the day when an undergraduate has time to do papers or have them corrected. An undergraduate will not go out into the town and ring at the tutorial bell. Hence a tutor, married or not, must reside in college to be thoroughly one with his men; and here again we want money for building residences for married tutors—that is, for one at least in each college, and more in the larger ones. We are loth to run counter to the matrimonial tendency, but we would suggest that young men in other callings can rarely marry till they are about thirty years of age, and there can be no more hardship in celibacy being made a condition for holding such college offices as require presence in college, and would naturally fall to young men, than attaches to service in the navy on board ship. The incomes of college lecturers now commence at a high point, and scarcely increase at all; this want of gradation is bad, while of course the apparent wealth which is showered on juniors makes them in a hurry to marry, disregarding the future. If they began at a moderate stipend, and proceeded gradually to a higher income, they would be more nearly in the position of people elsewhere, and might be content to postpone marriage till they had acquired sufficient means. It is remarked that the requirements of the various Boards and others who represent departments of learning are exorbitant in the inverse proportion of the students who take to such studies. Those who represent classics and mathematics are reasonable in their demands and in their remarks, while those who have to do with abstruse subjects seem to think that the spreading of their particular subject is the *raison d'être* of the whole University. We must not be supposed to object to the providing of a teacher in some recondite language because he will have but few pupils. It is the very object of endowments to provide such teaching, because without them no instruction could be got out of the common run. But it may not be necessary to maintain permanently a teacher of such branches of learning. The University might often obtain all that it requires by subsidizing a teacher from elsewhere, who should come and give lessons three times a week in Cambridge. The Report throughout speaks of teachers and teaching, but if what it recommends were adopted it would really bring about an endowment of research. Opinion is favourable to this in the University, supposing that guarantees can be found for its being only given where it is deserved.

THE WORKING-MAN AS HE IS.

IN the political as in the financial world there are some fancy stocks which were a good deal run after a few years ago, but are just now rather at a discount. Among them may be reckoned the worship of the working-man, which rose to such a height during the last Reform agitation. In the cant of those days, the working-man was the perfection of human virtue and wisdom. Directly a man rose from fustian to broadcloth his moral nature began to decay, and his mind was suddenly corrupted. Lord Palmerston's good-natured theory about babies, that they were all born good and only became wicked as they grew up, was applied to the working-man. He was born good, and as long as he remained in his primitive state his instincts were pure and unadulterated. It is probable that some of the orators who talked in this way are now rather ashamed to remember it. Mr. Bright, for instance, when it suited his purpose, was very anxious that the Trade-Unions should take up political agitation, and suggested that Mr. Lowe's description of the working classes should be hung up in every workshop as an incitement, we hardly like to say to what, but certainly to something very different from moral self-reform. But Mr. Bright has since shown that he can see through the working-man, and understands the effect of the *residuum* at Norwich and elsewhere. The working classes themselves have indeed been at great pains to dissipate any delusion as to their superiority to the rest of the community in morality and intelligence. In the course of an unparalleled run of industrial prosperity what have they done for themselves? what gain remains with them? There has been a general rise of wages throughout the country, hours of labour have been shortened; but have the working classes really profited by these supposed advantages? The present deplorable condition of the industrial world supplies a

conclusive answer to the question. The increased wages have been squandered in drink, prices have everywhere risen, and production has been seriously diminished. At the present moment the working classes are practically poorer than they were, less fit and less willing for their work, and there is also less work to be done. And this they have brought on themselves by their own folly and perversity. When trade was at its best, and when the universal demand for labour secured good wages, they made up their minds to shirk work as much as possible, to keep down production, and to frighten off customers by exorbitant prices. Of course we do not mean to say that the whole responsibility for the collapse of trade and the continued stagnation rests with the operative class. There has also been recklessness and mismanagement on the part of the employers; but the difficulties of the latter have been greatly increased by the action of the men; and, indeed, scarcely any degree of prudence or foresight in the conduct of business would have availed to counteract the unfortunate temper of the men. In other walks of life, when people have a good market before them, they set themselves to make the most of it; but the working-men, under the dictation of the Trade-Unions, perversely chose this lucky period for an outbreak of idleness. Everywhere the hours of labour were shortened, and the workers took to "playing" with the time which otherwise they might have coined into money. Instead of putting forth all their strength and energy in order to make hay while the sun shone, they preferred to spend the bright hours in idling and drinking on the assumption that they would last for ever. It was entirely left out of account that the development of trade depends upon certain causes, and that if these causes are arrested in their operation trade must give way too. The root of the mania which has had such a disastrous effect on the material prosperity of the country, and, above all, of the working classes, is the idea that the amount of work to be done is a fixed quantity, quite independent of any efforts which may be made to encourage and stimulate demand, and that, therefore, the best course is to spread it thin in order to make it go as far as possible. As long as there is only a higgling of the market between employers and employed, the latter have no doubt a chance of securing a larger share of the profits without affecting the commercial price of the commodity. But, as soon as this price is touched, the effect is at once seen in a falling-off of demand. Customers cannot be coerced in the same way as employers, because there is always a wide margin within which they can reduce their consumption of an article or obtain it elsewhere; and even with employers there is a point where their own interest compels them to abandon an unremunerative speculation. There could hardly be a more glaring act of fatuity than the behaviour of the Welsh miners, who, at a time when they might have accumulated good wages against a bad season, madly gave up work, knowing all the while that the fund which they thus deliberately annihilated could never be recovered. The coals remained in the hands of the owners to be dug up at their convenience, but the time of the men was wholly lost to them. And the conduct of the miners in this case is only an example of the conduct of the Trade-Unionists generally.

There is, of course, nothing in what we have said which is not perfectly well known to all who pay attention to such matters. Yet it is well that the facts should be kept distinctly in view, not only in the hope that working-men may themselves begin to understand them, but because there are other people who, out of an honourable tenderness for the poorer classes, try to excuse and palliate the errors which they commit to their own detriment and that of the public. There was too much of this weakness in the debates of last Session, and there can be little doubt that the mistaken concessions which were then made, and the disposition to set aside the real and hard issues of the case, have had a very bad effect. It is not a question of the right of working-men to do what they think best for themselves, but whether encouragement should be given to what is, in reality, a conspiracy against free industry. Even when the Trade-Unions confine themselves to strictly legal methods of enforcing their false and pernicious theories they do immense harm. There is some confusion in the use of the phrase lower wages as applied to the incomes of the working classes. It is true that wages, in the sense of so much per hour or day, are being gradually brought down from the excessive point which they reached at an exceptional period; but the aggregate income of the workers is reduced only because, and in so far as, they refuse to work for it. In some cases, we believe, the miners have already discovered this, and have agreed to go back to their old hours of work in order to prevent a reduction of income; and there can be no doubt that those who have acted thus have done wisely. Unhappily the great body of working-men still cling to the delusion that it is possible by artificially checking production to make labour more valuable. The coal and iron trades are still demoralized by the inflated wages, shortened hours, and relaxed discipline of 1872 and 1873; and this is the evil which has now to be corrected. When a reduction of hours was first proposed, a great deal was said about the working-man's need of leisure to improve his mind, and the increased energy which he would put into such work as he did; but experience has shown very different results. It is certainly not surprising that ignorant men should not all at once appreciate the value of intelligent study or recreation, and it might be hoped that, in the course of time, they would make a better use of their new-found leisure. But it is not merely that they misuse their time; the main evil is that they are taught by the Unions that it is only by deliberate idleness and shirking of work that they can force up wages. Many of the men have, no doubt, a love of idleness for its own sake, and when this is indulged it grows terribly, and is shaken off with difficulty; but the majority decline to work more than a short time, not so much from a dislike of labour as with the object of making labour artificially scarce, and, as they think, consequently dear. Within certain limits this may perhaps be accomplished, but these limits have long been overpassed; and what the workingman has to consider is whether he will be content with a small income for little work, or whether he will do enough work to yield a satisfactory income. From every part of the country, and in regard to every branch of industry, we hear the same complaint that the industrial power of the nation is more or less paralysed by the caprices of the men. Not only are shorter hours insisted on, but during the hours of supposed work the great object is to take care that as little as possible shall be done. A good day's work, as it was once known, is never heard of. The men dawdle about in the factory during their comparatively brief attendance, and take continual holidays. In some trades it is scarcely possible even for the most liberal masters to get their hands to stick steadily to work. As soon as they have got a little money, they go off to spend it, and come back in distress. They are quiet and subdued for a little while, recover their spirits as they find themselves once more in funds, and then off they go on other bouts of dissipation. It is impossible that such men can be good workmen. They have no heart in their work, and are constantly being corrupted by their bad habits and dishonourable evasion of honest labour.

It must not be supposed that we are drawing a sweeping indictment against a whole class of men, or that we attribute the misconduct which is gradually gaining ground among the labouring population to some inherent immorality on their part. There are, no doubt, still workmen who would be glad to secure a stable position for themselves and families by steady continuous work; but they too suffer from the spirit which is spreading among their class, and which is deliberately cultivated by the Trade-Unions. They are overborne by the wave of class opinion, and have to swim with the current in order to avoid being dashed on the rocks. It is the poisonous nonsense of the Trade-Unions which is the root of the evil, and the only chance of striking at it is by opening the eyes of working-men themselves to their own suicidal folly. It is possible that their recent experiences may have had some effect in this direction, and anything which shakes the ascendency of the fanatics and adventurers who rule them will be for the public advantage. Mr. W. R. Greg, who has already done much to impress upon the public mind the importance of this subject, has just published, under the title of *Mistaken Aims and Attainable Ideals of the Artisan Class* (Trübner), a collection of articles which he has written at different times pointing out the injury which this class inflicts on itself by its foolish proceedings, and its neglect of the natural means of improving its position; and it would certainly be worth the while of any philanthropist to circulate this work, or at least parts of it, for the benefit of those whose errors and delusions it so clearly and decisively exposes. It is only justice to Mr. Greg to say that he writes in the interest of, and with a keen sympathy for, the artisans, though he does not adopt their point of view. In his preface Mr. Greg points out that within a recent period the manufactures of England have enormously increased; the aggregate wealth as well as the number of the productive classes has augmented in a vast and rapid ratio; the weekly wages of artisans and mechanics have risen from twenty to twenty-five per cent.; their instruction has been unquestionably, perhaps materially, improved; while they have also obtained an extraordinary increase of political power. Yet during this period "it is impossible to say that we can trace any corresponding or parallel growth either in their sobriety, in their treatment of their own wives and children, in the sentiments of friendliness with which they regard their employers, in the sense of justice and consideration which they manifest towards their fellow-labourers, in the sagacity with which they manage their own affairs, or in the wisdom with which they contribute to the affairs of the nation." "The working-men," he adds, "of 1875 (taken in the aggregate, and allowing for large exceptions) do not appear to be less easily misguided, less unwise in pursuit of their own interest, less blind followers to mischievous agitators and leaders, and assuredly neither less brutal nor less temperate, than those I lived amongst in 1850." And then he addresses himself to the latest outbreak of the conspiracy of Trade-Unionism against justice and fair play. He shows that in the movement against piecework they have not only displayed a curious blindness to the very elements and conditions of England's industrial success, and declared war on her prosperity, but, "what is far worse, have set themselves in opposition to the simplest and most obvious dictates of equity and freedom; forbidding men to do as well as they can or to work as hard as they wish; declaring that labour shall not be paid according to its real value; exercising an oppression upon more rational and honourable workmen than themselves, which few other people would endure at the hands of even a legal and established Government; throwing thousands of unskilled labourers out of work who have no concern in their quarrels nor any share in their funds; and without scruple, or apparently any sense of the adjectives by which these proceedings should be characterized, robbing the industrious man of his industry, the able man of his superior skill; and by the one and same stop wasting the earnings of the workman laid by as a security against sickness, old age, or failing trade, and

the capital of the employer which should be spent in finding occupation for the artisan." Who can say that this picture is not a true one? Unfortunately, one of the chief misfortunes of the working classes is that the political power which has rashly been bestowed on them tends to a tone of sickly adulation and sycophancy in addressing them; they are bribed with flattery, if not with baser coin, and are apt to forget the conditions of the world in which they live. Still they are not without a certain degree of shrewdness, and it is much to be desired that such a paper as Mr. Greg's, "The Proletariat on a False Scent," should attract their notice.

THE NEW AMERICAN CHURCH IN ROME.

THE telegrams report the consecration on Saturday last, the feast of the Annunciation, of a new American church in the Via Nazionale at Rome, with considerable ceremony. Several bishops and clergy, both of the Anglican and American Churches, were present, as well as the English Ambassador and the United States Minister, with the Secretaries of both Legations, and many Italian senators and noblemen, and "the church was densely crowded by the *élite* of the English and American society in Rome." There was a procession of bishops and clergy through the streets, witnessed by an immense concourse of spectators. The service was entirely choral, under direction of the organist of York Minster—or, as the *Times'* Correspondent prefers to phrase it, "York Cathedral"—and it closed with an ordination, probably the first of the kind ever held in Rome. The church itself is reported to be a fine Gothic building, erected from Mr. Street's design at a cost of 30,000*l.*; and another, designed by the same architect, is to be built for the English congregation at a cost of 20,000*l.* Altogether no such display of Anglican, or indeed of any other than Papal, worship, has before been witnessed in Rome since the gods of Paganism yielded to the Cross. The Bishop of Long Island, who preached the sermon, appears to have thought "the remarkable occasion which had brought them together" one that called for a sort of public manifesto. And accordingly, after vindicating the civil and ecclesiastical right of his co-religionists to a place in the Eternal City, he proceeded to define the position they propose to assume there:—

> Controversy would not be invited, but neither would it be declined if the interests of truth demanded it. The Church would strive on peace with all men, and the true unity of Christ's body. It would become all before all in maintaining the purity and unity of the Catholic Church and the written word of God, the unerring source of all that is necessary to be believed. But the written word of God must have interpreter. Where, asked the Bishop, is that interpreter to be found? Under what conditions and by what tongue does it speak? It was impossible for any living branch of the Church to be silent under the portentous conflict of opinions which these questions have excited.
>
> After stating the essential points upon which there is no debate, the preacher set forth fully the rival theories of infallibility, the extreme Protestant, the Romish, and the Primitive, and, lastly, he considered the attitude maintained by the several leading branches of Christ's Church towards the genius and drift of modern civilization.

We shall not enter here on any discussion of the details of the sermon or the ceremony; still less shall we follow one of our daily contemporaries in contrasting "pure and uncorrupt Catholicity" with the spurious "Romanism" which it is now for the first time permitted to confront on equal terms under the very shadow of St. Peter's. This is not the place for theological controversy; but a wider question, by no means deficient in interest, is at once suggested by the altered relation towards rival creeds and communions at its headquarters which has now for the first time been forced upon the Papacy. What may be the ultimate results of the change it would be rash to predict, though it is not unnatural to indulge in curious speculation on the subject. But that the change, in whatever light it may be regarded, is an important one, and can hardly fail to be fruitful in results, may be affirmed with tolerable confidence. And we may add that sincere Roman Catholics are the very last persons who ought to assume that those results will be unmixedly evil. Montalembert, if we may judge from his posthumous essay on Liberty in Spain, would have maintained precisely the reverse.

Protection has come in modern times to be a word of ill omen. But our forefathers thought otherwise. And history shows, what it is not at all difficult to explain, that of all interests the religious has most tenaciously clung to that now exploded system. We are not speaking especially of the Roman Catholic Church, nor would it be fair to do so. Those who first broke off from obedience to Rome in the sixteenth century were in general as little disposed to allow any differences of opinion as the Church they had discarded. It was only by slow degrees, as they began to split up into rival sects at issue with one another, and often found themselves reduced to the position of standing minorities, that they drifted from the necessity of the case into a plea for toleration which was afterwards erected into a principle; while the old Church, which still continued dominant in many parts of Europe, and for a century or more did not abandon all hope of recovering lost ground in the rest, was naturally the last to recognize the need for taking this course. So entirely is this the true account of the gradual progress of religious toleration that, as Mr. Mill points out, it has seldom, if ever, been practically realized, except when indifference has added its weight to the scale; and even now there are comparatively few religious persons, of whatever creed, who admit the duty of toleration without some tacit reserves, varying according to the bent of their own most cherished convictions. Some *e.g.* are tolerant of dissent in matters of Church government, which they regard as unimportant, but not in doctrine, or at least not in the particular doctrines which they hold to be fundamental; some, like the late Dr. Arnold, would include all but Papists and Unitarians in their comprehensive system; others draw the line at belief in revelation, and others again at theism. It is not twenty years since an Under-Secretary of State, when addressing his constituents about India, observed that, while "toleration was the great corner-stone of the religious liberties *of this country*," it was not to be "abused" by misapplying it to cases where it was really quite unsuitable; "it meant freedom of worship *among Christians, who worshipped upon the same foundation*; it meant toleration of all sects and denominations of Christians *who believed in the one mediation*." And therefore toleration of "the superstition called religion" in India had been a grievous mistake. Now this speaker, who at the time held a high Government office, and would probably have passed for a tolerant and enlightened Englishman, evidently held just the same view of toleration as that commonly ascribed to the Roman Church, though his detailed application of the principle differed with his difference of creed. There was to his mind no fundamental distinction among those who united in the worship of Christ, and he would accordingly tolerate all forms of Christianity, but no religions beyond the Christian pale. Rome draws the line, not at Christianity, as commonly understood, but at Catholicism, and would tolerate no form of heresy. There is a considerable theological difference between the two views, but in the principle of toleration, or rather of intolerance, they are identical. Both would allow freedom in matters of opinion merely, but would recognize no liberty of error in essential points of faith. Now we are not engaged here in examining the true grounds or limits of religious toleration, but are simply explaining how it actually came into vogue as a principle more or less consistently professed and acted upon throughout the modern world. That it may be justified, as a principle, by much better reasons than can be plausibly alleged to account for its historical development we fully believe, but it would take us too far from our immediate subject to enumerate and defend them now. One point, however, it will be much to our purpose to insist upon, which has a direct bearing on the probable consequences of the newly introduced rivalry of communions under the shadow of the Vatican.

The Bishop of Long Island, as we have seen, disclaimed any intention of using the American church in Rome as a focus of controversy and propagandism; and we sincerely trust that his wishes in this respect will be carried out. But two powerful communions like the Roman and Anglican—for we may confine ourselves for the present to these only—can hardly be brought into close and continual contact in the very centre and headquarters of the Papacy without exerting some influence on each other. And whether we regard one of them as in exclusive possession of the truth, or each as having something to learn from intercourse with the other, it will certainly be their own fault if the result is not beneficial. There can be no doubt, for instance, that since the Roman Catholic Church has been free to develop its resources in this country, without hindrance from legal penalties or restrictions, it has to a certain extent both influenced and been influenced by the great national communion which overshadows it, in spite of the jealous antagonism which holds the two apart. And it is obvious to remark that the same sort of almost unconscious interchange of reflex action may be looked for still more at Rome, where rival ecclesiastics are less likely to hold aloof from one another than in England, while the novelty and strangeness of a liturgical service not wholly dissimilar to their own, yet with marked differences, cannot fail to strike the minds of Italian Catholics who had scarcely realized the existence of any Christian worship other than that with which they are familiar in their own churches. All this indeed is too obvious to require being dwelt upon. But theologians on both sides may argue—Ultramontanes will certainly insist—that they have nothing to learn from their rivals. Be it so. We wish to point out that, even so, the withdrawal of "protection" may be of great advantage to the hitherto protected creed. When no freedom of discussion is tolerated, men are very apt to forget, not only the grounds, but the meaning, of their professed convictions. Their faith becomes, in theological language, material instead of formal—that is to say, they accept the letter without really grasping the purport and spirit of their creed. If our memory serves us rightly, Dr. Newman has somewhere suggested that this is often the condition of members of the Eastern Church, owing to the stagnation of all intellectual life among them. But surely the same may be said of many members of his own Church also in countries where it has been protected from all adverse criticism, and especially in Rome, where till within the last few years even books placed in the Index could not be introduced or procured with impunity. Creeds, however definite and however orthodox, are liable under such circumstances to lose their moral power; "instead of a vivid conception and a living belief, there remain only a few phrases retained by rote; or, if any part, the shell and husk only of the meaning is retained, the finer essence being lost." It does not at all follow that creeds and formularies are therefore useless; for, as the writer we have just quoted has elsewhere observed, they serve to enshrine and perpetuate the genuine substance of belief, and the full meaning, which has for the time been obscured or lost, may always under more favourable circumstances be recovered. It may be an exaggeration to say, with him, that "not one Christian in

a thousand guides or tests his individual conduct" by the doctrines he professes to believe; but there can be no doubt that in the early days when Christianity was put on its trial, and had to undergo the double ordeal of philosophical criticism and civil persecution, it was more intensely realised than is now generally the case. Doctrines which are coldly acquiesced in or quietly dropped in our own day were then, to use the words of a learned apologist of Christianity, "heard issuing from out the midst of the fire, and lisped by the quivering lips of women and children while writhing on the rack." Supposing then that the received Ultramontane belief is not only true, but the whole truth—which is, of course, the contention of those who most vehemently denounce the liberty of worship and teaching now established, in spite of them, in the capital of Christendom—it ought in the end to gain rather than lose by the vigorous cross-questioning and competition to which it is exposed. If it be objected that such views are unchristian, since unity, and not division, is the normal condition of the Christian Church as designed by its Divine Founder, a twofold reply may be offered, without at all questioning that unity is the ideal state of Christendom, and that it is right, so far as circumstances permit, to strive for the realization of the ideal standard. In the first place, we must deal with facts as we find them, and there is no reason to forego any incidental benefits which may be derived from the existing state of religious discord because it is not the highest condition and is encumbered with serious disadvantages. In the next place—which is still more to the purpose—the dangers of narrowness and stagnation of belief are far greater in the separate communities which make up a divided Christendom, and which are apt to become all the narrower and more intolerant from their isolation, than in a "world-Church"—to use a German term—necessarily embracing the widest diversities of national, social, and intellectual life. We may illustrate our meaning by a story told some years ago of a learned and able divine of what would now be called strong Ritualistic, if not Romanizing, sympathies, who visited Rome for the first time, full of hope that his lofty aspirations would find in that great Catholic centre their adequate encouragement and satisfaction. He returned, however, a sadder, if not a wiser, man, and his criticism was reported to be, what in his mouth was a very severe one—"Rome after all is narrower than the Scotch Episcopal Church." Will the zealous Ultramontanes who most fiercely resent the overthrow of the Temporal Power and all which it involves venture to assure us that Rome has found that narrowness an element of strength?

ASSIZES.

THE ancient system of assizes is likely to be greatly changed by the indirect operation of other legal changes. As regards the counties near London, whether properly belonging to the old Home Circuit or not, it is often more convenient to bring the parties and witnesses to London than to the county town; and if the courts in London can be kept open almost continuously, the choice of the place of trial will depend chiefly on accessibility. If judges are not employed in the country, they can sit in London, and accordingly one of the judges of assize who sat at Maidstone on Wednesday in last week sat the next day at Westminster. But, if it is easy in many cases to bring the parties and witnesses to London, it is also easy, and sometimes it may be desirable, to send judges to the assize towns; and as regards criminal business it is to be hoped that no departure will be attempted from the ancient practice of sending commissions of oyer and terminer and gaol delivery into every county.

For several centuries up to the year 1830, the whole of England was divided into six circuits, to each of which the judges of assize were sent twice a year. Previously to that year the Welsh counties and the County Palatine of Chester were independent of the courts at Westminster, and their peculiar judges and assizes were appointed by the Crown under several statutes. This separation of jurisdiction being found inconvenient, the number of judges of the Superior Courts was increased, and it was enacted that commissions should issue for Wales and Chester in the same manner as for the English counties. Since that date, therefore, throughout England and Wales, except in London and Middlesex, where the administration of justice was regulated by peculiar customs and Acts of Parliament, the assizes have been held twice a year upon a uniform system; and about the same time a third assize for the trial of criminals began to be held in the Home Counties. The arrangements of the circuits remained unaltered until 1863, when the county of York was severed from the Northern and joined to the Midland circuit, and some minor changes were made; and thus matters continued until the present year, when fresh arrangements, consequent on the passing of the Judicature Act, have been made of which the full effect has probably not yet been felt. The term "assizes" will still continue to be used, although its original meaning and the legal history which it embodies will gradually be forgotten. The ancient "writ of assize" lay for the recovery of lands or tenements of which a man or his ancestors had been disseised, and the trial or "taking of the assize" upon this writ could only be in the Courts of Queen's Bench or Common Pleas or before the justices in eyre at their septennial circuits. To remedy the delay and inconvenience thus arising, it was provided by Magna Charta that the judges should visit each county once a year to take assizes. A statute of King Ed. I. made further provision of the same kind by enacting that the justices of assize for each county should be two sworn judges, associating to themselves one or two discreet knights, and they were directed to take the assizes not more than three times in every year. By the same statute authority is given to them to determine other matters besides those in respect of which the "writ of assize" issued, and this was the foundation of the jurisdiction of assize courts down to the present time. If a case arose in Cornwall, a jury of that county must come to Westminster to try it, and the sheriff was commanded to cause a jury to come accordingly, unless the justices of assize should first come (*nisi prius venerint*) into his county, as in due course they did. The old writs of *venire facias* and *distringas* continued to be issued down to 1852, and although the form of process was altered at that time, the idea which had shaped it still prevailed. The judge of assize was regarded as a sort of commissioner sitting to try certain questions or "issues" sent down from the court at Westminster, and, when he had tried them, the "record" with the finding of the jury was returned to the court, and the court when it sat next term, if no motion were made for a new trial, gave judgment according to the verdict. One of the most important changes made by the Judicature Act is that the judge sitting at *nisi prius*, whether in town or country, is himself the court, and not a mere commissioner, and he may himself give judgment if he thinks fit to do so. But, although the term "nisi prius" has become in its primary sense obsolete, it will probably be always used as a synonym for jury trials in civil cases, and a barrister who has aptitude for that kind of work will still be called "a *nisi prius* lawyer." Perhaps, too, when one legal member of the House of Commons wishes to sneer at the speech of another legal member which he cannot answer, it will still be possible to exclaim, "Let us get out of *nisi prius*."

The county of Surrey has been taken out of the Home Circuit, and the remainder of it, and the larger part of the Norfolk Circuit, have been formed into the South-Eastern Circuit, and we have now had an opportunity of observing how the business of this new circuit is affected by recent changes. At Lewes, the first place on the circuit, there was rather a heavy calendar of prisoners, and there were seven civil cases. The business occupied two judges three days each, and they were assisted during part of this time by two Queen's Counsel sitting as commissioners according to ancient practice. At Maidstone there was an average calendar of prisoners and four civil cases, and the work occupied two judges for three days. At Chelmsford, again, there were four civil cases, and all the business, civil and criminal, was finished in two days. At Hertford there was only one civil case and two days' business, and this is the last place on the old Home Circuit. At Huntingdon, on the old Norfolk Circuit, there was no civil case at all, and there were only five prisoners. The remaining places on this circuit are Cambridge, Ipswich, and Norwich. The county of Surrey, which has been taken out of the Home Circuit, has been provided for by a separate commission. The remaining portion of the Norfolk Circuit has been transferred to the Midland, to which part of it formerly belonged. Yorkshire has been taken from the Midland Circuit, and, together with Durham and Northumberland, it forms a new circuit called the North-Eastern. These are all the changes that have been made, and it may be doubted whether it was worth while to make some of them. The supposed reason was the saving of judicial time, but it would be easy to arrange that judges when not wanted in the country might sit in London, and in fact one of the judges of the South-Eastern Circuit has sat in London in the intervals of circuit work. Whether the old arrangements and names of the Home and Norfolk Circuits had been preserved or changed, the same amount of judicial time would be required to do the business. Whether four judges are occupied half their time, or two judges are occupied all their time, comes, as far as the public are concerned, to the same thing, because those judges who are not employed in the country may be employed in London. It seems, therefore, that the arrangements of the circuits concerned chiefly the counsel practising on them, and they would probably have for the most part preferred that things should be left as they were. It seems unnecessary to take Surrey out of the Home Circuit and then to send two judges down there under a separate Commission, just at the time when the judges of the Home Circuit would have been ready to go there under the old arrangement. In this, as in other matters of detail, we cannot help thinking that the Judicature Act has been worked with a want of common sense. It seems as if some changes had been made for change's sake.

At Northampton, which has been transferred from the Norfolk Circuit to the Midland, there were two civil cases and forty-one prisoners, but half of them were charged with larceny and might have been tried at sessions, if an adjourned sessions could have been held shortly before the assizes. When the judges come to an assize town under the usual commission, they are bound to "deliver the gaol"—that is, to try all the prisoners they find there; and in order to prevent their time being wasted on trivial cases, it is the practice in some counties to hold sessions, which are an adjournment or continuation of the last regular Quarter Sessions, in the week before the judges come. This practice might be adopted everywhere. The time of the judges ought not to be unnecessarily expended, and, on the other hand, their time ought to be available to try serious cases without that long detention in prison before trial of which we often hear complaints. To quote Baron Bramwell's favourite phrase, "It is all an affair of railways," and there is now no reason why justice with adequate theatrical properties should not be forthcoming in any county where cases are

awaiting trial. Even in the time of King Edward I. it was contemplated that assizes might be held thrice in the year, and as we have made such enormous increase in wealth and population since his time, our judicial machinery ought to be equal to as much as that. It has been sometimes proposed to constitute certain centres at which the assize business of a considerable district might be transacted, instead of sending the judges into every county. Without in any way favouring this proposal, we may remark that it would only be reverting to the ancient practice by which jurymen and witnesses were required not only to leave their own counties, but to travel all the way to London, *unless before* the appointed day the judges should come into their county. Before the circuits were established, the necessity for what was then a long and dangerous journey frequently arose. It is probable that when the circuits were arranged, and for some centuries afterwards, business was pretty equally distributed among them. But now there is a vast disproportion between Manchester with 69 civil cases and 64 prisoners and the chief towns of agricultural districts which largely constitute the South-Eastern and Midland Circuits. At Stafford there were 23 civil cases and 45 prisoners, and this number of prisoners is the more considerable because 50 had been disposed of at an adjourned sessions held immediately before the assizes. At York it appears that the help of a commissioner was needed in trying civil cases, and it is suggested that when the judges want assistance of this kind the official referees appointed under the Judicature Act should be available to give it. In cases suitable to be dealt with by those referees it would certainly be sometimes convenient that they should sit at an assize town or other place near the site of the dispute or the residence of the witnesses. Not long ago one of the judges consented to sit at a place distant from any assize town, but easily accessible from London, and he thereby saved considerable expense to the parties. This, again, was an example of getting the most in the shape of judicial facilities out of railways. The practice of joining the Queen's Counsel and serjeants belonging to the circuits in the commissions with the judges is almost as old as the circuits themselves, and there is another officer always named in the commission and called "associate" from this circumstance. The country gets in this way a considerable amount of judicial work done for nothing; while the counsel who do the work gain from it experience and reputation which may afterwards be useful to them. We observe that at Brecon there were no civil cases at all; but even there the single judge who takes the South Wales Circuit was helped by a commissioner. At Oakham there was only one civil case, and there were only five prisoners, and we remember to have heard that in the small county of Rutland there is some difficulty in finding tenants for the gaol. At Stafford the business was only disposed of by the help of two commissioners just in time to open the commission at the next town in the circuit. At Nottingham there was considerable business, and at Leeds there were eighty-six civil cases. It thus appears that at many, although not at all places in the circuits, there is a large quantity of work, and we would urge that it should in general be dealt with on the principle of bringing the judges to the business, and not the business to the judges.

THE PUFF PRELIMINARY.

IT is announced in the *Daily News* of Monday that "another addition is proposed to be made to the places of recreation in and about London." It is possible, however, that this intimation may not be received with the enthusiasm which the writer seems to expect. It may perhaps occur to some minds that there is at present an abundance of so-called places of recreation, and that what is wanted is not so much an increase of their number as an improvement of their quality. The Royal Aquarium, for instance, which has lately been added to the list, does not appear to have as yet contributed much to the enjoyment of the public or the fulfilment of the hopes of its shareholders. It has, indeed, been obliged to confess that its name is a misnomer, and that it is still unable to provide either water or fishes for its tanks. Its Picture Gallery, however, is in its way quite as much an imposture as the empty tanks, and it is a pitiful degradation of art to see an eminent musician "playing in" customers to the drinking-bars. It may be remembered that this singular institution was, as the reporters call it, "inaugurated by a *déjeuner*" presided over by the Duke of Edinburgh, and a dreadful rumour has since been spread to the effect that the exigencies of the banquet led to the mysterious absence of the fishes in the form in which they were expected to be exhibited. We should hardly have thought that this ill-omened experiment would have encouraged rivalry; but it appears that the new place of recreation which has just been introduced to public notice is to combine, as the writer beautifully expresses it, "the advantages of a museum with the interest attaching to an aquarium, and various other sources of entertainment," among which we may perhaps safely include a rink. "Baths of fresh sea-water, brought up by steamer every morning," are also, we are told, to form an important feature of the establishment; and it is added that "it seems to be, above all, the intention of the promoters to provide a particularly cheap place of pleasure resort." If the charge for admission, including steamboat fare, is to be only sixpence, the entertainment will certainly be cheap, though it remains to be seen how far it will be pleasant. It is needless to say that when any speculation of this kind is got up, it is considered indispensable to drag in the memory of the late Prince Consort. The Duke of Edinburgh has stated that the disguised tavern he was "inaugurating" was a "natural result" of the part taken by his lamented father in regard to the Exhibition of 1851. And now, again, we find that the title of this new place of recreation is to be Victoria and Albert Palace; that the "site suggested"—so the project has at least got as far as the suggestion of a site—"is the one originally selected by the late Prince Consort for the Great Exhibition of 1851"; and that the building is "intended to be constructed largely of glass and iron, after the style of the Crystal Palace." If the persons engaged in this project desire to emulate the dismal fate of that unfortunate institution, they certainly cannot do better than adopt the same style of construction; but it might perhaps be well to ask what the latter costs for daily repairs. The *Daily News* asserts that "it has been found out, as a matter of fact, that people will not go out of their way to the British and Kensington Museums, and it is hoped to combine something of instruction with recreation on the convenient situation proposed for the Albert and Victoria Palace." It is no doubt a matter of fact that there is no beer to be had at the British Museum, though this is one of the features of South Kensington; and it may be supposed that the recreation offered at Battersea will be more lively than looking at ancient marbles and stuffed animals.

It will be observed that this project is, as described in the account we have seen of it, of a somewhat hypothetical character. A site has been suggested, an intention of building in a certain style is vaguely entertained; but the matter does not seem to have got much further. What the promoters appear to be chiefly in want of at the present moment is, we gather, "moral support." Indeed, the *Daily News* tells us that it was "with a view of obtaining moral support" that "the association"—whatever it is —"gave a dinner at the Ship Hotel, Greenwich, on Saturday to a considerable number of guests"; and it is of course needless to say that the reporters were entertained "in a style fully sustaining the well-deserved reputation of the house." It is surely time that respectable journals should give up this sort of puffery; but at least there is thus much to be said, that the dinner was no doubt real, while the project in honour of which it was held seems to be still, in a large degree, a matter of imagination. However, the Royal Aquarium had its *déjeuner* while its fishes were still, as they are now, somewhere in the clouds, and the promoters of this other Aquarium saw no reason why they should not also celebrate their scheme, though it has developed no further than "suggestion" and "intention." In this case, if the fishes fail, the tanks will at least be available for bathers. However, to return to the main object of the gathering, moral support was obtained by dining a number of Irish members, chiefly of the Home Rule party, who seem to have responded with characteristic enthusiasm to the various toasts. When we have mentioned that Major O'Gorman was one of the speakers, the good humour of the company will be understood. Mr. Roebuck, oddly enough, presided, and referred approvingly to the new title of Empress, which "was received with cheers," and it need not surprise any one that people who call a booth a palace should relish calling a Queen an Empress. In proposing the toast of the evening, Mr. Roebuck said "he had been told" (he did not apparently mention who told him) "that they would have a magnificent structure on the banks of the Thames, near Battersea Park." He also "spoke highly of the advantage of being able to obtain a fresh-water bath for twopence, and a sea-water bath for sixpence, from which both rich and poor might derive great benefit." He is not reported to have dilated on the civilizing influence of aquariums, and he had the good taste to let the Prince Consort alone. There is, it seems, "a confidential Report" of the Company, in which a hope is expressed that the building may be opened in May next year; and of course it may, and may prove to be as magnificent as Mr. Roebuck was told it would be. Only it may occur to some people that it might have been as well to postpone the celebration of the event until it happened.

There is of course no reason why Irish or any other members should not accept an invitation to dinner at Greenwich, or why the promoters of a speculation should not invite their friends to wish them success. The question arises why an entertainment of this kind should be reported in respectable newspapers as a means of procuring funds for a mysterious speculation. When this Company is openly formed, and has published its "confidential prospectus," and is able to say that it has really bought a site and made a contract for the construction of a building, there will be time enough for the press to deal with it. Even then, indeed, as is pointedly demonstrated by the example of the sham Royal Aquarium, it might be well to suspend judgment until the exhibition is actually completed. But here are a number of people, who dine together in order to talk over a mere speculative idea, buzzing *in cæcuo*, and it is put before the public as a substantial project. It is all very well to say that the promoters only want moral support, but they would be in a much better position to obtain this if they had opened their exhibition, and demonstrated in a practical way that it deserved moral support. If, after all, the Victoria and Albert Palace should prove, like some other undertakings of the same kind, only a public-house under a grand name, it may be a very honest and legitimate enterprise; only it should be left to take its chance like other shops and taverns. It is quite clear that the members of Parliament who attended the dinner had nothing more to go upon than a vague assurance that some speculative person had promised that a magnificent

palace was about to be erected at Battersea. It may be assumed that something or other will be done in this way, but it is impossible to say what it will turn out to be till it is actually in existence. If ever it is opened it will no doubt advertise itself largely, and this will be good for the newspapers in which it advertises. But it is surely a degradation of the press that it should lend itself to puff empty schemes on the chance of extending its advertising connexion. We have certainly no wish to prejudge the merits of this exhibition, or whatever it is to be; but this method of introducing it to public notice seems to us to be hardly calculated to encourage public confidence. At present it appears to be only an idea, which has found favour with a convivial party entertained at the expense of the promoter, whoever he may be; and it is certainly not pleasant to those who have any respect for the House of Commons to think of any section of its members lending themselves to this sort of tap-house propagandism. It is perhaps impossible to place any restriction on members of Parliament giving their support to any speculation; but there is a question of good taste which cannot be excluded from consideration. In the same way it may be worth while for the conductors of certain journals to consider whether they can expect to retain public confidence in their criticism of public amusements if they give up their columns to puffing reporters who are ready to sound the praises of any project, even when it exists only in the imagination of the inventors, and has not been reduced to a practical form.

LOSS OF THE *STRATHMORE*.

THE wreck of the *Strathmore* presents features which nowadays occur rarely. She struck on a rock in the Southern Ocean on 1st July, 1875, and forty-nine of her crew and passengers landed on one of the Crozet Islands of which the rock formed part, and remained there living in huts and feeding on wild birds until 21st January last, when they were rescued by an American whaler and put in the way of reaching Point de Galle. The ship was lost through miscalculating her position, caused by thick weather which prevented observations being taken. On the night of the 30th June, the captain thought he was about eighty-seven miles from the Crozet Group, but he must have been mistaken, as the ship struck about 3.45 A.M. on the 1st July. There was the usual confusion and difficulty in launching boats. On day breaking two boats were got off under the direction of the second mate, who, as the captain and chief mate had been washed off the ship soon after she struck, was left in command. The two boats went towards the rocks, which were seen in front about a hundred yards distant, rising like a wall several hundred feet out of the water. Late in the afternoon the gig returned and took away five passengers. As she could not return again that night, those who were left in the rigging passed another night of misery and terror. All their sustenance was a few biscuits, and they were wet and almost frozen. After daybreak the gig came back, and took them all off, and they joined those who had already landed. Besides the two boats already mentioned, a third boat had reached the shore. They found a desolate place, a refuge for sea-birds and without trees. The island on which they had landed was about two and a half miles long and half a mile broad at the broadest part. When they first arrived they slept on the bare rocks, but they soon built huts of stones and turf. They found albatross on the island and a sort of grey bird. They subsisted on these for some time, and then they had a flock of molly hawks. After these came penguins, whose eggs were a great luxury. Their skins were used for fuel, and also to make clothes and boots. The boats had been lost on the third night after their arrival, but before this happened they had taken from the wreck two barrels of gunpowder, one cask of port wine, two cases of rum, two of gin, one of brandy, and one of provisions, and a case of eight tins of sweets. The liquor lasted four or five weeks, being served out at first night and morning, and afterwards at night only, till it was reduced to a small quantity, which was reserved for medical purposes. The tins in which the sweets were packed were used for pots and lamps. A few matches had been saved from the wreck, and they kept a lamp, fed by fat from the birds, burning continually. It is seldom that we meet with a modern narrative of fact that so closely resembles Robinson Crusoe's account of the stores he obtained from the wreck and what he did with them. It may be thought, however, that he was made rather too comfortable by the author, who herein showed the way to those modern novelists who provide parks and palaces, landed estates and three per cents., costly pictures and splendid furniture *ad libitum* for their characters. The escaped crew and passengers of the *Strathmore* underwent much hardship, and, although the wrecked vessel contained provisions and stores in abundance, almost the whole was lost with her. The party arrived on the island at the beginning of winter, and suffered much from ice and snow. They had plenty of fresh water, and for vegetable food the tops of a tuber resembling carrot tops. On the first night there was one death from exposure. A young man died of lockjaw, caused by injury to his foot. Two other men and a child of three years old died, and thus the number saved from the ship, which was 49, was reduced to 44. When the ship left Gravesend she had a crew of 38 hands, and carried 50 passengers, so that 39 persons perished when she struck. Among the saved was a woman, Mrs. Wordsworth. A ship passed within two miles of them on 13th September, and three other ships were sighted, but these either failed to see or would not notice them. The American ship *Young Phœnix* was cruising for whales when she saw their signals, and took them off on 21st January. Their feet had been made very sore from using albatross-skins to cover them, and, indeed, the fatal case of lock-jaw already mentioned is ascribed to this cause. The ship carried no surgeon, and the second mate, who was left in command by the death of his superior officers, does not seem to have been equal to the position, which perhaps is not surprising.

The situation of these islands may be roughly indicated by saying that they are in the latitude of the southern extremity of New Zealand, and due south of Madagascar. They were discovered in 1772 by the French navigator, Marion du Fresne, and were named after his second in command, Crozet, who informed Captain Cook of their existence. The nearest islands to them are Prince Edward's Island and Marion Island to the west, and Kerguelen Island to the east. The group is of volcanic origin. It was visited by Sir James Ross in 1840, but it appears to offer no temptation for settlement, and therefore is little known. Yet it might be thought that an island where boats land easily in moderate weather, and which is well supplied with water, might be convenient to whalers. There are so few islands in the belt of twenty degrees of ocean which stretches from South America to New Zealand, that it might be thought that those which exist would have been in some way utilized by man. Both animals and vegetables good for food would probably thrive if it were worth while to introduce them, as was done in the island of Tristan da Cunha, in the same ocean. We believe that this island, which lies considerably to the west of the Crozet Islands, is frequented by whalers in want of fresh provisions, and perhaps no other station of the same kind is needed. It is satisfactory to learn that there are still a few uninhabited, and almost unknown, islands left, and there does not seem to be any influence at work which is likely to make it worth anybody's while to occupy these islands. The whaling in the Antarctic Sea is hardly likely to increase; but, on the contrary, unless some disciple of Mr. Buckland can obtain protection for the breed of whales, they will gradually diminish in number, as they have done in the Arctic Sea.

In 1776 Captain Cook sailed upon his last voyage, and after making the Cape of Good Hope, he steered south-east, and thus, as we are told, he arrived at some islands which had been discovered by the French four years earlier. These, no doubt, were the Crozet Islands, and Cook at the same time gave the name of Prince Edward, afterwards Duke of Kent, and father of the Queen, to an island which he discovered to the west of the Crozet Islands. One of the objects of Cook's voyages was to introduce English animals and plants in the regions which he visited; and we are told that, in his last voyage, he had two horses with him which were landed and ridden by him and another officer in Otaheite. In this, as in other respects, he was a type of his class; for sailors, as we know, will always get on horseback if they can, and an admiral is at this moment the first authority on the Turf. We do not know what became of Cook's horses, but there is little doubt that the pigs and rabbits which abound in many islands of the Pacific were introduced either by Cook or his contemporaries, to the benefit of the natives, if there are any, as well as of possible European visitors. It has been said that the pig is the great civilizer of the Pacific, and that no preaching against cannibalism has been so effective as placing before the natives a more dainty dish than man. In some parts of New Zealand pigs have become a nuisance, and some districts of Australia are eaten up with rabbits. This is too much of a good thing, but it would still be useful to propagate these animals when there is not likely to be any cultivation with which they could interfere. As there is a Society for everything else, we would recommend that one should be formed for stocking uninhabited islands with pigs and rabbits. The carelessness of modern seamanship makes shipwreck possible anywhere and at any time, and as iron ships do not last long among rocks, and there is therefore little time to get out provisions and stores, it is highly desirable that some resources should be provided wherever land exists. Although penguins may amiably invite us to knock them on the head, yet they are not pleasant food, and for our own part we should prefer on landing on an uninhabited island to meet a sleek comfortable pig who would welcome with cheerful grunt the advent of civilization with its machinery, including perhaps a sausage-mill. We learn that, if the boats of the *Strathmore* had not been lost soon after the landing of those who escaped from the wreck, the party might have been transferred to Hog Island, which seems in every way worthy of its name. There are pigs and rabbits there, and as it has been used as a sealing station, it also possesses the accommodation of a hut and boiler. An imaginative and benevolent person might take pleasure in breeding pigs and rabbits in some island where their natural enemies could not follow them, nor any vivisection threaten their tranquillity. Huts and boilers might be placed on these islands on the same principle that similar conveniences are provided among the high Alps. They are not often useful, but they are sometimes; and if the boats had not been accidentally lost, the party from the *Strathmore* might have passed a tolerably comfortable winter. It is stated that her crew were an indifferent lot, and she had lost her captain and first mate. It is not wonderful under these circumstances that proceedings in the island were not so orderly and exemplary as they might have been if the same accident had happened to a man-of-war. There was some approach to that state of nature where the strongest take, and they keep who can; and it was fortunate that

penguins and molly hawks came abundantly for all, and there was little else to quarrel over. But this and other recent instances of shipwreck have shown how desirable it is that the officers, seamen, and passengers of merchant ships should, if possible, be to some extent instructed in their respective duties, so that danger may not necessarily involve destruction. In this case we cannot help thinking that better management might have saved more lives. The captain seems, when the ship struck, to have in effect given up command, and left everybody to shift for themselves. We must allow, however, that some skill was shown in finding a landing-place, and some of the men who had gone first handsomely came back to fetch their comrades who had remained in the rigging of the ship, although, perhaps, they may also have had an eye to the brandy and other stores which the ship contained. This story is in many ways remarkable, and not least so for the light it throws on one of the controversies of the day. Can any reasonable man doubt that this party had a better chance of life and comfort on the island after they had brought to it all the wine and brandy they could save from the wreck? There used to be a book called *The Swiss Family Robinson*, which was a very mild copy, with additions, of Defoe's veracious history. We should recommend the Alliance to spend some of its abundant money in getting a pretty tale written of a serious abstaining family, which, being cast upon a desert island, and having the opportunity of taking stores out of a wrecked ship, left all the brandy, wine, and tobacco on board, and lived harmoniously on penguins and cold water until relief came.

THE POLICE MASQUERADE.

THE paragraphs which appear from time to time in the press headed "The Police and the Public" are apt to offer a strange contradiction to the boasted love of order and regard for authority in which the English are supposed to be so superior to Continental people. It is natural enough that there should be a certain class of the community who look upon the police force with so little liking that the sight of a blue uniform acts upon their senses as that of a red flag does on a bull's, although they are in most cases fortunately deterred from giving vent to their feelings as the bull does. It is not so easy to explain the animosity which occasionally shows itself among some of the more respectable classes against the police—a body of men who, as a general rule, execute trying duties with singular success. To enforce order without any offensive flaunting of authority, and to preserve an equal mind under an immense variety of irritations, are by no means easy tasks, and they are among the most common which policemen discharge, and for the most part discharge well. In a certain number of cases where policemen have been accused of gross blundering, of locking up a man desperately ill whose symptoms they have mistaken for those of drunkenness, or of arresting an innocent bystander at a disturbance instead of the real offender, the accusation has no doubt been well founded; and it has also happened that policemen have been convicted of grave offences against the law which they are supposed to preserve. But it is too much to expect that a man on being enrolled in the police force, and assuming the regulation helmet and uniform, should at once be endowed with wisdom and discretion far above that of his fellow-men; and it is inevitable that among a large body of men there should, in spite of all precautions, be found some of base metal. It would be surprising, indeed, if every policeman were to exemplify the virtues of honesty, forbearance, and courage, which we cannot but think are exhibited by the force as a whole. It is, however, of the utmost importance that the standard of the force should be kept at as high a level as possible, and this object can only be secured by the most searching investigation of every case where there exists clear evidence of a policeman having overstepped the limits of his authority in what he may take to be the cause of order. And when it is plain that a member of the police force has taken advantage of his position to indulge in the amusement of assaulting an inoffensive person, it becomes the duty of every one in whose power it lies to press for the discovery and conviction of the offender, in order that his fate may be a warning to any disposed to follow his example. It can hardly be thought that a proper amount of trouble was taken to attain this end in the case which was heard before Alderman Sir W. A. Rose at Guildhall on Monday last, when James Brigg, metropolitan police constable 450, was summoned for violently assaulting Mr. William Palmer on the occasion of the Queen's visit to the London Hospital.

The proceedings opened with a certain amount of liveliness, which was kept up more or less by the presiding Alderman throughout the hearing of the case. On a previous occasion, Sir Robert Carden, who was present on the bench, had expressed a strong opinion that the case ought not to be dropped until the offending constable had been detected; and, whether because he thought this opinion too forcibly expressed, or for some other reason which we cannot hope to fathom, Sir W. Rose, when he ordered the witnesses in the case to retire, added that he "would go further, and say that Sir Robert Carden ought to be out of court also." To this Sir Robert Carden naturally objected, and when his brother Alderman observed that he could—or, according to a corrected version, could not—order Sir Robert Carden out of court, Sir Robert replied with perfect justice that he might as well order Sir W. Rose out of court. Fortunately for the dignity of the Bench the matter was not carried further; but it must by this time be obvious to Sir W. Rose that, apart from any privileges which the title of an alderman and magistrate may be supposed to confer, Sir Robert Carden had a perfect right to be in court as one of the general public. After this preliminary skirmish of words the case was heard, and it appeared from the evidence of Mr. Palmer that, on the day of the Queen's visit to the East End, he was returning to the City and found the road he had chosen as the nearest barred by a line of policemen. He asked a constable to let him pass, but was not allowed to do so, and, according to his statement, was pushed backwards and forwards among the police, until one of them struck him in the eye across the shoulder of another so violently that the eye bled. Unfortunately neither he nor the four witnesses who saw the blow given were able positively to identify the man who gave it. That this should be so is, when the circumstances are considered, not altogether surprising. The witnesses were not certain as to all the figures of the number on the constable's collar, and, taking into account the crowd and excitement around them at the time, this perhaps is not very strange. Two of them, however, asserted that the number was 450 E, one believed it was 450 E, and the fourth was sure that it ended with 50 E. Mr. Palmer himself thought that the number was 250 E, and the day after the assault the matter was brought to the notice of Colonel Henderson, who naturally considered it serious, and referred Mr. Palmer to Guildhall for a summons against 250 E, who, however, as it was found, was not in Aldgate, where the assault was committed, on the day of its occurrence. A few days afterwards Mr. Palmer went to Bow Street Police station, when the men who had been on the spot were paraded in uniform, in order that he might identify the man who struck him. In order to assist him in this identification a very curious method was adopted. "He saw," to quote from the reports of the case on Monday, "in 450 E uniform"—the uniform thought by the witnesses to have been worn by the man who struck the blow—"a man who to the best of his belief was 173 E. Police constable 173 E, having been called in, was identified by the complainant as the man referred to. The next day he heard about the change of uniforms, and after that saw Chief Inspector Harris. Subsequently he identified the defendant in Inspector Harris's room."

Mr. Palmer's identification did not, however, seem satisfactory when the case was heard on Monday, and with that of course we cannot be further concerned. But the extraordinary proceeding of the change of uniforms cannot but be a matter of general concern. The recognition even of people whom one is constantly accustomed to see depends more than might be supposed without experiment upon the clothes they wear. In this case the person to be recognized drew attention to himself for a moment among people who were probably somewhat excited, and whose natural impulse was to look rather at the number on his uniform than at his face as a guide for future recognition. Mr. Palmer, who was chiefly interested in the matter, was, according to his statement, "startled," as most people would be by receiving a violent and unexpected blow in the eye; and it was therefore more difficult for him than for the bystanders to take any accurate note of what occurred. He, however, agreed with them so far as to think that his assailant wore a badge ending with the number 50, and his attention, when he saw the men paraded before him, would of course be caught first by the wearer of a badge ending with that number. That on such an occasion the coat bearing that number should have been worn by another man will appear to most people suspicious. Colonel Henderson is of course not personally responsible for this disgraceful proceeding. Chief Inspector Harris, speaking for him on Monday, said that he had given Mr. Palmer "every facility to identify the man complained of, and had even furnished him with their private reports to assist him. Mr. Palmer attended at Bow Street and failed to identify the man in consequence of the numbers of one of the men having been changed—a proceeding which Colonel Henderson disapproved, although he believed it was done without any sinister motive."

It is difficult to see what motive except a "sinister" one, which we may take to mean a desire to throw dust in Mr. Palmer's eyes and screen the offender, can have prompted such an extraordinary action. We are driven therefore to conclude that it was done, as perhaps the assault was committed, out of pure love of fun and light-heartedness, and it is no doubt pleasant to think that the guardians of law and order are not such stiff pedantic characters as, from the severity of the examinations proposed for their steps to promotion, they might be imagined to be. It is also refreshing to find that the keen sense of humour suggested by this masquerade can be fully shared by Sir W. Rose, who ended the proceedings on Monday last with a singularly entertaining speech. After he had dismissed the case and Mr. Straight had remarked that "the mystery remained the same—a constable had assaulted his client, and he was unable to discover who it was," the presiding Alderman delivered some words in praise of the general conduct of the police. With what he said on this matter we are disposed in the main to agree. There is no doubt, however, that a more appropriate occasion might have been chosen for eulogy of the police than the very moment when an inoffensive citizen had failed, under the circumstances detailed, to identify a policeman who had assaulted him violently and without provocation. Sir W. Rose went on to say that forbearance was necessary on the part

of the public towards the police, and that had been hardly considered. If Sir W. Rose thinks that the necessary forbearance consists in submitting to brutal treatment without attempting to seek redress by lawful means, his statement may be accepted as correct. But fortunately the people of London have something better to rely on in the cause of order than the discretion of the police and their own forbearance. Sir W. Rose "considered it a duty to the police" to say that on the day of the assault, feeling that a responsibility rested on him as a magistrate, he took particular pains to ride from the Embankment to the London Hospital, and that he was bound to say, knowing something of military matters, that the arrangements were of the most complete character. What the responsibility resting on Sir W. Rose on that day was is best known to himself; it is consoling, however, to know that he did not shrink from the particular pains of riding from the Embankment to the Hospital in order to fulfil it, and that his military knowledge enabled him to admire the "complete" arrangements of the police. What is yet more consoling is that this admiration was the result of "a very extraordinary coincidence which enabled him on that day to have personal observation of the conduct of the whole of the police." This coincidence is indeed extraordinary, and of course, if the assault complained of did not come within the scope of Sir W. Rose's comprehensive observation, it must have existed only in Mr. Palmer's imagination. The Alderman finished his brilliant speech by expressing his great satisfaction in dismissing the summons, an announcement which was received with a burst of applause from the body of the Court, which, it is instructive to note, "was densely crowded, principally with Metropolitan Police constables in plain clothes."

SPRING EXHIBITIONS.

THE geographical area of art is from year to year extending; as civilization advances, fresh countries rise into the position of art-producers and consumers, and, as commerce becomes more and more world-wide, the number of foreign pictures annually imported into London is ever on the increase. The Twenty-third Exhibition in the French Gallery, Pall Mall, of "the Contributions of Artists of the Continental Schools," once more proves that the supply is practically inexhaustible. This Gallery was first French, then Flemish also; now it is little short of cosmopolitan, containing representative works, not from France and Belgium only, but likewise from Italy, Spain, Germany, Holland, and Sweden. England likewise may be added to the list, by virtue of a few works of foreigners who make it their pleasure and their profit to take up their abode among us. The only omission of magnitude is the entire hemisphere of the New World; the artists of the United States of America have, with very few exceptions, no market or reception either in England or on the Continent of Europe; they greatly owe their persistent existence and prosperity to a kind of mutual admiration society among themselves. These aboriginal painters have the further privilege of being borne up to a seventh heaven by an aboriginal press. The "French Gallery," still the chief of its kind, notwithstanding formidable competitors, has become, after the continuous efforts of twenty-three years, less commendable for its exceptional value than for its variety. The interest of these recurrent collections no longer centres in some large master-work, such as "The Horse Fair" by Mlle. Rosa Bonheur, but is diffused over a good average of cabinet pictures, closely packed together, so as to epitomize distinctive and national schools. Recruits are from time to time pressed into the service, wheresoever rising talent may declare itself with promise and with cheapness.

Some old names, such as MM. Gérôme, Hébert, Breton, Meissonier, and Duverger, still cling to the Pall Mall walls as their former habitat. These geniuses, including Mlle. Rosa Bonheur, have been so often passed under review as to need no further comment, especially when their performances are little more than the small by-play of the studio. But several French pictures come with the credential of having obtained honour in the Paris Salon. Thus may be mentioned "Setting Fire to a Barricaded House at Villersexel, January 9, 1871" (121); the work is but a second-rate example of the greatest battle school in Europe—that of Paris. In the Salon we remember to have taken a dislike to M. Gérôme's "L'Eminence Grise" (73). Here Père Joseph, the confidant of Louis XIII. and the unscrupulous tool of Richelieu, is seen in his monastic robes, reading his breviary while descending the great staircase of the palace. A train of gaily dressed prelates, nobles, and officers at the same moment ascend. One and all salute with low obeisance the "grey monk," who, with immobile disdain, does not condescend even to recognize their presence. The situation just suits the withering sarcasm of a painter who is accustomed to look on life as a jest and to study history for irony. The execution, unpleasantly smooth, ill suits the keen satire of the sentiment; more in keeping is the detestable colour, gay as flowers, yet harsh as with a metallic ring. Nevertheless, not strange to say, all things considered, the picture obtained in Paris the "medal of honour." The renowned M. Hébert favours us with a small segment of his circumscribed art; a "Water Carrier" is evidently a mere extract from the oft-repeated picture in the gallery of the Luxembourg. M. Breton, the art apostle of Brittany, exhibits "La Saint Jean" (157), a picture of decadence, which almost as a matter of course gained applause in the Salon. The painter here surrenders a strong honest naturalism for a weak and false sentiment. The motive is pretty enough. A circle of Breton girls, lusty in limb and clumsy in bouncing movement, dance about a torch-lit fire. It is a scene of revelry by night. A pupil of M. Breton, M. Billet, retains with manifold advantage the master's earlier manner in "A Shepherdess, Normandy" (145). The figure is almost statuesque in immobility, and grand and Sibyl-like in power, in repose, and in thought awaiting utterance. And yet the subject is merely a shepherdess. Another Parisian painter who of late has been making himself prominent is M. Bertrand. He became a few years ago much talked about in consequence of a lachrymose composition, Virginia cast by the waves on a sandy beach. His lines were then horizontal. He now has gained sufficient strength to make them perpendicular in a couple of sentimental figures, trite as they can be, "Marguerite" (149) and "Lesbia," the dead sparrow and the empty cage of course included (168). But these creations—not of the imagination, but of memory merely—scarcely having innate force to stand on their legs firmly, the artist once more betakes himself to the safer horizontal attitude of the human form divine in a full-length life-size "Magdalen" lying prone on the bare ground without a scrap of drapery as a symbol of her return to chastity. The picture is little short of despicable. All the works we have seen by M. Bertrand are distinguished by a soft nerveless handling corresponding to a mawkish sentiment which seems to suit precisely the tastes of our English connoisseurs and purchasers.

A few gleanings here gathered with discriminative eye from foreign lands will further indicate the varied contents of this so-called "French" Gallery. We hardly expected to encounter landscapes by the Swede M. Wahlberg, an artist seen on a large scale and in great power in the national picture gallery of Stockholm. We have long been of opinion that the landscape art of Scandinavia—seen chiefly at the capitals of Copenhagen and Stockholm—might with advantage be introduced to the English public. Take, for example, the local landscapes of forests and of fiords painted by the Norwegian M. Morten Müller. We scarcely like to mention that they were formerly sold on the spot at ridiculously low prices. The style affected by the best artists in Norway, Sweden, and Denmark is borrowed from Düsseldorf; but the subjects are for the most part national. Herr Knaus, professor of painting in the Dusseldorf Academy, whose early work, "The Thief in the Market," we remember many years ago by virtue of its knock-down force, has changed, and not improved, his manner in his latest achievement, "Point de rose sans épine" (56). He loses the vigour of his touch, and his colour becomes gay, crude, and artificial. This great master of naturalism obtained one of the four "grands prix" accorded to nations foreign to France in the International Exhibition of 1867. England was then excluded; such is the estimation in which our first artists are held upon the Continent. Pictures by Professor Knaus are comparatively rare in this country; one reason being that his works are bought up eagerly by his own countrymen at high prices. We are happy to renew acquaintance with Professor Diez; "A Horse-Fair in Bavaria" is even more in miniature than Meissonier; the handling is smart, with somewhat of the *chic* of an etching. As examples of the composite phases assumed in Continental schools may be quoted Signor Pasini, an Italian (21), and Señor Palmaroli, a Spaniard (69). Both these painters have done well to study in Paris, and yet they have not quite sold their birthright. The best chance for the revival of the cognate arts of the sister peninsulas of Italy and of Spain is not by contact with Germany or with England, but by companionship with France, by far the foremost school in Europe. In this eclectic Gallery landscape art is represented by a few distinguished names—MM. Lambinet (19) and Corot (88), both Frenchmen; M. Clays (43), a Belgian, and M. Munthe (49), Chevalier of the Order of Leopold. But we notice as a little strange that not a single landscape finds a place on the line; the plea is that landscape does not tell in Exhibitions. This seems a more cruel snub than even the Royal Academy has yet inflicted.

The Marine Gallery, New Bond Street, has a character of its own; its domain is the wild ocean ruled of old by the daring and dashing "sea kings." Denmark, a kingdom which stands as a Jutland and breakwater between stormy and conflicting waves, has of late years given birth to a race of painters as brave as her own Vikings and fishermen. MM. Sörensen, Melby and Neumann have won European renown in international exhibitions by studies of ocean local in Northern colour and in crisp and cast-iron articulation of wave-forms. Whoever has sailed in the Mediterranean and then in the Baltic will know how "dark and true and tender is the North," and how "bright and fierce and fickle is the South." Unfortunately the small art community in Denmark is riven asunder between two hostile camps, one boasting of the name "national," the other suffering obloquy under the term "anti-national." Temper and mutual hatred work the destruction of so small and dismembered a kingdom as Denmark. Yet these sea pieces, not to be approached in London since the days of Clarkson Stanfield, prove that marine-painting cannot die among a nation of mariners.

The General Exhibition of Water-Colour Drawings—"the twelfth"—might be curtly dismissed as the worst ever seen in the Dudley Gallery. Nevertheless we gladly proceed to do justice to some of the best works in it. At the outset let us pay tribute to the management for the fair play shown to landscapes. We have before stated that "in the French Gallery" not one landscape was allowed a place on the line. Here in the Dudley, on the contrary, about thirty landscapes obtain that distinction, the reason no doubt being that, while the French Gallery is natu-

rally strong in the figure, the Dudley is weak. These thirty landscapes may be reckoned as a third of the total on the line, two-thirds being accorded to figures. Roughly, the relation between landscape and figure in this collection of 592 works is, numerically, one-third landscape to two-thirds figure; therefore the hanging would seem to respond to the claims of the constituency. The artists deservedly made prominent are Mr. J. C. Moore, Mr. Clifford in portraiture, Mr. Henry Moore in sea pieces, and Messrs. Fahey (253), Frank Walton (568), Stocks (106), and Aston (343) in the way of miscellanies. We cannot compliment Professor Poynter on "Michelangelo" (527), a character whom he is supposed to affect to understand. The Slade Professor shows himself a plagiarist from his grand original; the figure is evidently inspired by the Jeremiah in the Sistine; the architectural niche would seem to be suggested by the marble stalling which cribs and cabins "the Moses." The worst part, the drapery, is the most original. The figure and the treatment lack the dignity and elevation innate in Michelangelo.

The Society of Lady Artists, "re-organized in 1865," manages to live partly by the pecuniary aid of donors and life subscribers. We have long been unable to understand why this Exhibition should exist at all except as a charity, seeing that there is not one of the very many London exhibitions that does not acknowledge, at least in art, "the rights of women." But, perhaps a little unfortunately, "rights" hitherto have grown up out of merits; hence the need of an exhibition on the basis of demerits, for the benefit of "lady artists" possessing little else than the ardent ambition of making themselves conspicuous. Few persons—except contributors who come to see and admire their own performances—could care to visit this out-of-the-way Gallery, were it not that about half-a-dozen "female artists" who have made a mark elsewhere kindly come to the rescue of an unknown sisterhood. Works by Miss Thompson (3-4), Mrs. Jopling (2), Miss Sophia Beale (1), Miss Edwards (9), Madame Bisschop (492), and Miss Hilda Montalba (240), have something more than promise to commend them. But what are these among a multitude of six hundred and sixty-six performances, with the audition of three or four hundred rejected abortions.

In conclusion, we may cast a retrospective glance at the oil-pictures, drawings, and engravings of the late Mr. Walker, Mr. Pinwell, and Mr. Houghton—three kindred painters united in art, and not separated in death. These collective works have in posthumous exhibitions and auction marts commanded, as they deserved, consideration from an appreciative public. The three comparatively young painters, though akin, were not identical. Walker was most of the artist, Pinwell most of the poet, Houghton most of the storyteller. And yet they had much in common; they looked at nature in the same way, they loved her in her simplicity, and yet they raised her above commonplace. Especially they hit by a happy accommodation on the innate relation between landscape and figure; the expression in the figure was often not so much in the face as in the attitude, and the angles or graceful bends in the drawing of men, women, and children found responsive harmonies in the growth of trees or in the detail of foregrounds. Moreover, the remarkable and often eccentric compositions of these painters were removed from the atmosphere of common day; nature was seen through a flood of light and a fever of colour which seemed to transport a dun London model to the region of the tropics. Such hot-bed art appears, as we said when recently treating of the short-lived Fortuny, to perish as a frail plant in the effort of blooming. Aspiring artists who offer things "new and strange" die first, while established Academicians who have long worn out their last idea live for ever.

REVIEWS.

PRIDEAUX'S LETTERS TO ELLIS.*

HUMPHREY PRIDEAUX, Dean of Norwich, and the earlier John Prideaux, Bishop of Worcester, both bore the same foreign-looking name, and both came from the same part of England. Yet we are told that the Bishop was of humble birth, while the Dean was of an ancient and honourable family. Genealogists may settle the seeming paradox; but it is certain that, in the case of very great families, it almost always happens, from whatever cause, that the name is common among smaller folk in the neighbourhood. It is so at Alnwick; it is so at Berkeley. Whether the Dean's branch of the house of Prideaux was so great as all this, we do not know; but the contrast between the alleged ancestry of two divines of the same century whom one might have rashly taken for father and son is anyhow remarkable. Our present business, however, is not with Bishop John, but with Dean Humphrey, and Dean Humphrey's letters are a memorable proof that love of learning does not exclude either love of gossip or of plainness of speech in retailing gossip. It may even seem consistent with a certain share of spitefulness, or at least love of fault-finding. But so much the better; if Prideaux had been more inclined either to keep things to himself or to tell them in a more solemn fashion, he would not have written such amusing letters as he has written.

Prideaux's name is still well known by his works, the *Connexion* and the *Life of Mahomet*. This last is a specimen of the way in which in his day it was thought to be the duty of a Christian controversialist to do nothing but revile and misrepresent the founders of the rival religion. In Mahomet Prideaux can see nothing but a "wicked impostor"; indeed his book itself is "the True Nature of Imposture displayed in the Life of Mahomet"; and it is accompanied by a "Letter to the Deists," to prove that Christianity is not open to the same charge of imposture as Mahometanism. There is a long distance between this and the Life of Mahomet by Sir William Muir, though the modern author is clearly as firm a believer in Christianity as the Dean himself.

Here however we have to deal with Prideaux only as the correspondent with John Ellis, who lived from 1645 to 1738, and employed the greater part of that long time in various offices in the public service, including a seat in more than one Parliament. He himself left no descendants; but two peerages, those of Normanton and Clifden, belong to descendants in the female line from one of his brothers. Both he and Prideaux were Westminster scholars and Christ Church students, and their friendship must have begun at Oxford. Prideaux's letters fall into two divisions, those which were written at Oxford, and those which were written in his later life at Norwich, where he was first Prebendary, and afterwards Dean. And certainly both at Oxford and at Norwich he made it his business to tell his friend all that was going on around him. If any one wishes to see something of the personal details of the University, and even of the city of Oxford, and afterwards of the church and city of Norwich and the county of Norfolk, he cannot go to a better source than these letters of Prideaux. The worst thing is that, if we are to believe the writer, his lot was cast at both places among an unusual number of worthless and contemptible people. We can well believe that both at Oxford and at Norwich there were many things that might have been better; still Prideaux's accounts always read as if he were disposed to make the worst of everybody and everything. Let us hope, at least, that Dean Fairfax of Norwich, "our brutish Dean," "this horrid sot which we have got for our Dean," "one of the greatest beasts of nature," may not have been quite so bad as the zealous Prebendary makes out. Better-known people at Oxford do not fare quite so badly as this; but Prideaux has something to say against most people there also. Every one knows the lines of which the burden is "I do not like you, Dr. Fell"; and Prideaux, when at Christ-Church, seems to have been much of the same opinion. Prideaux took much interest in the University Press, with which Fell had much to do. Here is a specimen:—

> We have got another booke of Dr. Willises in the presse, beside which nothing is to be expected from us that is worth the publicke vew, Mr. Dean at present dealeing in most vile small businesses. I must confesse most of his designes are shallow, and I am sure will conduce very little to the advancement of learneing and knowledge. We have scarce as yet set forth any booke of worth, neither can I perswade Mr. Dean to attempt any, his answare to all my proposals beeing, it will not sell. A Bible hath lately come forth from us; if you hear anything of it pray inform us. I must confesse, since Mr. Dean hath taken the liberty of inventeing a new way of spelleing and useing it therein, which I thinke will confound and alter the analogy of the English tongue, y^t I doe not at all approve thereof; and I could hartyly wish that he would be a looser by the experiment, that we may have noe more of it.

What changes the Dean would have made in spelling does not appear, but Prideaux's own spelling was certainly of the laxest. A little before this he complains that "now all our faculty places are filled with *tosts*, and those which formerly had the learnedest and most eminent men in the University are become the refuges of dunces and knaves." This sounds odd when we read just before that "Lock hath wrigled into Ireland's faculty place." By faculty place Prideaux means the few lay studentships of Christ Church, whose holders took degrees in law or medicine; and "Lock" is no other than the famous John Locke, with whom one might have expected Prideaux to have more fellow-feeling. Nor do our "greezy townsmen" fare any better. In 1679-80 he writes that "we have gotten here a very od fellow Mayor of the Town, who seems to have been put into this office to serve the Presbyterians," "in which office he acteth to the utmost folly of phanaticisme, molesteing both the University and town." Other places are not much more approved of than those in which Prideaux lived himself. In 1675 the town of Northampton was burned, as may be remembered by any one who has seen the statue of Charles the Second over the portico of All Saints' Church there. Large collections were made everywhere for the rebuilding of the unlucky town, on which Prideaux thus speaks his mind:—

> Our town affords little news worth your knowledge; y^t which is most talked of at present is what each colledge contributeth towards the rebuilding of Northampton. Our schollars are ridiculously liberal to this phanatical town. If all others should equall them in their contributions, North Hampton would get double what it lost by beeing burnt. Such ridiculous pride and emulation in giveing much having soe possesst all our schollars, y^t poor rogues that are scarce worth 40^s thinke themselfes undervalued if they give not 20. Most of our fellows of houses are in this humour; but I thought 5^s as great an almes as I could give or that rogny town deserve.

All this certainly shows a carping spirit on the part of the writer, or at all events the spirit of one who blurted out to an intimate friend everything that he thought; but in some of the stories which he tells it is plain that there was a deal in many [illegible] of the University which needed reform. In 1674 [illegible], President of Trinity, was [illegible] of Baliol was Dr. Thomas Good, [illegible] and understands business well enough, [illegible]

* *Letters of Humphrey Prideaux, sometime Dean of Norwich, to John Ellis, sometime Under Secretary of State.* Edited by Edward Maude Thompson. Printed for the Camden Society: 1875.

guilty of absurdities which rendereth him contemptible to the young men of the Town." "Out of a desire to be a fool in print," he published a controversial dialogue, and he certainly seems to have preached in a very odd way. The present members of his college will be inclined, like the Homeric heroes, to boast themselves better than their forefathers when they read:—

There is over against Baliol College a dingy, horrid, scandalous alehouse, fit for none but draymen and tinkers and such as by goeing there have made themselfes equally scandalous. Here the Baliol men continually ly, and by perpetuall bubbeing ad art to their natural stupidity to make themselfes perfect sots.

The Master rebukes his men, telling them "of the mischiefs of that hellish liquor cald ale," upon which one of them, "not willing so tamely to be preached out of his beloved liquor, made reply that "the Vice-Chancelour's men dranke ale at the Split Crow, and why should not they to." The old man "immediately packeth away" to the Vice-Chancellor, but, finding that that dignitary thought well of ale and did not care to stop his men from drinking it, he went back again and told the Balliol men that, "since the Vice-Chancellour gave his men leave to drinke ale, he would give them leave to; soe now they may be sots by authority."

It is plain from a great many of Prideaux's stories that drunkenness was in his day a most prevalent vice in the University. It is pleasant to turn from these scandals to his accounts of the doings at the University Press and of his own studies. Prideaux was a diligent student, and some of his judgments on books show real discernment, though others sound nowadays a little startling. He lived in an age when perhaps more was done for the sound study of English history than at any other time down to our own day; but on such labours he looked with scorn. He did indeed allow some merit to the collection of Gale; it would be, he says, an "acceptable work" to carry out the design of printing "Guildas, and other of the most antient British and Saxon authors, several of which have never yet been printed." But directly after he says that "Tony Wood, our antiquary, having pored so long on old monkish storys, at last dotes on them and is turned papist." He then comments on the folly of spending time "on rakeing togeather such dotages," and adds "And this is Dugdale's case who on the same account hath embraced the same religion." The charge was quite untrue with regard to either Wood or Dugdale; but that it should have been brought on such grounds shows the notions of the times. The editor adds in a note that, when the Monasticon was first published, "some looked suspiciously upon that work as a means to further the restoration of the monasteries, preparatory to the re-establishment of the Romish religion." When we remember that ideas of this kind lived on long enough to affect in some degree even the mind of Hallam, we shall hardly be surprised at finding Prideaux speaking in this way. Yet Prideaux was a scholar, and, like most men of his age who read at all, he read further within his own range than men commonly do nowadays. Besides the Pavian Chronicle, which he published in his Marmora Oxoniensia, he was set to work on John Malelas, whom he did not like at all. But he persuaded Dean Fell to print the Greek Fathers, and we find him busy with the Anecdotes of Procopius. To his correspondent, as a lawyer, he remarks, "I doubt not but that the relation he giveth of the founder of your civil law will surprise you." He does not enter into the question, which to some may seem more surprising, whether this book of gossiping and impossible libels can really come from the pen of the great writer who brought back Greek historical composition, after so many ages, so nearly to the level of its best days. In another letter he sketches a course of reading for a friend of his correspondent, who wished for "a method for reading the Greek and Latin histories." He begins amusingly enough:—"If he be a gentleman, Dr. Hoel's universal history in English will be sufficient for him; but, if he be a scholar, and desires to read the best historians in the original," he is to begin with Herodotus and go steadily to Ammianus. Prideaux clearly had no notion of a later fashion in his University, which stopped at the sacrifice of Tissaphernes and started again with Tiberius or Galba. With regard to the last name on his list, he exactly hits the truth when he says that Ammianus, "although to his language is very barbarous, is however a most excellent author." Some of his judgments are curious. "In reading the Roman history, it is to be observed the faithfullest narrators of it are the Grecians, and that more is to be learnt from them than the Roman writers themselves. He therefore holds that "Dionysius and Dio in those things they treat of are to be preferred to Livy and Tacitus." For Dionysius he has an admiration which is almost startling:—

The original and first foundation of the Roman Empire is noe where better treated of then in this author, which I thinke to be much the best of any that relates the actions of ancient times and the most diverting.

But there is something in this more than one might think at first. It is only about Dionysius being diverting that there need be any difficulty. A modern reader would probably say that Dionysius is diverting, though in another sense than that which Prideaux meant. But once believe in the early legends of Rome as a real political history, and we can at once see why Dionysius should be preferred to Livy. Livy, with all his faith, never forgot that he was telling a beautiful story. Dionysius thought very little about mere story-telling; he was far too much in deadly earnest for that. To him the institutions of Romulus were just as much, and just in the same way, matters for political study as the institutions of Kleisthenes. Prideaux had most likely not begun to doubt, and to one who mistook legend for history we can quite understand that Dionysius would seem to give a more instructive account than Livy. No one will dispute Prideaux's judgment when he says, "As to the life of Alexander, I judge it not written by Arrian." But his notions of the last days of independent Greece are a little shallow:—

What comes after are actions for the most part soe obscure as that they deserve noe historian, and I know none they have except Polybius, and his relations are reather of the Roman then Greek affaires, Greece in his time being made a province of the Roman Empire.

Some may perhaps think that Prideaux was more at home with Greek and Latin authors than with English. Here is a piece of criticism:—

He [Sir Richard Willis] likewise showed me an Italian romance, called Archadia De Sanizara, to which Sr Philip Sidny was beholdon for his, that beeing as he assured me only a bare translation of this. Accordeing to my judgement of his peice, I thinke it could not have been much worse if he had made it himselfe, although it hath the luck to be in soe high esteem among women and fooles, who know not how better to bestow their time then in reading such like foolish trash. As for my part, I must confesse myselfe to be utterly ignorant on what account Sr Philip Sidny hath soe great repute among us, I knoweing nothing of him that may in the least deserve it, only the world conceived great hopes of him, which, if he had lived, perchance he would never have satisfyed, and bee er this as little remembered as other men.

Directly after we read about the Duchess of Cleveland's sojourn at Oxford, and her putting one of her sons into the hands of Dean Fell:—

Her [thir]d son was with her, who beeing, she told Mr. Dean, born in Oxford among the schollars, shall live [som]e considerable time among them, especially since he is far more apt to receive instructions then his elder brother, whom she confesseth to be a very kockish idle boy. The morneing before she went she sate at least an hour in her coach, that every body might se her.

The "kockish" boy was Charles, Duke of Southampton; the one of better promise who was born among the scholars was George, Duke of Northumberland, who was actually born in Merton College. Elsewhere we hear how "old Cartret of Ano" (Cartwright of Aynho) has left behind him "a vast estate, which hath been collected togeather by much thryft and niggardlynesse," and how "2 little girles will have 25000[l] a peice, which before they are marriageable will grow to a much greater sum. I suppose," he adds, "the King may put in for some of his bastards." He comments on "y[t] which he hath here with us," namely, the Duke of Southampton, who "is kept very orderly, but will ever be very simple, and scarce, I beleive, ever attain to the reputation of not beeing thought a fool." "Nel Gwyn" figures in another story, told on the authority of an Oxford alderman.

The whole book is curious. Prideaux had at all events the great merit of writing exactly as he thought.

HOMERIC SYNCHRONISM.*

THIS work is grounded on the discoveries which seem to have been most recently made in two very distinct quarters, both of which may be found to reflect some interesting light on the date of the Trojan war, the one directly, the other indirectly indeed, but hardly less instructively. The one is the presumed identification of certain remains long hidden deep below the soil at Hissarlik in the Troad, the other the fragmentary record of events connecting at a very primitive era the history of the Greeks and Trojans with that of Egypt. Both these discoveries—for such we may assume them to be, however imperfect and immature as yet—do undoubtedly assist in determining the date of the war; but we are not sure that they give us any such help in ascertaining the time of Homer, understanding "Homer" in the sense which Mr. Gladstone attaches to the name, as the master who composed, not substantially only, but in almost every detail, the Iliad and Odyssey as we now possess them. For such is the contention of Mr. Gladstone, which he has enforced with vast learning and ingenuity in many previous works, and which every one must admit to be worthy of the highest consideration, though a great number, perhaps a majority, of modern critics still profess themselves unconvinced of it. Our present object is only to indicate briefly some of the points in which the recent discoveries bear upon this question.

That "Homer" was a Western and not an Asiatic Greek, and that he lived before the "Return of the Heraclidæ" or the Doric invasion of the Peloponnese, which ejected the descendants of Agamemnon from Argos, and reduced the Achaian name from the general appellative of the Greek nation to that of an obscure tribe or a narrow strip of sea-coast, is Mr. Gladstone's standpoint. The question has been abundantly discussed, and there can be little doubt that, granting "Homer," the well-known arguments in its favour strongly predominate. Assuming the time of Homer to have been within one, or at most three, generations from the war, he might very well have possessed himself of minute and accurate knowledge on all its particulars, and have visited and examined the site while its genuine traces and traditions were still fresh; and this, if we remember correctly, is a point on which Mr. Gladstone has particularly insisted, along with other believers in Homer, in his former publications. It is since his latest writing on the subject that Dr. Schliemann has made the excavations which have given so much fresh interest to the ancient debate. From these we can, it seems, actually determine the real site of Troy; and,

* *Homeric Synchronism: an Inquiry into the Time and Place of Homer.* By the Right Hon. W. E. Gladstone, M.P. London: Macmillan & Co. 1876.

after uncovering the remains of two, or, we believe, three later cities, the traces of which are clearly too recent to be those of the ancient hold of Priam, we light at last upon a still earlier *couche*, or stratum of ruins, bearing marks of destruction by fire, and comprising the foundations of walls, gates, and towers corresponding in character with those of a suitably primitive era, and containing a vast number of objects, in gold, in copper, and in baked clay, more or less clearly marked with lines and figures some of which may be thought to bear reference to the mythology of the presumed Trojan epoch. There is found abundance of copper, but very little bronze; and those accordingly who maintain, with Mr. Gladstone, that Homer lived within a generation or two of the war will be confirmed in their constant rendering of the Homeric χαλκός by "copper." But, on the other hand, there is also a vast amount of stone knives and hatchets; and in the entire absence of allusion to weapons of stone in the poems we seem to find ourselves in a period earlier than "Homer," not by generations only, but by centuries. The rude gravings which appear on clay and metal indicate also an antiquity of hundreds of years, as compared with the references contained in the poems to works of skill and objects of æsthetic taste. To this we must add that these remains present us, as yet, with no specimens at all of many objects which hold an important place in the "manners" of the Iliad, such as the parts and furniture of chariots. Mr. Gladstone's explanation of this untoward circumstance is rather far-fetched. He suggests that the best and most valuable articles were exhausted in the long course of the war, while stone implements, too mean to be noticed, remained in store. He is obliged to contend that the sculpture of the shield of Achilles, exquisite in design and in execution as it is represented by the poet, is due to his own imagination wholly, and that he actually saw nothing more advanced in art than almost shapeless scratches. We apprehend, however, that the plain inference from these facts is that "Homer" belongs after all to a period quite indeterminate, but long subsequent to the war, and that the familiarity with the locality and other circumstances with which our sanguine critics so freely credit him is to a great extent imaginary in themselves.

We fear that we may be doing Mr. Gladstone some injustice in passing so lightly over matters on which he has thought long and found occasion to express himself decidedly. But our remarks must be taken at their worth as cursory impressions rather than as critical judgments. The second part of the book before us will tend, however, if our view of the facts brought forward is correct, to confirm the apprehension that the records of Egyptology will extend rather than contract the interval between the War of Troy and the composition of the Homeric poems. For in this case, as in the other, the recent discoveries, if such they really are, seem to throw back the war to an earlier epoch than has hitherto been supposed. Thus, for instance, the inscriptions, as now interpreted by certain French inquirers, place the commencement of the nineteenth Egyptian dynasty about 1462 B.C., and the accession of Rameses II., the Sesostris of the Greeks, about 1410. Monuments, it appears, can now be deciphered which point to a combination of various peoples in Asia Minor against the powers of this mighty conqueror, in the fourth year of his reign, 1406, among which we may discover names which it is supposed can only stand for the Lycians, the Dardanians, and others which occur in the Iliad in alliance against the Greek invaders. Now, to follow the precise statements of Homer, the Dardanians first gave their name to the people of the Troad, who in the third generation received from Tros the appellation of Trojans. From thence five more generations bring us to the death of Hector and the fall of Troy, and from these data Mr. Gladstone calculates that "the settlement of Dardania was probably founded between 1466 and 1406 B.C., and the overthrow of Troy, on the same basis of computation, would probably fall between 1286 and 1226 B.C.," that is, from one hundred to forty years earlier than the data commonly received.

If, however [he continues], we are to read the inscriptions as meaning that these Dardanians were Dardanians of Ilion, as appears to be held by a writer of authority (M. Lenormant), a new and rather important element is introduced, and we at once reach the time of King Ilos. We must then suppose that the rivalry of the Dardan and Trojan names for territorial supremacy had lasted for one generation longer; and the combination against Rameses II. thus operates with a corresponding difference on the date of the foundation of Dardania. For, as Ilos was not founded until some ninety years, more or less, after Dardanos, it follows that if the name of the city was known in 1406 B.C., the epoch of Dardanos is thrown back to 1496 at the latest; . . . thus the epoch of the Troica is thrown back at least to about 1316 B.C. . . . According to this piece of evidence, the overthrow of Troy might have been as late as 1226 B.C., or as early as 1316.

We have allowed Mr. Gladstone to speak for himself, because he depends in his calculations on the exact accuracy of the Homeric account of the generations of the Trojan rulers, on which our readers may perhaps place less implicit reliance. If, however, we may accept his conclusions on this point, they would seem to corroborate the inference from local discovery that the war is of much earlier date than that usually assigned to it. The monumental inscriptions at Karnak are now said to furnish further testimony to the same effect as that which has just been referred to. It was in the reign of Thothmes III. (1600—1550) that the power of Egypt was at its climax, and extended over the Greek peninsula and the islands. After that era the maritime ascendency of this great people was abated. In the next generation after Rameses II. Egypt was herself attacked by a combination of foreigners, among whom we read the names of the Achaians and Laconians, as well as the Tyrrhenians and Sicelians, at a date which may be placed about 1345. Now it will be found, on examination of the Homeric poem, that this era exactly coincides with the period when the Achaians held that ascendency among the tribes of Greece which Homer so evidently assigns to them, but which certainly passed away very soon afterwards. This, then, must be a close approximation to the epoch of the Trojan war, and that event must again be fixed within such limits as the interval between 1345 B.C. and 1285.

It has been shown already that the recent local discoveries indicate a great interval of time between the war and the composition of the poem. The new historical discoveries tend apparently in the same direction. That the author possessed some vague traditionary knowledge of Egypt, which shaped itself in very exaggerated forms and colours in his imagination, is clear enough; but can we suppose that such remarkable facts as a recent supremacy of Egypt over Greece and Asia, and a strong reactionary movement against her both east and west, could have occurred within two or three generations before the war, and have passed into such complete oblivion within two generations after it that "Homer," not poet only, but national historian as he is, should make no reference to it whatever? This seems to us quite inadmissible; and it is important to observe how both the local and the historical discoveries seem to concur in discrediting it. Without pretending to put forth a definite theory of the composition of the Homeric poems, we should be emboldened by the result of these double investigations to insist all the more strongly on the indications of a much later origin for them, in their present form, derived from the manners they depict, and still more from the language in which they are delivered. We are free to admit that we have as yet met with no satisfactory solution of the problem of their existence at all; it is far easier no doubt to pull down theories in this case, as in many others, than to build one up; but the very novelty of the views to which these recent inquiries introduce us may dispose us to wait patiently, and not without hope, for further light, and to receive with the greatest satisfaction the contributions to our knowledge which a book like this of Mr. Gladstone's puts so clearly and vividly before us.

WYLLIE'S EXTERNAL POLICY OF INDIA.*

THIS volume is a reprint of essays written in the intervals of business by a young member of the Bombay Civil Service, who was prematurely cut off from what, we doubt not, would have been a very distinguished career. The editorship of Mr. W. W. Hunter is a guarantee that the work is all that literary accomplishments can make it. The chief interest, however, lies more in the character and services of the late Mr. Wyllie than in the writings; and from the introductory memoir, as well as from a few other independent sources, we select the following facts, which may have attraction both for friends and relatives, and for aspirants to those advantages which, coupled with frightful drawbacks, the Indian Civil Service now holds out to a competing public. The son of a military officer of the Bombay Establishment distinguished in Cutch, Afghanistan, and Sindé, young Wyllie was educated at the Edinburgh Academy, at Cheltenham College, and at Oxford, where he gained one scholarship at Lincoln and another at Trinity College. After obtaining a first-class in Moderations, he was led by domestic reasons to compete for an appointment in the Indian Civil Service, gained the eleventh place when twenty-two were successful, and reached India towards the close of 1856, just after the attainment of his majority. After a short residence at Sattara, he was appointed Political Assistant in Kattiawar, and when he had learnt district work for two years and a half in that province and in others, he had the good fortune to be selected, for his merit and capacity, for employment under the Chief Commissioner in Oudh. This involved the unusual occurrence of a transfer from one Presidency to another, and the selection is in itself a clear proof that young Wyllie's talents had already been appreciated by his superiors. His work as a district officer in that splendid province, which in just twenty years has passed from the middle ages to the close of the eighteenth century, led to an appointment first in the Oudh and then in the Calcutta Secretariat, the dream of many another ambitious young civilian. This was in 1862. In the remaining five and a half years of his service he passed through the Home, Financial, and Foreign Departments, six months of some years being spent at Simla, and the remainder at Calcutta. But it was in the latter department that his talents were matured, his experience of external and internal politics acquired, and his natural aptitude for periodical literature stimulated and developed. Yet, in spite of the attractions of the Calcutta Foreign Office, the old hankering after University honours returned to him, and he took advantage of a trip to England of nearly eighteen months' duration to reside at Trinity College and to take his degree. We are by no means certain that this course ought to be held up admiringly as a precedent, or that we can conscientiously recommend it to other competitioners. In Mr. Wyllie's peculiar case it was rendered feasible, and it may have been right. But in the majority of instances a Civil servant who has begun to grapple with one of

* *Essays on the External Policy of India.* By the late J. W. S. Wyllie, M.A., C.S.I., H. M. India Civil Service; sometime Acting Foreign Secretary to the Government of India. Edited, with a brief Life, by W. W. Hunter, B.A., LL.D., H. M. India Civil Service. London: Smith, Elder, & Co. 1875.

the most complex and attractive problems of modern times had far better spend his vacation in travel or recreation than in competing for honours with men eight or ten years his juniors. There is one period of life for examinations and another for active work, and official capacity is a matter not to be gauged by stiff papers and columns of marks. On his return to India, Mr. Wyllie was fortunate enough to secure the confidence of the Viceroy, Lord Lawrence, and he passed the latter part of his career in studying Central Asian and frontier politics under a statesman of consummate experience, in mastering, analysing, and replying to the mass of correspondence which is entailed on the Indian Secretariat, and in making those contributions to an influential political journal which are the justification of the present work. Early in 1868 Mr. Wyllie was compelled to take three years' furlough, and he never saw India again. His contest for Hereford, where he defeated the late Attorney-General, Sir R. Baggallay, is probably more easily recalled to the minds of many readers than his Indian career. He gained the second seat for the borough by a small majority, took his place in the House of Commons, but was unseated on petition, owing to what Mr. Hunter truly terms "the excessive zeal of an indiscreet supporter," who, before taking the Liberal electors to the poll, had given them a breakfast. The rest is soon told. Excluded from the House, and unable to return to a profession which he had advisedly abandoned, he paid a visit to Paris; and after a year died of cold and inflammation, which were too much for a frame already weakened by malarial fever. It may be said, indeed, that he had never been actually free from disease since first attacked in Goozerat. His Indian service had previously been acknowledged by a Companionship of the Star of India.

That the late Mr. Wyllie was a man of solid education, considerable accomplishments, engaging manners, and most estimable character, must be readily acknowledged by all who knew him. Nor do we wish to impugn the merit of several of the papers of which the volume is made up. But, while we would have young civilians imitate Mr. Wyllie's honesty and love of work, his geniality, his wide sympathies, his skilful combination of official diligence with literary grace and brilliancy, we think it most desirable that ambitious public servants should not be tempted prematurely to desert the path of Indian duty for the fascinations of English controversy and Parliamentary debate. The House, if it is to be, as Mr. Roebuck deemed it, an epitome of English life everywhere, may well afford a few seats to Indian and Colonial celebrities. But they should be *emeriti*. Bad health may be a very good reason for throwing up a service where only one man in fifty can discharge his duties in a hill climate. But independence in worldly affairs, which Mr. Wyllie does not appear to have possessed, is surely a condition precedent to the desertion of a fine service and to a Parliamentary candidate-ship. This may appear somewhat ungracious, but those who deliberately adopt an Eastern country as their own ought not to be encouraged to abandon it for such an uncertainty as politics in England.

The articles selected by Mr. Hunter for reprint are by no means all of equal merit. There are two from the *Edinburgh Review*, two from the *Fortnightly*, an early essay from the *Calcutta Review*, and a long official note or *précis* on a recondite and exquisitely Oriental but suggestive topic, exhumed from the Calcutta Foreign Office. We have no present intention of going deeply into the various questions as to our duty or our policy in Central Asia which these papers raise. But we desire to draw attention to Mr. Hunter's mode of dealing with articles in which their late author expresses views which time has not only not confirmed but has disproved, and which the editor cannot endorse. Students of Italian paintings are very familiar with the *prima*, the *seconda*, and the *ultima maniera* of certain artists. The foreign policy of the Government of India, which is the subject of the article in the *Edinburgh Review*, is in Mr. Wyllie's first manner, and it is also in his best. He then had a storehouse of accurate facts to resort to, and a sense of responsibility to guide his pen. The paper is, in consequence, excellent in language, convincing in statement, and admirable in tone. The first of the reprints from the *Fortnightly Review* brings us to the second stage. The author had not yet lost all the traditions of his service in the Foreign Office or the seal of official reticence and moderation. He still sees his way clearly through the tangled web of Afghan politics; he stigmatizes the wild proposal to occupy Quetta with just reprobation, as untenable on political, strategical, and financial grounds; and he sums up by showing clearly that it was the wisest course to allow Shere Ali to fight his own battles, and to help him by money and munitions only when he had recovered his paternal throne by sheer pluck. Mr. Hunter remarks that the author, had he lived, would probably have revised his opinion, and that he would not have expressed himself with so much certainty as to the impolicy of an outpost at Quetta. Of course a change in affairs at Kabul may modify the opinion of statesmen older than Mr. Wyllie and almost as wise and experienced as Mr. Hunter; but the main arguments against occupying an outpost at a frightful expense and facilitating Russian advance by meeting it half way, remain just as tough and unassailable as ever. But this review will stand examination far better than the second reprint from the *Fortnightly*, to which its author was unhappily induced to give the sensational title of "Mischievous Activity." We read with some surprise Mr. Hunter's statement that he has reprinted it "with omissions and modifications of expression," such as the author "would have himself made, had he lived to reprint it at this date." Surely this is a violation of a very well-understood literary canon. Reprints of exploded theories, discredited opinions, and prophecies scattered to the winds, may be extremely valuable. But then we require the very form and pressure of the time which has been described. And Mr. Hunter, admitting that he has touched up the picture, goes on to tell us that, after all, the likeness is a bad one, and that "in every point dealt with, from the instability of the Amir's rule and the danger of his administrative reforms, to the Seistan complication, and the evil effects of the Ambala Durbar in Russia and Persia," the events of the last five years have falsified the predictions of the essay. Mr. Hunter, with unconscious irony, has dealt a severe blow at those who sneer at the official mind, and he adds no less than nine foot notes to show indisputably where and how the writer went astray. The truth is that this paper had far better have been omitted. Released from official restraint, barred from reference to dull but exhaustive and accurate sources of information, and misled by the crude reasonings of "advanced thinkers," Mr. Wyllie surrendered his usual sound judgment, and penned what we are quite sure he would now have been the first to commit *flammæ sive Mari Hadriano*.

The essay on Western China (*Edinburgh Review*, April 1868) is just the kind of useful paper which a clever author can put together from abundant materials regarding a country of which he knows nothing from actual observation or travel. It contains much valuable information, but we must point out that the writer's estimate of the "decadence" of China is entirely at variance with that of Sir Rutherford Alcock, who, we gather from his recent work, has a firm belief in the recuperative vigour and the undiminished resources of that enormous empire. The remaining paper about the Rao of Kutch and his kindred is one over which even the Prince of Wales's visit to India will hardly shed a gleam of interest. But it is an excellent specimen of the sort of "Note" or "Précis" which a young Under-Secretary will often have to draw up. In Indian official parlance, officers of the Secretariat write "Notes." Viceroys, Governors, and Councillors write "Minutes." But, on nearly all vexed, unpleasant, and complicated subjects the "Note" of the Secretary or Under-Secretary is usually the commencement of a paper warfare by the Indian Cabinet, and possibly the core of a Resolution which eventually discloses the Imperial policy to the outside world. The point may arise in this way. Some Resident or Political Agent writes a despatch to say that the relations between the Jam, or Rao, or Rana, or Maharaja of some out-of-the-way principality and his nobles, never cordial, have been again unsettled. The little State is threatened with financial discredit, open warfare, or ruinous intrigues. The *Senaputti*, or Commander-in-Chief, sides with one party because he is related to one of the Thakoors by marriage. The *Muntri*, or Prime Minister, takes the opposite view because his grandfather had a dispute on a point of caste with the grand-uncle of the Senaputti, the merits of which no one but Sir John Malcolm ever professed to understand. Matters have reached such a pitch that the Paramount Power is bound to interfere. On receipt of this alarming despatch, the dusty records of the Foreign Office, extending from the era of Lord Wellesley to that of Lord Lawrence, are brought out of their pigeon-holes. The dispute, it seems, has never failed to come up at intervals under various phases for a period of seventy or eighty years. Lord Wellesley had sent Colonel Close to investigate the matter on the spot. The Marquess of Hastings had brought the inexpressible charm of his manner to bear on the disputants of his day, and had prevented an outbreak even in all the excitement of the Mahratta and Pindarrie wars. The quarrel revived in the time of Lord Auckland, who patched it up somehow, until our reverses at Kabul gave him something to settle besides the right of two claimants to nominate the priest of a certain temple, or to invest the successor to a fief by marking his forehead with a long streak of white paint. Lord Dalhousie, to whom this legacy had been bequeathed by Lord Hardinge, reviewed the correspondence of fifty years in a masterly minute, held that the sound rule of Lord Wellesley should never have been abandoned, reminded the combatants that neither of them could draw a sword or fire a matchlock without incurring the grave displeasure of the British Government, and carried with him, by his sagacious reasoning, his colleagues in Council, the whole Court of Directors, and the President of the Board of Control. After the Mutiny, the Prince and his turbulent barons had again to yield to the dignified remonstrances and the stately presence of Lord Canning in one of his imposing Durbars. Lord Elgin handed over the correspondence on this inflammatory topic, more bulky than ever, to Major-General Durand and to Sir Henry Maine; the former as being deeply versed in political precedents, and the latter in international law. In short, the case is found to resemble one of those old and interminable Equity suits in which every Lord Chancellor, at some period of his career, had held a brief or passed an order. In a comprehensive "Note," the Under-Secretary points out the landmarks of the Imperial policy, arranges the prominent facts, sends adrift all superfluous references, selects an important despatch by Colonel Tod, a warning administered by Lord William Bentinck, and a compromise in writing agreed to by the ancestors of the claimants, brings down the quarrel to the very last telegram from the Agent, and then leaves it to His Excellency in Council to say whether the subordinate of a subordinate noble is to have his forehead daubed by his immediate feudal superior, or whether this grave, time-honoured, and indispensable ceremony can be performed only by the Maharaja himself. "Forms are things with Orientals," said a master of this kind of statecraft; and on the right and timely settlement of some mysterious point of etiquette may hang not

merely the credit of a clever young official, but the contentment of a dozen "Barons," and the tranquillity of a province. The *précis* of Mr. Wyllie, which really differs little from the above sketch in scope or substance, is an excellent specimen of what a young man who has just gained his first in Moderations may be engaged on in a few years' time.

What we have felt it right to say regarding the not very judicious republication of one of the essays of Mr. Wyllie must not be taken as a dissent from the eulogy passed by Mr. Hunter on his friend. Heartily welcomed by the older race of Civil servants, honourably distinguished even amongst the clever men of his own generation, Mr. Wyllie, in his too short career, had already surpassed expectation, and had given reason to hope that he would eventually win some of the highest posts in the political or executive departments which it is in the power of Indian Government to bestow.

ERASMUS ON PILGRIMAGES.*

THE first edition of this book appeared, we believe, more than thirty years ago, and Mr. Nichols had begun revising it, with a view to bringing out a second, a few months before his death. The present editor tells us that he has made some further emendations; and he considers that the time is opportune for a republication, because, while at the period of its first appearance pilgrimage, in England at least, was a thing of the past, we have since witnessed a revival of the practice, though under altered conditions. We agree with him that these treatises of Erasmus are worth reprinting, and many of the illustrative notes are useful and appropriate; but there is too evident an attempt at book-making about some parts of the volume. Long extracts from Murray's Handbooks and some thirty pages of the *Times'* reports of pilgrimages to Pontigny, Paray-le-Monial, and Lourdes are quite out of place in such a work. Nor can we congratulate the translator on his success in carrying out his rather needlessly ostentatious disclaimer of writing "in any polemical spirit." There is throughout a too obvious disposition to make controversial capital out of the satirical comments of Erasmus, who certainly was not, as his translator is obliged to admit, a Protestant in the ordinary sense of the term—still less, like himself, an extreme Protestant. Erasmus censured roundly the superstitious and abuses prevalent in his Church at the time, as many sincere Roman Catholics would no doubt be ready to censure them now if the reins of ecclesiastical discipline were not drawn so much tighter than they were in the sixteenth century. But a writer who himself composed prayers to the Virgin, one of which is quoted here, entreating her to use her irresistible influence with her Divine Son, can hardly be said to conform to any Protestant standard of orthodoxy. The real interest of these Colloquies of Erasmus is historical, not controversial, and in this aspect they derive considerable interest both from the author and the subject-matter, which is not diminished but increased by the circumstance already referred to, that Erasmus continued to the last, as there is no reason to doubt, a sincere Roman Catholic. And if "it is easy at Rome to praise the Romans," the greater weight must attach from that fact to his censures. His main design in composing his "Pilgrimage" is very clearly summed up by himself in the following passage:—

> In the "Peregrinatio Religionis ergo" I censure those who have violently ejected all images from churches: and then such as run mad upon pilgrimages undertaken under pretext of religion, for which now even associations are formed. Those who have been to Jerusalem are called knights, and they call one another brothers, and on Palm-Sunday seriously act a ridiculous farce, dragging along an ass with a rope, themselves being not much different from the wooden beast they draw. Those who have been to Compostella imitate the same thing. Such performances may be allowed indeed as an indulgence of men's fancies; but it is not to be borne that they should claim any pious merit in them. In this colloquy those also are stigmatised who exhibit doubtful relics for real, who attribute to them greater valt than they are worth, or sordidly manufacture them for gain.

This view of the matter is fully borne out by the examination of William Thorpe, the Lollard, before Archbishop Arundel, about a century earlier, a part of which is here reproduced by Mr. Nichols. We subjoin one short passage:—

> And again, I saide, as their workes show, the most parte of men and women that goe now on pilgrimages have not these foresaide conditions, nor loveth to busie them faithfullie for to have. For, as I well know, since I have full oft assaid, examine, whosoever will, twenty of these pilgrimes, and he shall not find three men or women that know surely a commandment of God, nor can they say their Pater Noster and Ave Maria, nor their Creed readily in any manner of language. And, as I have learned, and also know somewhat by experience, of these same pilgrimes, telling the cause whie that many men and women go hither and thither now on pilgrimage: It is more for the health of their bodies then of their soules; more for to have riches and prosperitie of this world then for to be enriched with vertues in their soules; more to have here worldlie and fleshlie friendship then for to have friendship of God and of his saintes in heaven. For, whatsoever thing man or woman doth, the friendship of God, nor of any other saint, cannot be gat without keeping of God's commandments.

To which, and a good deal more to the same effect, the Archbishop rather oddly replies:—

> And the Archbishop said to me, Lewd losell! thou seest not far inough in this matter, for thou considerest not the great travalle of pilgrimes; therefore thou blamest that thing that is praisable. I say to thee, that it is right wel done that pilgrims have with them both singers and also pipers; that when one of them that goeth barefoot striketh his toe upon a stone, and hurteth him sore, and maketh him bleede, it is well done that he or his fellow begin then a song, or else take out of his bosom a bagpipe, for to drive awaie with such mirth the hurt of his fellow; for with such solace the travaile and wearinesse of pilgrimes is lightly and merrily borne out.

The short Colloquy of Erasmus on Rash Vows points in the same direction, as may be gathered from his own defence of it in his *De Utilitate Colloquiorum*, published at Basle in 1526, which is worth quoting:—

> The Colloquy on visiting Sacred Places checks the superstitious and extravagant fancy of certain people who imagine it the height of piety to have seen Jerusalem; whither, over such wide distances of sea and land, run old bishops, leaving their flock, which ought to be tended; thither go men of rank, deserting their families and their estates; thither go husbands, whose children and wives require some guardian of their education and their modesty; thither young men and women, not without great danger to their morals and chastity. Some even go again and again, and indeed do nothing else all their lives; and all along the name of religion is given to superstition, love of change, folly, and rashness; and a man who, contrary to the doctrine of Paul, deserts his own, will carry off the credit of sanctity, and flatter himself that he has fulfilled all the requirements of devotion.

The "Pilgrimage" itself occupies about sixty pages only, nearly three hundred more being devoted to Notes and Introduction. It describes, in the form of a dialogue between Menedemus and Ogygius, the pilgrimages actually made by Erasmus to the shrines of Our Lady at Walsingham and St. Thomas at Canterbury, and should be read through, as it stands, to be appreciated; no selection of extracts would do justice to the general impression produced on the reader's mind. The most interesting of the notes, though they do not contain much that is new, are those which concern—to borrow the phraseology of Henry VIII.'s Proclamation in 1538—"the death, which they untruly called martirdome, of Thomas Becket, sometime Archbishop of Canterbury"; an event which must always have an important place in the civil and ecclesiastical history of England, whether we regard the murdered prelate as a patriot and a saint, or, according to the Royal declaration, "rather esteem him a rebel and traitor." Mr. Nichols makes no secret of his own hearty adherence to the Tudor view of the matter. We have said that this is the most interesting portion of the notes, but here an important reservation must be made. For two minor tractates of Erasmus, of very considerable historical interest, are embodied in these notes; indeed, to our mind, they are more deserving of a permanent place in literature than the *Peregrinatio* itself. We mean the sketches of Dean Colet and of Archbishop Warham. Colet was an intimate friend of Erasmus, and was in many respects like him both in character and tone of thought, though a man of much deeper moral and religious earnestness. He was a reformer in the same sense that Erasmus was a reformer, and though he died several years before the beginning of the English Reformation, there is nothing to show that he would have gone along with the religious changes introduced, when the movement passed beyond the correction of practical abuses, any more than Erasmus did himself. In the correction of prevalent abuses and superstitions, however, the good Dean displayed, not, like Erasmus, a mere literary enthusiasm, but an active and resolute zeal; nor did he preach to others what he did not himself consistently practise. Thus we are told that, on being appointed by Henry VII. to the Deanery of St. Paul's, which then, as now, was "the foremost dignity of its kind in England," he considered himself "called to labour, not to dignity merely, amended the decayed discipline of his Chapter, and, what was then a new thing, began to preach on every feast in his church, besides the extraordinary sermons which he gave sometimes at Court, and sometimes in various other places." A large congregation collected to hear him at St. Paul's, among whom Sir Thomas More was one of the most regular attendants. His manner of life was simple and devout, and he spent large sums in charitable works. Of these, far the best known, of course, is the foundation "of a new school in the limits of St. Paul's, which he dedicated to the Boy Jesus," perceiving, observes his friendly biographer, that "the chief hope of the State consisted in the judicious education of youth." The masters were well endowed, that they might teach gratuitously, and the number of boys in the school was limited to 153:—

> He divided it into four apartments. Into the first boys enter as catechumens, but no one is admitted that is not already able to read and write. The second receives those who are taught by the under-master; the third those whom the upper-master instructs. These two parts are separated from each other by a curtain, which is drawn, or withdrawn, at pleasure. Above the master's chair is a seated figure of beautiful workmanship, the Boy Jesus, in the attitude of teaching, whom the whole flock, on entering and leaving the school, salutes with a hymn; and above is the face of the Father, saying, IESUM AUDITE! for these words he inscribed at my suggestion. In the fourth or last apartment is the chapel, in which divine service may be performed. The whole school has no corners or closets, so that it gives no room for eating or sleeping. Every boy has his own seat on benches, gradually rising, and at fixed intervals. Every class has sixteen, and the boy who heads his class has a seat a little raised above the rest. Nor is any applicant admitted indiscriminately, but a choice is made of dispositions and capacities.

Colet placed his new institution under the control of "certain married citizens" (the Company of Mercers) of approved character, for reasons of which Erasmus has elsewhere given rather a curious explanation in his dialogue *De Pronunciatione*:—

> *Ursus.* Thus John Colet, a man worthy of perpetual remembrance, when he had added a school for boys to the church of Saint Paul's, found his greatest difficulty in determining to whom he should consign the government of the institution. The bishops deem such a matter unworthy of their care. The schoolmen fancy their calling is rather to collect fees than take

* *Pilgrimages to St. Mary of Walsingham and St. Thomas of Canterbury.* By Desiderius Erasmus. Newly Translated [illegible] and Illustrative Notes, by J. G. Nichols, [illegible]. John Murray. 1875.

charge of schools, and think they have filled their office fairly if they do not tithe the schoolmaster. In colleges of canons the worse part almost always bears away. The magistrates either want judgment, or favour private interests.

Leo. What plan did he at last adopt?

Ursus. He set over his school a married man, and who was rich in children. He entrusted its superintendence to certain lay citizens, of whose integrity he thought so highly that he had good hope it would descend to their next heirs.

It is difficult for a man who has been trained in a one-sided or defective system, and has become alive to its weaknesses, always to preserve the balance of his judgment; and there is certainly an absence of all moderation in the language applied by Colet to the writings of Thomas Aquinas, though it may only mark a natural recoil from the almost idolatrous reverence paid to them during the later middle ages. "Why do you preach up that fellow," he replied to Erasmus, "who, if he had not great arrogance, would not have defined everything with so much rashness and so much dogmatism, and, if he had not possessed some worldly spirit, would not have so contaminated the whole doctrine of Christ with his own profane philosophy?" But this impetuosity of tone was very unusual with him. There is for the most part a judicial calmness about his estimate of men and things which, in an age of fierce controversy and sharp transition, is very remarkable. We are told, for instance, that he was not favourably disposed towards monasteries, and gave them very little, not that he disapproved of the religious orders—for he had entertained the idea of joining one—but because their members did not live up to their vows. To take again what has become a burning question in our own day, "whilst he strongly approved of secret (or auricular) confession, asserting that he had never derived from any other source so much spiritual consolation and support, he equally strongly condemned its anxious and too frequent repetition." It is amusing to find that one of the charges brought against him by his persistent enemy, the Bishop of London, who accused him to the Archbishop of heresy, was "that, when in his sermons he had said that some preached from book (*the lifeless practice followed by many in England*), he had obliquely reflected upon the Bishop, who, on account of his age, was accustomed to do so." This shows that the custom of preaching written sermons did not, as is often supposed, come in with the Reformation, and is rather an English than a Protestant peculiarity. The Archbishop treated these malicious charges against Colet as they deserved, and this leads us to notice in conclusion the character which Erasmus has left of him.

Warham, that "true primate, not only in rank, but also in every kind of merit," has hardly had justice done to his memory. He was eclipsed during life by the commanding figure of Wolsey, and the dignified quiet of his uneventful primacy is thrown into the shade by the stormy vicissitudes of the erratic career of his successor. Nevertheless, Archbishop Warham presents a graceful example of that special type of *mitis sapientia* which has in later days been admired, or its absence deplored, as the appropriate ornament of his high office. There is a story told of the late Dr. Candlish once having occasion somewhat reluctantly to seek an interview, on some matter of business, with Archbishop Howley. His Presbyterian prejudices were strong, and he was prepared to encounter a "prelate full of pride" when he entered the uncongenial precincts of Lambeth Palace; but he was agreeably disappointed. On his return he was heard to observe that the Archbishop seemed to move unscathed amid all the pomp of his surroundings (which at that period was still considerable) like the Three Children in the midst of the fiery furnace, and that he had never so truly felt himself in the presence of a man of God. We are reminded of this anecdote by Erasmus's description of his genial and munificent patron:—

> Whilst very many others treat me with marked kindness, so chiefly does that my especial Mæcenas the Archbishop of Canterbury,—or rather not mine only, but the patron of all the learned, among whom I take the lowest place, if any at all. Almighty God! how felicitous, how copious, how ready, is the genius of that man! what skill in conducting the most important business! how extraordinary his learning! But then what unheard-of courtesy towards every one! what pleasantness in address! so that, in a manner truly royal, he dismisses no one from him depressed. Moreover, how great and what ready liberality! Lastly, in such an eminence of fortune and dignity, what an absence of pride! so that he alone appears to be unaware of his greatness. In protecting his friends no one is more faithful or more constant. In fine, he is a true primate, not only in rank, but in every kind of merit.

And after describing how Warham discharged the high and onerous duties of the Chancellorship, he thus proceeds:—

> But at the same time he was so vigilant and attentive in matters relating to religion and his ecclesiastical functions that you would say he was engaged in no external concerns. He found time sufficient to discharge religiously the solemn duty of prayer, to perform mass almost daily, to be present besides at two or three services, to hear causes, to receive embassies, to advise the king if any thing of importance had arisen in court; to visit his churches, wherever his presence was required; to receive his guests, often amounting to two hundred; and lastly his leisure was given to reading. For occupations so various he found one life sufficient, no part of which he bestowed on hunting, none on dice, none on empty tales, none on luxury or pleasures. In the place of all these amusements he had either some agreeable reading, or conversation with a learned man. Although he sometimes had bishops, dukes, and earls as his guests, yet dinner was always finished within the space of one hour. In the midst of a sumptuous table, as his dignity demands, it is incredible to say how he abstained from all delicacies. He rarely tasted wine, but generally, when already a septuagenarian, used to drink very weak ale, which they there call beer, and even that very sparingly. Moreover, when he had taken the smallest quantity of food, yet with the kindness of his looks, and the cheerfulness of his discourse, he enlivened the whole table. You perceived the same gravity either before or after dinner. He abstained entirely from suppers, or if some of his intimate friends, of which number we were, happened to be with him, he sat down, but scarcely touched the viands; but, if no such company were there, he spent the time of supper either in prayer or in reading. And as he abounded himself in very happy pleasantries, but far removed from bitterness or indecorum, so he was pleased with the more free jests of his friends: yet he shrunk as much from scurrility or detraction as any would do from a serpent. Thus this excellent man made those days abundantly long, of the shortness of which so many complain.

We have given somewhat copious extracts, as the best means of indicating to our readers what is chiefly of interest in this volume. It might have been compressed with advantage; but they may be content to overlook a good deal of superfluous padding—which is easily left on one side—for the sake of the really solid matter, in the shape of reprints and illustrations, which it contains.

BRIGHT'S ENGLISH HISTORY FOR PUBLIC SCHOOLS.*

SOME years ago, as we learn from Mr. Bright's preface, at a meeting of public school masters the want of a useful book of English history for school teaching was spoken of. Against the books ordinarily used were objected—"first, the absence of historical perspective, produced by the unconnected manner in which the facts were narrated, and the inadequate mention of the foreign relations of the country; secondly, the omission of many important points of constitutional history; thirdly, the limitation of the history to the political relations of the nation, to the exclusion of its social growth." It was suggested to Mr. Bright, who as Historical Lecturer in three Oxford Colleges, and late Master of the Modern School in Marlborough College, is well qualified to judge what are the requirements of teachers and learners, that he should "attempt to supply this want"; and the first instalment of the work thus undertaken, covering the period from 449 to 1485, is now before us. Mr. Bright tells us that "it was at first intended to approach the history almost entirely on the social and constitutional side"; but a short trial proved, what indeed we should have expected, that to do this would require such a constant employment of allusions, and so much previous knowledge on the part of the reader, as to be unsuitable for a school book. Constitutional history, in fact, is neither interesting nor even intelligible until the actual course of events has been thoroughly mastered; and still more is this the case with social history, which is, moreover, to a great extent a work of imagination. The stages of the growth of society are not recorded in chronicles or in State papers; and history socially treated is, in truth, the historian's opinion upon the mass of facts before him. When the laws of social science have been satisfactorily settled, we may hope to see some agreement among our philosophical and social historians; but at present the view they take of the growth of society depends very much upon their respective idiosyncrasies. Mr. Bright, however, lets us know that the decision "to limit the description of the growth of society to a few comprehensive chapters and passages" was taken against his inclination, although he adds that he can no longer regret it, "as the social side of our history has been so adequately treated by Mr. Green in his *History of the English People*." It may be easily supposed that a work on a plan approved by the united wisdom of a meeting of public school masters is a more steady-going and less new-fangled production than that of the brilliant writer to whom this compliment is paid, Mr. Bright half apologizes for being so far behind the times as to retain the usual division into reigns, rather than "disturb the knowledge boys have already gained by the introduction of a new though more scientific division." And so we are allowed to keep to a method of division which, if not "scientific," at any rate rests upon facts, and not upon theories. On the other hand, the modern school will be conciliated by finding the starting-point of the book taken at A.D. 449, and not B.C. 55. For constitutional or social history this is undoubtedly right, and the author truly remarks that the Roman rule has had little or no influence upon the development of the nation. Still a question might be raised whether in a narrative history it is not useful to have a slight preliminary sketch of the British-Roman period. We should be sorry to see the next generation grow up in ignorance of the "British warrior queen," though it is well that they should be warned that it is not her posterity who sway "regions Cæsar never knew." If we open the Old-English Chronicle we see that its compilers, though assuredly they were well aware that they themselves were Englishmen and not Welshmen, yet thought good to begin with the Britons and "Caius Julius, the Emperor." Mr. Bright dashes straight into his story without stopping to explain who the people then dwelling in Britain were:—

> The dominion of the Romans in Britain had been complete. The country, as far as the Frith of Forth, had been brought under Roman civilization. But in England, as elsewhere, the continuance of that form of civilization had produced weakness; and the unconquered Britons of the North, known by the name of Picts, broke into the Romanized districts, and pushed their incursions far into the centre of the country. On all sides the nations outside the Empire were breaking through its limits and threatening its existence. The danger which threatened the very heart of the Empire, from the advance of the Goths into Italy, compelled the Romans in 411 to withdraw their legions from Britain, and leave the inhabitants of the island to fight their own battles with the Picts.

* *English History for the Use of Public Schools.* By the Rev. J. Franck Bright, M.A., F[illegible] I. Mediæval Monarchy. From the Departure of the Romans [illegible] and Plans. Rivingtons:

Still this opening has the merit of brevity and decision, and would be clear, as far as it goes, was it not for the mention of *England* in Britain before the English came there. We may here note a remarkable entry under the year 1137, in the table of contents—"Last national effort of the English." It is really sad to think that for seven centuries we have never roused ourselves to make another national effort. However, to return to our heroic days, Mr. Bright gives a good description of the English conquest of Britain, and lays due stress on the point that it was "not only a conquest, but a re-settlement." When he unhesitatingly represents the first recorded trial of strength between Welsh and English, the battle of Aylesford, as an English victory, he enters upon debateable ground, as is evidenced by a recent critic having taken Mr. Green to task for holding the same view. These writers have, however, only followed the lead of Florence of Worcester, who says:—"Licet in ea pugna Hors occisus esset, Hengest tamen victoriam habuit; et post hæc cum filio suo Æsc regnare cœpit." This may be merely an inference drawn by Florence from the language of the Chronicle, but it is at any rate not the invention of modern authors. Mr. Bright is seen at his best when giving an account of the general tendencies of a reign or a period, or when weighing one political force against another. In such passages his remarks are usually just and thoughtful, and clearly expressed. Thus, at the end of the reign of Edward IV., there is an excellent summary of the state of the nation under that prince, and the character of the monarchy he developed. The Introduction also, which gives a rapid sketch of the political growth of England, is in many points good, though we cannot see why "monarchy by Divine right" should be called "the logical offspring of feudalism." The tendency of feudalism was to destroy the central authority in all but name; and "Divine right" is traceable to clerical and legal rather than to feudal influences. Later on Mr. Bright shows that he understands the hostile attitude of the Norman kings towards feudalism, and he gives the true interpretation of the oath exacted at the Salisbury Gemót of 1086, which has so often been thought to mark the introduction of the feudal system. The elaborate chapter on the "State of Society" from 449 to 1066 would, however, have been better without such frequent reference to "feudalism" and "the feudal system" before any explanation of those terms has been given. The narrative is for the most part dry, and in one or two places it reads as if it had been hastily abridged, rather to the injury of the story. Thus, in the account of one of the many crimes of Eadric Streona, we read:—

> Eadric had of course joined the victorious party; but again his persistent treachery was the destruction of the country. He attracted to a meeting at Oxford, Sigeferth and Morkere, Thegns of the Five Danish Burghs. The wife of Sigeferth was kept a prisoner, and taken in marriage by Edmund Ironside, Æthelred's son. This Prince thus acquired possession of the Five Burghs, and secured an influence which enabled him to take up a position in opposition to Eadric.

Here one of the main incidents of the story, the murder of Sigeferth and Morkere by Eadric, is left out, and it is never even hinted that Sigeferth's wife was a widow when she "taken in marriage" by Eadmund. There is a worse break between the reigns of Henry VI. and Edward IV., where all mention of the acknowledgment of Edward of York as King is omitted, and the reader is left to guess that "the young Earl of March" in one page is the same man as "Edward IV." in the next. In addition to its being a necessary link in the chain of events, the election or acknowledgment of Edward IV. by the lords in council and the people of London has a constitutional importance which should have prevented its being overlooked. So King Eadwig is introduced casually into the narrative without any explanation as to how he came to succeed Eadred. Nor do we think the relations between the young King Eadwig and Ælfgifu are fairly stated when the latter is described as one of the leaders in "a palace intrigue" and as having "obtained influence over the lad." The brief notice in the Chronicle, "In this year Archbishop Odo separated King Eadwig and Ælfgyfu, because they were too near akin," implies a marriage, though an uncanonical one, of which Mr. Bright gives no hint. Bishop Birinus, the evangelist of the West-Saxons, should not have been reckoned among the missionaries from Lindisfarn. He had been consecrated in Italy, and came "cum consilio papæ Honorii" into Britain. From the dates, indeed, it would seem that he had begun his work among the West-Saxons before Aidan established himself in Lindisfarn. And as Aidan's presence in Northumberland was solely in consequence of King Oswald's application to the Scots for a bishop, it is rather unfair towards the sainted King that an unfortunate arrangement of tenses should make it appear as if, on coming to the throne, he had found Aidan already labouring among his people.

Neither the text nor the table of contents is by any means free from those slips of the pen or errors of the press which are of no great importance in themselves, but which are likely to mislead or puzzle learners. *Essex* occurs twice when *Wessex* would seem to be meant (pp. 20, 21); "Orford in Kent" is put for Otford, as the scene of one of Eadmund Ironside's victories over the Danes. The Earldom of Mercia, which is said at p. 23 to have been restored to Ælfgar after Godwine's death, should have been the Earldom of East-Anglia. And it is almost enough to make Mr. Freeman feel that he has lived and laboured in vain when Harold's foundation at Waltham is twice called an "Abbey," even though the offence is mitigated by the further statement that it was "occupied by secular canons." Æthelred the Unready's accession is in one place dated 975, instead of 979. William of Normandy's first conquest of Maine should have been dated 1063, not 1073. The day of his landing at Pevensey is not absolutely certain, but Mr. Freeman gives the weight of his authority to the date of the 28th, not, as here, the 29th of September. "Swend of Norway," at p. 45, should be Swend of Denmark; "King Robert," at p. 56, should be Duke Robert. The "Dictum of Kenilworth" should be dated 1266, not 1267. The "Extinction of the Scotch royal family" during the reign of Edward I. is dated 1282, four years before the male line was extinguished by the death of Alexander III. The great Statute of 1275, though rightly named in the text "of Westminster," appears in the table of contents as the "Statute of Winchester." Confusion on this point ought to have been the more carefully avoided because there exists a real Statute of Winchester, passed ten years later. In the text our attention is called to the form in which the Statute of 1275 is enacted. "The present statute [of 1275] was said to be enacted 'by the King by the advice of his Council and the assent of Parliament.'" This no doubt gives the sense, but it does not literally translate the formula, and therefore should not have been placed between inverted commas. The phrase "assent of Parliament" does not appear in the original, which, omitting unnecessary words, runs thus:—"Ces sunt les Establisemenz le Rey Edward . . ., fez a Weymoster a son primer parlement general . . ., par son conseil par le assentement des Erceveskes, Eveskes, Abbes, Priurs, Contes, Barons, et la Communaute de la tere ileokes somons. . . ." The provisions of the Statute of Mortmain, 7 Edw. I. stat. 2, are described twice, in slightly different words:—first, that by this statute "it was forbidden, without the King's consent, to leave property to religious corporations"; secondly, that by it it was enacted "that no property should be given or left to the Church without royal permission." These statements seem to betray the common confusion between the 7 Edw. I. stat. 2. and the Geo. II. c. 36, also known as the Statute of Mortmain. There is nothing said in the 7 Edw. I. about leaving property. It forbids any transaction whereby lands and tenements may any wise come into mortmain. Again, it is not, as Mr. Bright states, the Statute of Westminster (3 Edw. I.), which is renewed by the Statute of Stamford (2 Edw. II.), but part of the "Articuli super Cartas" (28 Edw. I. stat. 3). The Black Prince died in 1376—the year of the Good Parliament—not in 1377; and the omission of a figure—August 6 for August 26—antedates the battle of Crécy by twenty days; while Henry V. is said to have died September 21, instead of August 31. The date given in one place for Richard II.'s marriage with Isabel of France—1495, instead of 1396—is so obviously an error that it will probably not mislead any one. John Beaufort, Duke of Somerset, who was beheaded after the affair of Hexham, was not "the third Duke of Somerset who had died in these wars," but the second. His brother, Edmund Beaufort, appears in the genealogical tables as "Edmund Beauchamp"; Edmund, Earl of Richmond, the father of Henry VII., is elevated to the rank of Duke, and Henry Courtenay, Marquess of Exeter, is called "Edward Courtenay." "Lord John Howard," afterwards the "Jack of Norfolk" who perished with "Dickon his master," at Bosworth, should be John, Lord Howard, his rank being then that of Baron. Nor had he, as stated in the text, "married into the Mowbray family." His connexion with the Mowbrays was, as Mr. Bright's own genealogical tables show, through his mother. Sir John Oldcastle is said to have been "put to death, not as a traitor, but as a heretic." He was put to death as both. The sentence is to be found in the Rolls of Parliament:—"q̄ le dit John, come Traitour a Dieu, & Heretik notorement approvee, & adjugge . . .; & come Traitour au Roi & a son Roialme; soit amesnee a la Tour de Loundres, & d'illeoqes soit treinez p my la Citee de Loundres, tanq; as novelles furches, en la paroche de Seynt Gyles hors de la barre de Veille Temple de Loundres, & illeoqes soit penduz & ars pendant."

These are matters which may easily be set right in a second edition, but the main fault of the book lies deeper. In plain words, it is very dull reading. A history which contains a great deal of precise information in a small compass can never of course be entertaining; but it might be sharper and more spirited than Mr. Bright has made it. His anxiety to crowd in as many facts as possible has probably a good deal to do with its general dreariness; the canvas is so full that no figure stands forth distinctly. No boy, however intelligent, could possibly regard it as anything but a dry lesson-book; and with all deference to the public school masters, this strikes us as a serious objection. As M. Jourdain said of the serenade submitted for his approval, "Je voudrois que vous la pussiez un peu ragaillardir par-ci par-là."

TWO BOOKS ABOUT AUSTRALIA.*

ALL books may be divided into three classes. The first and most honourable class are the books which are written; books which spring into existence in obedience to a genuine inspiration on the part of the writer; which express definite ideas of the literary kind that must clothe themselves in the shape of a literary work. Secondly, there are the books which are made; volumes supplied often quite independently of the capacity and taste of

* *The Queen of the Colonies; or, Queensland as I Knew it.* By an Eight Years' Resident. London: Sampson Low, Marston, & Co. 1876.

Sketches of Australian Life and Scenery. By One who has been a Resident Thirty Years. London: Sampson Low & Co. 1876.

their producers, merely to satisfy some popular craving. And, lastly, there are the *biblia abiblia* of Elia, books which are no books; written, that is, with no literary aim, but only as a vehicle for conveying the opinions or information of the author, just as a scientific treatise, or a blue-book, or a sermon, might be. As we have not all of us the idiosyncrasies of a Charles Lamb (indeed the world would be quite an unworkable concern were this the case), these *biblia abiblia* have a perfectly definite place in our literature. We criticize them on different ground from the books which are books, and we expect different things from them. It is only necessary to indicate in which class the work under notice is to be placed. When we say, therefore, that the *Queen of the Colonies* will be read, if read at all, simply for its information, we at once put aside all questions of style or external adornment. It is impossible to say how many people beside "intending emigrants" may want to know about Queensland; but those who do will not be disappointed if they turn to this book. The author gives a very clear and practical account of the present condition of that rising colony, especially as regards its wonderful agricultural resources.

The large supplies of Australian beef which are now consumed throughout this country ought to bring the agricultural districts of the colonies especially home to men's business and bosoms, and disabuse them of the still prevalent idea that the wealth of Australia consists chiefly in gold. This is very far from being the case in Queensland. There are indeed gold-fields and productive ones at Gympie, but the colony possesses much surer sources of wealth in her soil, her beautiful climate, and a coast more favourable to navigation than that of any other part of Australia. In respect of climate she is particularly fortunate. Though, as lying further to the north than any of the sister colonies, she has a greater degree of the sun's heat, this disadvantage is more than counterbalanced by a breeze which every day during the whole summer blows inland from the sea. "It usually begins to be felt about 9 A.M., before which time it will be hot. But as soon as the toiler feels the cooling breeze playing about his forehead he is sensible of a wonderful change. Although the sun rises higher and higher until it shines down the chimneys into the pots on the fire, the cool breeze tempers its rays and makes them bearable. Were it not for this breeze, we believe it would be almost impossible for the European to do much manual work in Queensland." As it is, he can work with as much comfort as in the Southern colonies, and with more safety. The climate so favourable to health is not equally so to agricultural purposes. Like all the other colonies of Australia, the farmer has much to fear both from drought and from floods—from the former chiefly if his farm is on the higher land called the forest, from the latter if it is on the rich alluvial soil at a less elevation which is called the "scrub." Perhaps it would on the whole be more correct to say that the farmer, or "settler," suffers most from the flood, and the cattle-feeder, or "squatter," from the drought; for the industry of Queensland is chiefly divided between these two pursuits, the neighbourhood of the coast being occupied as a settled or agricultural district, and the rest of the colony being the unsettled or pastoral country. With the growth of the colony the tendency will be to convert the latter into the former, and all the sympathies, as well as most of the information, of the writer are on the side of the settlers. At present, however, the profits on capital invested in squatting are very great. "Mr. Daintree, the Agent-General for Queensland, himself a squatter, and therefore speaking by the book, in his excellent handbook gives a statement showing that on a capital of 20,600*l.* there is an annual profit of 3,795*l.*, or 17½ per cent., on fat cattle sold, without any calculation as to the natural increase, while on a larger capital the profits would be considerably more." A great impulse has been given to squatting by the introduction of meat-preserving. Of course, the land occupied in this way is enormously greater than that which is settled. In the settled districts, which are marked out by the Land Act, free selection for cultivation is lawful, while in the unsettled the land is leased from the Crown. Not less than twenty-five square miles can be taken in one block, the lease being in all cases for twenty-one years. For this area the annual rental is only 6*l.* 5*s.* for the first seven years, 12*l.* 10*s.* for the second, and 18*l.* 15*s.* for the third.

As has been the case in all the colonies of Australia, the prosperity of Queensland has often been impeded by sudden fluctuations in the labour market. Originally a penal settlement, the labour employed when squatting first began to be followed on the Darling Downs in 1829 was what was called "assigned" labour—the labour, that is to say, of convicts assigned by the Government to the squatters and paid for only by rations and clothing. The squatters being themselves the magistrates of the district, it may be imagined that this system was open to all kinds of abuse. An unscrupulous squatter might, if a valuable servant were nearing the end of his term, trump up a false charge against him, or at least exasperate him to some attempted act of violence, hurry him before a brother magistrate, and have him reassigned for a fresh term. In fact, the convict labourers were much in the position of serfs, and when in 1842 the district of Moreton Bay was thrown open to free immigration, and the convicts removed, the old squatters were not more pleased than the nobility of Russia after the recent emancipation. Many schemes for the introduction of cheap labour were tried without success; Chinese were brought in, and coolies were proposed. But there can be no doubt that the productiveness of the country would have easily met the increase in the price of labour, had it not been for the English cotton famine of 1863, which flooded the colony with thousands of factory hands totally unused to agricultural work; in four years the population rose from 38,198 to 94,710. The Immigration Act not having provided for the exportation of factory hands, the country was for a while impoverished; and the difficulties of the farmer were further increased by the discovery of the Gympie gold-fields in 1867-68, and the rush consequent upon that discovery. These circumstances led to the introduction of Kanaka labour, a measure which has been the cause of the greatest possible stir in Queensland. The Kanakas are the Polynesian islanders, who, according to the Polynesian Labourers' Act which was passed in 1868, might be engaged for a period of three years at the rate of 6*l.* per annum, besides food and clothing. It may well be supposed that the passing of this Act was looked on with the greatest disfavour by the poorer class of immigrants, and with suspicion by philanthropists and by the Government at home. Nor were the employers and exporters of black labour long in giving tangible grounds for these suspicions. It was found that many clauses of the Act might without much difficulty be evaded, especially that which provided that the agreement with the Kanaka was to be witnessed "by a consul, missionary, or *some other respectable person*, who would be requested to sign a document stating that the natives came willingly, and understood the nature of the agreement." As, moreover, in the South Seas each chief is absolutely master of the lives of his subjects, it was suspected that, by a judiciously arranged present to the chief, a certain number of his tribe could be induced to agree to the terms proposed, however unwilling they might really be to surrender their freedom. These facts were quite sufficient to rouse the indignation of the philanthropists, and we confess that from some of the stories told in these pages there seem to have been strong enough grounds for putting an end to the traffic, quite apart from those personal ones which influenced the more ignorant labouring classes against the labour which competed with them in the market. Many members of the Government of Queensland were, however, interested in the black labour trade, and it is improbable that they would themselves have assisted in its suppression. At length, in 1871, a circular from the Colonial Secretary obliged the Queensland Government to put in force the clause of the Act providing for the sending of a Government agent in each vessel. Since then, owing to the pressure of public opinion, the black labour trade has gradually died away. Such is in outline the writer's account of this interesting question; and it will be seen by those who have read Mr. Trollope's book on Australia that the opinions of our author differ materially from his. The real question, however, which must decide the desirableness of introducing black labour is whether the European is capable of doing the work required for some forms of agriculture, especially that of sugar-growing; and this is a question which can only be answered by those who are well acquainted with the Queensland climate. These chapters on labour form perhaps the most novel and instructive portion of the book. Those on the Gympie gold-fields are also well worth reading. On the whole, though it is arranged in rather a disjointed way, there is a great deal of useful information in the *Queen of the Colonies*.

Sketches of Australian Life and Scenery is a book of a different kind. It belongs to the order of books which are made, and may be looked upon as dedicated to a peculiar class of readers. Beside those who read books of travels for the sake of definite information, there are others who seem to exist almost entirely upon this kind of literature. With a sort of Puritan contempt for fiction, and yet not studious enough to undertake severer studies, they are under immense obligations to those—and your traveller is just such a one—who can offer them an intellectual food which, without putting too great a strain upon their attention, shall still afford a solid nourishment of fact. For them especially spring into existence those somewhat hybrid works called "Sketches," "Journals," "Trips to the Antipodes," and the like—books which, while they profess not to relate anything very new or striking, do nevertheless give the actual experiences of the writer. The only other feature in a book beside that of fact which these readers demand is that the events narrated should have taken place a considerable distance off. Given these two conditions, they are content not to be overnice about power of description or delicacy of style, or even about the novelty and excitement of the incidents related. Perhaps it is the certainty of an appreciative audience that produces the self-confident garrulousness so distinctive of books of this class. Doubtless the author knows that from the moment he lands upon the new shore, when in all probability "the calling of the coolies, the swearing of the troopers, the neighing of horses, and the cries of the women, combined to produce a scene which may be more easily imagined than described," they will follow his career with interest; that they will not weary of the record of how Captain Brown shot his buffalo on Monday, and Dr. Robinson returned with an empty bag on the Wednesday; everything, so long as it really did happen, is fish for the basket of such readers as these. The "actual objective existence," as the philosophers say, of Tito Melema, or of Rebecca Sharp, is unfortunately even less than problematical; but that the coolies did on that particular occasion call out in the manner hinted at, seems beyond all reasonable question.

Now, as the existence of any product of nature is justified rather by its fitness for the function it has to fulfil than by its inherent beauties, we are rendered diffident in our criticism of such a work by our imperfect knowledge of the mental constitution

of those for whom it is written. When, therefore, the author tells us that "an irresistible impulse" prompts him "to speak out and tell of the motley characters, strange incidents, and changing circumstances which make up the episode of colonial life," and asks us, as he does more than once, "Why should I not try?" we feel at once that we have no valid objection to offer. An "irresistible impulse" is not to be gainsaid, and we can only hope that an impulse equally irresistible will compel an appreciative public to buy and read his book. No carping criticism of ours, we can assure him, shall interfere with so satisfactory a result; the less so as the book really seems rather good of its kind than bad. The author cannot indeed quite rid himself of the garrulousness which distinguishes his order. The keenest appetite for facts would, we imagine, scarcely care to be informed that at Melbourne as elsewhere people are liable to be bitten by mosquitoes. "I do not forget the astonishment with which I beheld my face in the glass next morning. It was covered with crimson blotches, of various sizes; one eye swollen and painful. I had not thought of mosquitoes when I decided to occupy a bedroom abutting on the river." Nor can we consider Dr. Lay's coachman Thomas deserving a place in a gallery of motley characters. Too much of the book is of this character, but there are left very tolerable pickings for those who have the leisure and the taste for such narratives. The author has really lived through a remarkable period in the history of Australia, and describes his experiences sufficiently well to make many of them very striking and suggestive. He has, as he tells us, seen three phases of Australian life:—

> The easy-going, comfortable times when the squatters were kings, and used their wealth right royally.
>
> The bustling days of excitement, when the diggers were kings, and used their wealth right madly.
>
> The settled, prosperous times when the banks and merchants are kings, and use their wealth right prudently.

And the social changes which these three phases embrace are greater than most countries pass through in a century. In spite of all the hints and gleanings we may get from historians or romancers, English and American, the era of the gold fever in Australia still wants its *vates sacer*; so perpetually interesting from all points of view, moral, social, and political, must be the spectacle of a society subject to a sudden fluctuation or acquisition of wealth. The second phase of Australian life therefore furnishes the author with his best stories and most striking descriptions. Unfortunately these pages form but a very small portion of the book. After about the first third, which is supposed to take us through thirty years of the writer's colonial life, we are landed upon the present time, ushered in by the arrival of the author's half-sisters from England, and the rest of the book drags to a close with the very slightest of love stories which we ever remember to have read. Matrimony must be sadly on the wane in the colony if the author can place the marriages of Jessie and Margaret and the events which led up to them in the category of "strange incidents" to which he has been a witness. But we rather fancy he holds a theory which we have always secretly attributed to Mr. Henry Kingsley—namely, that no human being can ever be expected to read a book through to the end, so that the construction of its latter half is of the smallest possible consequence.

LASLETT'S TIMBER TREES.*

AMIDST an abundance of interesting and useful books on ornamental trees and timber, there has been a scarcity of succinct handbooks upon the commercial and domestic aspects of dendrology. Treatises on shipbuilding and naval construction are as uninviting in form to the general reader as stiffly scientific botanical works; and Mr. Laslett has obeyed a sound instinct in striking out a new path, and trying to convey information respecting the properties, strength, and preservation of the chief timbers in use, whether for ship or house building, joinery or cabinet-making, along with a lucid account of the trees which yield such timber. It is not indeed to be expected that such a book should be either amusing or untechnical; it is enough if it presents matter for the curious to digest, and gives a zest to the work of the amateur planter not unconnected with thoughts of prospective profit, assuring the latter of the unapproached superiority of British oak, and interesting the former with details of African, Australian, American, and New Zealand trees, which supplement, if they cannot supplant, the native commodity. From the nature of Mr. Laslett's life-long occupation, and the opportunities he has had, in the service of the Admiralty, of seeing the forests of the Old and New Worlds, it is clear that he possesses great qualifications for his task; and, whilst we leave his figures and tables to practical and professional readers, it may be worth while to cull from the volume a few points of interest for the general reader touching the growth, structure, strength, and weakness of trees, which are closely connected with the interests of man by land and water.

The introductory chapters place before the reader a clear idea of stem-growth in trees, of the pith or centre, or, in the tree's converted state, its innermost layer of heart-wood, and of the medullary rays through the contact of which with the annual layers the sap ascends; of the conversion of "alburnum" or sapwood, into "duramen" or heart-wood, and other processes of tree-life. In computing the age of a tree by its rings or circles of lignine, Mr. Laslett seems disposed to leave open the question whether in tropical climates each of these represents a year's growth, or whether in such regions three or four layers may not have been formed in the same period of time. Generally, however, he accepts the rule as a guide to a tree's age at the time of felling—that is to say, where the rings are clearly defined and concentric; whilst in other cases recourse must be had to historical and traditional records. The evidence which these circles afford of the duration of life in trees is one of the curiosities of vegetable longevity. As indices of deterioration in trees past maturity (discernible of course by examination after felling), our author notes a white or yellowish-red colour at the butt, the latter passing into a red or "foxy" hue, which betokens extensive decay. A more visible token, however, is when the topmost branches grow stunted and "stag-headed," for which reason trees should be chosen for felling which have their top branches strong, pointed, and vigorous. Upon the question of growing such trees as the oak in sheltered places or in the open ground or hedgerow, it is found that the former make the softer wood, through lack of breathing-space, but "have the compensating advantage of being very free from local defects." The latter are more productive of the "cracked uns," as the woodman calls them, which contractors covet for navy purposes, and which are, with all their lower lateral branches, much the harder and more compact. Mr. Laslett shows, what would at first sight seem paradoxical, that trees improve in form, shapeliness, and straight growth not so much when young as later on in years, and then very gradually. He also notes a fact which is the basis of one or more of his subsequent theories, that variations of temperature, violent storms, and nearness to seas or large rivers affect the quality and rate of growth of trees. It is a plausible conjecture that these have to do with that particular defect in trees which is called "cup-shake," and which consists in the separation—mostly in the region of the roots—of two of the concentric layers, from defect of cohesive matter. Cup-shake is often limited to partial disjunction of this nature; but where it is complete it is apt to pervade the tree to its serious detriment in the timber-market. Other "shakes" are the *heart-shake*, extending in various bad splits from the pith to two-thirds of the diameter of the tree, and *star-shakes*, or clefts, which radiate from the centre or pith to the circumference of the tree, and render it useless for boards or small scantlings. This last defect is commonest in trees grown on a sandy or rocky soil; but all the three limit the convertible quantity of timber in a tree where they occur, as do also excrescences, and external swellings arising from over-close pruning of branches, though the burrs on the oak from the puncturation of insects do not affect its quality, and in Austrian and Turkey walnut-wood is enhanced in value by a mottled figuring, which is prized for veneering. It is by giving the details of these defects and hints, and showing how to detect or prevent them, as well as by a tabular record of experiments on larger scantlings instead of smaller pieces of wood, as was the old fashion, that Mr. Laslett aims at enabling the engineer or architect to select the species most suited to his purpose, to determine the scantlings, and to economize the process of conversion.

Among the three distinct species of British oaks, the rare Quercus pubescens or Durmast oak is interior, and of comparatively small account, and as to the vexed question of superiority between Q. pedunculata (with footstalks of flowers and acorns long, and of leaves short) and Q. sessiliflora our author is clearly of opinion that it is made too much of (as the difference can only be traced in timbers by access to the converters); but he holds the preference accorded by current belief to Q. pedunculata as so far fortunate, as it is most abundant, and highly deserving of perpetuation in future plantations, though the Sessiliflora, with its greater length of clear stem, yields the best return commercially. Fine specimens of the latter may be seen in Dean Forest, but Pedunculata is less subject to cup-shake. Perhaps the greatest merit of both is a wonderful toughness and hardness, with scarcely the slightest tendency to splinter or warp. If kept wholly under water, this toughness of the oak is endless. On the other hand, its powerful pyroligneous acid prevents its general use in immediate contact with iron, as in such a case the iron corrodes, and the wood suffers waste and deterioration. It is on this account that the teak tree, of which the chief forests are now in Burmah and Siam, and of which the resinous oil resists the action of water and also keeps iron from rusting, and the acidless Angelique from French Guiana are preferred in English and French dockyards for the backing of armour-plates in ironclads (see pp. 114 and 149). Although, of course, the last-named fashion in ships of war might seem an extinguisher to oak, as far as shipbuilding is concerned, it is interesting to learn from Mr. Laslett's statistics of the timber-stores at Woolwich that the total quantity of loads of it maintained there in 1865 was more than five times as large as in 1845. In these storings a preference has long prevailed for winter-felled over spring-felled oak, as trees cut down when the sap is quiescent are better in quality and durability. Mr. Laslett's experience, however, goes to show that premiums for winter-felled timber offered a few years ago were comparatively impotent, being outbidden by the consideration of the bark.

It is impossible to say more here of the experiments on the strength of the standard British oak, which serve as a guide as regards the strength of its substitutes, and of the Dantzic fir, which Mr. Laslett takes as a standard of all the soft or white woods, than that they are directed towards testing the transverse strength, the tensile strength, and the vertical strength (or resistance to crushing force applied in the direction of the fibres) of these and other kinds of timber, and that he claims to have extended the

* *Timber and Timber Trees, Native and Foreign.* By Thomas Laslett, Timber Inspector to the Admiralty. London: Macmillan & Co. 1876.

previous range of these experiments, which are as difficult and tedious as they are important. The results are shown, page after page, in the comparative estimates of the woods passed in review in the course of this book, but the general reader breathes more freely when he escapes from the region of tables and statistics. We find that the French oak of the North-West provinces is said to have all the good points of British, except length, and uniform breadth; it is more tapering in form, and generally shorter and smaller, but is less apt to split. The best Italian oak, less elastic and a little heavier than ours, but hard, horny, tough, and strong, is unfit for planks, boards, and small scantlings by reason of its "shakes," but excellent for the *framing* of ships of war, for which purpose it is used to nearly the full growth of the tree. For the same purpose the American Live-oak (Quercus virens), a smaller evergreen tree from the Southern States of America, which is of much the same character as the Italian, with logs usually crooked or *compassed* in shape, is also suited, by reason of its great strength; but it is limited to ships of such burden as require only small scantlings. The Italian oaks are all hard to work, as, according to Mr. Laslett, temporary sawyers at the dockyards know, and show that they know. Our Royal dockyards got a great deal of it in 1860-3, before the advent of ironclads, much of which is still on hand and perfectly sound. Dantzic oak, so called from the port of shipment to which it is brought from Polish forests down the Vistula, is straight grown, moderately strong, hard, and rather porous, and has medullary rays in its timber so bright and distinct as to qualify it, for the same reason, though not in the same degree, as the Riga oak timber, for wainscot, ornamental, and cabinet purposes. Though used for building merchantmen, Dantzic oak is only used for the decks of our men-of-war, for which it is a speciality, because it stands the wear and tear of gun-carriages. One of its merits is that, besides being straight-grained, clear, and knotless, it is pliable when boiled or heated; a property which the white American oak, also very elastic and capable, when steamed, of being brought to any curve, shares with it. This latter thrives in Maryland, and is spread over a large tract between 28° and 46° N. latitude. It is a disparagement to the Dutch and Rhenish oak that the parcels of it which have come to the London market gave token of having been dressed to produce a greater curve than was natural, with a view to make them seem adapted for shipbuilding. The bait did not take (p. 98), but the fact is an index to the appreciation of crooked trees for navy purposes. Of other European oaks, Belgian and Piedmontese appear nearest to the standard of English and Western French. The Spanish is small and soft, apt to shrink, and much given to star-shake. Of the Turkey oak, or Broussa timber, Mr. Laslett complains that it is hard to form a thorough estimate, as the lazy Turks select the "mildest"—that is, those easiest to work—specimens in their dockyards. A far better supplement to our native store than any of the last named is found in the American oaks at which we have glanced, the Live-oak being probably stronger than any oak known. This, however, is far from being the case with the Baltimore oak, which is not as strong as the best fir or pine, and will soon decay without paint. The Canadian oak (Q. rubra) is of superior dimensions, and in much request with the cabinet-makers, but without strength or durability for architectural or engineering works. For such purposes the white American oak is better adapted, as it has little shrinkage, and will bear almost any exposure. Mr. Laslett pronounces it "by far the best foreign oak timber of straight growth and large dimensions for constructive purposes that has ever been imported."

Of the Indian teak tree there is no fear of exhaustion, seeing that Siam and Java will keep up the supply if Burmah fails. In the East Indies its high growths make lower masts for ships of two thousand tons burden, but the Burmese import it in short logs to avoid duty and the difficulties of forest and steam transit. To make it ready for use on delivery in England, they "girdle" (or cut through and remove a complete ring of the bark and sapwood) the tree three years before felling it, which renders the timber brittle, and extends heart-shake. In Burmah, too, there grows a straight clean-stemmed acacia of eighty feet in the clear, and of large girth, called the Piengadu, or Iron-wood tree, which combines the properties of wood and iron, and is said to be quite ball-proof. It seems fit for any work of construction demanding extra strength, as does the Bornean Chow, which is of lesser dimensions, and has been approved at Woolwich. In the Philippine Islands the Lauan wood is so tough and ball-proof that it furnished the outside planks of the old Manilla and Acapulco galleons. The African teak is a very valuable timber, and a link between our oak and the Indian teak, but is depreciated by the awkward shape in which it is brought to market. A more curious tree, and one among several valuable productions of Guiana and the West Indies, is the Greenheart or Nectandra Rodiæi, which furnishes timber of from twenty-four to fifty feet long, and twelve to twenty-four inches square. There is a virtue in its bark, in that it possesses an alkaloid which is quinine without its headachy results; and it is also an almost imperishable wood, hard, heavy, tough, elastic, and waterproof. It is also singularly knotless. Tried by transverse or tensile strain, or by crushing force in the direction of its fibres, its strength is exceptional. The last-named test exhibits in it a peculiarity shared only with the *Sabicu*, a hard wood of twisted fibre from Cuba. As Mr. Laslett puts it, "it bears the addition of weight after weight without any signs of yielding, and, when the crushing force is obtained, it gives way suddenly and completely with a loud report, nothing being left of the pieces but a loose mass of shapeless fibres." The Sabicu, like the Greenheart, will stand any exposure to weather; but is found, on conversion, to be liable to a singular cross fracture, the longitudinal fibres of the early and middle age of the tree being broken, while the outer woody layers of the duramen and alburnum are perfect. Mr. Laslett inclines to the opinion that this is attributable to the storms and hurricanes which sweep the island, snapping, but not breaking off, the stem, whilst the later growth strengthens and conceals the defect.

As a match for the Greenheart in being proof against time and weather, mention must be made of the Australian Tewart, a variety of the Eucalyptus, or Gum Tree. It is found in the districts of Swan River and King George's Sound, is of straight and noble dimensions, and yields timber of much the same bulk as the Greenheart. Close-textured, of twisted grain and thorough soundness, it has the great advantage of neither shrinking nor splitting. It is probably too heavy for domestic uses, but excellently adapted for piles or dockgate framing. Other varieties of the Eucalyptus are subject to the "shakes," and so not very solid in the centre. Perhaps the most popularly known of them is the Eucalyptus globulus, or Blue Gum Tree, which grows abundantly in Australia and Tasmania up to two hundred or three hundred feet, with a diameter of from six to twenty-five feet. It is used for keels, beams, and planking in ships, as well as for fencing and other purposes in civil architecture. It is almost needless to add that it is the famous "disease-destroying tree," which has wrought such wonders in the fever-stricken districts of the Cape, in Algiers, and in Cuba, and which, if it can be acclimatized in other than hot climates, promises to banish fever and malaria.

Enough has been said of Mr. Laslett's handling of the subject, so far as relates to British and foreign oaks, to satisfy those who examine the part of his book dealing with miscellaneous native and foreign deciduous trees, as well as of the firs, pines, and larch which play so large a part in the timber-yards and in works of naval and civil construction, that they will find it treated with a masterly experience and intelligence. He is very clear in explaining the distinction between the British oak and Spanish chestnut, and assists the novice in arriving at the now general conclusion that what was once deemed to be the later in our oldest and best specimens of civil architecture was really the earlier. He gives a handy rule of precedence and quality in the purchase of foreign deals and battens, and enforces the golden advice that "the larch is the most profitable tree to plant on a poor soil." He fires our longing for Douglas pines at home like those from Oregon and North-Western America, which cannot compete with Canadian and Baltic firs in the London market because of the heavy freight charge. "Visent ea poma nepotes!" And lastly he works up our wonderment to the highest point by his account of two giant specimens of the Kauri pine in New Zealand—one forty-eight feet in girth at three feet from the ground, and the other seventy-two, and measuring respectively sixty-six and eighty feet to the branches. Of exceptionally slow growth (an inch of wood in seven years), these trees are computed to be 1,300 and 2,000 years old. Of course they are almost impossible to move, if felled; but more manageable samples are exported by private adventure, in spite of the great costs of working and freightage, and serve for masts and yards, decks of yachts, and joiners' and cabinet-makers' purposes, being unrivalled as well in lightness, elasticity, strength, and durability as in knotlessness, pleasant odour, and a sort of satinwood lustre about the planed boards.

But we must not ramble on, though the subject is unexhausted. Suffice it to say that the practical timber-buyer and the amateur timber-grower, the man who contemplates standing trees for pleasure and eye-service, and the man who inspects them, when felled and converted, with an eye to profit, will alike derive advantage from the study of Mr. Laslett's book.

DIANA CAREW.*

THE character of an *ingénue* requires more subtle and delicate handling than perhaps any other in that queer storehouse of fancies where authors keep their lay figures. The innocence which is not silliness, the ingenuousness which is not conscious pretence, the impulsiveness which is real and not the result of rapid calculation as to the effect which it will produce and the appearance which it will have, all are qualities of exceeding difficulty to portray with grace and skill. To the uncritical part of Mrs. Forrester's readers her *ingénue* may possibly appear all that is lovely and real, but those who understand the method of workmanship better will probably find her a mass of contradictions, wearisomely self-conscious, and a simulacrum rather than a living person. The author lays stress on the fact of Diana's constancy; we are called upon to note that neither the deep love of a noble-hearted man, nor the frank adoration of a fine-natured youth, nor yet the temptation which wealth and rank naturally offer to a penniless little country girl, could lead her away from the passion which she fashioned for herself out of a pair of blue eyes and a [illegible] insufferably coxcombical manner. We, however, see nothing noble[illegible] either in her love or her constancy. That is [illegible] passion which some writers seem to think the best kind [illegible]

* *Diana Carew; or, for a Woman's Sake.* By Mrs. Forrester, Author of "Dolores," "My Hero," &c. &c. 3 vols. London: Hurst & Blackett. 1876.

that woman can feel is not, to our mind, so respectable as it is sad. We may pity the temperament which is prone to so ignoble a form of attachment, but we cannot idealize it, or hold it worthy of commendation; and the history of a young woman who lets herself love with unmistakable passion a man whose only merit is his beauty has an unpleasant flavour in it which not all Diana's fidelity nor Charlie's after devotion can do away with. "Hot love," with no deeper root than physical beauty on both sides, and opportunity to aid in the fascination of the senses, is not the most delightful form under which to paint the passion that has made men and women heroes and saints; but it is apparently the best that the author has been able to depict. The manner in which this story is told is not more to our taste than is the motive. When an author writes "Neither Colonel Fane nor I are," and the hero says "Let Miss Carew and I have our little secrets"; when a good-looking young cornet speaks of boys as "so lungeous," and a high-born lady says of a youth whom she has known, so far as we can make out, for about twenty-four hours, yet whom she calls by his pet name of "Curly," "I'm sure you would not swagger about a thing you could not do, and if you dance as well as you ride I should not mind waltzing all night with you"; when one married woman makes herself seductive to young men, and another meets her former lover in secret, and bewails her sad fate as represented by her husband—we know what we have to expect further on.

The characters of Lord Rexborough, Lady Gwyneth Desborough, Mrs. Huntingdon, and even Captain Montagu himself, Diana's idol and Mrs. Forrester's hero, are all simply odious; while Sir Hector Montagu is a monstrosity, apparently taken from life as to the leading lines, and tortured by exaggeration into a caricature. Lord Rexborough, it seems, was once a good, honest, but rather uncouth fellow, by name Jack Blount, who, without a sixpence, falls in love with the horsey Lady Gwyneth, the portionless daughter of an impecunious earl. He receives his dismissal, and she marries Mr. Desborough, who is generally called a "cad," by way of special description; though one does not see why he should be singled out for a term of opprobrium which would be more or less appropriate to all the characters alike. After she has married her cad, whose real name is Puggins, some obstructive relatives go to the bottom of the sea, and Jack Blount becomes Lord Rexborough. But in the brutal "satyr," who talks of Diana as a "clean-limbed and thoroughbred filly" whose "looks he likes," who stares with "bold eyes," and talks in a style "such as I should imagine," says Diana, "a commercial traveller might adopt to a barmaid," who makes love as much by personal violence as by impudent words, disgusting leerings, "hot breath," and the rest of it, we fail to see a trace of the rough and honest lover which we are expected to believe he had been in the days gone by; just as we fail to see in Lady Gwyneth one solitary trace of beautiful womanhood or the possibility of past sweetness. We have no kind of sympathy with the woes of young women who sell themselves to hateful husbands. They make the bargain with their eyes open, and the morality which pities them and finds excuses for their bad behaviour afterwards is fatally false and unjust. The horsey Lady Gwyneth, bold, fast, unwomanly, unwifely, with her inextinguished passion for her brutal Orson whose merits not the most charitable critic can discover, makes a picture wherein there is not a single trait to be commended; and Mrs. Huntingdon, though more lightly sketched, is no better. Lady Gwyneth is impudent, Mrs. Huntingdon seductive; but neither one nor the other is a fit companion for the *ingénue*, suddenly carried away from "nurse," papa, and the chickens, to be launched in the midst of very bad society, and that too by one who is spoken of as a womanly and very charming woman. We scarcely think, too, that such a person as Mrs. Warrington, who is meant to be all that is sweet and gracious, would have asked an Eton boy of fifteen, and his sister three years older, to meet such a questionable set as she had gathered round her. The Lady Gwyneths, Mrs. Huntingdons, Lord Rexboroughs, and even Charlie Montagus of the fast world are not usually given such prey as Diana and "Curly" Carew; and that Mrs. Warrington should have invited the two kinds of people together shows a strange want of perception in the author. The scenes where Diana is subjected to Lord Rexborough's peculiar method of love-making; those where Lady Gwyneth tries her hand on Curly; where Curly gets drunk; and where Diana shows her passion for Captain Montagu, are all in the worst possible taste, the "bad flavour" predominating in some, with infinite silliness in others.

When we come to life as it passes at Alford Court, with Sir Hector Montagu and his sons, we wonder still more from what odd depths the author has fished up her hideous models. Sir Hector is as great a brute in his way as Lord Rexborough is in his. He bullies his wife, who lives in tears and submission; is a demon to his servants, an autocrat to his sons; but in return those sons abuse him roundly to his young guest, and ask their mother "Don't you long and pray for the old man's death?" It is handsome Charlie who says this, with more to the same purpose; mimicking his father's manner, saying confidentially to "the Mater," "What on earth made you marry the Governor?" asking Diana what sort of time she has had—"Has my father d—d the servants much?" and offering, with her help and countenance, to "make the old gentleman an apple-pie bed," to hide his brushes, tie a string to his bed-clothes, or "practise any other witty little joke of the kind." Even solemn Hector, who is the *preux chevalier* of the story, follows suit, and thinks it no shame to show his hatred of his father to the girl whom he wishes to make his wife. If this is the author's experience of the gentry of England, we think it would have been more patriotic had she kept it to herself. Let us hope, however, that her country baronet is as purely her own invention as her *ingénue*—and her grammar, and that a Sir Hector Montagu, whose "lady was the Fetish he banged and battered incessantly," belongs to the world where the Japanese mermaid and the heraldic griffin are mainly to be found.

The ingenuousness of Diana is again one of those circumstances of a novelist's fancy which have no foundation in fact. She is eighteen when she pays her first visit to Mrs. Warrington; and at eighteen most young women, however innocent, have certain provisions of reticence and caution which prevent them from making absolute fools of themselves. But Diana is far too much of an *ingénue* to feel her way with anything like tact; and her confidences to Colonel Fane, who takes her in a manner under his protection, are odd, to say the least of them. When it comes to Charlie Montagu, with whom she falls in love solely on account of his beauty, her candour is of a kind that would more likely have alarmed that gentleman than pleased him. This is a small sample of the beginning of things:—

> I feel and probably look crestfallen, for Captain Montagu laughs lightly and says—
>
> "Don't look so frightened! Looks don't kill, you know! Come in, won't you?"
>
> I shut the door and go forward as I am bidden.
>
> "And how did you like the dance last night?" he asks in a tone the passage of which I might resent from anyone else.
>
> "Very much," I say, taking off my hat and looking fixedly at it, to prevent my eyes straying as they long to do to his face. "It was the first I ever was at."
>
> "Really!" (with languid curiosity). "Oh then you must have enjoyed it intensely!"
>
> "Must I?" I say, still not looking at him. "Why?"
>
> "Because I believe it is delightful to do anything for the first time—anything pleasant at least. At all events it can't bore you, and being bored is the curse of most people's lives."
>
> "Are you often bored?" I ask, looking at him with a great desire and curiosity to know something of his real feelings.
>
> "Very often" (smiling). "I was bored last night when you forsook me for the cornet."
>
> "Were you?" I say eagerly. "So was I." And then smitten with shame at my youthful sincerity, I bury my face in a book of photographs.

A little further on we come to more candour of the same kind:—

> "Of course it's impossible for any of us always to do right," I say, anxious to defend him even against himself.
>
> "But I am always doing what is wrong," he answers (maliciously making the worst of himself to vex me, I believe). "Somehow I seem to fall into it naturally. Ask my brother. He would tell you I wasn't at all fit company for such a good, well-brought-up little lady as you."
>
> "I should not believe him," I say with some warmth. "I do not believe you—you only say it to tease me."
>
> I stop, horribly ashamed of my *naïveté*. Oh why was I suddenly let loose from my rustic life upon society without any preparation?
>
> "No?" he says softly. "Would it really tease you to think I was a miserable sinner?" And all this time he has never once taken his eyes off me.
>
> "I should be sorry to think anybody was a miserable sinner," I answer confusedly.
>
> "Oh!" (in a disappointed tone, probably feigned), "then you are only a general missionary—you don't take any particular interest in me? You would be as sorry for the footman or the gardener if they were in a similarly unconverted state!"
>
> "Don't laugh at me, please," I say, looking imploringly at him. "You know I am only a little country girl, and I do so hate to be made fun of."

This edifying scene is broken in upon by Mrs. Huntingdon, who is flirting with the handsome Captain, and who calls him Charlie. Diana consoles herself for the lady's evident familiarity by the following reflection:—

> But I recover myself when I remember a fact that I have forgotten for the moment *she has a husband!* Blessed thought! It restores peace to my mind.
>
> Her fish has come out of the sea; she has hooked, devoured him; he purveys her with rich garments, with much store of worldly wealth, for which she requites him with frowns and sulks; but my fish is still in his native ocean. I have not even baited my hook yet. I may angle for a triton or a minnow, and catch—who knows?
>
> They are starting; I watch them jealously from behind the curtain, such a pair as limner might desire to paint or poet to immortalise in love-songs. The frown has gone from her brow, nay she smiles as she looks up at him. Yes, she is *very* handsome, I tell myself reluctantly.

The main thread of the story is the love of Hector Montagu for Diana, while she loves his younger brother Charles because he is "so beautiful," and therefore will have none of the elder and nobler, but sterner and less winning, of the two. In the beginning Charlie does not love her, though he makes love to her and "leads her on," by virtue of his proclivities which cause him to make love to every pretty woman with whom he comes in contact. As time goes on his simulated passion becomes a reality, and he breaks his promise to his brother not to try and win Diana, with that happy unconsciousness of a higher law and a purer morality which is characteristic of all the people in this book. When Hector becomes the baronet and owner of Alford Court, and finds that even now he can make no way with his charmer, he first of all tries drink and dissipation, then reads an old legend telling how a "sad knight" dies "for a woman's sake," underscores certain passages, wraps the book in paper, and directs the inner cover "For my sister-in-law if her name be Diana," the outer only "For my sister-in-law." After which he goes away and flings himself into the sea to save a boy who falls overboard, has cramp, and is drowned, "with the strange irony of Fate"—Mrs. Forrester is fond of capitals—going out of life "fighting his hardest to keep it when all these days and weeks past he had been longing for death,

and not knowing how or where to find it." Of course on this Diana marries Sir Charles, and "lives happy ever after," and the last page closes a story of mingled silliness and vulgarity such as we seldom have the ill fortune to read, or the disagreeable task of reviewing.

FRENCH LITERATURE.

M. MAXIME DU CAMP'S volume * leaves on the reader an impression of sadness in spite of the brilliant flashes of wit which appear in it from the first page to the last; for it is impossible to forget the fatal consequences of the revolution of 1848—a revolution accomplished by surprise, and the only result of which was to place the destinies of France for a short time in the hands of ambitious but incapable men. If ever any episode in the history of our neighbours was calculated to show the utterly mischievous character of the National Guard, it is certainly the narrative of the five months which ended in June 1848. The citizen-soldiers wanted to "give a lesson," as they said, to Louis-Philippe; but whilst the unfortunate King paid smartly for his extraordinary weakness, the lesson in his case was as transient as it was unprofitable, whereas the Paris *bourgeoisie* is still suffering under the effects of the reform banquets of 1848. We do not know what the admirers of MM. Louis Blanc, Ledru Rollin, Caussidière, and Odilon Barrot will think of the unceremonious way in which M. du Camp treats their idols; but we do not remember having ever read so curious and so bold a criticism on modern French revolutionists.

M. du Camp asks, by way of conclusion, whether it really was worth while making in February 1848 a revolution of which the necessary consequences were the riots of May 15 and of June 23, all for the sake of transforming M. Odilon Barrot into a Prime Minister. M. Barrot's own memoirs † supply a negative answer to this question; and it is some satisfaction to know that the politician who with Lamartine was chiefly concerned in the events of 1848 openly acknowledges his mistake. The introductory chapter of M. Odilon Barrot's third volume begins by stating that the new Republic could not live, because the vices of its organization were complicated by a series of imprudent and foolish acts; a declaration which implies the condemnation of M. Barrot's own conduct, and of all revolutionary Governments framed according to the same theory. The book now before us takes us from the election of Louis Napoleon as President of the Republic to the dismissal of the Liberal Cabinet in 1849; it includes, of course, a description of the *emeute* of June 13, and it is amusing to find the cause of order upheld by the very man whose whole career till then had been an apology for the revolution. M. Odilon Barrot does full justice to the efforts of the Constituent Assembly to correct and nullify the egregious blunders committed by the Provisional Government. So far, the Legislature which sprang into power after the downfall of Louis-Philippe deserves all praise; its mistakes began when it found itself face to face with a President whose ambition it suspected, and whose ulterior designs it dreaded. Cavaignac's loyalty was beyond doubt, and, besides, he had saved society from impending anarchy; accordingly the Assembly felt no scruple in giving up to him the power with which it was entrusted by the nation. Louis Napoleon, on the contrary, had the misfortune of arousing distrust in the minds of all true friends of liberty, and the Assembly, as M. Odilon Barrot remarks, stood in the position of an enemy who can only annoy, and whose ill-will is puerile because it is harmless.

M. Paul Allard is already favourably known by his translation of Messrs. Northcote and Brownlow's work on the catacombs of Rome. He now attempts to deal with the question of slavery ‡, and to show what was the share of Christianity in destroying one of the principal elements of heathen society. After the learned productions of MM. Wallon, Yanoski, Cochin, Möhler, and others, it might be thought that M. Allard's volume was hardly wanted; but we must not forget that a new historical school has sprung up in France, represented just now chiefly by M. Havet, which seeks to demonstrate that Christianity has really had very little, if anything, to do with civilization. In a solid work, betokening much careful reading and prefaced by a good introduction, M. Allard shows the fallacy of M. Havet's argument, and proves that the gradual abolition of serfdom is really due to the Church, and subsequently to the influence of Christian ideas leavening public opinion.

The readers of the *Revue des Deux Mondes* will not have forgotten M. Julian Klaczko's interesting articles published under the title *Deux Chanceliers*.§ Collected now in a handsome volume, these sketches will be favourably received as a valuable contribution to the history of modern politics. The complications which brought about the Franco-German war are intelligible to any one who has studied the careers of Prince Gortchakoff and Prince Bismarck, and accordingly the two parallel biographies written by M. Klaczko appeal with special force to the attention of French readers. The author takes in the first place a kind of retrospective view; he describes the family antecedents of the Russian and Prussian statesmen, and shows how they were led to play the important part which has been their share in the history of the nineteenth century. M. Klaczko says plainly in his preface that his readers must not expect from him anything *inédit*. The documents he quotes or summarizes have been long before the public, and his only duty has been to explain and comment on them. Anecdotes abound in this volume, which reminds us more than once of M. d'Ideville's *Souvenirs d'un diplomate*.

M. Mailfer undertakes * to defend democracy against the ultra-democrats, and to prove that what he describes as the transformist, dynamist, and evolutionist theories of the day are in flagrant contradiction to true republican principles. If mankind occupies no higher rank than the material creation, it follows that we are no longer responsible beings, and we fall under the empire of force. But the so-called dynamists, with a want of logic which is creditable to their better feelings, confess that man is endowed with the faculty of reason, for we could not otherwise penetrate into the regions of the unknowable; and, this concession once made, the notions of responsibility and liberty follow as a matter of course. The previous question being thus cleared up, M. Mailfer proceeds to show how the modern principle of democracy has affected the conditions of international law, and he discusses historically the views held by publicists and lawyers on the right of war, conquest, annexation, occupation, and colonization. As we have said, this book is written from the democratic point of view, but the postulate which M. Mailfer puts forth is one which politicians of every school must readily accept. The work is evidently the production of a scholar and an experienced political thinker.

Like M. Mailfer, the author of *La démocratie contemporaine* † is a decided Republican; he begins by saying that the theory of the *jus divinum* leads necessarily to that of "providential men," and is only fit for times of barbarism; he then takes for granted that the principle of equality is a direct result of the laws of nature, and that therefore forms of government are made for the people, and not *vice versâ*. It is not our business here to point out the flaws in M. Beaure's logic; we merely state the cardinal axiom from which are deduced all the applications contained in his volume. The various branches of the public service pass successively under review, and the last chapter is devoted to a brief survey of the present state and probable future of European nations. The picture here drawn will strike some of M. Beaure's readers as slightly fanciful, but the wonderful elasticity with which France has recovered her position so soon after the war may well call forth feelings of pride in the minds of Frenchmen.

The third volume of Messrs. Hachette's edition of Molière ‡ is now before us, containing *Les fâcheux*, *L'école des femmes*, with its accompanying *Critique*, and *L'impromptu de Versailles*. These three plays are certainly not among the best productions of the author, but they are historically most interesting. The *Fâcheux* is the first, chronologically speaking, of Molière's *comédies-ballets*, and we know, besides, that it was composed for the magnificent entertainment given to Louis XV. by Foucquet, and which led to the *surintendant's* disgrace. The *Ecole des femmes* marks another epoch in the author's life. It was the greatest success he ever obtained, and his enemies took the opportunity of showing their spite by a deluge of pamphlets, in which he was attacked, not only as a writer, but personally. The *Impromptu de Versailles* may be considered to be Molière's refutation of his accusers. He held them up to the ridicule of the Court, and Boursault, in particular, was treated with an amount of severity which was perfectly merited, although it went beyond the bounds of strict moderation. All these details of literary history, and many others, are fully given in the excellent introductions and notes with which M. Despois has illustrated the several comedies published in this volume.

It would be difficult perhaps to mention two poets more totally different from each other than Molière and Théophile Gautier.§ Both have shed upon French literature a lustre which will not perish; and, if the author of *Tartuffe* holds the first rank on the list of classical writers, the romantic school has not a more illustrious name to boast of than that of the genius who forty years ago gave us the *Comédie de la mort*. Up to the present time the poems of Théophile Gautier had never been carefully edited, and even now it seems that many of his lyrics, buried in the *feuilletons* of the Paris daily papers, or in the columns of reviews and magazines, have escaped the patient researches of the friend to whom we are indebted for the two volumes now before us. We heartily welcome this new and important addition to the *Bibliothèque Charpentier*. The first volume contains the poems published in 1830, the legend entitled "Albertus," and the fugitive pieces composed as late as 1838; in the second we find the *Comédie de la mort*, the posthumous works, and a certain number of lyrics which were found in manuscript amongst the author's papers. We can thus follow the entire development of Théophile Gautier's poetical genius, and study the character of that wonderful artist, who, notwithstanding his cynical pretensions, has given throughout his writings so many proofs of genuine feeling.

The notion of publishing a yearly handbook of the stage and of musical performances is not a new one, but it has never before

been carried out with the completeness which distinguishes M. Sarcey's volume.* Let no one imagine that a work of this kind is easily prepared, and that it requires nothing but the dull exactness of an almanac. If you wish to do more than give a dry nomenclature, you undertake the duties of the [illegible] and, as M. Sarcey remarks, a readable and impartial *pré* [illegible] the touchstone of an experienced writer. We have [illegible] Sarcey in connexion with the *Annales du théâtre*: but [illegible] no more correct to say that he acts only as the chaperon of MM. Edouard Noël and Edmond Stoullig; he is, however, responsible to a certain extent for the [illegible] dramatic [illegible] whom he introduces, and the collaborateurs [illegible] the volume, which exhausts the wide subject of drama and music for the year 1875.

The second volume of M. Daniel's *Année politique*† is in certain respects a decided improvement on the first; besides giving a very full and impartial sketch of the history of France during the last twelve months, it has allowed a larger space to State papers and other official documents, and it is completed by a table of synchronisms.

M. Louis Figuier's year-book‡ is also an old friend, and the information it supplies as to scientific discoveries, publications, inventions, &c., renders it very valuable. Many rival works have from time to time aimed at supplanting the *Année scientifique*; but none has succeeded. A glance at the contents of the volume for 1875 shows that in the various applications of natural philosophy and chemistry there has been no lack of useful activity during the last twelve months; the biographical notices, summaries of the meetings held by learned Societies with the table and alphabetical index, are, as usual, very correct and very complete.

Why should M. Ch. Desmaze take so desponding a view of the University of France, and pronounce, so to say, its funeral oration in his new volume?§ That the State should no longer claim a monopoly of teaching does not affect in the smallest degree the existence of our author's *alma parens*, and he ought to know that as late as the eighteenth century the various religious corporations, the Jesuits and the Oratorians, for instance, had schools over which the State had no control whatever. If the University of France is worthy of its fame, the competition of other educational centres will do it good instead of harm; and it seems to us singularly illogical that the most ardent friends of liberty on the other side of the Channel should be at the same time so eager to deny its application to intellectual training. Setting aside, however, all controversial topics, M. Desmaze's book may be usefully consulted as a work of reference; within the limits of three hundred and fifty pages it would have been impossible to give more than a few statistical details; and by suppressing a number of particulars referring to the polemics of the day, the author would have been able to present his readers with a still more satisfactory sketch than that which he now places before us.

M. Xavier Marmier‖ is so thoroughly experienced in the art of travelling that he speaks with authority when he discourses about foreign climes. The duodecimo which he has just published is a series of summaries of books of travel; but he is able to bring the result of his own experience either to confirm or to refute the assertions of tourists, and thus his criticisms have an exceptional value. In the last chapter, which touches more particularly on emigration, and in the introductory one, devoted to the question of colonies, he endeavours to point out how far the French share in the love of locomotion which is so general just now. Whatever may have been the *casanier* habits of our neighbours formerly, they are certainly much improved in that respect, for some of the ablest books recently issued from the Paris press are books of travel—witness M. de Carné's volume which M. Xavier Marmier reviews in this work; witness also the amusing description¶ of M. Meignan's overland journey from Paris to Pekin. China, let us add, is not the country respecting which M. Meignan gives us the most striking details; Siberia has chiefly attracted his notice, and he endeavours to rehabilitate in public opinion a country hitherto regarded as a kind of wilderness, on the threshold of which the famous *lasciate ogni speranza voi ch' entrate* might appropriately be engraved. If we may believe M. Meignan, Siberia is a thriving country, and its principal cities—Tomsk, for instance—are commercial centres capable of holding their own against the busiest emporiums of more civilized nations. The district of Transbaïkalia boasts of gold mines so abundant that, compared with it, California itself is an exhausted land, destined to be very speedily abandoned by the diggers. Of course between town and town there extends a large tract of desolate and uninhabited steppes; but as the Imperial agents are compelled in the discharge of their duties to travel on an average more than thirty thousand miles a year, there is an amount of activity which contrasts singularly with the ideas of exile, of stagnation, and of misery current in Western Europe with those who talk or write about Siberia. Then, as far as political offenders are concerned, it is no doubt extremely annoy[illegible] that you are not at liberty to leave the district assi[illegible] within those limits the persons consi[illegible] fullest liberty, and in Siberian society, which consists [illegible] of men of business, they are the literary, intellectual, an[illegible] element. M. Meignan is at any rate an amusing guide for the traveller who may feel disposed to face the asperities of the climate—and to spend forty consecuti[illegible] on the list of literary celebrities, and he has no pretensions to originality; but it is pleasant to hear what an accomplished scholar thinks about Lucretius and Rabelais, Bossuet and La Fontaine, and one is always sure of learning something in the society of the editor of the *Temps*. English readers who take up these *Études critiques*‡ will naturally turn to the chapters treating of the works with which they are most familiar, and the articles on Shakspeare, Milton, and Sterne will probably attract them in preference to those on Machiavel and Goethe, they will find in M. Schérer a critic who has thoroughly studied their national literature. Thus the various points of view from which Shakspeare has been appreciated in France and in Germany are well described, beginning with the comments of Lessing and of the romantic school, and ending with the biographical explanations of Professor Rümelin. Under the singular title *Le cabaret du Mouton Blanc*, M. Schérer has endeavoured to give a sketch of Boileau's friends, and to contribute a page to the gossiping history of the seventeenth century. Molière and La Fontaine were, as is well known, somewhat less regular in their everyday habits than in their compositions; but, on the other hand, Boileau and Racine are names which are commonly identified with decorum, method, and stiffness almost carried to excess. Our author shows that such a notion is untenable, and that if we wish to know Racine and Boileau thoroughly, we must watch them as they carouse together in the dingy taproom of the "Mouton Blanc."

It is impossible to analyse a volume of detached thoughts, and M. Agénor Gasparin's book falls under this category; but we can at least state the impression it has produced upon us, and as La Rochefoucauld's Maxims may be defined the code of selfishness, so the *Pensées de liberté*† are the outpourings of a mind in which Christianity and liberty have joined in a natural and happy union. Like his friend and fellow-religionist, M. de Pressensé, Count de Gasparin has always seemed to French Republicans a champion of freedom spoilt by Puritanism, a kind of Don Quixote in pursuit of an ideal which cannot be realized in this world. The fact is that he is guilty of telling Liberals that they are not always true to their principles, and of honestly pointing out the less admirable side of the French character.

M. Lavollée is not the first French writer‡ who has taken Channing as the subject of his studies. M. Laboulaye and M. de Rémusat had preceded him in composing biographical sketches of the American preacher and philanthropist. The difference between M. Lavollée and the writers we have just named is that he has undertaken to carry out a programme set by the Académie des Sciences morales et politiques, which invited a study of Channing's character, considered chiefly as an abolitionist and a friend of education. It is often said that the truths advocated and enforced by Channing are mere commonplaces; but, as M. Saint-Marc Girardin well remarks in his work on Rousseau, the notion of duty deserves that appellation more perhaps than any other, and yet would the greatest optimist be bold enough to say that it can ever be superfluous to enforce moral obligations? M. Lavollée's volume, completed as it is by translated extracts from Channing's works, deserves to be popular in France.

The novels of the past month are neither worse nor better than usual. M. Alphonse Daudet's *Contes du Lundi*§, pleasantly written, have no pretension to be more than simple sketches, where history and fancy, poetry and satire, hold equal places. M. Hector Malot's *Auberge du monde*‖, after having begun in a manner which promised well, has dragged its way through four distinct episodes, each of which is inferior to the previous one, the last, entitled *Thérèse*, ending amongst the horrors of the siege of Paris. George Sand's recent tales¶, without being in any way remarkable, still show that wonderful command of language which is unsurpassed by any French writer of fiction. The *Ménages militaires*** of Mme. de Chaudeneux** are interesting descriptions of a class of society very little known to most readers; it was rather dangerous, perhaps, to challenge a comparison with Alfred de Vigny's celebrated volume, but the author has, we think, made good her claims as an original and clever novelist.

THE BUDGET.

THE addition of a penny to the Income-tax, which is the only important part of the Budget, is unsatisfactory and disappointing. One of the effects of the change will be the revival of the agitation against the principle of the tax, which is only just when it is permanent and equable, and which is only tolerable when it is low. The present increase may perhaps continue for one or two years, and in that time it will have deranged the due proportion of burdens between earnings and incomes derived from property. The taxpayer whose income is worth five years' purchase will, if the additional penny is levied for a single year, have paid six or seven times his proper quota in comparison with a fundholder or landholder. After many years of controversy, economists, if not popular orators, are agreed on the proposition that a permanent and unvarying tax on income falls equally and justly on earnings and on property. Mr. HUBBARD, indeed, can never be convinced that it is not the business of financiers to readjust the relations of different classes of the community. Because a trader is less rich than a landowner of equal income, he asks the CHANCELLOR of the EXCHEQUER to redress the balance of fortune. An extension and logical application of the principle would lead to an equal division of property. If Sir S. NORTHCOTE had not added a penny to the tax, perhaps Mr. HUBBARD would not have taken occasion to propound his fanciful theory, nor would Mr. SAMPSON LLOYD'S constituents have already begun to agitate for a total abolition of the tax. The CHANCELLOR of the EXCHEQUER himself gave undue encouragement to the prejudices which it was his business to correct. Unfortunately, Chancellors of the Exchequer never allow five years to pass without some more or less capricious alteration of the rate. When Sir S. NORTHCOTE proposed his first Budget there seemed reason to hope that a sounder system was about to commence. It is to be regretted that he then disposed of a surplus of six millions, and that he now thinks it necessary to impose an increase of fifty per cent. on the burdens of the payer of Income-tax. It is true that there are strong objections to any plan of a temporary addition to indirect taxes. The derangement of trade which might result from an increase of the spirit duties would perhaps be more mischievous in practice than a change in the percentage of Income-tax. The necessity for an increased provision of revenue ought to be vigilantly watched when a Finance Minister can only choose between two inconvenient and objectionable taxes. It is now too late to object to former reductions of taxation which have for the present year created an estimated deficiency. It would perhaps have been prudent to establish the rule that in ordinary years there should be an estimated surplus of from one to two millions. The excess of receipts over payments would, under the provisions of the existing law, have been applied to the reduction of debt; and in unfavourable seasons the surplus would have operated as a reserve fund to render taxation equal and regular.

A small margin would have obviated the necessity of a change in the Income-tax percentage. The estimated deficiency was 774,000*l.*, or, after the abolition of a [illegible] tax on servants occasionally employed, it reached 800,000*l.* Of this amount no less than 570,000*l.* is required for the Sinking Fund instituted in 1875; while 150,000*l.* is provided for interest and Sinking Fund on the Suez Canal purchase. The CHANCELLOR of the EXCHEQUER expressed a decorous confidence that the Khedive will, in performance of his contract, pay the sum to the English Government; but it is thought expedient to provide against possible failure or delay. It unluckily happens that a new Post Office which will cost 100,000*l.* is urgently required at Manchester; and if these three items had been excluded from the Estimate the CHANCELLOR of the EXCHEQUER might without additional taxation have presented an equilibrium to Parliament. The ordinary growth of revenue has, as if for the purpose of justifying fresh taxation, been estimated at a sum far below the average increase. But for the Sinking Fund, it would have been possible to postpone changes for the present year; and probably they might at the end of the time not have been found necessary. Sir STAFFORD NORTHCOTE shares with the House of Commons, and especially with the members of the last Government, the responsibility of adopting and applying the modern doctrine that it is necessary to pay off or reduce the National Debt. If the principle is admitted, his machinery is simpler and more economical than Mr. GLADSTONE'S plan of disguising the process of payment; nor would it be possible to carry much further the system of Terminable Annuities, which are almost unsaleable in the open market. The present Budget will perhaps diminish the zeal which has been exhibited for the reduction of Debt. No financial skill or knowledge is required for the appreciation of a burdensome increase of taxation which is extracted from the pockets of the community to be invested at 3¼ per cent. There is much force in Sir S. NORTHCOTE'S appeal to the House of Commons not to abandon in the second year a great experiment which was initiated in accordance with popular or Parliamentary opinion; but there was no kind of necessity for providing any Sinking Fund beyond the current surpluses of prosperous years.

The poorer class of payers of Income-tax receive a bonus which will prevent them from joining in agitation against the increased percentage. The limit of exemption is raised from 100*l.* to 150*l.*, to the theoretical relief of artisans who never paid at all, and for the more substantial benefit of more needy and more solvent contributors. The return to Sir R. PEEL'S original limit is probably justifiable. Sir S. NORTHCOTE is the first to allow a large deduction on incomes of no less than 400*l.* Up to that amount the taxpayer will only be charged on the excess of his income over 120*l.* The recipient of 400*l.* a year will therefore, as Mr. LEWIS calculated, pay, at the rate of 3*d.* in the pound, only 3*s.* 4*d.* more than at the former percentage of 2*d.* Exemptions and reductions have certainly been now carried far enough, nor would it be prudent to approach more nearly to the vicious system of a graduated tax. It is not desirable that taxation and representation should be absolutely and finally dissociated. A penny in the pound during the last year produced 2,000,000*l.*, to be compared with 750,000*l.* received when the Income-tax was first imposed. The CHANCELLOR of the EXCHEQUER estimates the tax after the proposed exemptions at about 1,800,000*l.* for each penny, and he will probably find that the higher rate diminishes the proportional return. Between 1,400,000*l.* and 1,500,000*l.* will accrue during the financial year, leaving a surplus of more than 300,000*l.* There will as usual be supplementary estimates in the course of the Session, and probably the CHANCELLOR of the EXCHEQUER hopes to meet unforeseen demands by means of an elasticity of revenue which he has not professedly anticipated. The general fall in wages and the dulness of trade [illegible] their natural effect in diminishing the consumption

of beer, spirits, and tobacco. It is surprising that the receipts for Excise duties have not fallen off more considerably, while the Customs duties have increased. The productiveness of the Stamps may possibly be attributed to a casual increase of the Succession duties, but the revenue returns in general show that the national prosperity is not seriously impaired.

For the increased expenditure which renders new taxation necessary the CHANCELLOR of the EXCHEQUER is only responsible as a member of the Government. In adding to the pay of the army, and in providing for an additional outlay on the navy, the Ministers have acted in accordance with general opinion and feeling. The large increase which has taken place within two or three years in the Civil Service Estimates is, according to Sir S. NORTHCOTE, exclusively due to the growing demands for education and to the subsidies which have, at the instance of large majorities of the House of Commons, been granted in relief of local taxation. Experience sufficiently proves that the national expenditure has a tendency to become larger and larger. Prices have risen greatly, and the Government is the largest of consumers, while the sphere of its activity is constantly enlarging. Few members share Mr. RYLANDS's regret for the failure of Mr. COBDEN's favourite scheme of putting the Government on an allowance. Mr. PERCEVAL had anticipated the modern economist by attempting to conduct the Peninsular war at a fixed charge; but the result of the experiment was not encouraging. Private persons, who necessarily regulate their expenditure by their incomes, are compelled to dispense with many useful and agreeable things which money would purchase. There is no reason why the country at large should practise self-denial, except where the cost exceeds the advantage. Additional taxation will perhaps stimulate the virtue of frugality; but an unsatisfactory Budget teaches other things besides the expediency of checking the growth of Army and Navy Estimates. When the apparently irrepressible elasticity of the revenue is once more illustrated by a surplus, the Chancellor of the Exchequer of the day will do well to resist reductions of taxes to the whole extent of the disposable margin. It may be hoped that next year the fifty per cent. addition to the Income-tax may be repealed; but no other impost urgently requires either reduction or abolition. The natural growth of the public income ought to keep pace with the constant increase of expenditure.

MR. CAVE'S REPORT.

IF the object of Mr. CAVE's mission was to furnish the English public with a little trustworthy information about Egyptian finance that object has been attained. No reader, on laying down the Report, can say that he has not learned much about Egypt which he did not know before, or knew only in a vague and untrustworthy way. The general result may be stated as follows. Egypt owes seventy-five millions sterling, and has a reasonable prospect of being able to pay seven per cent. interest on the amount, and to provide a sinking fund by which in fifty years the debt would be paid off. The first questions that suggest themselves are, how does it happen that Egypt owes seventy-five millions sterling, and how can it be shown that interest on this amount could be provided? The answer to the first question is very simple. With the exception of the comparatively small sums raised by the KHEDIVE's predecessor, and by the present KHEDIVE to pay his predecessor's debts, the money borrowed has gone to help the Suez Canal. It is true that a sum so considerable as thirty millions sterling has been laid out by the KHEDIVE on other public works. In railways alone he has spent thirteen or fourteen millions, and he has got 1,210 miles of railway actually at work. But the excess of revenue over expenditure has been sufficient to provide the money. It was mainly the Suez Canal that made him a borrower, although perhaps some of the premature schemes on which he entered for improving his estates helped to swell the amount borrowed. The loans have produced much less than the nominal amount borrowed, and the interest and redemption of the loans have had to be met by fresh borrowings. When this process is carried on for a series of years at a charge never less than twelve per cent., it is easy to see how the cash which the KHEDIVE has had for the purposes of the Suez Canal has been very much less than the nominal amount of his indebtedness would suggest. At the same time it must not be supposed that, if the Suez Canal had not been made, the KHEDIVE could have done all the other things he has done and yet kept clear of debt. In seven years, from 1864 to 1871, the revenue increased fifty per cent., and a large part of this increase must be put down to the stimulus given to Egyptian trade by the construction of the Canal. However, as time went on, the financial difficulties of the KHEDIVE went on increasing, as the difficulties of every one increase who meets the requirements of old loans by borrowing again. In 1873 a great effort was made to put things straight once for all, and a gigantic loan for thirty-two millions sterling was launched. But he had got into the webs of the spoilers. The loan was not a success, and the demands of financiers were very heavy. The KHEDIVE found himself a debtor, and went on from hand to mouth, borrowing at any rate demanded by any one who would lend him the money. Last autumn bankruptcy stared him in the face, and was only averted by the sudden purchase of the Canal shares. Four millions, however, was far too small a sum to put him anything like straight. He still has a floating debt of twenty-one millions, or rather this was what he owed when Mr. CAVE made up his figures. As it is said that he is paying twenty per cent. for some of the money he owes, even a week makes a considerable variation in the real figure.

The statistics by which Mr. CAVE shows what Egypt can do to meet its liabilities are made somewhat complicated by an arrangement entered into by the KHEDIVE for the conversion of half the Land-tax. The redemption of this half is purchased by instalments extending over fourteen years. When these instalments are all paid, the revenue will be diminished not only by their discontinuance, but by the permanent reduction of the Land-tax. Whilst they go on they serve to pay off two loans of short dates not included in the seventy-five millions. But, taking into account the natural growth of the revenue, Mr. CAVE is still able to show that the interest which he proposes should be paid on the debt might be provided for. The result is so much more important than the steps by which it is reached that it is unnecessary to go into details. But what is most necessary to notice is the assumption which evidently possessed Mr. CAVE's mind during the whole of his stay in Egypt. His whole Report is framed on the supposition that Egypt would somehow be treated for the future like a native Indian State. He does not say this in so many words; but he continually points out that what is really wanted in Egypt is the presence of a body of officials like those who administer affairs in India. He has before his mind the vision of a trustworthy, omnipotent staff of persons exactly suited to the task, who should not only see to the application of the revenue, but who should keep the native officials in strict subordination, should ascertain that even the humblest labourers were protected from extortion, and should take care that the KHEDIVE did not exceed the handsome allowance that would be made him for the ornamental purposes of State. There is not the slightest value in Mr. CAVE's figures or calculations unless his fundamental hypothesis be granted him. What his mission may really have been no one unacquainted with the secrets of the Cabinet can undertake to say. But there cannot be the slightest doubt what Mr. CAVE himself conceived to be the nature of his mission. He had only one thought, and that was to make it clear to himself whether, if Egypt were placed under an English protectorate, it could be made to pay its way. As his figures gradually unfolded themselves before him he had the satisfaction of ascertaining that this could be done. The bondholders would have had to make a slight nominal sacrifice, for the date of the redemption of their bonds would be postponed. But Mr. CAVE rightly judged that they would readily sanction an operation by which the market value of their bonds would be at once raised to par; and that he assumed that the market value actually would be so raised is evident, as he sees no difficulty in paying off the twenty-one millions now owing in cash by the issue of new bonds to the same amount. There is no reason to doubt the correctness of Mr. CAVE's views on this head. Seven per cent. interest would be a very sufficient inducement to capitalists if the receipt of the stipulated sum were ensured by the establishment of an English Protectorate. It thus appears that Sir STAFFORD NORTHCOTE did not at all go beyond the truth when he said that Mr. CAVE's Report showed that, under good management, Egypt could pay its way. The only

thing he forgot to add was that by good management was meant the exclusive management of all Egyptian affairs by English officials, with recognized indisputable authority. What he said was quite correct; but then what he omitted to say was equally important, and this omission was no doubt the innocent cause of very considerable perturbation and confusion on the Stock Exchange.

Without the effectual aid of a foreign Power Egypt is, on Mr. CAVE'S showing, hopelessly and unavoidably bankrupt. She owes twenty-one millions plus the accumulations since Mr. CAVE framed his Report, and cannot possibly get the money to pay them. The question of the moment is whether any Power will come to her aid. Our Ministry has, we may suppose, at last made up its mind, and will stand aloof. The grand visions which floated before the mind of Mr. CAVE, and perhaps of those higher still whose ideas Mr. CAVE at least fancied he was reproducing, have died away before the common sense of the ordinary English world. It remains to be seen whether France will take the place which England has left vacant. It may seem surprising that the notion of so hazardous an undertaking should be entertained for a moment by the French Government. But very great pressure is brought to bear on it. A serious financial crisis in France is apprehended if aid is withheld. The French are the great holders of Egyptian stocks; the recent purchases of those stocks have been made almost entirely on French account; and the bankruptcy of Egypt would involve the bankruptcy of many French societies of great standing, and the ruin or distress of thousands of French families. The Government, which has by no means a secure or comfortable position in the present state of French politics, may naturally be dismayed at the thought of having to face the catastrophe of a great financial panic, for which the unreflecting indignation of sufferers would hold it, however unjustly, accountable. Nor is the pressure put on the Government a merely financial one. Political feelings intervene. There is an anxiety, as to the depth and extent of which Englishmen cannot pretend to judge, that France should seize the opportunity of showing that she is not to be ousted from her supremacy in a country which for eighty years she has considered as her own special dependency. The feeling to which M. DE LESSEPS so successfully appealed when he wished to get the original capital for the Canal subscribed still survives; and the triumph of eclipsing England in the East would be sweet to many patriotic Frenchmen. The real difficulty is, that to do a little would be almost the same as to do nothing. Egypt would be no further forward if a few millions were got together with immense difficulty and at an immense cost, and the bulk of the floating debt left unpaid. The only effectual course is to give investors the guarantee of the administration of Egypt being altogether under French direction. The French Government must either take over Mr. CAVE'S Report with its engagements, or have nothing to do with the risks of the Egyptian racecourse. To buy the protectorate of Egypt is a very big and serious thing, even for a country with money and spirit like France. Nor is it quite certain that the KHEDIVE would prefer a protectorate to bankruptcy. It is a choice of evils, and he may think a protectorate the greater evil of the two.

THE LORDS AND THE ROYAL TITLES BILL.

ALL that could be said for the unhappy Royal Titles Bill was said by the LORD CHANCELLOR. His mission was to make things pleasant. He endeavoured to show, and, so far as an amiable sort of special pleading could show it, he did show, that it was the title of Queen that would reflect glory on the Empress, and not the other way. Emperors and Empresses are poor creatures, but necessary after their sort; but now they may hold up their heads, for Queen VICTORIA has condescended to join their humble throng. For the Oriental world the CHANCELLOR spoke in a vein of Oriental imagery. The natives are invited to take notice that a beneficent lustre is going to be poured over their Sovereign. The QUEEN will, as it were, irradiate the Empress for their benefit. And every precaution will be taken that the irradiating process does not act in the wrong way. The LORD CHANCELLOR expressly announced that in all writs, commissions, patents, and charters intended to operate within the United Kingdom the Royal style is to continue as it is, without any addition. This is really what the Opposition has gained by its long and apparently fruitless struggle. Nor is the gain at all to be despised. The introduction of the title of Empress under protest will be a very different thing from what its introduction without protest would have been. A danger has been run which the Ministry, with a little tact and good sense, might have easily avoided altogether. But no one can fairly say that there will not be some safeguard in the public recognition by the Ministry that "Empress" is a word alien to the traditions, and one that ought to be always alien to the feelings, of Englishmen. It is conceded that this objectionable word is never to appear in any writ, commission, or patent operating in territory where the higher title of Queen is held sacred; that people who calculate in rupees may have a title for the Sovereign which at least one Commissioner, one almanac-maker, and the compiler of a school-book have offered them already, but that we, with our different habits, may keep to the title to which for a thousand years England has been accustomed. Things no doubt look a little brighter than they did. Very much, no doubt, depends on the course taken by those in high authority when the change of title first comes into operation. The Proclamation itself may offer an occasion for a good start, and it may safely be conjectured that the Proclamation will be framed with much more care and much more sensitiveness to criticism than if Parliament had not spent so much time in discussing the mischiefs of domestic Imperialism. But it will be in little things and by slight signs that those who can give a salutary direction to effusive loyalty will find their influence for good greatest. If it is but once known that the QUEEN is very much prouder of being Queen of England than Empress of India, and has taken to heart what may be termed the beneficent-lustre theory of her CHANCELLOR, courtiers will be awed into decency, and even illumination-makers into something like sense. The CHANCELLOR himself might do much to help. If, when a Lord Mayor spoke of an Empress in his presence, he would but look as grave and shocked as if an oath had interrupted the flow of ordinary discourse, the delinquent would despair of any beneficent lustre ever irradiating his humble head. The language of the Ministry in the earlier debates was like its language about the cattle plague before Mr. REED resigned. The language of the CHANCELLOR last Monday was like the language of the Ministry about the cattle plague after Mr. REED resigned. There is a firmness and heartiness in the present dislike of the Cabinet to sick cows which is supposed to be very comforting to farmers; and the public that dislikes Imperialism may now perhaps hope that its position will not be much worse than that of those for whom Mr. REED sacrificed himself with so much glory and success.

Lord SELBORNE followed the CHANCELLOR and did all that skill in advocacy could do to establish the proposition that even for India Empress is the wrong title and Queen the right one. He naturally noticed that the CHANCELLOR had been far too cautious to repeat Mr. DISRAELI'S astonishing argument for the new title, that it was a cheap way of defending ourselves against Russia. Lord CAIRNS is not the sort of person to pick up a hot coal because a rash friend has dropped it in his way. Lord SELBORNE also took a curious legal point, and suggested that, if the promise of the Ministry should be carried out, and writs run as heretofore after the title of Empress has been assumed, the Courts might hold them bad on the authority of a case in the time of CHARLES II., where a writ was held bad because it did not set out that the KING was King of Scotland. But all this was only the garnishing of Lord SELBORNE'S main argument. He contended that "Emperor" was in itself inappropriate; for, properly speaking, an Emperor meant an elective military chief, and scarcely ever implied a ruler of rulers. Of no country can it now be said that the Emperor is a ruler of rulers except Germany; and although it is not implied in the title of King that he is a ruler of rulers, yet the history of France shows that such a position is quite consistent with the title of King. This appears to us to be riding the antiquarian hobby rather too hard. We cannot go back to CESAR or the early CAPETS; we must take the words as used now. If it were perfectly certain that we in England should know nothing of the new title, and that it would never in the least degree affect our language or ideas, and if the bare question had to be resolved whether Empress or Queen was, if tried by the standard of modern usage, the most appropriate title for the Sovereign of India, we believe that ninety-nine out of every hundred impartial men of any nation in Europe would at once say "Empress."

If nothing were at issue but a mere verbal nicety, if we were in the position of little boys making Latin verses, and had to look out in the Gradus and choose between two epithets, the choice of Empress seems a better choice than that of Queen. It is precisely because we are not dealing with a verbal nicety affecting India, but with a question of what may be very practical policy affecting England, that we regret the decision of the Ministry. Empress is a word slightly more accurate than Queen as describing a ruler of rulers in India. But it also happens to be a word which, from a combination of causes, is a very bad word for the Sovereign in England. Again we go to modern usage, and we find the recent history of the word vulgarized by association with upstart rulers, and with the pretensions of rulers who affect to be greater rulers than Kings. Therefore, as the Ministry, making its final utterance through the CHANCELLOR, owns that it is not a fit word for the Sovereign of England, the only question is whether it was of any use, for the sake of a mere verbal nicety, to run the risk of this inappropriate word being used here.

As to India, who can doubt that Lord LAWRENCE spoke a piece of plain undeniable truth when he said that the natives would like the QUEEN to assume a new title, but would be absolutely indifferent as to whether the particular title chosen was Queen or Empress of India? The whole question is non-existent to them except to the handful that may read or hear something of what has been said in Parliament. The title, to have any meaning for the mass, must be in an Oriental language, and this Oriental title they will get anyhow. A few, a very few, will have a dim idea of the arguments for and against "Empress" that have been used here. They will learn that some great Englishmen said that the word Empress was a grand word; and possibly some Oriental expressions may be found adequate to reproduce the magniloquence of Lord CARNARVON, who said that he claimed the word Empress as the "record of "that triumphant power which is the result of a long "emblazonment of historic successes." Lord CARNARVON has too refined a taste to believe that this is English, but he was probably translating back from what he thought would be the Hindustani for what he meant to say. The natives will further hear that other great Englishmen say that Empress is a bad, objectionable word, and they will learn that the inventors of the title agree so far in this opinion that they have undertaken to keep the word as far as possible out of English use. Lastly, it is to be hoped that they may get to understand the beautiful theory of the CHANCELLOR. The more educated natives are fond of studying systems of philosophy, and their knowledge, which, if shallow, is extensive, will suffice to suggest to them that the history of philosophy [illegible] where it started. There is a system started. There is a diametrically opposite system which reconciliates and blends the two, and makes the perfect ball again. Such a theory of reconciliation has been suggested by the fertile brain of Lord CAIRNS. Standing alone, there would not be much to be said for it. But it will not stand alone. Queen will [illegible] before it, and Queen will irradiate it with its benevolent lustre over it, make it sweet, bright, and good. If the word does not thrill Baboos with delight, we may be sure that nothing Englishmen could think of would do it.

TURKEY AND RUSSIA.

MANY weeks have passed since the acceptance by the Porte of the Austrian Note; but the prospects of the pacification of Herzegovina are still obscure. One or two skirmishes of more or less importance have since occurred, with results which seem, on a comparison of doubtful evidence, to have been favourable to the insurgents. The loud declarations of the chiefs that they would listen to no overtures of peace were of course not to be accepted as final. General RODICH is still holding interviews with representatives of the insurgents; and the Prince of MONTENEGRO has, for the purpose of facilitating negotiations, agreed to victual a Turkish fort from day to day. The Turkish generals and the insurgent leaders refuse to hold communication with one another for the purpose of arranging an armistice; but in the meantime both parties keep within their own lines, so that a truce practically exists. It is impossible to trust the reports which are freely circulated by all parties to the dispute, and by strangers. The Slavonic imagination is fertile of inventions. According to one account the Prince of MONTENEGRO considers war inevitable; but it is also stated that he expects an accession of territory as a reward for his neutrality. The Servians, who are at the same time arming and assuring the Austrian Government that they have no warlike intentions, are, perhaps not without good reason, jealous of Montenegro. Probably all the petty States and divided factions are waiting to ascertain the policy of the Great Powers before they determine to gratify the hostility to Turkey which they all feel in common. A powerful section of politicians at Constantinople would welcome an immediate rupture both with Servia and Montenegro, in the confidence that neither a single Principality nor [illegible] united could withstand the power of the Porte, both financial difficulties which impede at every point the [illegible] of the Government are not fully appreciated by its advisers.

The insurrection has in some degree justified its long continuance. Nine months ago it seemed [illegible] possible that the insurgents could offer effective resistance to the Turkish armies; but the dilatory and feeble manner in which the contest has been conducted has [illegible] unexpected weakness on the part of the [illegible] unexpected collapse of the Turkish Empire [illegible] Government. The period has hitherto been assigned [illegible] has long been predicted to an indefinitely future period. The more sanguine [illegible] now persuaded themselves that [illegible] of the insurgents have has already commenced. [illegible] process of dissolution which perhaps coincided [illegible] confession of insolvency, rection, has encouraged only by accident with the insurthe hardships which have been suffered by the Turkish forces, though they are probably results of habitual faults of administration, are attributed to the financial difficulties of the Government. Up to the present time the insurgents have not had to encounter on a large scale the opposition which may perhaps prove to be more formidable than the operations of the regular troops. The Government has succeeded in restraining the Mahometan population of the insurgent provinces from active participation in the struggle. Some acts of violence may have resulted from local animosity, but the struggle has not generally assumed the form of a civil war conducted in every village and district by two hostile sections of the community. Western philanthropists have undervalued the difficulty of expelling or exterminating one-third of the inhabitants of Herzegovina, including the owners of the greater part of the land. It is probable that if the attempt were made the Mahometans of the neighbouring provinces would anticipate the attack which would afterwards be made upon themselves. Invading hordes which have been settled in a country for hundreds of years are not likely to evacuate their possessions without resistance, and it happens that the Mahometans of Bosnia and Herzegovina are not less ancient denizens of the country than the Christians.

If the accounts of the able *Times'* Correspondent may be trusted, notwithstanding his strong and undisguised partiship, the conference between the Turkish representatisand Baron RODICH at Ragusa is not likely to lead to tives agreement. The alternative proposals of arming the any settlement or of disarming the Mussulmans of Herzegovina Christians are summarily rejected by the agents of the Porte; nor is that [illegible] invited to return to their [illegible] safety of refugees from a well-known friend of the insurgents. It is possible that [illegible] may have been [illegible] improbability in a statement which [illegible] finally withheld [illegible] and indifference to officials serving under the [illegible] but there is no vernment. One of their number, though he is a Christian of intelligence and experience, is said to be not less unreasonable than his Mahometan colleague.

All speculations on the issue of the insurrection must be dependent on the maintenance or dissolution of the boasted alliance of the three Imperial Courts. From the commencement of the troubles in Herzegovina the Russian Government ostentatiously allowed the initiative in diplomacy to Austria, as the Power most immediately concerned in the restoration of tranquillity. The task of drawing up the Note or statement of the terms to be imposed on the Porte was entrusted to Count ANDRASSY; and the document, after it had been approved by Germany and Russia, was tendered jointly by the three Governments for the approval of England, France, and Italy. General IGNATIEFF has

supported at Constantinople all the proposals of Austria, with the professed intention of asserting the sovereignty of the Porte. Nevertheless, within a few weeks an entire change has taken place in the language of the Russian journals which are controlled or inspired by the Government. The influence of a press which has no liberty is frequently mischievous, and its tone is habitually perplexing. When half a dozen semi-official papers at St. Petersburg and Moscow suddenly advocate a new line of policy, it may be inferred, not necessarily that the Government has changed its purpose, but that it is thought expedient to disturb the impressions which had previously existed. The Russian press has now renewed its chronic antagonism to Turkey; and it encourages Servia and Montenegro to take the aggressive course which they had hitherto been forbidden by the Russian Government to adopt. It is no longer thought expedient to insist on the necessity of maintaining the triple alliance; and Austria as well as Turkey is held up as an object of national jealousy. It is worth while to observe that England is simultaneously threatened with Russian aggression in Asia. One journal announces the necessity of an advance towards the Persian Gulf, and informs the English nation that, if it objects, it must take the consequences.

The intimation of a change in Russian policy is thought to confirm a rumour that the Emperor of RUSSIA meditates either temporary or final retirement from the anxieties and labours of government. ALEXANDER II., although the boundaries of the Empire have been widely extended during his reign, is believed on ordinary occasions to favour a prudent and moderate policy, and to regard war with aversion. He is also strongly attached, both from reasons of State and through family feeling, to the German alliance; and in later years he has renewed friendly relations with Austria. In his absence, or after his abdication, supreme power would devolve on his son; and it is thought that the CZAREWITCH belongs to the Old Russian party, and shares its dislike of the Germans as well as its ambitious aspirations. His supposed sympathy with the wrongs of Denmark, which is attributed to the influence of his wife, is probably not beyond his control; but there is no doubt that the national or exclusively Russian party is also the most turbulent and aggressive in foreign policy. In a readjustment of international relations a Russian Emperor might perhaps be disposed to prefer the alliance of France to that of Germany; and he would necessarily pursue objects which would be inconsistent with the interests of Austria. The coldness which existed between Vienna and St. Petersburg for many years after the Crimean War was but a continuance of the personal animosity with which both ALEXANDER I. and NICHOLAS had constantly regarded METTERNICH. The temper and inclination of an absolute Sovereign are to be taken into account in the calculation of political probabilities, but the apprehensions or hopes which are founded on the opinions of the CZAREWITCH are premature, and perhaps chimerical. It is not yet certain that the Emperor ALEXANDER intends to abdicate, and it is scarcely probable that a Regent would, during his temporary withdrawal, venture on the introduction of a new and dangerous system of policy. The difficulties which have hitherto impeded the ambitious projects of Russia still remain. Austria will long bar the way to Constantinople, and on this point Hungary is even more thoroughly in earnest than the Western portion of the monarchy. War on the Eastern question would not have been so long postponed if the conquest of Turkey had been an easy undertaking.

STATE SUPERVISION OF CONVENTS.

OF all the fanciful measures which are annually or periodically proposed by private members, the Bills for the supervision of convents are the oddest. Sir THOMAS CHAMBERS has for the present year undertaken the task which was formerly wont to devolve on Mr. NEWDEGATE. Perhaps the mover may by this time be convinced that a No-Popery agitation is no longer practicable in England. The alarmists who are troubled by the existence of convents persuade themselves that they are exempt from religious prejudice, or even that they feel a meritorious sympathy for victims who hold a creed which they detest. It would be pleasanter for themselves, and less troublesome to others, if they would reflect that the miserable condition of recluses is a just punishment for their superstitious errors. The Roman Catholics, on the other hand, decline to ask protection for their sisters and daughters against evils which, if they exist, have been voluntarily encountered. The preamble of Sir T. CHAMBERS's Bill recites the expediency of inquiry respecting the increase and character of monastic and conventual institutions in Great Britain, and respecting their property and income, and matters connected therewith. A Committee which sat a few years ago collected ample information on all the points with which Parliament can be supposed to have any concern; and it was stated more than once during the debate that a Catholic Directory containing a complete list of convents may be bought for a shilling. There are a few establishments of monks, and several of nuns, and the collective property of all the communities is insignificant. The Commissioners who were to be appointed by the Bill were, amongst other matters, to ascertain whether the laws of mortmain or superstitious uses were violated. They would have found, as Sir T. CHAMBERS must know, that conventual property is carefully secured by trust-deeds drawn by experienced lawyers according to the best precedents of conveyancing. Another duty of the Commissioners would have been to report on any regulations which might be needed respecting convents in Great Britain. If justices or Commissioners were empowered to hold visitations of convents for the protection of the inmates, it would become a point of honour with the most contumacious nun to give no information to the heretical intruders. It is highly probable that a peevish or tyrannical Superior may make those who are under her control extremely uncomfortable; but interference from without would be as unanimously resented as in a private family.

The Government had, with superfluous courtesy, granted papers in preparation for Sir T. CHAMBERS's Bill, consisting principally of letters from English Ministers abroad in answer to communications from the Foreign Office. The various Governments to which they are accredited, with only one or two exceptions, inform them that there have been no recent regulations or laws affecting monastic or conventual institutions. The Duchy of Hesse and two of the Swiss Cantons have suppressed convents, or have forbidden them to receive new members. The Minister at Rome reminds Lord DERBY that all institutions of the kind have been suppressed in Italy; and the Minister at Stockholm reports, not for the first time, that monastic institutions are not tolerated in Sweden and Norway. It is difficult to understand the object of printing several pages of familiar or useless information. If all the States of Europe prohibited monastic institutions, it would still be inconsistent with the principles of English legislation to interfere with the establishment of voluntary clubs. It may probably have been necessary in Italy and in some other Catholic countries to dissolve associations which were pernicious to society or hostile to the Government. It was not for the protection of nuns supposed to be arbitrarily imprisoned, but for urgent political reasons, that the Italian Parliament seized the property of the numerous orders. The prohibition of monastic institutions in Sweden and Norway, where there is scarcely any Roman Catholic population, is an historical relic of ancient religious jealousies. When Lutheranism was established as the only authorized communion in Sweden, the legislators of the time would not have professed the tolerance of Sir T. CHAMBERS or Mr. NEWDEGATE. It is because Governments have wanted money, or because they have apprehended danger, that they have discouraged monastic communities. English nunneries have small endowments, and they are absolutely devoid of political importance. It is intelligible that they should be regarded with disapproval and dislike; but it is the idlest of affectations to cultivate officious solicitude for the welfare of the inmates.

The attempts which have sometimes been made to interfere with monastic or semi-monastic institutions in Ireland have not furnished encouraging precedents. The principles and traditions of English government and legislation are inconsistent with a censorial supervision of religious or secular associations. Trade-Unions, which are far more powerful bodies than monasteries, are at last recognized as legitimate associations, and even indulged with special immunities. All the monastic and conventual institutions in Great Britain, if they were to concentrate their energies on a common object, could effect nothing approaching in importance to a week's strike of colliers or engineers. The coercion exercised by Trade Councils over

the members of the Unions is more stringent than that of an abbess over her nuns; but in both cases the submission is in one sense voluntary, and in the case of convents it is absolutely spontaneous. It is scarcely respectful to the House of Commons to found a demand for legislation on vague rumours of acts of personal violence or restraint of liberty, which, if they could be proved, would admit of remedy without any change in the law. If men or women think fit to subject themselves to a despotic government, they run a certain risk of ill-treatment; but all that can be asked on their behalf is that their contract and its consequences should not be recognized by law. A few seceders from religious orders find that their liberty is sufficiently protected, though they may probably incur social penalties by the assertion of their independence. To women especially the disapproval of religious teachers and of their own families would be more formidable than the fabulous cruelties which once formed the subject of popular calumnies. The public opinion of a sect is, within its own limits, almost irresistible. The theory that the obligation of monastic vows depends upon material force is the shallowest of delusions. Monks and nuns observe their respective rules, either because they think them binding on their consciences, or in deference to the conventional belief of their religious communion. If they chose to leave the cloister the doors would be open, but no law can prevent ecclesiastical or social excommunication.

The unconscious prejudice against Roman Catholic doctrines which suggests an anxiety for the protection of the inmates of convents finds expression in some of the provisions of the Bill which is for the present happily disposed of. Sir T. CHAMBERS proposed that seven Commissioners should be permanently charged with the superintendence of monastic and conventual institutions. Two of the number were to be appointed by the Roman Catholic Poor Schools Committee, a body unknown to the law, which would certainly have refused to co-operate with heretical persecutors of religious orders. A stranger provision was that one member of the inspecting body should be nominated by the Commissioners in Lunacy. It is evident that the framers of the measure thought that persons bound by religious vows were entitled to the same protection which is provided for those who are confined on the grounds of alleged lunacy. They might at least have remembered that both real and alleged lunatics are always eager to escape from confinement, while the members of religious orders would unanimously reject an official order of liberation. In a lawsuit which attracted popular attention some years ago, a nun sued the community from which she had been removed for restitution of conventual rights. The Convents Commission was to have all the powers of the Superior Courts in England or Scotland, and all constables and keepers of prisons were to obey the orders of the Commissioners. It might perhaps have been possible to pass such an Act during the craze of the Papal Aggression, but Sir T. CHAMBERS comes too late. The country has already refused to share Mr. GLADSTONE's fright at the more recent pretensions of the POPE; and, although conventual institutions are repugnant to the national judgment and taste, they are regarded with equanimity or contemptuous indifference. Persecution is not necessarily inoperative; but any persecution which is possible in England would be frivolous as well as oppressive. It would be practically impossible to prevent a number of unmarried women from living in one house, or from abstaining from all intercourse with the rest of the world. The regulations to which they may submit depend entirely on their own choice; and if they think fit to starve or otherwise incommode themselves, no Commissioners can effectually insist on their leading a comfortable and rational life.

FRANCE.

THE election of M. GAMBETTA as Chairman of the Budget Committee is a significant indication of his position in the Chamber of Deputies as compared with his position in the Assembly. Even in the latter body he exercised a great though scarcely recognized influence; but it was rather in virtue of the strength which it was thought he might possess out of doors than from the votes he could command on a division. In the Assembly he was a person outside the Parliamentary system; in the new Chamber he is one of the most important members of that system. He is more and more becoming the recognized leader of the Liberal Opposition, but the divergence between his views and those of the Government is not wide enough to prevent him from giving them a general support. It is already evident that the necessity of securing this support is constantly present to them as an essential element in their calculations. His speech, on taking the chair for the first time, is another proof that the elections have gone precisely in the way in which it all along seemed likely that they would go. In the Assembly M. GAMBETTA had to remember that, though the declared Irreconcilables were few in number, the issue between his policy and theirs had not been fairly presented to the Republican party. Now that the elections have proved that the Irreconcilable minority is as small in the country as it was in the Assembly, M. GAMBETTA speaks with a decision which is necessarily wanting to a man who cannot convey to others the assurance which he feels himself. France, he declares, has at the present moment a wise, orderly, and progressive Republic, which gives security to all legitimate interests, and offers guarantees of liberty which only disorderly spirits can think insufficient. There is no further place for constitutional conflicts; the anxieties and the labours of the Legislature must in future be devoted to the development of the material and moral interests of the nation. M. GAMBETTA could not have more completely dissociated himself from the extreme members of his own party, and he has been enabled to do this by the change which the elections have worked in the composition of that party. In the Assembly there were moderate Republicans who did not, and extreme Republicans who did, recognize M. GAMBETTA as their leader. With the first he had nothing to do; with the last his chief concern was to prevent them from breaking out into open mutiny. In the new Chamber there are moderate Republicans who find their theories of moderation best expressed by M. GAMBETTA, and he is thus enabled to keep under better control the mutinous element among his old followers. His policy from 1873 to 1876 was a prolonged appeal from the Assembly to the constituencies, and the constituencies have answered it by electing a Chamber in which M. GAMBETTA is able to lay aside a militant policy and devote himself to financial details. The rest of his speech was apparently intended to lay to rest the alarm which might be excited by the election of an advocate of an Income-tax as Chairman of the Budget Committee. M. GAMBETTA is not of opinion that the present is the right moment for startling financial changes. In these matters there should be no rash experiments. Time and opinion cannot be hurried: they must be left to ripen of themselves.

The only field in which M. GAMBETTA does not feel disposed to maintain this studied moderation is in ecclesiastical affairs. The mere thought of half-a-dozen bishops collected together in one room seems to be too much for him. The bishops who founded the Catholic University of Paris under the law of last Session have lately held the annual meeting prescribed by the statutes of the University, and a note in the *Union* gives a summary of their labours. They have attended to the ordinary business of the University, including the organization of the three faculties of Arts, Law, and Science. They have gone over the University accounts, and they have created two new professorships. Finding themselves together, they have naturally considered the probable effect of M. WADDINGTON's Bill on the future of the free Universities. They have communicated to one another the astonishment and regret with which the news that the mixed Board of Examiners is to be abolished has been received by the fathers of families in their several dioceses, and the Cardinal Archbishops of ROUEN and PARIS have undertaken to convey to the Government the sentiments of their brethren in prospect of this unexpected attack on a law so recently voted, and on the faith of which so much has been undertaken. It is difficult to imagine a milder remonstrance, considering that it comes from a body which has been collecting large sums of money for the foundation of a Catholic University, and now believes that the object of founding it will in a great measure be defeated by this sudden reversal of the legislation of last year. Of course it by no means follows that the Government ought to pay any attention to their representations. Those who took what they could get from the late Assembly took it in the full knowledge that the Assembly did not represent any opinions but its own, and that, if they chose to invest money in carrying out powers given by it, they made

the investments at their own risk. But unlucky investors are usually allowed to make their lamentations in company, and the privilege which is freely granted to Turkish bondholders might, one would think, have been conceded with equal justice to the directors of a Catholic University. M. GAMBETTA, so far as his views are to be gathered from the journal which is regarded as his organ, is not of this opinion. The bishops, the *République Française* has discovered, cannot legally be absent from their dioceses without the leave of the chief of the State. By meeting to protest against M. WADDINGTON'S Bill, they have brought themselves under the law which prescribes that no national or metropolitan council, no diocesan synod, and no deliberative assembly shall be held without the express consent of the Government. In originating an agitation against a proposed act of legislation they have further violated the article of the Concordat which obliges all bishops to swear that they will not take part in any association which is directed against the public peace. To the first of these charges it has been answered very truly that, inasmuch as the law now allows bishops to set up Universities of their own, that permission must be held to carry with it the permission to meet together for the transaction of University business, and so far, therefore, the law prohibiting the holding of synods or deliberative assemblies has been repealed. As regards the second, it is true that there is a law, dating from the revolutionary period, that no bishop may go outside his diocese without leave. But this same law forbids bishops to be addressed as Monseigneur, and makes it illegal for a priest to wear the ecclesiastical habit in the street. If, therefore, the legislation of the year X. is to determine the present relations of the Government with the clergy, it will not be sufficient to confine each bishop in his own separate cage. Other reforms will have to be effected; in fact, the ecclesiastical history of France for the last three-quarters a century will have to be wiped out. The third charge, that the act of requesting the Archbishops of ROUEN and PARIS to convey to the Government the dislike which certain French bishops feel towards M. WADDINGTON'S Bill involves a breach of the oath not to take part in proceedings against the public peace, is more extraordinary than either of the others. Granting that the bishops have taken an oath not to do anything calculated to cause a breach of the peace, they have only sworn to avoid what it is the duty of every good citizen to avoid without swearing. Consequently, if the bishops have broken their oath by meeting together to oppose a Bill which has been introduced into the Chamber of Deputies, any laymen who meet for the same purpose are equally guilty of an offence against the public peace. When a bishop swears not to disturb the public tranquillity, he does not take on himself an obligation peculiar to bishops; he only takes on himself, in a way peculiar to bishops, an obligation which is common to clergy and laity. If to tell the Government that certain fathers of families are grieved at hearing that mixed Boards of Examiners are to be abolished is a breach of the episcopal oath, it would be a breach of the general duty of a good citizen if the fathers of families had themselves made a similar representation. If this is so, what becomes of freedom of speech and the right of association? If this is not so, it follows that a bishop's oath imposes on him an obligation which is not shared by the laity, and consequently that the laity may, without incurring any blame, take part in meetings directed against the public peace. This is a dangerous doctrine for the Republican party to associate with itself, and on further reflection M. GAMBETTA will probably let it drop.

This parade of concordats, organic laws, and other machinery designed to regulate the relations between Church and State under totally different conditions from those which now exist, will seem to Englishmen almost as absurd as those appeals to the Tudor legislation which are common in the mouths of a certain small section of fanatics in this country. It is possible, however, that M. GAMBETTA may have an object in pointing to these rusty weapons which is less unworthy of a statesman than on the surface it appears to be. He is compelled by circumstances to take up a strongly anti-clerical line, and in doing this he has to elect between appealing to law and appealing to popular passion. It is unfortunate that it should be necessary to make such a choice; but given that it is, he may perhaps think that it is safer to enter upon a probably interminable controversy as to the effect of certain obsolete statutes than to provoke a discussion upon first principles. When theological passions run high the part of Mr. NEWDEGATE is certainly preferable to the part of Lord GEORGE GORDON, and it is well to bear this in mind when estimating M. GAMBETTA'S otherwise inexplicable attitude towards the clergy.

THE *ALBERTA* AND *MISTLETOE*.

THE story of the running down of the *Mistletoe*, sad enough in itself, has also had a singularly unfortunate sequel. It was unfortunate that at the Gosport inquest Prince LEININGEN should, by a flagrant irregularity which the Coroner unaccountably permitted, have introduced a letter from the QUEEN as part of his evidence, and have thus given at the very outset a false turn to the question; and it is not difficult to understand the influences which paralysed the minds of the Coroner and his jury, both on this occasion and at the adjourned sitting when they had the assistance of Baron BRAMWELL. The other inquest had a still more illogical result, for a verdict of accidental death was coupled with a distinct charge of carelessness and recklessness against the navigating officer of the Royal yacht. The irrelevant production of the QUEEN'S letter to Lord EXETER, though subsequently explained, further tended to confuse and embitter the discussion; and it is especially unfortunate that the subject should be revived at the present moment. There has been throughout an obvious hesitation in speaking plainly on this subject, from a feeling very natural and proper in itself—of deference to the QUEEN; but it requires very little consideration to see that, apart from the fact that her own life was in peril, the QUEEN had nothing whatever to do with the accident. In such a case the Sovereign is necessarily in the hands of the officials who have charge of her, and the fact that they acted in a way which not only led to the death of several of her subjects but endangered her own life is certainly not a reason why they should be treated with undue lenity or screened from the natural consequences of their conduct. Nothing can be more mischievous or unfair than to associate the Crown in a personal manner with public controversies. In naval and military, as in political, affairs the officials concerned must bear their own responsibilities. Everybody, however, knows perfectly well that in this case, if Prince LEININGEN and Captain WELCH had been in command of a common steamboat, or engaged in any of the ordinary services of their profession, they would have been dealt with in a very different way from that which has been adopted, and that one or the other would have been tried by an open court-martial in the regular way, or perhaps have had to answer a charge of manslaughter in a criminal court. It appears from the correspondence which has just been presented to Parliament, that, instead of this, these officers were examined by a Secret Committee, the evidence taken by which has never been divulged. On the strength of this private and confidential inquiry, Prince LEININGEN has been acquitted by the Admiralty, and Captain WELCH, though blamed for "not having exhibited sufficient care and attention so as to have avoided all risk of accident," is let off with a formal reprimand, while, at the same time, he is, as a mark of special favour, exempted from the rule of the service as to staff appointments which has just been rigidly enforced in regard to the other officers of the *Alberta*.

It is unpleasant to have to go back on the details of this disaster, but the extraordinary course which has been pursued by the Admiralty leaves us no alternative but to do so. It is laid down among the rules of the road at sea that, if two ships, one of which is a sailing ship and the other a steam ship, are proceeding in such directions as to involve risk of collision, the steam ship shall keep out of the way of the sailing ship; that every steam ship, when approaching another ship so as to involve risk of collision, shall slacken her speed, or, if necessary, stop and reverse; and that any vessel overtaking any other vessel shall keep out of the way of that vessel. The *Alberta*, as far as the published evidence goes, violated every one of these rules in the most reckless manner. The *Alberta* was bearing down on the *Mistletoe* at the rate of seventeen miles an hour, while the latter was moving slowly in a light wind and unable to quicken her speed at will; yet the *Alberta* not only did not get out of the way of the sailing vessel, or slacken speed, but went straight at her, and even when close to her did not stop and reverse, until a collision was inevitable. Captain

Welch in one part of his evidence remarked that, "if a "vessel"—meaning the *Mistletoe*—"had made up its "mind to get under his bows, no skill upon earth could "stop her," and this supposed suicidal intention on the part of the *Mistletoe* was apparently the basis of his defence. We will not, however, speculate as to the intentions of the *Alberta*. Nobody supposes that her commanders deliberately resolved to run down the yacht; and it is indeed tolerably obvious how the accident happened. Both Prince Leiningen and Captain Welch chose to "take it for "granted," as they said, when they first observed the yacht, that, instead of their having to get out of her way, according to the rule, she would get out of their way; and having made up their minds on this point, they turned their eyes away and looked hard in the opposite direction, and did not see where the *Mistletoe* actually was till they were almost on the top of her. Even then, if they had at once stopped and reversed, the collision might possibly have been avoided, or at least its force might have been lessened; but the reversal of the engines was delayed till it had the effect, not of averting, but of precipitating, loss of life. Thus the *Alberta* did not, as she should have done, keep out of the way of the sailing vessel; she did not slacken speed; nor did she stop and reverse till too late. Moreover she also broke the rule as to keeping a proper look-out. Incredible as it may seem, there was no look-out in her bows of any kind. Captain Welch took the whole of this duty upon himself, standing on the paddle-bridge, with his view obscured by the funnel and shelter-house, his attention distracted both by the visits of gossipy members of the Royal *suite*, and by his inability to see both sides of the ship without going from one part of the bridge to another. One of the officers of the *Alberta* asserted in the witness-box that it was necessary that the Queen should travel rapidly; but Captain Welch himself admitted that "it made no differ- "ence whether the Queen was on board or not," and that he was bound to observe "the regular rules of steer- "ing." It is clear, however, that he had no right to assume that the sailing vessel would depart from these rules, which were in fact necessary for her protection, and also that he himself violated them. This is indeed acknowledged by the Lords of the Admiralty, who in their letter on the subject "consider, in accordance with the finding of the Court, "that the course steered by the *Alberta* should have been "such that she could not have been brought into collision "with the *Mistletoe* through any alteration of course made "by that vessel"; and it must be remembered that, except at the very last instant, the *Mistletoe* is not proved to have altered her course in the least.

It is pleaded that Captain Welch, though he was at fault in this case, is a very clever seaman; but this does not affect the question. On this point Baron Bramwell, in his address to the coroner's jury, remarked that a man was guilty of manslaughter "if, though "perfectly skilful, he yet becomes recklessly indifferent "to the lives of persons with whom he is brought "into contact." "Suppose," he added, "a man to "say:—'I am in a hurry, and shall drive through that "'crowded thoroughfare as fast as I can, and people must "'get out of the way the best they can'; if any one was "killed that would be manslaughter, though the driver "might be the best whip who ever sat on a coach-box." It may perhaps be suspected that in Captain Welch's case it was his excessive confidence in himself which led him astray. Soon after the accident a well-known yachtsman published a letter in which he said, in reference to this officer, "We of the Royal Yacht Club have especial oppor- "tunities of admiring his skill and marvelling at his nerve, "when he is bringing his Royal freight into Cowes Har- "bour at full speed through an anchorage blocked with "vessels; often and often I have heard the involuntary "exclamation, 'What a wonderful man that Welch is!'" It may be thought, however, that these wonderful exploits, like feats of mad galloping through the streets, are not exactly compatible with public safety. It is true that Captain Welch has kept clear of accidents till now, but it is going too far to say, as the Admiralty does, that hitherto "his proceedings have given entire satisfaction," for it is known that his dashing style of navigation has long been a source of alarm and danger to yachtsmen frequenting the Solent, who go there, it should be observed, not to see the Queen, but to enjoy their sport at a suitable place.

It is impossible, in reading the very mild reprimand bestowed on Captain Welch by the Admiralty—like the "naughty, naughty" of a fond mamma to an unruly darling—not to think of the severity with which Captain Dawkins was treated for a similar fault of "want of "judgment and want of duty in handling his ship." As far as Prince Leiningen is concerned, the decision of the Admiralty is not perhaps unreasonable; only, if the Prince is to be merely an ornamental person in attendance on the Queen, he ought to keep off the steering-bridge, and not distract the real commander's attention. As it was, the man really in charge seems to have been the boatswain, who tapped his Captain on the shoulder in order to awaken him to the danger they were in. The way in which the Admiralty has condoned Captain Welch's offence is, however, a very serious matter, because it implies either that officers in attendance on the Queen are not expected to obey the rules of the sea with the same scrupulous attention as other navigators, or that these rules are of no great consequence in any case. And it is from this point of view that the public will regard it. Mr. Heywood, who is "highly satisfied," and can hardly find words to express his "grateful acknowledgments" for the "liberal compensation" awarded to him for the loss of his yacht and sister-in-law, has, it seems, "expressed "a hope that all feeling which might have arisen in conse- "quence of this lamentable accident should be allowed "to rest now and for ever." Mr. Heywood has of course a right to be satisfied if he chooses; but, for our own part, we must express a hope and belief that there is still some part of the nation which thinks it important that law and justice should be fairly carried out without respect of persons, and which will not allow an audacious breach of discipline to be passed over in this equivocal manner.

COMPULSORY EDUCATION.

THE debate on Mr. Dixon's Elementary Education Act Amendment Bill was necessarily wanting in spirit. There are only two things that could have given life to a discussion on so well-worn a subject—a probability that the Bill might be carried, or a prospect of extracting from the Government some indication of their educational policy. Neither of these elements of interest was present on Wednesday. It was well known that the Bill would be rejected; and as Lord Sandon has promised to introduce a Bill of his own later in the Session, there was no chance of his prematurely disclosing the provisions of which it is to consist. Consequently the speeches had no practical purpose in them, and, as everything that can be said about elementary education has already been said many times over, it is impossible either to feel or feign any pleasure in hearing it said again.

Mr. Sandford may claim the credit of having done his best to import new matter into the discussion. It is true that this new matter was only an old sophism re-dressed; but where originality is so hard to achieve a judicious revival is not to be despised. Mr. Sandford is of opinion that the interests of a family will be consulted and understood by the father better than by the State. This might be true if the father could be trusted in all cases to take, we will not say an intelligent, but even a commonly unbiased, view of those interests. As it is, a great number of fathers think a great deal more of their own interests than of any one else's. They want their children's wages or their children's services, and so they keep them at home instead of sending them to school. We do not say that there may not be extreme cases of illness and the like as to which such claims have a right to be heard; we are testing the argument by the ordinary run of tolerably hale and visibly selfish mankind. Does Mr. Sandford hold this matter to be one in which the interests of a family are understood by the father better than by the State? If he does, he ought to have the courage of his opinions and to admit that it is not so much any particular scheme of education that he dislikes as education in general. Of course, if it were an open question whether it is better for a child to grow up in total ignorance or to be able to read and write and cast accounts, it might be fairly argued that a father, though not an unerring judge in the matter, is likely to be at least as good a judge as Parliament. But if it is taken as beyond dispute that every child ought to possess these rudiments of knowledge, it is no longer a matter of doubt whether the State is consulting a child's interests in insisting on his going to school, or the father in keeping him away

from school. Mr. SANDFORD is not even consistent with himself. A little later on in his speech he said that it is the duty of the State to provide a sound English education for those who are not able to afford it. But if a sound English education is only an uncertain benefit—a benefit, that is, for some children, but not for others—why should the State provide it? And if a sound English education is an indisputable benefit to a child, how can the father who rejects it be said to know his child's interests better than the State which offers it? Mr. SANDFORD is at liberty to choose which horn of this dilemma he likes; but he will never succeed in balancing himself on both. It is not only the liberty of the subject that he thinks violated by compulsory education; that equally sacred conception, the labour market, is disturbed. Mr. SANDFORD claims to represent an agricultural constituency, and he is able to testify that his constituents are much opposed to compulsion. We have no doubt they are. But have Mr. SANDFORD'S constituents any right to be heard in this matter? Even on his own plea that the father is a better judge of a child's interests than the State can possibly be, the State may fairly ask for some assurance that the father is not subjected to positive temptation to subordinate the child's interests to his own. But without interference with the labour market no such assurance can possibly be had. A farmer comes to a labourer and asks him to send his boy into the fields instead of to school. The trifle the boy earns will go into the father's pocket, and if he refuses he may be less certain of employment on the farm. Yet all the time he may be convinced that, if he consulted the child's interests, he would refuse the farmer's offer and keep him at school a year or two longer. There can be no more legitimate action on the part of the State than to protect the child and the father's own better judgment against the immediate inducement of the father's own interest. Yet it is impossible to give this protection without interfering with the labour market. The truth is, Mr. SANDFORD has come into the world too late. He ought to have lived in the times when children went to work at five years old, and worked for as many hours as they could keep awake. There was no interference with the labour market then, and every father was left free to do what he liked with his own child. In these days of Factory and Workshop Acts Mr. SANDFORD is simply a survival.

The dignity of the debate was saved by an excellent speech from Mr. BRIGHT. Nothing can be better than his description of what the State ought to see that every child is thoroughly taught. To read so that he may comprehend what he reads, to write so that what he writes can be read, and to be able to keep an account of the little transactions of his every-day life—this is the minimum of knowledge without which no child should begin the world, except through his own fault. Mr. BRIGHT does not say that nothing more should be taught in the State schools. He only means that everything beyond this should be taught rather by way of opportunities afforded to children who are more than ordinarily clever and diligent, and whose parents are willing, if some help is given them, to let them stay longer at school. But the three R's, in that wide sense in which Mr. BRIGHT understands them, can and ought to be brought within the reach of every child in the kingdom; and, if once they were mastered in this thorough fashion, there would be no fear of their being forgotten in after life. A child who can read so as to derive pleasure from what he reads may choose his books badly, but he will not lose the power of reading them. A child who is able to write legibly and cipher correctly will find constant occasions of using the faculty. The vice of so much of the instruction at present given in elementary schools is that it does not carry the scholar far enough to get any permanent hold of him. He learns to read and write, and manages just to satisfy the Inspector in this or that standard. But he never reads or writes well enough to care for doing either when the pressure of school is removed, and the consequence is that he very soon loses the ability to do either readily. The time that he passes at school is really time thrown away, and the money he has cost the community might as well have been spent in other ways.

The main reason of this frequent absence of any useful result from the time and money spent on elementary education is the irregularity of attendance which is inseparable from a system in which compulsion is only applied here and there. Children do not come to school young enough, they do not stay at school long enough, and they are not regular enough in their attendance while they are at school. The reports of School Inspectors are always full of lamentations on this head. Other difficulties can be, and are, in process of being surmounted. School accommodation is now provided for every child that needs it; the supply of competent teachers is greatly increased, even if it is not yet equal to the demand for them; but the absence or the irregular attendance of the children is an evil that nothing but compulsion can touch. The debate on Wednesday showed how much progress the idea of direct compulsion has made among all parties, and if the Education Department will introduce into their promised Bill some machinery for applying compulsion in districts where there are no School Boards, they will, we believe, have the genuine support of a decided majority of both sections of the House. That many of the *à priori* objections to School Boards were imaginary or exaggerated may be as little questionable as that the belief in their all-healing powers was a piece of doctrinaire pedantry. The practical question, after some years' experience of the Education Act, is how they have worked; and upon this point the fact stated by Lord SANDON, that the Education Department is crowded with applications to get rid of them, may deserve consideration. Under such circumstances it may well be doubted whether Mr. DIXON himself, if his Bill had been unexpectedly carried, would not have felt some misgiving as to its working in country parishes. A School Board has great powers of obstructing education as well as great powers of furthering it; and a School Board composed of the delegates of some narrow fanaticism, or of farmers deeply penetrated with Mr. SANDFORD'S theories of individual liberty and the labour market, would probably prove a singularly useless instrument for enforcing school attendance against the interest of its members.

CRUELTY.

IT was said of old, and we are afraid it is equally true now, that "the dark places of the earth are full of the habitations of cruelty." Whether cruelty is an innate element of the "wicked heart," or an acquired habit only; whether it is pursued for its own sake in the first instance, or only as a means to some further end; and what are the main causes or conditions of its prevalence, are questions of much interest, about which very various opinions have been entertained. The subject is one to which we have before now called attention, and we are led to revert to it at this moment by the appearance of a characteristic and suggestive paper "On Cruelty" from the pen of Professor F. Newman, in *Fraser's Magazine* for this month. To what extent we agree with the writer's theory, so far as he propounds any, will appear in the sequel; but he has chiefly concerned himself with tracing out an historical sketch of the practice of this peculiarly odious vice among mankind. He does, however, begin with a vindication of nature, or rather of "the Creator"—for Mr. Newman, we need not observe, is a decided Theist—apparently directed against Mr. J. S. Mill's posthumous indictment in his *Three Essays on Religion*, though his name is not mentioned. Up to a certain point the answer is satisfactory, though we cannot think it covers the whole case; drowning, for instance, is probably not a painful death, but we are not equally sure that "to perish by natural fire," or to be devoured by a wild beast, is generally painless. But Mr. Newman's doctrine is at least more reasonable than that which he assails. If "nature red in tooth and claw" does not "shriek" against all religious creeds, Mr. Mill indubitably "shrieks" against nature in his very shrillest tones. But that is too wide a controversy to enter upon here. As to human cruelty, Professor Newman's view seems to be that it is not an instinctive, but an acquired, taste, which is accordingly not usually found among savages, except accidentally—that is, when it arises from the necessities of self-preservation and the like, or from mere thoughtlessness and "total inobservance how others suffer from their actions." Yet sooner or later, even among savages, a crisis must arise, from the inevitable propensity of one tribe to encroach upon the pastures or hunting grounds of its neighbours; so that it is only in the most inhospitable climates, like Lapland and Greenland, that communities of men live on for centuries in tranquillity without government and without convulsions. But while they remain in that rude condition—and it must of course be a very rude one—they are not cruel, but kind, hospitable, and just. Cruelty in its worst form is, in fact, the child, or at least the ultimate result, of civilization and of religious fanaticism; in later days, also, of science—but to that we shall return presently.

That there is a good deal of truth in this view of the matter we by no means deny. Civilization has undoubtedly in many ways promoted and intensified cruelty, as it has promoted other vices also which savages have learnt for the first time from their European conquerors. But still this does not afford a complete account of the phenomena, which Mr. Newman appears to

have somewhat inadequately weighed. If there is no instinct of cruelty in human nature, how comes it to pass that young children, in spite of the great Palmerstonian dogma that "all babies are born good," so often betray a positive pleasure in the wanton infliction of suffering as well on their own "flesh and blood," in the shape of younger brothers and sisters who can be pinched and scratched with impunity, as on insects, cats, and other creatures weaker than themselves? For the infantile taste for crushing flies was by no means a peculiarity of Nero's. Some boys were taken up only the other day for deliberately stoning a horse to death. How, again, can we account for those abnormal, but at one period not very uncommon, outbreaks of homicidal, and—if we may coin the word—puerocidal, mania, which was not unnaturally regarded by our ancestors as a kind of demoniacal possession? We do not refer merely to lycanthropy and kindred varieties of what may perhaps be regarded as a form of insanity, though that is rather a confession of ignorance than an explanation, but to facts not so easily disposed of by that convenient, but very elastic, definition. Take, for instance, the hideous story, which is far from being a unique one, of the Marshal de Retz in the fourteenth century, who had been a brave soldier and carried the sacred *ampulla* at the coronation of Charles VII. at Rheims. Without entering into details which are too loathsome to be dwelt upon, it is enough to say that he was condemned to be burnt at Nantes, in 1440, for his crimes, which comprised the torture and murder of several hundreds of children of both sexes, though chiefly boys, from the age of eight to eighteen, who had been enticed into his castles for that purpose. It is true that he was accused of other abominable vices also, but the one charge, even if fully admitted, by no means explains the other. It is clear from his own confessions and those of his accomplices, that numbers of these children were decoyed into his clutches simply for the purpose of being murdered by slow and most excruciating tortures, and that he gloated over their agonies with a kind of sensual gratification, as Queen Elizabeth is said to have enjoyed privately witnessing the torture of "Popish recusants," and James II. watched the crushing of the legs of prisoners in the "boot." The high position of the Marshal, and the large opportunities it afforded him of indulging his murderous propensities, have secured for his name an exceptional prominence of infamy, but his case was not in itself so very exceptional. Many similar examples are on record where the power only and not the will was wanting for an equally extensive indulgence of the same fiendish disposition. We are afraid then that the notion of cruelty being a kind of vice to which human nature, if left to itself, has no instinctive bent, is one of those pleasant delusions which it is easier to cherish than to defend. That its exhibition varies greatly according to differences of race, climate, and other circumstances which influence the formation of national and individual character, is perfectly true; but as much may be said of most other qualities, good or bad.

In tracing the particular circumstances which have mainly helped to develop this evil propensity, we are able in the main to go along with Professor Newman. The exigencies first of war, and then of advancing civilization, under the control of strong despotic monarchies, have been the chief provocatives of cruelty. Tartary and European Russia were ruled by military despotisms while still in a state of barbarism, and all we know of their early history displays them as eminently murderous. In later times Timour, though himself not devoid of cultivation, erected on the ruins of Bagdad a pyramid of ninety thousand human skulls, and, where he met with resistance in Persia, slew to the best of his ability all the males of the district. And when a settled government had superseded a state of chronic warfare, the despotic intolerance of absolute rulers continued to exact its tale of victims. Hence the almost incredible atrocities recorded of Persian and Macedonian queens; hence, again, not a century ago, Agha Mohammed, pretender to the Persian throne, on entering a city which had espoused the cause of his rival, had a basket of human eyes brought to him. But it is needless to multiply examples. Democratic sympathies have no doubt, as Mr. Newman insists, done something to check imperial violence, yet the Greek republics were ruthless in their treatment of slaves and of captives whenever fear prompted them; witness the Spartan crypteia, and the merciful decision of the Athenians to sacrifice only one thousand Mitylenæans instead of the whole population. Fear has indeed always been one of the main incitements to cruelty, and timid rulers are apt to be the most tyrannical. The language current in this country twenty years ago at the time of the Indian Mutiny will illustrate this. And another great incitement has been avarice. This, as Mr. Newman points out, is abundantly illustrated in the history of slavery; and we may add that the present state of things in Egypt, as described by an eye-witness in the April number of the *Fortnightly Review*, only too fully confirms it. Religious zeal has also, no doubt, often prompted deeds of cruelty; but it would involve a longer inquiry than we can find room for here to examine in detail Mr. Newman's views on that point. It is perfectly true that shocking cruelties were perpetrated both in the earlier and the Albigensian Crusades; but in either case reasons of policy might be pleaded for undertaking the war, and the accompanying atrocities were, as a rule, the inseparable accidents of warfare in a rude age. No such excuse, of course, can be alleged for the Inquisition, which is the other instance quoted, but even here it must be remembered that dispassionate writers like the late Dr. Maitland have shown that the severities of the mediæval Inquisition have been immensely exaggerated, while political considerations are largely mixed up with the scandalous history of the Spanish Inquisition. However, according to the old proverb, *corruptio optimi pessima*, it is quite true that religious earnestness has been too often perverted into an instrument of cruel oppression; and, if this applies far more to Christianity than to the ancient national religions, that is easily explained by the circumstance that they were for the most part mere matters of civil arrangement or outward form, while Christianity, even when most deeply corrupted, has been a living faith.

Professor Newman turns, in conclusion, to a branch of the subject which in the present day is assuming a tragical importance—"Cruelty in the garb and pretensions of science." This he describes, in language essentially just though too sweeping in its application, as "a new horror." "Science was going to set Religion right. She held up her torch to illuminate the deformities of superstition, and display the wickedness of Religion, yet now Science has become a rival of the tortures of the Inquisition, and by increase of knowledge has learnt to torment still more ingeniously." In this matter the practice of ancient Paganism may well put us to shame. In Egypt regard for sacred animals was carried to a ludicrous extreme. There are many touching legends about animals in ancient literature, as afterwards in the lives of Christian saints. They were protected more or less by special legislation both in Greece and Rome. The Athenians are reported by Ælian to have actually condemned a boy to death for killing a sparrow which had taken refuge in the Temple of Æsculapius, and a somewhat similar story is related by Quintilian. Latin poetry abounds in testimonies to the affection entertained towards birds and other animals. We have said that the legends of Christian hagiology are full of similar stories, yet a coarse hard feeling grew up by degrees among Christians that animals, having no souls, had no rights, as Italian professors still say when called to account for their brutality. But, as Professor Newman very justly observes, "to cut up a living horse day after day in order to practise students in dissection is a crime and abomination hardly less monstrous from his not having an immortal soul." It might be added that many Christian authorities, like Bishop Butler, have argued in favour of animals having a future life, and they can make out fully as good a case from the Bible as their opponents. And as to the conventional plea for practising these barbarities, as a means of hereafter lessening human suffering, even supposing it to be sincere, it is only fair to reply that "an inevitable logic would in a couple of generations unteach all tenderness towards human suffering, if such horrors are endured, and carry us back into greater heartlessness than that of the worst barbarians." It is a taunt sometimes hurled by the scientific Torquemadas of the day at those who condemn their recklessness of the feelings of animals, that they regard morals as a fixed science which can have no further development. Waiving all the abstract questions which moralists and metaphysicians might raise on this point, the practical answer is a very simple one. Those who most strenuously maintain the principle of development, whether in theological, moral, or any other science, are the first to insist that there is a true and a false development, and that the latter is not conservative, but destructive of the original idea. The true advance of morality here consists in taking up new rights of the weak against the strong, as of women, of slaves, of subjects, of captives, and the like, not in forging the chains of a new oppression. And cruelty, be it remembered, whether it be regarded as a depraved instinct of humanity requiring to be held in check, or as an acquired habit which ought not to be formed, never stands alone. History teaches us that it is the foster-mother and inseparable companion of the vilest impurities and vices to which flesh is heir.

A METHODIST PILGRIMAGE.

WE are familiar enough in all times and places with the pilgrimages of those who go to keep a feast in the places which they deem holy; but there is something which has at least the merit of novelty in a pilgrimage to keep a feast in a place which the pilgrims are bound to deem most unholy. When a body of Ultramontanes go to Pontigny to worship St. Edmund, they undoubtedly come under the head of those who worship they know not what. But the mistake is simply one of fact; they have, through some process of invincible ignorance, mistaken a champion of England for a champion of Rome. But as to the place which the Pope and all his works must hold in the estimation of a body of Wesleyan Methodists one would have thought that there could have been no mistake whatever. Surely he must be Antichrist, or the Beast, or anything else that Frederick the Second and Gregory the Ninth called one another. Surely all that he does—above all, all that he does in the way of religious worship—must come under the head of what our outspoken forefathers prayed against under the name of "the tyranny of the Bishop of Rome and all his detestable enormities." Yet here we have before us a circular advertising a select party of Wesleyan Methodists and friends of the Wesleyan Missionary Society who are going, strictly in their Wesleyan-Methodist character, to keep Easter in the very home and centre of abomination. They are, to be sure, to do other things on the way, and at Rome, on Easter Sunday itself, it is not forgotten that "there will be services in the Wesleyan Chapel, conducted by the Rev. H. J. Piggott, B.A." But the local worship of the place is clearly held out as a counter-attraction:—"On Holy Thursday there are usually special services in the Sistine Chapel, &c., as

also on Good Friday and Saturday." So "on Easter Sunday there are also services of a most important character in the Cathedral of St. Peter." "Services of a most important character" is a phrase of the most beautiful vagueness, and leaves it open whether they are important for good or for evil. Still these important services are clearly held out as amongst the attractions of the place. The slight hint of difficulty that "their exact order and time can only be obtained on arrival at Rome" can only be meant to put expectant pilgrims on their mettle. Now there is something very strange in all this; we cannot think that the prophet Daniel would have announced to the Jews at Babylon that at a certain time and place there would be services of a most important character in honour of Bel, or a great feast of which the Dragon would partake in person. We cannot conceive an apostle advertising services in honour of Jupiter, or Augustine or Paulinus advertising services in honour of Woden. If they had done so they would surely have done it in subtlety after the manner of Jehu, or in open defiance after the manner of Coifi. But here we have a whole Wesleyan pilgrimage going to mystic Babylon in order to partake of the devotions of the Man of Sin. There is of course no reason on earth why a Wesleyan Methodist should not, just as much as any other man, go to Rome, and see St. Peter's and everything that goes on in it, if he does it simply as a man and not as a Wesleyan Methodist. But here is a party of Wesleyan Methodists, distinctively organized as Wesleyan Methodists, a party who will have nobody in their company except Wesleyan Methodists, or, at the very least, friends of the Wesleyan Missionary Society, who set forth on purpose to keep Easter, with the Pope himself if he chooses to turn out of his supposed prison, at all events with those who may appear to act in his stead. The thing is the very oddest that we ever came across. "Care," we are told, "has been taken in framing the plan that the Sundays should be spent at suitable resting-places." Rome therefore is a suitable resting-place for Sunday, and especially for Easter Sunday; or rather, which is perhaps nearer the truth, it is a suitable place for a Sunday without rest. On the other Sundays in the course of the pilgrimage rest is distinctly spoken of. Sunday, April 2nd, "will be spent as a day of rest at the delightful locality of Mentone." Sunday, April 9th, "will be spent as a day of rest at Naples," and there will be services at the Wesleyan Chapel by the Rev. J. W. S. Jones. But on the Sunday which is to be spent at Rome there is no mention of rest. Between the services in the Wesleyan Chapel and the services of a most important character in the Cathedral of St. Peter, there will most likely be no time for rest. And, after once getting to the bad place of all, the rest of the programme seems to be in some measure tainted. Sunday, April 23rd, will indeed be "spent as a day of rest at Venice"; but there is no hint of any Wesleyan services, while there is a hint that "the fine old churches of the city can be visited." In short, it would seem to be a painful truth that even Wesleyan Methodist pilgrims, when they once get into such Babylonish quarters, are tempted to do at Rome as Rome does, and that some traces of the evil habits picked up at Rome are likely to stick to them, at least as far on their homeward road as Venice.

The whole thing is about as funny as it can be. The "proposed tour of a second select party of Wesleyan Methodists and friends of the Wesleyan Missionary Society" is advertised in the most artistic fashion of advertising, with lines of various lengths and letters of various forms. The largest letters of all announce that the object of the tour is "to visit the French and Italian missions under the care of the Rev. John Wesley Close and others." The faithful are invited to the tour as "affording both ministers and laymen an opportunity of visiting our missionaries, and encouraging them in their work carried on in the Italian cities." But it would seem that the mention of the Italian cities was too much for the writer of the circular. There are indeed Wesleyan missionaries in those cities, and they are carrying on a work; but the mention of the cities themselves seems at once to put to flight all remembrance of the missionaries and their work. Immediately after the word "cities" comes a dash, and the advertisement goes on, in a somewhat spasmodic style, as if its composer had felt, like Gray's bard, the visions of glory crowding too fast upon his aching sight. Our extract ended at the word "cities"; the advertisement goes on—of course we do not attempt to reproduce the typographical varieties—with a sublime contempt of all ordinary punctuation. "Crowded with historic memories, and surrounded by associations possessing a living interest. Comprehending the grand natural scenery of the Riviera; the orange groves of Sorrento; the islands of the Bay of Naples. Visiting the most renowned cities of Italy. Viewing the wonders of nature and art; A picnic to the world-famous Vallambrosa [*sic*], the paradise of Italy. And returning by the Mont Cenis tunnel to Paris and London." And so, when we come to the more detailed account of the proposed journey, it is sad to see how much the latter part of the programme prevails over the former. There must surely be some degree of backsliding when there is so little about the missionaries and their work, and so much about the renowned cities of Italy and other such-like worldly attractions. In fact, though, as we have seen, there is an occasional reference to Wesleyan chapels and services in them, there is not a single reference to the Wesleyan missionaries and their work. That work, it seems, is carried on, among other places, at Milan. But how can the pilgrims visit the mission in that city when they arrive there on Monday afternoon? "When the Grand Cathedral"—does St. Ambrose pass for another Cathedral which is not grand?—"the finest and most elaborate Gothic edifice in the world," will be visited. On Tuesday "the party will leave Milan by morning train, and arrive at Turin so as to afford time for visiting the principal attractions of that city the same day," as they start again for Macon at 9 A.M. on Wednesday. This really leaves very little time indeed for the missionaries at Milan to take any sweet counsel with their pilgrim brethren. Nor do matters seem to be any better at the other places, Paris, Florence, Naples, and Rome, where it seems that missionaries are also quartered. In short, as soon as the cities, the picnics, the wonders of nature and art, have once come in sight, the missionaries pass away, or at most only turn up on Sundays as a counter-attraction—a feeble one we fear—to the "important services" at Rome and the "fine old churches" at Venice. Instead of the pilgrims being in any way constrained or invited to visit the missionaries, it would seem to be only on the Sunday to be spent at Naples, when "the services at the Wesleyan chapel by the Rev. J. W. S. Jones" have no counter-attraction held out against them, that there would be a moment left for the most zealous pilgrim to visit any missionary, if he should feel ever so much inclined to do so. We really think this is hard on the missionaries at Paris, Milan, Florence, and Rome, who are thus in a manner put out of the synagogue by the pilgrims who so unkindly hurry past them.

The programme itself is in no way different, except in the occasional mention of days of rest and Wesleyan chapels, from any other ordinary tourist programme. Strike out those one or two notices, and all, it would seem, might be done just as well by a party which was not entirely restricted to Wesleyan Methodists and the friends attached to Wesleyan missionary institutions. In fact, Wesleyan Methodists seem to go about in very much the same way, and to go and see very much the same things, as people who are not Wesleyan Methodists. This is in truth nothing very wonderful. We know of no reason why a Methodist should not behave himself at home or abroad in exactly the same way as any other man. Only, if so, why should there be this amazing pother about Wesleyan Methodist tourists? Why should there be a party entirely restricted to Wesleyan Methodists, got together for the object of visiting Wesleyan missions, but which after all seems not to be going to visit any Wesleyan missions, but is going to do exactly the same as tourists of any other denomination or of no denomination at all. People of quite different religious views often meet in the course of their travels, and sometimes even deliberately set out to travel together. Experience shows that people who must look on one another as highly heterodox can go through the renowned cities of Italy without finding their religious differences trouble them in the least, and without wishing to exchange their companions for others who might be ready to take their own particular test. Why should people make picnics to Vallombrosa, and carriage trips to the more distant points of Rome, in the special character of Wesleyan Methodists? This state of mind is beyond us. We do not know whether there is any special meaning in the fact that the tour is to be managed, not by Messrs. Cook and Co., but by "the eminent Tourist Directors Messrs. Gaze and Sons," and it is highly satisfactory that the promoters of the scheme are able to announce that "the terms quoted are at the lowest possible figures." It was Messrs. Cook who took another party of pilgrims to Pontigny; so one is tempted to think that they are perhaps not looked on as orthodox enough to "conduct" a party entirely restricted to Wesleyan Methodists. But this notion seems inconsistent with the fact that the important services of St. Peter's are held out as attractions. One might have thought that those who had led the first band of pilgrims to the shrine of St. Edmund would be better qualified than any one else to lead the present band to the threshold of the apostles.

One other proposal must be mentioned in order that we may part on good terms with our pilgrims, and give them, on one point at least, a sincere blessing as they go. One paragraph of the circular runs thus:—

> The termination of the connexional year, in the following August, associated as it will be in many cases by the separation of Pastor and people, this scheme affords an opportunity to the latter of a kindly appreciation of the exhaustive labours of the former among them by offering a means of acknowledgment which is again presented, and of which it is hoped many congregations will avail themselves.

The grammar here is a little hard to parse; "the termination of the connexional year" does not give us so clear an idea as it doubtless does to the pilgrims themselves; but we guess that the meaning is to suggest to congregations that they should supply their pastors with the means of joining the pilgrimage. Now this is really a very good hint for congregations of any denomination. We can hardly conceive a more reasonable "testimonial of respect" than for a congregation to frank its pastor through the renowned cities of Italy, or through any other lands whither health or study may lead him. A sensible pastor would, we think, value such a tribute more than being loaded with teapots and slippers, or than receiving, what some pastors have received, a presentation pew or a presentation doctor's degree.

THE MANOR OF TYBURN.

SIX centuries ago Tyburn was a peaceful village on the road from London towards the west. The traveller who had crossed the Fleet, climbed the steep ascent at Holborn, and passed the gallows by St. Giles's Pound, entered the manor and parish at the

highest level of the road. Thence a slight descent took him to the narrow bridge over a brook, which, winding through meadows on the right and left, here flowed by the lonely church and churchyard of St. John of Tyburn. The name which calls up now so many unpleasant associations was then innocent of gibbet and stake. A "tigh," or enclosure by the burnside, where the Marylebone Vestry Hall stands now, may, according to Mr. Waller, have given its designation to the church. In an ancient charter at Westminster we have the earliest form of the word. A gift by Offa to the Abbey two hundred years before is recited in this document, which dates from 951, and the northern boundary of St. Margaret's is mentioned as "Teoburne." In Domesday it is "Tiburne," and the manor was assessed for five hides, and valued at fifty-two shillings. We further read that it "always lay, and lies, in the church of Barking"; a form which recalls another possession of the same abbey, Ingatestone, which was described in the Survey as having been owned "semper Sanctâ Mariâ." The brook divides it from Lylleston on the west, and may still be easily traced. It crosses Baker Street at Mme. Tussaud's, and enters High Street at South Street, finally leaving the parish where Barrett's Court opens into Oxford Street. But while the abbey held the manor, and for centuries later, a bridge crossed the stream at this point, and until the year 1400, the parish church stood on the eastern bank, a little above the bridge. It would be difficult now to conjure up the scene. A high, narrow, pointed bridge, a stream winding through green fields, a church surrounded by its churchyard, and, in a background of woods, the red-roofed houses of the village peeping through the trees, half a mile to the north—such was Tyburn in the fourteenth century; but it must by no means be confounded either with the later Tyburn, the Tyburn of history, nor yet with the modern Tyburnia. When Bullocksmithy, celebrated by Thackeray as the seat of a bishopric, turned itself into Hazelgrove, it followed a very ancient precedent. When Rugeley, ashamed of Palmer, applied to the Premier for leave to change its name, and Lord Palmerston laughingly proposed his own, it only sought to do what Tyburn had done in the first years of the fifteenth century. The old church by the brook was removed. St. John's became St. Mary-le-bourne. The old churchyard, perhaps the original "tigh," was closed, and a new cemetery was opened near the new church. Everything was removed half a mile towards the north, and Bishop Braybrook sanctioned the change because the loneliness of the situation had twice tempted thieves to steal the holy vessels, and the site was far from the village street. Henceforth Tyburn as a name was inseparable from the gallows, and only applied to a district of the neighbouring manor of Lylleston. Only the narrow lane by the brook-side led from the Tyburn Road to the High Street of St. Mary's; the newly named parish repudiated all connexion with the gallows, and looked the other way as the fatal cart, approaching from St. Giles's, followed the western road to Lylleston. In later years the field which the City had made the place of execution became the Conduit Mead, and at an annual visit of the Corporation the springs were inspected, the dinner, without which no civic ceremony was or is complete, was eaten in the Banqueting House at Stratford Place, and then the Lord Mayor and his attendant aldermen hunted a hare in the adjoining park of St. Marylebone. In 1562 a hare was hunted before dinner, and a fox after dinner, and the fox was killed in St. Giles's. But in 1737 the manly instincts of the City magnates had declined. Hares were no longer hunted by Aldermen, and water was no longer brought from Conduit Mead. The cisterns were arched over and hidden, and the Banqueting House was pulled down. The bridge over the brook was widened at the same time; and though Pennant relates that Mr. Carew Mildmay remembered to have shot a woodcock in Conduit Street, there is little now left to remind us of green fields and running water. In the dull season, every second year or so, somebody writes to the papers to announce the discovery of a walled-up cistern, and the same futility and fertility of guessing are displayed on each occasion. A stone used to mark the situation of one of these conduits at the junction of Marylebone Lane with Wigmore Street. Another was opened in North Audley Street last year. A third was discovered in Davies Street not long ago, and two are said to be under Aldborough House, the mansion at the end of Stratford Place. All were probably fed by the Tyburn; and it is owing to their former value to the citizens that the Corporation of London still owns the ground in which they stood.

The Abbess of Barking let the manor successively to some of the greatest nobles, and before the church was removed the lease had been the property of the Veres, the Lisles, and the Fitzalans. Its later history is almost peculiar from the number of its subdivisions. As early as 1415, on the death of Thomas Fitz Alan, fifth Earl of Arundel, his estates were divided among Berkeleys and Nevilles, Stanleys and Howards. All the best families in England seemed to have a share in St. Marylebone, as it was newly called; but Thomas Hobson, whom we have formerly noticed as holding what is now the Portman estate in the adjoining manor, the pseudo-Tyburn, bought up one share after another, so that when in 1544 his son exchanged with the King, he had narrowly escaped becoming the founder of a great territorial family. But the Crown kept only a portion, that which was hunting-ground, and the rest was at first let and afterwards sold. Before the end of the seventeenth century the manor increased so much in value that what in the reign of the first William had produced fifty-two shillings, in the reign of the third William brought in a rental of 900*l.*, and was sold by Sir John Austen for 17,500*l.* But before another century had gone by the value of the estate had been multiplied by a hundred at the least, and, as an example, Wicklow House, in Cavendish Square, may be adduced; five or six years ago this one tenement was sold for 20,000*l.*, being 2,500*l.* more than the whole estate originally cost the ancestor of its present owner. The subleases gradually fell in towards the close of the last century, and when Regent Street was made, White, the architect of the Portland estate, and who deserves to be remembered, made the suggestion that Marylebone Park should be taken up and properly laid out as Crown property. Few of the former leaseholders are now remembered, though one of them, Peter Hinde, gave his name to Hinde Street, and another, Lord Foley, was able to stop the way when Regent Street was carried northward towards the new Park. The street which bore his name has disappeared, as well as Foley House, but it was in order that the view from the windows might not be interrupted that Portland Place was made so wide, and the Langham Hotel now benefits by his obstinacy.

By far the largest part of the old manor is now occupied by the estate which Sir John Austen sold so cheap. The buyer was John Holles, Duke of Newcastle. In the statesman's transept of Westminster Abbey there is a well-known monument in which the virtues, but especially the honours, of the Duke are set forth. His effigy is supported by Wisdom and Sincerity, but the hand of Sincerity, which held a serpent, was broken by the scaffolding erected for the coronation of George IV. On the pedestal appears the name of the sculptor, "James Gibbs, Architect," and it is better known now than that of the Duke, though his titles and offices would fill half a column; and the cause of them all is but modestly alluded to, for we read that to his honours "his personal merit gave a lustre that needed not the addition of the great wealth he possessed." This cenotaph was erected by his daughter, "the Lady Henrietta Cavendish Holles Harley," who carried the manor of Tyburn to the Harley family, and whose daughter Lady Margaret brought it to the Bentincks. It is necessary to put all these names together to account for Harley and Holles, Henrietta and Margaret, as names of streets in the district; and, though Bentinck Street is one of the least of them all, it will be remembered because Gibbon lived at No. 7, and the preface to the *Decline and Fall* is dated "1 June, 1776, Bentinck Street." A hundred years have not made any very serious changes in the district. Gibbon's house is much as it was when he wrote to Lord Sheffield that "No. 7 in Bentinck Street is the best house in the world." His library was at the back, as we gather from an expression in another letter. He writes from Lausanne that his books have been "arranged in a room full as good as that in Bentinck Street, with this difference, indeed, that instead of looking on a stone court twelve feet square, I command an unbounded prospect." A greater library than Gibbon's had been bought with some of the money Lady Henrietta brought to the Harleys. Near the top of the Marylebone High Street was the old Manor House, and a few hundred yards to the south the famous Harleian Collection long remained in a library built for its reception. Edward Harley, son of the Lord Treasurer, and second Earl of Oxford, spared neither pains nor expense in its formation; and that he was not a mere collector of the sort fashionable a hundred years later may be gathered from his letters to the agents who sought at home and abroad for manuscripts, and his remarks on those he had bought. Great as the collection was, and priceless as it would be accounted now, the Trustees of the British Museum were able to acquire the manuscripts in 1753 for 10,000*l.* It cost Lord Oxford considerably more; but no calculation can arrive at more than a guess as to the sum, for the first Earl of Oxford also collected, and the gradual accumulation was spread over a great number of years. The building of Cavendish Square and the surrounding district was still in progress when George II. came to the throne. At first the square was called after the Lord Treasurer, Oxford; but this name was eventually confined to the street which, leading from St. Giles's towards Tyburn, had been hitherto known either as the Tyburn or the Uxbridge Road. Oxford Street, now one of the longest streets in London, then reached only from Stratford Place to Tottenham Court Road, perhaps not quite so far. There the village of St. Giles diverted it towards the South, and New Oxford Street is a recent improvement.

The Manor House of St. Marylebone came to base uses. The gardens were celebrated for their beauty, and for the resort which eventually gave them so bad a name. Though Pepys praises them, in Gay's time they were in disrepute. It is nearly a century since they were closed, and it would be very difficult to recall their fashionable bowers in the dingy brickwork of Beaumont Street and Devonshire Street. There is still a little of the picturesque about the so-called "Parish Chapel," immortalized by Hogarth in his picture of the "Rake's Marriage." It contains a monument to Gibbs, whose monument to the Duke of Newcastle we noticed above, but who is best remembered now by the beautiful portico of St. Martin's, which he designed. Small as the church was, it was once all that the parish possessed, and a melancholy account has come down to us of the duties of the curate in the early years of the last century. A manuscript, preserved appropriately enough among the Harleian Collection, gives some account of the funeral of Mr. Randolph Ford, who became curate in 1711, and continued to hold the office until his death thirteen years later. An anecdote was related at the grave, in which it was stated that on a single Sunday Mr. Ford's duties were as follows:—He began the day by marrying six couple—perhaps Hogarth's Rake among them

—then he read service and preached, churching six women after service. In the afternoon he again read the prayers and preached a sermon, and then the real duties of the day may be said to have commenced. He baptized twenty-six children at the font, and proceeding to the houses of six parishioners, baptized as many more privately. Finally, he buried thirteen corpses, reading the service separately over each of them; and reached home at length at nine o'clock.

The two manors of Lylleston and Tyburn, comprised in the one parish of St. Marylebone, have gone through so many vicissitudes, and have so completely changed both their names and their characters, that it is not easy to find traces of them now. In St. John's Wood we have a recollection kept up of the Knights at Clerkenwell. In the great highway, the greatest perhaps in the world, of Oxford Street, we preserve the memory of Queen Anne's Minister. The vestry still stands where it stood when St. John's lonely church by the brook-side was robbed five hundred years ago. But, instead of one church, there are now thirty-five, besides chapels; instead of a village and "unum messuagium," there are eight populous districts, electing one hundred and twenty-five members to their local vestry; there are single houses whose annual rent is greater than that of both manors two hundred years ago; and only the patient geographer, who will brave bad smells and pursue his objects among crowded alleys and through bustling streets, can trace the wanderings of the bourne which has twice given its name to the parish.

SKATING-RINKS

OLD people who lived before the age of steam find it difficult to become accustomed to the startling rapidity with which a new fashion, whether in dress or amusement, now travels, not only from London into the country, but to Madras and Melbourne. At the beginning of the century the shape of a bonnet was almost forgotten in Paris before it had reached Dublin or York, while in Devonshire short waists were only becoming general when long ones had again become the rage. Now, what with railways and cheap literature, the daughter of an Orkney farmer is only a few months later in discarding her petticoats, and injuring her health by tight lacing, than the Lady Gwendoline in Grosvenor Square; while the doctor at Penzance is just as early in the field with his spelling bee as his brother practitioner in Brook Street. The latest London madness has infected the country at once, even so far north as Aberdeen; and soon no provincial town will be without its rink, nor any one so poor, so stiff, or so unhappy, that he may not glide smoothly through at least a part of his sublunary existence. Should skating, instead of remaining a mere pastime like dancing or lawn-tennis, take its place as a substitute for walking, the appearance of our streets will become much more animated and amusing than it is at present. No longer will City men crouch in rows on the knifeboard of an omnibus, their brows wrinkled with care, their cheeks flabby from want of proper exercise. They will be spinning along the concrete at the rate of fifteen miles an hour, their eyes bright, their cheeks rosy, able to despise the fickle turn of Fortune's wheel whilst their own revolves without impediment. Regent Street will be a shopping rink, Kensington Gardens a baby rink, Columbia Market a costermonger's rink. Part of the Channel tunnel will be reserved for skaters, and by the aid of sails and artificial wind they will be able to cross from Dover to Calais as quickly as passengers by the *Castalia*, and with even less fear of sea-sickness. Perhaps Mr. Ruskin may allow tourists to approach Windermere on wheels, provided they are not driven by steam nor heralded by too loud a whistle. Whether there are to be rinks in his Arcadia, as well as dancing-schools, we have not yet heard. Fashionable physicians, no longer able to keep a carriage because all their patients are free from the complaints produced by idleness, will wheel about disconsolately, while a surgeon will be stationed at the corner of every street to attend to the casualties caused by the collisions of careless skaters. There will also be a policeman to decide upon the amount of damages to be paid for a broken nose, a lost tooth, or a general concussion of the brain and spine. The Tram and Cab Companies had better pause before they invest much money in building stables which may have to be turned into skating-rinks like those near Oxford Circus.

It is easy to understand that the skating-rink should be full of fascination for the young and vigorous; that they should delight to rush swiftly through the fresh air. There seems to be a natural craving for rapid motion, especially in children; and who does not know the exhilaration of a drive in a light dog-cart with a fast-trotting horse? A healthy girl will waltz herself out of breath round the schoolroom table; and as young women ought to be just as fond of exercise as their brothers, it is not surprising that they eagerly seize the opportunity afforded by skating-rinks to obtain the healthful glow which comes from vivid motion and the active play of all the muscles. Many girls, it is true, skate not because they care for exercise, or for one form of exercise more than another, but because at present it is accounted the proper thing to do. The rich, the idle, and the ignorant, who form so large a part of what is called society, are ever seeking some new method whereby they can rid themselves of their useless mornings and objectless afternoons. Skating-rinks have been a most valuable addition to the ways by which time, that bugbear of the empty-headed, can be supplied with wings. And within their walls we find all the well-known types with which every one is already so familiar in the ball-room. We see the same weary, hard-worked chaperons, the same crushing crowds of unmarried women. There is an equal amount of husband-hunting, rather less courtesy of manner, if that were possible, the same struggle to reach a higher rung on the social ladder, more time in which to concoct scandal, and more opportunity of circulating it. But in one point the skating-rink can claim a great advantage over the ball-room. Partners are by no means a necessity. A plain girl, therefore, does not find herself at the same disadvantage as at a dance. She need not wait beside her chaperon for partners who may never come, nor has she the mortification of contrasting the empty blank of her own card with the well-filled list of her pretty neighbour. In the rink she can buckle wings to her feet and pursue eldest sons as swiftly as her fairer sisters. She can exercise equally far-sighted calculation, and manage to fall as picturesquely and as helplessly when the heir to twenty thousand a year passes her by in a lonely corner. If she has small feet she can have her skates put on in public, or invent a dozen excuses for requiring a strap tightened or loosened by the men she meets. If these devices fail, it is easy to pretend a preference for skating alone or with those of her own sex, or else to set up as a good-natured coach to the inexperienced. Should a girl, however plain, become more than commonly accomplished on the wheels, she may be able to attract and retain as much attention as if she were good-looking, which is, no doubt, a great consolation. Married men, too, find the rink a not unpleasing place of amusement, independently of the exercise. There are plenty of pretty girls who want instruction, many helpless little hands held out to be steadied, fair damsels to be rescued from an ignominious position on the floor, and to be condoled with on skinned elbows or sprained ankles.

Indeed there is a great deal more freedom and intimacy in the rink than would be possible in a drawing-room, or than a wise mother ought to allow. How any refined lady can like to see her daughter exhibiting her paces in a crowded skating-rink is a mystery to these old-fashioned people who cling to the exploded idea that a girl's chief charm is modesty and purity of mind. An involuntary wish to rescue a pair of happy country maidens from the polluted atmosphere seizes one as they glide down the long, narrow slip of concrete hand in hand. It is their first season, and they are friends as well as sisters. Their short life has hitherto been spent in the schoolroom, the garden, visiting the village poor, or scampering along green lanes on a shaggy pony. They have looked forward to being presented as to a religious ceremony, and to their first ball as though it must decide their whole future life. Their adoring mother has kept them as long as she could in a well-guarded Eden of her own manufacture, from which the tree of knowledge was conspicuously absent. They know as little as possible about any world but their own, a world of family love, tenderness, and faith in each other. But their mother never thinks of resisting the call of custom and fashion, and from this atmosphere they pass without preparation to the London marriage market. Emancipated from the drudgery of the schoolroom, they revel in the liberty which they taste for the first time. New dresses are a boundless pleasure, the Opera a realization of fairy-land, and skating an endless delight—a pastime only too brief, an exercise to be taken without measure. But one of them looks at her watch; they have been hours on the wheels, and where is the poor mother? Does she not tire of sitting under a tree, even with *Daniel Deronda*? They beg her to come home; they protest they have had enough, as if that were possible; they are sure she is tired, which indeed she is; but no, she smiles lovingly while she bids them enjoy themselves as long as possible, and with pretty mendacity asseverates that she is not in the least fatigued. The younger daughter, with an innocent but highly unfashionable ardour of gratitude, will perhaps kiss her mother, and calls her a dear, delightful, unselfish old darling, and slide away for another turn. As she waves her hand by way of good-bye she hears the good-natured remark, "How can girls think to take men in by such ridiculous exhibitions of mock amiability? Lord Wideacres, for whose benefit this demonstration was evidently got up, is too old to be caught by such well-worn tricks." Our pretty skater has tasted of the forbidden but bitter fruit; the angry blood rushes to her very finger-tips, and she can hardly keep the tears out of her eyes. Her pleasure is spoilt for the day, and she almost persuades herself she is an impostor. But one season's blighting influence will thicken her skin; her blushes will not be so ready to protest against injustice, and her belief in girlish innocence will be much the same as that of her detractor. She will be able in the giddiest maze to remember which of the Guardsmen present are eligible, and will be intimately acquainted with all the unsavoury scandal of *Vanity Fair*. She will watch with interest and amusement, instead of disapprobation, the doings of women of many seasons, and listen with well-bred composure to the questionable stories told her by fast married men. If she does not marry, she may, alas! follow in the footsteps of a painted and powdered girl who stands sipping her coffee at a small table alone. Her dress is painfully scanty on her body and uselessly voluminous on the floor. She is bored to death, and waiting to catch some one with whom she can amuse herself by flirting outrageously. Presently she espies a distinguished-looking youth like a Peri at the gate. He is leaning against the low paling trying to see the skaters, and has beside him a beautiful collie dog. The girl, without a moment's hesitation, skates towards them as if by chance, stoops over and pats the dog, saying in a meaning tone, and with a glance at the handsome stranger, "Poor Bow-wow! Is he here all alone?

I would bring him in if I could." So by means of the dog she manages an introduction, and it is not her fault if the oddly made acquaintance does not ripen into a very warm and satisfactory flirtation. This is no hypothetical case. Such things do occur, and others of the same kind, and no wonder if girls who are kept in order at home think Prince's a glorious land of liberty and enjoyment. They drag their wretched parents from place to place till exhausted nature fails, and then start for the rink with a French maid as duenna. Still more unpleasant to the unsophisticated looker-on are the children who appear in French costumes and air their spindle legs and monkey tricks in public. There are always silly people ready to praise their rude speeches as if they were witty, and applaud their precocious imitations of the insolent or toadying manner of their elders. Such children make any one unaccustomed to them shudder at the thought that some day they may be wives and mothers in their turn. Fortunately there seems to be an interval in their lives when they are too old to come as children, and are not admitted because they have not yet been presented at Court; so that a place of improvement may be provided for them, for aught one can tell.

In amusing contrast to the aristocratic skating club is a rink where no annual subscription is required, no presentation at Court, no member's ticket, only a small payment at the door. Such places are springing up in all directions. They are the cause of much distress to the proprietors of dancing-rooms, but it is difficult to understand how they expected to evade the necessity of obtaining licences. Evening is the time to see such an establishment at its best, or worst. The room blazes with gas, but ventilators have been left out of the design. A smell of music-hall cigars, stale sandwiches, and cherry brandy pervades the air. The heat is suffocating, the glare blinding, the smell unsavoury. A combination of the barrel-organ and piano, uniting the more repulsive features of both instruments, and conspicuously labelled "For Sale," does duty for a band, and does not violate the provisions of 25 George II. cap 36. The whirr of wheels is like the sound of machinery out of gear, and the sight of figures gliding round and round makes the spectator giddy. But the skaters, who are apparently mostly of the shop-keeping class, seem to enjoy themselves. They are as silent as automatons, and busily occupied in keeping their heads from contact with the floor. Shop-boys are not as a class remarkable for personal charms. Their beauty is not of the type approved by artists; but no one who has not seen a second-class skating-rink knows of what contortions the human body is capable. Arms and legs fly about like the sails of a windmill, or like the figures in a magic-lantern. In the middle of the room and at the corners difficult feats are performed with ingenuity if not with grace, and one or two men secure the admiration of less skilful skaters by assuming the character of animated teapots. The young women may be seen, some clinging at the borders of the throng, where they eat sponge cake and drink lemonade at the expense of their respective young men, others showing a strong resolve to take the worth of their extra money out of the floor. Healthy as skating may be in the open air, it may be doubted whether these close and reeking rinks are more wholesome than the dancing pavilions which they seem destined to supersede, and whether there are not already too many of such establishments in London.

FASHION IN CRITICISM.

WE have frequently had occasion to comment upon the evils which result from the indiscriminate rush into authorship that belongs to these days. It is not every man who thinks that he can practise successfully as a barrister or a physician without any training; but a vast number of men and women appear to believe that nothing beyond the capacity for forming letters is necessary to the pursuit of literature. Probably the persons who suffer most bitterly from this strange creed are the critics, who for one first-rate or even decently good book have to encounter a large quantity of dull absurdity or limp commonplace; and it is no wonder if critics are sometimes possessed with despair or goaded into ferocity by the depressing nature of their tasks. At the same time it is they who are in a measure responsible for the toleration extended to the rubbish which constantly assumes the name of literature.

In literature, as in other things, there are fashions which change with the changing times. One cast of thought and expression first struck out by some man of original force comes into vogue, and is thought for a time to dwarf all other styles into insignificance. Its first appearance, when it is received by the majority with hesitation or utter disapproval, gives to certain people an opportunity for forming themselves into a select few. To them it is given to discern the beauties which are of too fine a structure for the faculties of the common eye. Theirs it is to cherish and expound the articles of the new faith. By degrees the world outside this charmed circle discovers the merits which have for a time been the special property of a few devotees; and when these have become a common possession, the pride of holding a secret treasure above the appreciation of the mass is lost to the self-constituted priests, who straightway search for a new idol. Meanwhile those who have followed in their wake, anxious to prove that they too have a fine apprehension, have lashed themselves into an extravagant admiration which ends in satiety. And this result is the more surely reached because any original style is tolerably sure to be imitated by writers who with their shallow perceptions reproduce its defects, and help to call public attention to them.

The reaction from an excessive admiration has been strikingly illustrated in the varying estimation of Byron's poetry. To a generation which not only delighted in the marvellous flow of his verse and the vast splendour of his imagery, but fell also into adulation of his false and unhealthy thought, which was found the easiest part of his work to emulate, succeeded one which was as indiscriminate in blame as its forerunner had been in praise. These concentrated so much attention upon the poet's faults that there was none left for his beauties; his eloquence was bombast, his imagination tinsel. The nature and simplicity of the Lake school were recognized; and presently the cry for nature degenerated into a thoughtless gabble. The imagination which, like the lakes themselves, could catch the forms of nature and mirror them with new beauty in its depths, was no longer needed. The cry was for simplicity, and not seldom drivel was accepted in its place. To the craving for fiery stimulant succeeded a longing for spoon-meat.

Nowadays these conditions are somewhat modified. Cultivation has spread so widely that it is possible for several poets of different styles to exist together, and even to be admired by the same people. This, no doubt, is good; but as there is danger in narrow, so is there in extensive, sympathies, especially if their constitution is so feeble that, in order to cover much ground, they must be very thinly spread. There is a large class of people who love to play Maecenas at little cost by bestowing the patronage of lazy approval upon followers of the arts. Endowed with a few wits which they have well nigh muddled in the attempt to be well informed without any trouble, they believe themselves gifted like the girl in the German story, so that whatever falls from their lips is golden. They would tell Milton, Farinelli, or Gainsborough with equal affability that their last performance was "really charming," and that "it must be so delightful to be an artist." The original sin, however, of pride in an admiration which the vulgar cannot share has by no means died out. Of late years it has taken a somewhat singular form. Those who looked around them for some startling development of imagination to set up as the central figure of a literary belief found what they sought in the morbid ideas of such writers as Gautier and Baudelaire, from whom they might have imitated what was good, but that would not have served their purpose so well. They were best pleased to find loveliness in the brilliancy which struck terror into most who saw it, the fevered brilliancy of disease; the exaltation which attracted them was the cry of delirium that broke through all accustomed trammels of speech. It seemed good to them to cast a lurid glow of fancy over the most sodden vice, as one may see the muddy bed of a river lit up by the glare of torches. The ring of melodious verse was more tuneful in their ears if by its means some story that should have been hidden was told. They found sermons, not in stones, but in the reptiles crawling in the dark beneath them. There are some who once trafficked in such things, and who have shown since that true power ends by shaking itself free from the evils that may threaten at first to obscure it; but there are others also who, like jays and parrots, have caught up the first utterances of a new style, and will long continue to repeat them with empty pretension.

It would not perhaps be difficult to point to a multitude of fashions in present-day criticism; but it is only needful to speak of a few. At one time the slashing style was in vogue; the critic imagined that he resembled Apollo in the far reach of his sight and the directness of his aim; and felt bound to carry the resemblance out by acting from time to time the story of Marsyas. His position was a safe one; he pointed out with unerring accuracy how ill certain work was performed; and it might be supposed that one who possessed such a keen eye for faults, and inferentially such a just conception of beauty as he did, could do the same work much better himself. If he were challenged to attempt it he could, if he pleased, reply with perfect truth and fairness that it was his business not to make, but to examine; that the creative and critical faculties were rarely allied, and that it was a notorious fact that artists failed in appreciation of their own works. Or he might even take higher ground and say that he had sometimes thought of showing by example how original work ought to be done, but that the services which he rendered to the arts by pointing out their professors' defects were too valuable to be abandoned for any selfish consideration. As a thoroughly admirable work of art is seldom produced, it would have been strange if such critics had failed to find victims in plenty to make stalking-horses for their own cleverness; and so the method continued until there came a reaction, of which the effects are not altogether wholesome. From thinking that it was not desirable to blame with unsparing ferocity, people grew by the usual process of exaggeration to think that it was desirable not to blame at all, until it might be said that, instead of trying to discover a blockhead in whatever genius might appear, they were bent on finding a genius in all the blockheads who do appear. Toleration is carried to excess when it not only admits, but bepraises, works which have no originality, grace, or even decent care to recommend them. How many novels, to take one branch of art, are now published which have neither plot, characters, nor grammar; and to how many of these is toleration, if not praise, extended? The critic who looks only or mainly for faults is not fair; but the evil which he does is probably less than that worked by one

who, discarding all notion of severity, encourages mediocrity or incompetence. True talent will triumph over undeserved sneers; but the standard of performance, once lowered by careless praise, will not soon reach its right level again. Thoughtless good nature, the easiest of virtues, when applied to criticism, perpetuates the bad habit of writing; and its practice bears a double fruit, for the more that there is written the more there will be to criticize.

There is another fashion of criticism of which the effect is less important, but which has grown so much that it must attract attention. This is in some sort allied to the school of poetry of which we last spoke, and has caught from it one of its worst tricks, that of jingling words together without any regard to their sense. Not only are its adopters contented if they can produce a sounding period, however little meaning may be contained in it; but they even go out of their way to make unnatural combinations of words, just as some French writers have done to discover unnatural fancies. They find their best opportunity in the criticism of pictures, in describing which they will talk of "a large quiet," or of the grace with which "the softer melodies of the landscape are relieved by the shrill staccato of a red cloak." They go about to find some new and finely æsthetic point of view from which to regard the things submitted to them; and in pursuit of this idea they will, for instance, discourse most exquisitely of the "strong personality" which runs through an artist's work. Whether it is meant by this phrase that an ordinary artist's performances appear as if they were done by some one else, we need not perhaps hope to discover. There is one phrase which has been for a long time in common use among various kinds of writers, but which yet belongs to the class of discordant combinations. In praising a writer's descriptive power it has been customary to talk of his skill in word-painting. The methods of the writer and of the painter in conveying the effect of a scene differ so entirely that it would be hard to find a more unhappy expression than this which confounds the two arts. The writer produces his impression by a slow process of detail, carried on under his reader's eye; and the reader makes the combination of the different portions for himself. The painter presents his spectator with the complete scene, and leaves him to discover if he will how its various parts were worked into a whole. The one process is the reverse of the other; and it would be as appropriate to speak of a painter's colour-writing as of a writer's word-painting. It might be easy to heap up instances of "æsthetic" (which is with some people a synonym for affected) phrases mistakenly employed by writers either with or without talent. "But enough of these toys."

THE BATTLE OF THE WHISKIES.

A FRESH Irish grievance has cropped up. Just as English or Scotch settlers intermarried with the Irish and produced a race more troublesome to rulers than the natives, so now English gin or Scotch whisky is "blended" with the "pure spirit" of the Emerald Isle, and it is alleged that the compound makes those who swallow it riotously and madly drunk. There are of course two sides to this, as to every other question, and the Scotch aver that what they call "silent spirit" is imported into Ireland to improve the native whisky. It is perhaps due to the quality of the spirit which he drinks that, as has been often noticed, the Scotchman when drunk is silent, while the Irishman is noisy. This "silent spirit" is brought to Dublin, and, either because it is better or because it is cheaper, it is mixed in bond with Irish whisky, and, said Mr. O'Sullivan in the House of Commons, "It is a shame that the State should be a party to this practice, particularly as it gains nothing by it." Previously to the Union, he said, this tampering with Irish whisky was unknown, and an Act of Parliament provided that any cask which had been partially emptied should not be filled up. We should say that on the proper construction of this statute whoever broached a cask of whisky would be bound to finish it, and disobedience to this enactment would of course be a misdemeanor. But now this and other legislative safeguards have been swept away, and, besides, there is at Somerset House an enemy of Ireland who issues at the public expense, in the shape of a Report of the Board of Inland Revenue, a crafty composition describing the "silent spirit" as a colourless and flavourless spirit well adapted for mixing with other spirits.

Thus Ireland suffers by a combination of Scotch cupidity and English indifference or malevolence, and various remedies have been proposed. One speaker in the debate considered that nothing short of an Irish Parliament and an Irish Chancellor of the Exchequer would give relief, while another thought that a Select Committee of the existing House of Commons should be appointed to inquire into the practice of "blending" and "into the effect of using new-made spirits," and the expediency of detaining all spirits twelve months in bond. It is objected that the Select Committee could satisfactorily inquire into the effect of using new-made spirits only by themselves drinking it, and the prospect of having twenty-one members of the House of Commons afflicted with *delirium tremens* in the discharge of duty would be alarming, even if the Committee were impartially selected from both sides of the House, or contained a large proportion of Irish members. As regards detaining spirits twelve months in bond, Sir Wilfrid Lawson would prefer to make the time twelve years. Another speaker suggested that the debate was got up by certain distillers in Dublin as an advertisement, and we are much struck with the novelty and beauty of this idea. It might perhaps be an improvement on the old plan of "keeping a poet" if some great house of business were to keep a member to call attention by an annual motion to its manufactures. Amid the confusion of various statements and opinions, we can discern that the Irish think their own whisky the best in the world, and it also bears a high reputation beyond Ireland. Spirit is brought from Scotland, mixed with whisky made in Ireland, and exported. As Government allows this to be done in bonded warehouses which are under its control, it seemed proper to require that the article thus produced should be marked "blended," and this has been done. There never is an end to anything Irish; but, if this were an English question, we should have thought that these marks, provided they were legible, would have settled it. People who are curious in whisky would know what the marks mean, particularly after two or three annual debates in the House of Commons; and to the rest of the world the whole subject seems, so far as anything Irish can so seem, unimportant. Mr. O'Sullivan, by way of imparting a moral flavour to the discussion, asked what would be said if Government were to allow deeds deposited in the Registry Office to be tampered with for the purpose of private gain? We may admit that the comparison is so far appropriate that even old deeds are probably capable, under the process vulgarly called gin-spinning, of producing spirit. The Irish, of course, assert that their whisky is made out of pure corn, while the Scotch is derived from rice, potatoes, beetroot, and refuse generally. The Scotch retort that, although the Irish have corn, they don't know how to make it into whisky, and that their product contains much fusel oil, which is rank poison. The Irish champion tells the House of Commons that drinking Scotch whisky is like a torch-light procession down a man's throat, to which his Scotch antagonist answers that a glass of Irish whisky is full of headaches to the brim. An English listener to the debate might perhaps be tempted to exclaim, "A plague on both your houses." If it be true that 5,000,000 or 6,000,000 gallons of spirit are annually imported into Belfast, we can only say that the fashions on which business depends are wonderful. It may of course be that this spirit, mixed with Irish whisky, makes a better article than could be made either by Ireland or Scotland unaided. Or it may be that the spirit made in Scotland is good, but consumers fancy it is better if it comes to them from Ireland. Probably much the larger part of consumption is supplied by retail dealers, and as they had no representative in the debate, the blame of pernicious adulteration was shifted upon them. Whether they are thus culpable we do not know, but if they are capable of changing the nature of an article after it comes to their hands, they would also be capable, we may suppose, of changing its name. Nevertheless it seems to be thought worth while to carry Scotch whisky to Ireland in order that it may be called Irish, although with the qualification that it is "blended."

As might be expected, Belfast, which is not so much Irish as English or Scotch, is the chief seat of this "blending" by which the beauty and purity of the native usquebaugh or water of life is deformed and vitiated. Identical in race, and scarcely differing in language, the Irish of the North and the Scots of the Western isles kept up a close and increasing intercourse at a time when Ulster was less known to Englishmen than Central Africa is now. Rather more than three centuries ago some thousands of Scottish families emigrated from Bute, Arran, and Argyleshire to find settlements on the thinly-peopled coasts of Antrim and Down. The Irish chiefs sought their friendship, intermarried with them, or made war on them, as the humour of the moment prompted; but their numbers steadily increased, whether welcome or unwelcome, until they became objects of alarm both to the native Irish, whom they threatened to supplant, and to the English, whom they refused to obey. Sometimes they joined the native Irish against the English, and they were always accounted the more dangerous foe. Shan O'Neil, with the help of several thousand Scotch marauders, made war on the Earl of Sussex, Lord-Deputy under Queen Elizabeth, and almost got the better of him, near Armagh. The historian who describes a skirmish in which the English, outnumbered by ten to one, drove back a howling crowd of Irish, adds that fortunately there were no Scots among the latter. A few years later another Irish rebel or patriot, Fitzmaurice, went up into Ulster, collected 1,500 Scots, and came down upon the Shannon. His first step was to burn Athlone. Thence he moved to Portumna, and crossed the river into Limerick. Sir John Perrot, who then commanded for Queen Elizabeth, desired nothing better than to have Fitzmaurice within reach of his arm; he hurried up to the woods in which he was reported to be lying between Kilmalloch and the Shannon. The waters were out. The horses could not travel. The men splashed along the shaking tracks of the bogs. But he got at the Scots at last, cut them in two, hurled half of them into Lough Derg, and chased the rest into Tipperary. There a few days later he overtook and would have destroyed them, but his army took the opportunity to mutiny, and told him that they would do no more fighting till they were paid their wages. So his prey escaped him, but his allies, the Butlers, killed one hundred followers of Fitzmaurice, sent their heads to rot on the gates of Limerick, and made a final end of the Scotch invasion. Perrot in this campaign had slot and cut in pieces 800 Irish and had drowned some hundreds of Scots, while the Butlers accounted for 400. We have dwelt upon these early passages of Scotch-Irish history rather than upon the later and better known transactions of the colonization of Belfast and the adjacent district from Scotland and England, and it thus ap-

pears that for four or five centuries the Scotch have largely occupied Ulster, and some of them have become more Irish than the Irish themselves. But they have always loved the theology of their own land, and it now appears that they are equally orthodox in liquor. They consider that Scotch malt whisky is the best in the world, and it is cheaper than Irish whisky, as well as, in their judgment, incomparably superior.

There is, or was, an Irish whisky dealer who sold his commodity under the name of the Lord Lieutenant, and it appears that a "blender" now advertises whisky as "bottled under the immediate supervision of the officers of Her Majesty's Customs and Inland Revenue." This we take to be merely the Irish way of saying that the bottling has been done in a bonded warehouse; and when a speaker in the debate complains that the Scotch whisky imported into Ireland is filling lunatic asylums and sending men to untimely graves, we understand this only a strong way of expressing dislike to an article that is 2*s.* per gallon cheaper than the native product. We do not enter into the controversy between pot and patent stills, and when one side calls the Scotch whisky "vitriolic," and the other claims that it has "improved the native spirit," we can only conjecture that it is neither very bad nor very good. What one party calls "blending" is naturally regarded from the opposite point of view as "adulteration," and we should not be surprised to find that the Scotch colonization of Ulster is described in equally conflicting terms in reference to its supposed influence on the native population. But we cannot help thinking that these Irish distillers are upon dangerous ground when they propose for sanitary or moral reasons the prohibition of "blending" of Scotch whisky with their own. The precedent might be used for "protecting the lives, health, and sanity of the public" by prohibiting alike native and imported whisky. Outsiders may be apt to think that "pure spirit" and "blue ruin" are equivalent terms. We cannot help comparing this dispute to those which originated the saying that orthodoxy is your own doxy and heterodoxy is another man's doxy. It all depends on the point of view. But let the Irish distillers be consoled. The facts of which they complain only prove in a new and striking way the invincibility of Ireland. Who would have believed that the round and rosy of Normandy would have stooped to imitate a proud chivalry [illegible] They are [illegible] a barbarous equivalent? Yet their knightly names to as[illegible] heads [illegible] changed into McSweenie, Fitzurse became McMahon, and Ver[illegible]ble to. Casting aside the and Geraldines called themselves McShehies. [illegible] be undiscommanding features of their Norman race, they came to [illegible]ition, tinguished in soul or body, look or dress, language or dispos[illegible] from the Celts whom they had subdued. Invaders caught the national contagion and became *ipsis Hibernis Hiberniores*. The same potent spell has worked for seven hundred years, and it is a tribute to the fascinating genius of the country that Scotch whisky when imported into it becomes so thoroughly Irish that even Irishmen cannot tell the difference. The Chancellor of the Exchequer could not help these complainants if he would. Vainly did legislation forbid the "Englishry" in Ireland to intermarry with the native races, and the prohibition of blending or adulteration of Irish with Scotch whisky is equally impossible. History repeats itself, and the mingling of Scotch and Irish spirits began when the Earl of Argyll's sister eloped with Shan O'Neil.

DECEASED WIFE'S SISTER AGAIN.

IT might have been supposed that the hopelessness of attempting to overcome the deep and natural repugnance of the English people to the general confusion of family relations which would be produced by legalizing marriage with a deceased wife's sister, as the first step in a series of similar innovations, had already been sufficiently demonstrated, and that the artificial agitation on the subject had been pretty well exploded. It now turns up, however, in a new form, as unabashed as ever in its impudence and its habits of misrepresentation. On Monday a deputation waited upon the Colonial Secretary to propose that this objectionable form of marriage, which, it is seen, there is no chance of getting directly legalized in this country, should be indirectly legalized in an underhand and crooked way. The speeches were of the usual kind; but perhaps it is better to begin by tracing this new agitation through its primary stages in the official correspondence which has just been published. It begins with a letter from Sir Thomas Chambers, in which he points out to Lord Carnarvon that "nothing can be more disastrous than that questions of legitimacy and inheritance should be left unsettled, to introduce strife and controversy into families, and to be decided years hence, after protracted and costly litigation." Nobody of course will dispute this self-evident proposition. Indeed, as it happens, it was expressly on this ground that the law with regard to marriage with deceased wives' sisters was placed on its present footing in this country, and this is the law which Sir T. Chambers and his friends are now, by every kind of reckless artifice, endeavouring to unsettle and upset, regardless of the disastrous consequences which he himself points out. He then goes on to "assume" that "the Home Government, in advising the Crown to sanction the Colonial Acts, did so in perfect good faith, intending to give full validity in all respects to those marriages which might be contracted under them, whilst it is certain that the colonists confidently expected that every incident of a legal marriage would attach to those so sanctioned." Here are two assumptions which are both purely imaginary; that the Colonial Acts on this subject were intended to apply to the mother-country—for that is what Sir T. Chambers means—and that the colonists as a body are in favour of this kind of marriage. It is notorious that it has hitherto been found impossible in this country to get Parliamentary assent to such a change in the law, and that the majorities in the House of Commons which at one time lent a spurious appearance of support to the proposal have been steadily declining as the hollowness of the agitation, kept up by a few interested persons, has been gradually exposed. As to the colonists, they have no doubt passed the local Acts in question, probably without much consideration or appreciation of the consequences, but the minority which takes advantage of them is very small. It may be suspected, indeed, that these laws had their origin in the intrigues of agitators in this country, and were devised by them as a means of carrying their point by a side wind, and without attracting attention over here. It was perfectly understood when these Acts were sanctioned by the Home Government, that all that was conceded was that the mother-country, while preserving its own rights, was willing not to interfere with the wishes of the colonists, and that the Acts were therefore to be strictly local in their application to the various colonies which adopted them. It is obvious indeed that, if the mother-country had been willing to go any further, there would have been no necessity for the local Acts at all, inasmuch as a general law of the United Kingdom would have included the colonies in its operation. Sir T. Chambers, having invented an intention which never had any existence, characteristically proceeds to say that he "cannot therefore anticipate any objections on your Lordship's part to the passing of a Bill the single object of which is to carry out that intention, by putting the offspring of such marriages on the same footing as regards inheritance, as well as in respect of legitimacy, as the children of marriages lawful in the mother-country." Here again the fact that Sir. T. Chambers thinks it necessary to bring in a Bill to make these marriages lawful in England proves conclusively that they had never been made lawful, and that the various Acts have only a strictly local application. All that the English Government said to the colonies was:—"This is not a question on which we are disposed to quarrel with you. Take your own course, and don't bother us."

There is really something stupendous in the audacity with which an arrangement of this kind is now presented as, in effect, working a revolution in the general law of the United Kingdom. The insidious nature of the proposal is easily discovered; and the Colonial Secretary, after stating that there does not appear to be [illegible] any doubt wi[illegible] actual law on the subject, though it may be expected that questions of domicile will from time to time arise in connexion with marriages of this kind celebrated in colonies where they are legal, points out the way in which the proposed Act would be used by persons who wished to circumvent the existing English law. The proposed Act, it is remarked, "would have the effect of giving validity in the United Kingdom to marriages of this description entered into by residents in the United Kingdom who have simply made a trip to the colony for the purpose of procuring celebration of the marriage, thereby evading the law of this country." In reply to a second appeal from Sir T. Chambers, Lord Carnarvon replies that it is true that the offspring of marriage with a deceased wife's sister in colonies where such a marriage is legal cannot inherit land in Scotland, or, as he believes, in England; but "it does not appear that there is any doubt about this state of the law, and it is not, in his opinion, desirable to alter or interpret the law so as to place the issue of such marriages, if contracted in the colonies, in a better position in England than the issue of similar marriages contracted at home." Such being the state of the case, the question is brought to a very simple issue. There is no desire in the mother-country to restrict the freedom of colonists to do what they like among themselves in regard to these marriages; but, on the other hand, the mother-country has clearly a right to maintain its own laws within its own jurisdiction until it sees fit to change them. Mr. Alderman McArthur, in introducing the deputation at the Colonial Office, remarked that the colonists felt that it was very oppressive that these marriages should be recognized as legal, and the children as legitimate, in one part of the Queen's dominions, while in another exactly the reverse was the state of the law; but the obvious answer is, that it would be at least an equally invidious anomaly that the mother-country should be compelled to abandon its most cherished traditions, in order to please a few eccentric people—who, it must be borne in mind, are only an insignificant minority of the colonists—on the other side of the world.

Mr. Lowe urged that, though an enabling Act ought not to extend to persons who had gone to the colonies for the purpose of evading English law, or to any cases where the marriage might be considered incestuous, it would be safe to invest marriages with deceased wives' sisters with a legal character in England as well as in the colonies. It is evident, however, that this project for the establishment on a legal footing in England of colonial marriages of a peculiar kind is only, like the pretence of confining the change to deceased wives' sisters, the thin end of a dangerous wedge. If these colonial marriages were once recognized in England, there would at once be a cry raised as to the injustice of denying to British residents the privilege enjoyed by colonists. And next, when sisters-in-law had been made legally marriageable, there would

be an agitation to place other relations by marriage in a similar position, and the same horribly confused state of family relations which is now to be found in some parts of Germany would begin to creep in. Mr. Lowe also remarked that the English Government is committed to the approval of deceased wife's sister marriages by sanctioning them in certain colonies; but this is a mistake. No approval has been expressed, nor has any Government ever had the right to express such approval on behalf of the nation. All that has been done has been, for the sake of peace, to let the colonists have their own way if they choose. But we are not going to allow them to impose laws upon us against our will. On their own soil they can do as they please, but then we claim the same right on our soil; and this seems only fair. Whether marriages of the kind in question ought or ought not to be allowed is a question which anybody who has an interest in it is entitled to raise; but it ought to be done in an open and straightforward manner. A change amounting to a revolution in English domestic life ought not to be passed in a quiet, underhand way without the full knowledge and assent of the country, and a clear perception of what is being done.

THE AMERICAN "DOD."

WE have before us a list of the new members of the Congress which is now sitting at Washington, with brief biographical sketches of each, compiled from information supplied by themselves. These sketches are interesting from many points of view. But they are especially instructive as throwing light upon the classes from which American public men are drawn, and thereby affording an explanation of some of the causes of that corruption which the Democratic majority in the House of Representatives is so zealously unearthing, in the hope that the discredit of their opponents may redound to their own party advantage. The position of Congress in the American Union will be borne in mind. It is, speaking generally, recruited from the picked men of the several State Legislatures. The usual course for a man who has made a mark in his neighbourhood as a political aspirant is to enter the popular branch of the State Legislature. The next step in a normal progress is to go to the State Senate. Generally it is from the men who have undergone this preparatory training, and have asserted a superiority over their fellows, that the candidates for the popular Chamber of Congress are selected. For the Federal Senate still more distinguished candidates are sought out; usually they are past or present Governors, or else men of commanding eloquence, like the late Mr. Sumner. Of course there are many exceptions, but the general rule is as we have stated it. And, remembering the presumable superiority of the members of Congress, when we know what kind of men they are we shall be able to form some idea of the average State legislator.

The present Congress is composed of 74 Senators and 292 Representatives, making a total of 366 members, exclusive of the Delegates from the Territories. Of the whole number, 176 are new members, and it is of these that we have before us the biographical notices. What we are about to say, however, may be taken as fairly descriptive of the whole Congress. If, indeed, we were to include the entire Congress in our remarks, the picture would have to be made somewhat more unfavourable; for the new members comprise a large Southern contingent, composed mostly of men who occupied a good social position before the war. But for the present we confine our notice to the new members. And the first observation to be made is that they are, with singularly few exceptions, native-born citizens of the United States. Of the whole number, 176, there are only seven foreign born. And of these seven, two are Canadians. The Europeans therefore are only five, and of these again, three are Irish, one English, and one German. So that there is but a solitary member of the non-British population of the United States. The smallness of the foreign representation may serve to show how exaggerated is the influence generally attributed to the foreign population. Of course we do not mean to assert anything so paradoxical as that the presence of a large number of poor and adventurous immigrants, without the faintest feeling of patriotism, does not supply corruption with serviceable tools. But if the foreign element were actively corrupt, it would not allow all the prizes, as well as all the honours, of political life to be carried off by natives. Passing from nationality to the more important question of education, we find that 69 out of the 176 report themselves as having received a University education. It is necessary to bear in mind, however, that "University" in the United States means a very different thing from what it does in Europe. Some of the American Universities are, no doubt, admirable institutions. But the greater number are to be compared with the ambitious "collegiate" schools so plentifully found in English towns rather than with our Universities properly so-called. For example, several of them are mere sectarian seminaries. Of the real Universities, Yale has the largest number of graduates—six; while its rival, Harvard, has only one. One member, again, is a graduate of the German University of Giessen; and one has studied medicine at Edinburgh. Lastly, two are graduates of Westpoint. Indeed, of the 69 who have been at college, the majority received only a professional training. According to Mr. Gladstone, therefore, they have not had a liberal education. Let us cite a few examples. Here is the early biography of one of the new Senators:—"Born at Warrensburg, Missouri, October 1, 1834; received a common school education, but finished his studies at Chapel Hill College, in Lafayette County, Missouri, an institution belonging to the Cumberland Presbyterian Church. As opportunities offered, he worked upon his father's farm, studied law, &c." Here is another sketch, also of a Senator:—"Worked on his father's farm till twenty-one years of age; graduated at Hiwassie College; studied law." Another "was apprenticed to the saddlery trade; was two years in college; did not graduate; was admitted to the Bar." We need add nothing to these extracts. The so-called colleges, in fact, in many cases are merely pretentious schools, which students leave little less ignorant than when they entered. But, apart from the information they supply as to the nature of the education received, our extracts serve to show from how very low a stratum of the population a large proportion even of the better-educated members of the Senate are drawn.

Of the 176 new members there remain 107, who do not profess to have had more than an ordinary school education. Of these some are entirely silent on the subject, and some say that they received a classical, an academic, or a good education—terms so vague as to convey no distinct information. The large majority, however, frankly acknowledge that their early instruction was of the most limited kind. James Haralsson, for example, tells us that he was born in Georgia in 1846 of slave parents; he became free at the close of the Civil War, and settled in Alabama, "and acquired a knowledge of English by his own personal efforts." In 1868 he took an interest in politics, in 1870 was elected to the State Legislature, in the following year was made a justice of the peace, in 1872 was elected to the State Senate, and two years later was chosen a member of Congress. It may be said that the presence of men such as this in the Federal Legislature is an accidental and temporary phenomenon; we pass on, therefore, to the white members. We find one telling us that he gained what little he knows by his own exertions; another that he attended the common schools in the winter; a third that he went to school in intervals of leisure. But the commonest statement we meet with is, "Was raised on a farm, and attended the common schools," or, "Was instructed in the public schools, and worked on a farm." These two phrases are repeated so frequently that it would almost appear to be the normal beginning of a Congressman's career. The next step recorded is usually that the lad who thus snatched instruction as best he could in his intervals of hard work set up a school on his own account. After a while we find the young pedagogue at the Bar or editing a newspaper. It is hardly necessary to remind the reader that every large town has a Bar of its own, and that there does not exist the division between the two branches of the profession which obtains in this country. Preparation for the Bar, therefore, does not mean what an Englishman understands by the phrase. In several instances we are told that the intending lawyer had not the benefit of assistance of any kind. In other cases he went into an office. But outside the great cities a lawyer is little more than a country attorney. Preparation for the Bar, therefore, which in Europe would imply considerable culture, in the United States means very little. We are far from implying that a University training is essential to a public man, or from denying that a self-taught man may be a statesman. But, unfortunately, as a rule, American Congressmen are not self-taught. They are untaught.

The facts we have cited undoubtedly prove that careers are open in the United States, that the humblest citizens may aspire to the highest offices. Those who regard this as the principal end of government will therefore consider those facts eulogistic of American institutions. But those who believe the function of government to be the enactment of wise and just laws adapted to the requirements of the country, and their fearless, impartial administration by competent men fairly chosen for their fitness, will take a different view. Unquestionably, careers ought to be open. The State which acts upon a different principle is not merely unjust to a portion of its subjects, but deprives itself of a great fund of talent. But careers ought to be open to the educated as well as to the ignorant; and, as a matter of fact, they are not so open in the United States. For reasons which we need not go into here, political life has become so degraded that men of culture will have nothing to do with it. The way is thus left open for needy and half-educated adventurers who have fluency enough to repeat with effect upon the stump the commonplaces of popular oratory. They engage in log-rolling and wire-pulling and all the other practices by which Transatlantic politicians promote their own interests. Step by step they rise, and at last reach Congress. They have got on by courting the mob, by making themselves useful to men of influence, and availing themselves in turn of the services of aspiring followers. They have no knowledge or culture to grasp the principles of a broad national policy, or to perceive the defects of institutions worm-eaten by corruption. Naturally, therefore, they turn from the strange and uncongenial task of considering laws the merits and defects of which they are alike incapable of appreciating, to the practice of the arts on which they have prospered. Under their influence rings are formed and lobbying flourishes. They sell their support to the executive Government for a share of its patronage. And they sell their votes to Credit Mobiliers and Railway Companies for hard cash. Their influence reacts upon the constituencies, and deepens their corruption. It extends to the Administration, lowers its moral tone, compels it to bargain for support, and surrounds it with tools fit for its purposes. And thus is brought about the state of

things in which Cabinet Ministers barter away the offices in their gift, and the members of the President's family trade in Government posts.

MEASURE FOR MEASURE AT THE HAYMARKET.

IF the performance of *Measure for Measure* at the Haymarket Theatre should prove attractive, it will indicate the completion of a remarkable change in public taste. The play has, no doubt, been produced out of regard rather to the talent of Miss Neilson than to the general capability of the company, and we could wish that some of the fine passages which occur in it might be better spoken. But as a means of popular education this performance, although far from perfect, will be useful, and some persons may be surprised to find that they have been talking Shakspeare without knowing it. Everybody has heard the song "Take, oh take those lips away," and the name of Mariana at the Moated Grange is generally familiar, although the present generation knows her best from a modern poet's gloss on Shakspeare's text. The lady who performs this part looks as if disappointed love agreed with her, and possibly it is from a sense of incongruity that she neither listens to this song nor apologizes for her taste in music by the words

> My mirth it much displeas'd, but pleas'd my woe.

The stage edition of this play gives the cast at Drury Lane Theatre in 1824, when Macready played the Duke, and the scene at the Moated Grange is omitted. But as it is a short scene, and contains this beautiful song, we should have thought it might have been restored, particularly after the recent success of the musical parts of *As You Like It*, and of Mr. Tom Taylor's *Anne Boleyn* at this theatre. It would, however, have been desirable in that case to provide that Mariana should be rather more doleful, and it would be well also if she were a size smaller, as it is difficult to believe that she could be mistaken, even in "the heavy middle of the night," for Isabella. The wealth of Shakspeare's mind is shown in this scene by the few lines which he puts into the Duke's mouth merely to fill up the time while the two ladies are conferring; and as Mr. Howe can speak such lines as these, we should be glad to hear them, particularly as in these days of Special Correspondents and Royal or Imperial progresses "place and greatness" have more eyes fixed on them than ever. Although the scene of this play is nominally Vienna, the characters and circumstances belong either to England or to all the world. Perhaps the recent popularity of the play in the United States is due, not only to Miss Neilson's fine acting of Isabella, but also to the life-like picture which it presents of England as it was when American colonization began. The Clown and the Constable are English all over, and the prison, with debtors and murderers huddled in indiscriminate filth, is only too truly painted. The laughter which greets Mr. Buckstone's appearance as Pompey proves that the fun no less than the pathos of this play is of enduring texture. The disquisition on dishes, and the "truths" with which he confutes the case against him, are delivered with the cunning which affects simplicity; and, as might be expected, he makes the most of his promotion to be assistant executioner. The disgust of the regular hangman at this discredit to his mystery, and the Provost's rude comparison between his trade and Pompey's, must have always been one of the most popular points in the play. Hangmen, be it observed, are necessarily few in number, and perhaps, if there were enough of them to form a corporation, they might receive more public consideration than they do as individual practitioners. It has been a common practice to recruit these ministers of justice from among condemned criminals; and thus Pompey is offered the place of deputy hangman as an alternative to imprisonment and whipping. The death of a pirate by "cruel fever" in the prison is perhaps the truest feature in the picture; and the murderer "unfit to live or die" may still be found even where gaol fever has been extirpated. In America, perhaps, hangmen are treated with more respect, or at least they ought to be in States where respectable citizens sometimes take the hanging business into their own hands. In Shakspeare's time, if there were not many hangmen, they had a considerable business; and yet he knew what he was about when he made the Provost say that "a feather would turn the scale" between heading, hanging, and other forms of human butchery, on the one hand, and the unmentionable trade of Pompey on the other. The Clown is diligent in his new calling, and he hopes that if ever his master should come to be hanged he may find his pupil yare, "for truly," says he, "for your kindness I owe you a good turn." Such was the interior of a prison in Shakspeare's time, and such it continued for nearly two centuries, until Howard took the work of reform in hand. But although many criminals have lain under sentence of death in prison, there have been few such scenes either in fact or fiction as that between Claudio and Isabella.

It must be owned that Miss Neilson is not altogether fortunate in her assistants. Mr. Harcourt, who lately spoke the lines of Jaques in *As You Like It* with much taste and good effect, is less successful in the part of Angelo; and Mr. Warner cannot be congratulated on his delivery of blank verse, which perhaps was not considered an essential part of theatrical education when he learned his business. Mr. Howe is careful and generally successful in the Duke's speeches. Mr. Conway in Lucio helps the play considerably, and the sight of Mr. Buckstone would suffice to put the audience into pleasant humour even if the clown Pompey had not so many good things set down for him. The play wants, however, several representations to make it go thoroughly well, and when the company are better practised in their parts it ought to be very effective—supposing, that is, that audiences can be found able to feel and enjoy its beauties. Before the curtain has been up five minutes we are listening to some of the best poetry and philosophy in our language:—

> Spirits are not finely touched,
> But to fine issues.

This comes from the grave Duke. Even the airy Lucio teaches that

> Our doubts are traitors,
> And make us lose the good we oft might win,
> By fearing to attempt.

The principles on which justice should be administered are excellently set forth in the dialogue between Escalus and Angelo, beginning—

> We must not make a scarecrow of the law;

and if the condition of the prison shows that the practice of justice fell short of these principles, we are not therefore to conclude that the principles were not strongly held. The administration of criminal law must always be something of a lottery. Claudio says:—

> The sword of Heaven, on whom it will, it will;
> On whom it will not, so: yet still 'tis just.

The man who died of gaol fever in this play was a notorious pirate, but the danger of this death awaited in Shakspeare's time and long afterwards even a prisoner committed on a false charge. Another view of the uncertainty of the law is presented in Isabella's words:—

> Who is it that hath died for this offence?
> There's many have committed it.

It has been suggested that Shakspeare in sketching the character of Angelo had an eye to the Puritan austerity of outward conduct which was just then beginning to prevail. Both the Puritans in New England and the Jesuits in Canada governed society much as Vienna was governed during her Duke's retirement, and it may be questioned whether adult America has profited by the severities inflicted on its youth. In England the strictness of Roundhead *régime* was followed by riot and profanity under a restored King, and rightly or wrongly Angelo has been regarded as the type of a class of actual rulers of the Commonwealth, after whom even Jeffreys under the monarchy might seem respectable.

The defect of this play for acting purposes is that its most powerful scenes occur in the second and third acts, while the fifth act rather drags. After the two scenes between Isabella and Angelo, and the scene between Isabella and Claudio, it is difficult to avoid feeling something like disappointment as the play proceeds. Some critics have ascribed to the actress a failure of energy which we think belongs more properly to the part of Isabella. Yet it is only by comparison with what we have already heard that what we now hear seems tame and dull:—

> Nay, it is ten times true, for truth is truth
> To the end of reckoning.

These words might be fitly applied to many passages of this play, which as long as our tongue is spoken will be quoted as summing up all that can best be said on the course of justice and the influence of mercy. Yet if this were an ordinary play, we should be impressed with the skill with which the fifth act is carried on. The Duke, who in his disguise as a friar has learned the whole story, affects to disbelieve Isabella, and with fine irony he says, in assumed defence of Angelo,

> If he had so offended,
> He would have weighed thy brother by himself,
> And not have cut him off.

Then he leaves Angelo to judge with the help of Escalus his own cause, goes out, and returns in his old disguise, and being asked whether he set on the women to slander Angelo, answers, "'Tis false," adding the lines, more often quoted perhaps than any in the play—

> Respect to your great place! And let the devil
> Be sometime honoured for his burning throne.

Then he says, in apt reference to the suitors and the judge,

> Oh poor souls,
> Come you to seek the lamb here of the fox?

For this and other offensive speeches the Provost arrests him, and Lucio, aiding the minister of justice, tears off the friar's hood and discovers the Duke, whom he has both abused and roughly handled. The Duke commands Angelo to marry Mariana, and when that is done orders him to execution. His wife entreats Isabella to plead with her for his life, and here occur the lines—

> They say best men are moulded out of faults;
> And, for the most, become much more the better
> For being a little bad.

The censure of Angelo is well spoken by his colleague Escalus, and the Duke still pretends to be obdurate, until Claudio enters alive and well, and Isabella throws herself, with no lack of energy, into her brother's arms. It only remains for the Duke to settle accounts with Lucio, and then he addresses himself to Isabella, but with a vagueness which might perhaps have justified Isabella's mamma, if she had one, in asking what were the Duke's intentions. Some playwright, probably of the last century, undertook to define what Shakspeare has left doubtful, and has made the Duke offer in proper form his hand and heart to Isabella, who gratefully

accepts the same, and the lovers pair themselves accordingly. One would like to have known the man who could sit calmly down and proceed to improve at once Shakspeare and the generation in which he himself lived [illegible] this happy pair resolve "To rule themselves before [illegible] rule mankind." It is wonderful that he did not apply to himself what Shakspeare says about men who assumed to use Jove's thunder.

The comparison of this last act with the fourth act of the *Merchant of Venice* is obvious, and that play exhibits the same defect for stage purposes as this, and more strongly. The beautiful poetry which the author has put into Lorenzo's mouth cannot avert the feeling that he and Jessica are superfluities. But the last act of this play is needed to complete the story, and to justify its title—

Like doth quit like, and measure still for measure.

In the last century it was the fashion to apologize for the indelicacy of the subject of this play, but by the kind assistance of our French neighbours we have cleared our minds of any scruple on this head. There is, indeed, one French comedy, and that one as charming and popular as any, which does not even hint at the seduction of maid, widow, or wife. Those who have not seen *Les Pattes de Mouche* in the original will be delighted with *A Scrap of Paper* at the Court Theatre. We could not have believed that an English version of this comedy could be so amusing as good acting makes it.

REVIEWS.

WYON'S REIGN OF QUEEN ANNE.*

MUCH labour and not a little courage needed for the accomplishment of the task which Mr. Wyon has, in some respects successfully, performed. We are not among those who are in the habit of speaking slightingly, or of damning with the very faintest of praise, the historical labours of the late Lord Stanhope; but of his *History of England from* 1701–1713 it must be allowed that it can only serve its avowed purpose of forming a connecting link between Lord Macaulay's work and the author's own *History of England from the Peace of Utrecht* so long as there is nothing better to take its place. Lord Stanhope's narrative of the War of Succession in Spain was one of his earliest productions, and family papers here supplied him with materials which must continue to make this book, the substance of which was of course incorporated in the later work, an authority; and it is properly used as such on occasion by Mr. Wyon. Lord Stanhope had access to some other hitherto unused materials for his History of the reign of Queen Anne, and the spirit of moderation and candour in which he invariably wrote is not absent from this book, where its exercise was signally needed. But the work as a whole seems to lack the necessary vigour of grasp, and the attempt with which it closes to summarize the more general aspects of the period falls very far short even of a lower standard of comparison than that which the author himself invited. There could accordingly be no reason why Mr. Wyon should shrink from a rivalry quite permissible in itself and not rendered futile at the outset by conspicuous success on the part of any previous English historian. It is true that Marlborough is to such a degree the chief figure of this period of English history that, though all the rest cannot precisely be said, in the odd phrase of Lord Stanhope, to "centre around" it, and though Mr. Wyon asserts too much in observing that "the history of those twelve years during which Anne filled the throne of Great Britain is, and can be, little besides a biography of Marlborough," yet a competent biography of him certainly absorbs most of the political, and some of the literary, interest of the age. But Coxe's Life in any case requires to be supplemented even as a biography; and no biographical work can at any time, if true to its own character, as Coxe's must be allowed to be, usurp the place of a comprehensive history. As for contemporary sources, they are in this instance more numerous than trustworthy; but no very deep critical insight is requisite in dealing with a writer so outspokenly partisan as Burnet, or in gauging the veracity of Bolingbroke or the candour of Swift. The historical hacks of the age wear their colours with the most absolute openness; and it is only now and then that some discrimination is needed in interpreting the significance of one of the thousand disguises of Defoe. Much as may yet be forthcoming from the various archives of European States in the way of original evidence, it does not seem as if any material addition were likely to be made to our means of understanding the political history of the age, although, on the other hand, more and more of the statements derived from the doubtful sources of information we already possess are likely to be discredited. In a word, what, in addition to the indispensable element of discrimination, is chiefly needed in an historian of the reign of Queen Anne is the power of combination, construction, and arrangement. Interesting he can scarcely fail to be, for the materials are so many and various that hardly any fresh narrative can fail to give prominence to some that have been less exhaustively dealt with by its predecessors. But he should above all things strive to be clear, and to blend into a perspicuous whole a narrative the main course of which has a singular dramatic completeness of its own. What the ancient critic called the binding and the loosening of the knot are here in outline present to the mind of every reader; there is no difficulty in recognizing the whereabouts of climax or of catastrophe; the only danger is lest, in attempting to trace the several complications and to illustrate the progress of the action, the historian should contrive to deepen the obscurity he is seeking to remove.

Mr. Wyon has shown little disposition to achieve a notable success in the direction we have sought to indicate. His book gains in clearness, as indeed it seems to us to gain in other respects likewise, as it proceeds; and when towards the close he moves in the troubled waters of English politics at the period immediately preceding the death of Queen Anne, he steers his course with praiseworthy decision and not infelicitous boldness. But his opening sketch of the general situation of European politics at the time of the beginning of the great war, and of the progress of French aggression in particular, is poor: and he seems unacquainted with such works as that of C. von Noorden, which might have set him an example of a method of historical survey to which he is obviously a stranger. Indeed Mr. Wyon's acquaintance with German historical literature can only be supposed to be on a par with his special knowledge of German political history. Wurtemberg, we may inform him, was not a kingdom in the year 1703, and is not, on the other hand, a mere duchy at the present day; while, again, it is incorrect to speak of Swabia as a State. These, however, are trifles to which we only refer incidentally. A more serious objection to Mr. Wyon's method of workmanship lies in his too persistent adherence to a purely synchronistic plan of narration; so that the reader is taken backwards and forwards from England to Scotland, and from home transactions to the events of the war abroad, without the slightest attempt on the part of the author to mitigate the severity of the process. Nothing but a general index, and a couple of fly-leaves supplying the dates of the years, is vouchsafed to give coherence to the narrative; and a reader not already well acquainted with the general outline of events will not find it easy to keep the thread in hand. How serious a defect this is in a History of this kind will, for instance, be found by any one who tries to gain from Mr. Wyon's book a connected account of (say) the transactions in Scotland with reference to the Union, or of the successive attempts to negotiate a peace which preceded the Congress at Utrecht. Both these series of transactions are detailed by Mr. Wyon with much ability and judgment—the former, as it seems to us, conspicuously so—but it requires some patience, and some mental tension, to keep together his several statements and observation with regard to either subject.

To one other defect in this History we feel bound to advert, before dwelling on some points which appear to us to call for notice in the course of the narrative. In a book representing so large an amount of conscientious labour, and displaying qualities deserving cordial acknowledgment from the historical student, it would be ungracious to dwell on little faults of manner or trivial slips of composition. But we have always raised our voice against a particular tendency which seems on the increase among historical writers who cannot plead ignorance as to what befits the dignity of the branch of literature to which their works claim to belong. An historian of the reign of Queen Anne, above all, ought to have profited by the warning examples which the historical literature of that age only too abundantly supplies. We do not object to occasional strong language in the expression of decided views and sentiments, whether or not we may be ready to subscribe to the views or sentiments in question. We do not, therefore, for instance, quarrel with Mr. Wyon's remarks on the education of the Old Pretender, which, he says, "had been of that sternly religious character from which a boy of vivacious intellect generally emerges a monster of depravity, and a boy of ordinary parts a superstitious dotard"; though we cannot help remembering the results to which an education of a directly opposite character led in the case of the Old Pretender's son. Nor, on the other hand, if an historical writer is gifted with wit, even though that wit may be less ready than Macaulay's, or with humour, even though its vein be less rich than that of Mr. Carlyle, do we know why he should suppress the occasional use of these enlivening qualities of style. Mr. Wyon may therefore be indulged in such a sally as that of relating how Queen Anne (after the great storm) "proclaimed a general fast to be kept on the 19th of January for the purpose of deprecating the divine vengeance, and imploring the Almighty that he would avoid sending such high winds in future." Defoe was rather wittier on the subject of this very storm than Mr. Wyon; but his epigram took a more special turn. When, in his concluding summary of the character and capacities of good Queen Anne, her historian says that "she was a Tory, and imagined, with probably a great many kitchen wenches in her dominions, that the Whigs were a party who wanted to destroy the Church," he really very successfully describes both the depth of the Queen's convictions and the quality of her political intelligence. It is not with such instances of vivacity that we find fault, but with the many passages in Mr. Wyon's book where, seeking to be vivacious, he only succeeds—for the word must out—in becoming vulgar. We do not intend to inflict them upon our readers; as a specimen it will suffice to cite the observation added to a not very refined description of Queen Anne's personal appearance, that "it is to be hoped that her husband, the party principally concerned with these charms, held them in proper appreciation." Playfulness of this sort does not enliven a sober history, even in the sense in which "the

* *The History of Great Britain during the Reign of Queen Anne.* By Frederick William Wyon. 2 vols. London: Chapman & Hall. 1876.

struggle between the Church and Dissenters," in Mr. Wyon's elegant phrase, "enlivened the sixteenth and seventeenth centuries."

Mr. Wyon appears to us to have seized with a vigorous grasp and (in so far as his method made it possible) to have narrated with satisfactory clearness the main parts of the story once more retold by him. On the whole he has succeeded in showing at the same time what were the national interests involved, or supposed to be involved, in the great political questions of the reign of Queen Anne, and what was the way in which party politics caused these questions to be viewed and treated in the successive stages of their development. If it is easy for an historian of the present day to abstain from writing as a political partisan, and if a modern Whig or Tory who identifies his party with that which bore its name in the days of the Junta deserves no sympathy, except that which is given to hopeless aberration, it is not so easy to keep out of court those political theories of which the application seems all but unavoidable to such a period as that of the War of the Spanish Succession, the Scottish Union, and the Occasional Conformity debates. To take one example only, the historian of the reign of Queen Anne must ask himself and ask his readers whether or not the political legacy which William III. left to Marlborough, and which directed the policy of Marlborough till that policy was overthrown by the Tories who supplanted him, was in reality a true or a false guidance. The answer to this question must determine our judgment not only of the conduct of Marlborough at the successive crises of the struggle, but also of the whole question of war and peace whenever, as it repeatedly did, that question came to be reopened, and when at last it came to be settled by the statesmen to whom the Peace of Utrecht was due. Mr. Wyon, we think, at the close of his first chapter fairly states the motives which induced England to enter upon the great war, though we cannot agree that it would have been better "to wait until Louis gave proof that he entertained the ambitious projects ascribed to him," nor accept the position that "a war undertaken merely upon suspicion cannot be justified to heaven or to man." For the proof would have been merely a repetition, in favour of the now acknowledged King James III., of the active support so often accorded to his father; and the "suspicion" in this case was a conviction impressed upon those who entertained it by a long series of experiences. As to the question of intervention in general, it might have been "cheaper," but what close observer of the policy of France from 1688 onwards could have deemed it "equally safe," "to entrust to time and to differences of race and religion the work of readjusting the balance of power in Europe"?

Very different from these were the questions as to the most effective method in which the struggle could be carried on by England, and as to the point at which it might be justly regarded as having compassed the results to achieve which England had engaged in it. As to the former, Mr. Wyon has done good service in showing the difference of opinion which from the first existed, and the persistency of Marlborough in making the Low Countries a theatre of the war. As to the latter, he has discussed with much good sense and impartiality the attitude taken up by Marlborough towards the French overtures for peace on successive occasions. It appears to us that history cannot but condemn the rejection of the French offers in 1708–9 and in 1710. Mr. Wyon does not, like Lord Stanhope, suspect the sincerity of Louis XIV. on the latter occasion, which there seems to us no good reason to doubt; but he refers to the quasi-apology which has been set up for Marlborough, and which is naturally made the most of by Coxe. The historian prefers to pass by without comment the Duke's "frequent profession that he was determined to be guided solely in his conduct as a plenipotentiary by the instructions he received from home," and that, as for his own mind, it was "blank paper." Marlborough, and Cowper at home, doubted whether the dishonour which it was sought to inflict on Louis would be submitted to by him. Cowper was silenced by Somers; but the Duke might beyond a doubt have caused his view to prevail, had the moral timidity which was, after all, the worst flaw in his character, permitted him. Never has the policy of inaction avenged itself more bitterly, for the time was already at hand when Marlborough's voice was really to become powerless, and he was to see the nation dishonoured by the Peace of Utrecht. With all his impartiality Mr. Wyon does not disguise his opinion of that Peace under this aspect, though at the same time he sufficiently accounts for the altered sentiments of the nation at large which made it acceptable at the time.

Upon the whole, this History does justice to the genius and character of Marlborough, and, while abstaining from dwelling at needless length upon one of his weaknesses in which satire has at all times found a promising theme, illustrates the qualities which made him what he was, not only the first general, but the most skilful diplomatist of his age. Mr. Wyon is even disposed to give him credit for patriotic as well as personal motives in his attempt to become what Bolingbroke called "a perpetual dictator." The Duchess, on the other hand, as presented in these pages, is a mere caricature. The remaining chief actors on the political scene of this reign are sketched with more moderation, and in general with greater success. We agree with Mr. Wyon in holding that, if Harley's abilities "were once extravagantly praised, on the other hand it seems now too much the fashion to underrate them." The leading Scotch politicians of the reign—from the intriguing Hamilton, whose pliability removed one of the great difficulties out of the way of the Union, to the outspoken Fletcher of Saltoun, the chartered libertine of Scotch Anglophobia—are vividly brought before the reader; and indeed, as has been already observed, the account of Scottish affairs given in these volumes is both careful and effective. Certain other episodes, such as the whole of the Sacheverell agitation, relieve the general course of the narrative by the vivacity with which they are related; and it is only in relating the military transactions of the reign that Mr. Wyon, having nothing new to tell, infects the reader with some of the weariness which may perhaps at times have overcome the writer.

In conclusion, we should like to advert to two questions, connected with one another, as to which Mr. Wyon holds views likely to excite some controversy. He emphatically asserts and re-asserts his opinion that in England the number of Jacobites proper was in this reign extremely small. He says that "since the banishment, or, to use the legal term, the abdication, of James, the prominent anxiety of at least nineteen out of every twenty Englishmen had been lest, by foreign arms or internal treachery, he or his son should regain the throne." Elsewhere he observes that "the charge of Jacobitism which the Whigs brought wholesale against their adversaries had little foundation in fact. Indeed, the more closely this evidence is scrutinized, the more insignificant appears that party in England which was really desirous to see a restoration of the Stuarts." In a later part of his book he allows that "innumerable consciences halting between devotion to hereditary right and the dread of Popery would have hesitated no longer when the cause of James seemed likely to be the winning one"; but he doubts whether the hankering after a restoration so observable in the Tory literature of the period may not have had its chief cause in a wish to "despite the Whigs and Hanoverians." And once more he maintains that "it was really the wish of nine-tenths of the Tory party that the Act of Settlement should be carried into operation." If, as we believe to be the case, the balance of testimony is in favour of Mr. Wyon's view, his subsequent speculations on the real motives of the policy of the Tory leaders at the close of Queen Anne's reign acquire a greater degree of probability than they might seem at first sight to possess. For our part, we think that the time has come, and we thank Mr. Wyon for boldly avowing his opinion to that effect, to cease enveloping the proceedings of Oxford and Bolingbroke with a mystery resembling that with which they were themselves fain to surround them. Mr. Wyon, in our opinion, speaks the language of common sense, and need stand in no fear of being controverted by circumstantial evidence, when, after describing the "puzzling" behaviour of Oxford, he writes:—

> All this admits of easy explanation. The tactics of Oxford were the same as those of Marlborough; but he had not the same good fortune. The great soldier had contrived to inspire a belief of his sincerity in the successor who had every chance of winning. Oxford's hopes in that direction were almost desperate. Yet he could not bring himself to espouse the cause of the Pretender; nor is it likely that he ever entertained the subject seriously. The chances of success on that side were comparatively insignificant; and the penalty of failure, he knew, would be a death on the scaffold. The little energy his mind possessed was benumbed by the difficulties and uncertainties of his position. He did nothing; he was content to let matters drift on their course. He continued his assiduities to the Court of Hanover; he was careful not to push matters far against the Whigs, who would soon be his judges. But at the same time he continued to receive the visits of Jacobite emissaries. The omission in the royal speech of the customary sentence about the Hanoverian family was a slight, and, as he may have deemed, a harmless concession to the Stuarts.
>
> The steady hand and determined will of Bolingbroke might perhaps have piloted the Administration safely through its perils had he been at the helm. But he was only a subordinate, and one with so little power that the Jacobites appear to have thought it scarcely worth their while to bestow much pains upon him. With the Queen he had no influence. Her simple mind had been entirely captivated by the decorous exterior and high moral character of the Treasurer, and it was with him alone that she would vouchsafe to converse on matters of business. Bolingbroke was expected to be contented with the position of a superior clerk, to negotiate treaties, to correspond with ambassadors, and, in a word, to transact all the work of government, without being admitted to a greater share of the royal confidence than his colleague chose to dole out to him. His resentment against Oxford was natural. He felt that he was coupled with a fool, a mere lump of lead, who, by his incapacity and inertness, was dragging the whole body of Ministers to ruin. His own plans are sufficiently clear from his correspondence. He was desirous of obtaining a much firmer hold over the country by removing every Whig in authority from office, and supplying the vacancies thus created with men who were at least not political enemies. If, contrary to expectation, such a change in public feeling should occur as to render possible the restoration of James, then the opportunity might be seized. At all events the Elector and his Whig advisers would, he conceived, hold their heads a little less loftily, and would be more open to an arrangement, if they saw the Tories in a position to throw some impediments in the way of the Protestant succession.

In a word, neither Oxford nor Bolingbroke believed in the probability of a Jacobite restoration; on the other hand, both of them, each after his kind, as Marlborough again after his kind, could not regard such a contingency as an impossible event. Had it been otherwise, it is difficult to conceive why Bolingbroke should have allowed the control of affairs so easily to slip out of his hands when at last the crisis came.

We are glad to part from Mr. Wyon with a reference to the concluding chapters of his History, which are in our opinion among its most successful parts. As a whole, the book is a creditable endeavour to perform a task of which the difficulties are at least equal to the attractions. To some of the latter Mr. Wyon has turned a deaf ear; and he has not sought, in writing the History of Great Britain during the reign of Queen Anne, to avail himself to any large extent of the illustrations of manners, society, and intellectual life which the literature of the age so copiously supplies. Here and there he refers to the political labours of a man of letters—as in the case of Defoe, whom he, however, introduces most inadequately—or incidentally adds a de-

scriptive touches to manners and life. He gives a brief account (not particularly appropriate) of Bath, and indulges in an odd rapture concerning the architectural beauty of Queen Anne's churches, fearlessly asserting that "a steeple rising above a Greek portico will be admitted by such critics as are not firmly wedded to classical prejudices to be an improvement on the Parthenon." But in general he has not attempted to go beyond the usual range of the political historian. As such he has shown both industry and sagacity; and, though we cannot prophesy an enduring position for his book, we think that it is likely to hold its own against its predecessors.

BURMAH AND CHINA.*

A GLANCE at the map of Asia is sufficient to explain the motives which induced the Indian Government to sanction the two expeditions of which Dr. Anderson writes. The Western provinces of China are only separated from English soil by the narrow strip of territory belonging to our ally the King of Burmah; and were a road once made through this into Yunnan, English vessels in search of the products of Western China might avoid the delay and danger incurred by a voyage up the storm-tossed China sea, and would find in Rangoon, after a considerably shortened passage, a port much nearer the producing districts than any of the trading depôts on the coast of China. Nor would England be the only gainer by the adoption of such a route. The increased trade would be as beneficial to the Burmese Exchequer as to the Chinese merchants and officials of Yunnan. But unfortunately a strong prejudice exists on both sides of the frontier against any footing being allowed us either in Burmah or China. To the Eastern mind, unable as it is to appreciate the change of circumstances, our conquest of India is but an instance of the manner in which we would treat any Oriental State in which we might succeed in establishing ourselves. This doctrine is probably more universally held in China than in Burmah; but as the Chinese Emperor exercises sovereignty over the Court at Mandalay, the King is compelled to adopt the Chinese policy, which in this instance chimes in with the narrow view he holds as one of the principal traders with Yunnan.

The political difficulties therefore in the way of our opening up a communication with Western China are considerable, and the physical difficulties are at least equally formidable. The mountain ranges which form the western boundary wall of the Central Asian plateau extend southwards over the eastern portion of Burmah and the whole of Yunnan west of Tali Foo. These formidable barriers are crossed by paths which serve as trading routes, but which are for the most part of a kind to offer foothold only to practised mules and steady-headed coolies. Of course these difficulties might as surely be overcome by engineering skill as the others will be by patient perseverance. But at present they offer serious obstacles to any great extension of the native trade now existing. This in 1855 amounted in annual value to about 500,000*l.*, and probably does not now much exceed that figure. On the outbreak of the Panthay rebellion, however, the traffic ceased altogether, and so difficult was it to obtain information of what was going on in the sealed-up province of Yunnan, that the Indian Government determined to send Colonel Sladen, accompanied, amongst others, by the author of the work before us, to inquire into the causes which had led to the cessation of the trade.

The task thus undertaken by Colonel Sladen proved to be no light one. The Burmese, for political reasons, were opposed to the expedition; the Chinese merchants, from more sordid motives, were leagued against it; and the mountain tribes, fearful lest they should incur the wrath of the Chinese Government if they lent their aid to the travellers, showed every disposition to hold aloof. Under these circumstances, Colonel Sladen determined to take the bull by the horns, and to open communication with the Panthay authorities at Momien. This course had at least the merit of immediate expediency, since the main object of the expedition was to reach the territory occupied by the rebels; but there was one obstacle to its success, and that was the presence of an Imperial force, under the command of Li Hsieh-tai, on the line of road between the Burmese frontier and the Panthay outposts. The answer received by Colonel Sladen from the Panthays at Momien was a hearty welcome, but at the same time he was warned that a journey thither would be impossible until Li Hsieh-tai, the common enemy of the expedition and of themselves, had been driven off the line of communication. Meanwhile, Colonel Sladen started from Bhamo on the 26th of February. But before he could move he was obliged to make agreements with the native chiefs occupying districts on the road, who turned out to be but the mere tools of hostile Chinamen and intriguing Burmese. This alone would have rendered dealings with them difficult, but they added in their own persons other elements of discord, for they showed themselves to be both dishonest and drunken. The most prominent among them was Sala, the Kakhyen chief of Ponline, who was always either in a state of sulky sobriety or of dangerous intoxication, and who, whether drunk or sober, was always extortionate. It was on this man that Colonel Sladen had in the first instance to depend for transport, and it was therefore at no little cost of time and money that he succeeded in reaching Ponsee, the first town of importance within the Chinese frontier. Here the first definite rumour of armed opposition reached him, and when he refused to pay the 2,000 rupees which Sala assured him would convert the reported enemy into an ally, his muleteers all forsook him and fled. Their flight was, however, of no immediate importance, as he had received news that it would be necessary for him to remain where he was until the result of a Panthay expedition against the forces of Li Hsieh-tai should be known. Fortunately the Imperialist leader was utterly defeated, and with him fell all opposition to the progress of the mission. The villagers renewed the supplies of food and vegetables, which they had ceased to furnish as soon as the hostile disposition of their chiefs became apparent, and no difficulty was found in getting beasts and men of burden to carry the baggage on to Manwyne, although this was at the cost of 500 rupees, or, in other words, of about 50 rupees a mile.

The people of Manwyne, more especially the Chinese inhabitants, were at first inclined to be rude to the strangers, but when they found that the officials received them with hospitality, they likewise showed themselves friendly. Here the travellers first met with the Shan dwellers from the neighbouring mountains. These, unlike the Kakhyens, who occupy the ranges on the Burmese side of the mountain belt, are a fine and good-looking race, and their women seem particularly to have aroused the admiration of Dr. Anderson, who thus describes their dress:—

> The headdress was a long blue turban, curled in crescent-shaped folds with neat precision, towering nearly a foot above the head, and inclined backwards in an inverted cone, displaying the back of the head adorned with large silver discs. Add to this, neat little white or blue jackets slashed with red, fastened with enamelled silver brooches, and exposing plump little arms, adorned with heavy silver bracelets, blue petticoats with deeply embroidered silken borders, fanciful gaiters and blue shoes, and the reader can imagine that the curious crowd of Manwyne was picturesque.

The Chinese, on the other hand, were an ill-favoured class, as inferior to the Shans as regards their dwellings and habits as they were in personal appearance, and it must have been with a feeling of relief that the members of the expedition left the filthy, stilling streets of Manwyne on their way to Momien.

Beyond this point the travellers entered on the districts occupied by the Panthays, by whom they were received with rejoicings. The people lined the roads and waved them on with shouts of *Kara! Kara!* "Welcome! Welcome!" The officials *en route* showed them every civility, and they reached Momien without any adventure beyond an attack by Chinese robbers on part of their baggage train, in which unfortunately two Panthay officers were killed. The road from Bhamo gradually ascends along the course of the Ta-peng river until it reaches Momien, which city is situated on the edge of the great plateau of Yunnan, at an altitude of more than five thousand feet above the level of the sea. This was the furthest point reached by the expedition. The Panthay rebellion, which up to this time had flourished, was then at a standstill. The desire for rest engendered by thirteen years of constant fighting had caused the rebels to lend a ready ear to the voices of their prophets, who counselled them to rest on their laurels until the appointed time should come for them to annihilate their oppressors. Thus it came to pass that the Sultan Suleiman hung up his sword in his palace at Tali Foo, and his lieutenants contented themselves with acting on the defensive. This inactivity gave new life to the Imperialists, who kept up a guerilla warfare, carrying off stray cattle and small parties of Panthays as they fell into their hands. To have proceeded further into the country would only therefore have been to have courted danger, and consequently Colonel Sladen made up his mind to gather together such information as he could pick up with regard to the state of the province at Momien, and then to return whence he came.

The disturbed state of the country made it very difficult for the expedition to learn much about the products and trade of Yunnan. The bazaars at Momien were sufficient evidence that the province was rich in "gold, silver, lead, iron, copper, tin, mercury, arsenic, and gypsum"; but the circumstances above mentioned compelled them to draw their conclusions almost entirely from that which came beneath their immediate notice. Since 1868 several travellers have visited Yunnan, all of whom have added to our knowledge of the province, but there is yet much to learn concerning it. It is a district full of interest to the geologist and ethnologist as well as to the trader. It contains a greater variety of mineral wealth than any other known district of similar extent, and a survey of its riches would therefore be of extreme value and importance. With the main features of the Panthay rebellion Colonel Sladen made himself acquainted, and he received from the leaders an expression of an earnest desire to open up a trade route to British Burmah and to receive English merchants into Yunnan. Having thus accomplished as far as was practicable the objects of his mission, he returned to Bhamo after a residence of six weeks at Momien.

The political circumstances under which Colonel Sladen's expedition was undertaken were unfortunate, and to the Panthays it proved fatal. In spite of Colonel Sladen's asseverations, the Mahomedan chiefs insisted on viewing his mission in the light of an official recognition of themselves as an independent Power; and that they might gain the moral support as well as the friendship of the British Government, the Sultan Suleiman sent his adopted son, Prince Hassam, in 1871 on a special mission to England. While on this bootless errand news reached the Prince that the Chinese Government, alarmed at the interference of foreigners in the affairs

---

* *Mandalay and Momien: a Narrative of the Two Expeditions to Western China of 1868 and 1875, under Colonel Edward B. Sladen and Colonel Horace Browne.* By John Anderson, M.D. London: Macmillan & Co. 1876.

of Yunnan, was redoubling its efforts to suppress the rebellion; and on his return to Rangoon he was met by the intelligence that Tali Foo, the Panthay capital, had fallen into the hands of the Chinese, that his adopted father, while in the act of surrendering himself to the Imperialists, had committed suicide, and that the city had been given up to the sword. Thus ended the Panthay rebellion, which at one time had threatened the existence of the Chinese Empire, and which might have carried out the threat but for the strange fatalism which seems to be inherent in the Mahomedan creed.

With the restoration of peace caravans began to find their way over the mountain ranges and through the hilly gorges between Tali Foo and Bhamo; and as things gradually became more settled in Yunnan, the Indian Government deemed it advisable to send another expedition to treat with the successors of the Panthays for the opening of a foreign trade route into the Western provinces of China. The command of the mission was given to Colonel Browne, and Dr. Anderson was again appointed to accompany it as scientific commissioner. A hundred and fifty Burmese soldiers and fifteen Sikhs formed the escort, and Bhamo was again made the starting-point. Here were renewed the scenes of higgling and bargaining for means of transport with the Kakhyen and Shan chiefs which had occupied so much of Colonel Sladen's time, and finally, on the 3rd of February of last year, the expedition started with the intention of ascending the valley of the Ta-peng, as on the previous occasion. Down this same valley Margary had travelled, a few days before, at the conclusion of his unprecedented march across China, and with him he brought hopeful accounts of the country, tinged it may be with the reflection of his own bright, chivalrous spirit. But clouds began to gather round the expedition. Reports of opposition from all sides—from the King of Burmah, from the Bhamo Chinese, from the mountain tribes, and from the redoubted Li Hsieh-tai—reached the leader. On arriving at the frontier a rumour was current that the Chinese were preparing a force at Manwyne to oppose his entrance into China. To Margary, who but a short time before had been hospitably received at this place, the report seemed so improbable that he volunteered to go ahead to inquire into the truth of it, and in an evil moment Colonel Browne decided to send him, accompanied only by his Chinese servants. The next morning brought an encouraging report from Margary of the road as far as a town called Seray, which was about fifteen miles from the encampment, and about six from Manwyne, to which town Margary announced his intention of proceeding at once. On receipt of this news Colonel Browne advanced to a clearing in the neighbourhood of Shitee, where he ordered the camp to be pitched, while he, taking with him the Sikh guard, rode on to Seray to consult the chief of that place. The manner of this man and of his followers was so suspicious that Colonel Browne was unwilling to trust himself further in the country, and so, having requested the chief to forward letters to Margary, he returned to the encampment. The next morning news was brought him that Margary had been murdered at Manwyne the day before, and at the same time a Chinese force which had been observed moving along the mountain ridges opened fire on the camp. But though the numbers were vastly against them, the discipline of the fifteen Sikhs, and the steadiness of the Burmese guard, supplemented by the guerilla aid of a Kakhyen chief whose friendship was bought on the spot for the, to him, unheard of sum of 10,000 rupees, proved amply sufficient to rout the enemy, who fled in all directions. Having gained the day, Colonel Browne gave the order to retreat. The mules were promptly loaded, and Colonel Browne turned his back upon China. In his haste he outstripped the baggage, and, fearing lest the Chinese should renew the attack, he pushed on to the frontier without drawing rein. Finally he arrived at Bhamo, and his baggage followed him.

The subject of our relations with Burmah and Western China has recently occupied much of the public attention, and will be of increasing interest. In the political and social conditions of the frontier Burmese and Chinese, and of the intervening mountain tribes, together with the physical aspect and resources of the region, Dr. Anderson has had a rich mine of material from which to draw. His presence with two expeditions to Western China has placed him in a position of advantage over all other writers on the subject, and he has made himself well acquainted with the experiences of the few other travellers who have visited different parts of Yunnan. The result is that he is able to give us a clear and trustworthy account of this strange corner of the earth and all that pertains to it, the interest in which is heightened by the concise and graphic style in which he writes.

NORMAN MACLEOD.*

MR. DONALD MACLEOD has achieved a difficult task with much tact and delicacy. In his Life of his brother, Dr. Norman Macleod, he has wisely avoided the plan of making, as some biographers do, a selection of characteristics and putting them together so as to realize a preconceived ideal. He honestly produces all his facts, shows us his brother as he was, not merely on this side or on that side, but all round, and makes him, indeed, as far as possible speak for himself. Hence there is in this Memoir a sense of vivid reality and of close

of itself is a rare quality in this branch of literature, and the interest of this style of treatment is further enhanced by the character of the subject. One of the chief difficulties of a biographer in such a case is that the peculiar influence which Dr. Macleod exercised was, in a great degree, inseparable from his presence. His genial enthusiasm and keen humanity are no doubt reflected in his published works; yet the impression of his power which is thus conveyed is very inadequate. It is necessary to have constantly in view the handsome, manly figure, the bright eye, alternately twinkling with humour or flashing with passionate feeling, the hearty sympathy of look and manner, in order to understand the full measure and source of his strength. There can be little doubt that in any walk of life he would have distinguished himself, and if it had not been for the influence of family ties, he would very likely never have entered the pulpit. He was born, however, of a line of ministers, and marked out for the same course almost from the first, and he accepted it as a matter of natural duty; but it was not till afterwards that either he himself or others discovered his remarkable aptitude for the work he had chosen. Norman Macleod came of a good Highland stock, and inherited not only the devotional ardour, but the courage and spirit, which marked his race. The quiet and reserved ways which are characteristic of most Scotchmen commonly tend to disguise the *perfervidum ingenium* which underlies their nature; but in Macleod's case this impulsiveness was open and conspicuous, and in his early years he seems to have had some trouble with it. As a lad he was a bright, active fellow, with a constant flow of animal spirits, and irrepressible fondness for fun and adventure, which was anything but welcome to his family. It is hard to say whether it is something in the blood or in the prevailing religion of the Scotch which inspires them with a superstitious fear of anything approaching to demonstrative glee, or very high spirits, as if it were a departure from the humble state of mind suitable to fallen man, and likely to call down some kind of check or chastisement: but there can be no doubt that this is a deeply-rooted feature in the national character. Norman Macleod himself, with all his external frolicsomeness, was by no means free from this feeling, and we find him constantly suffering from a reaction when thrown back on himself. But this of course was not visible in public. As a child, we are told, his tongue was never still; and when he grew up to be a young man he was fond of rattling off the wildest paradoxes and then covering his retreat under a stream of ludicrous retorts and fanciful images, or perhaps breaking out into some burst of improvised doggrel or snatch of song. He had also, says his brother, from the first a strong tendency to throw a romantic colouring into common life, and schoolboy expeditions became under his leadership fanciful and heroic enterprises, in which some ideal part was assigned to each of his companions. Mackay, the actor—afterwards identified with Bailie Nicol Jarvie—having passed through Campbeltown, where Norman lived, the latter caught the histrionic enthusiasm, and got up a theatre and company of his own. Even when he was a student at Glasgow University, his father wrote to rebuke him for his "want of calmness and seriousness," and his "buffoonery of manner in tone of voice, and distortions of countenance, which are not only offensive but grievous," and to implore him, "by the tenderness of a father, and by the authority of one," to assume "a more manly, sedate manner." His mother also laments his "ugly habit of arguing." Afterwards when he became tutor and travelling companion to the son of a wealthy Yorkshire landowner, he plunged gaily into the social amusements which were opened up to him, especially at Weimar. He was as keen a waltzer as any *attaché* at the Court, and threw himself with a varied sense of enjoyment into the gaieties of the little capital. He fell in love with a lovely Baroness, and even went in court-dress to the Grand Ducal Sunday dinners, though he left when the card-playing began. His father and mother, we are told, frequently warned him against going too far in all this; and he often reproached himself for what he deemed his want of self-restraint when in society. Yet we may accept his biographer's assurance that the experience then gained was of immense practical importance to him, and that his nature was too pure and healthy to yield to evil influences. In the midst of this excitement he did not forget the scenes of his boyhood. "Many a time," he writes to his mother, "I shut my eyes and, while whistling a Highland tune, carry myself back to fishing at the loch, or walking about the old castle at Aros; at other times I am in the glen or on the hill. I often think those days must have been paradise. Every person has his ideal. That was mine; a plain manse is my only one now."

It was certainly a curious change from the gaiety and freedom of life at Weimar to the sober, hardworking life in the "plain manse." Though his manner was still as cheerful and genial as ever, he was settling down to a serious view of life. "Those," says his brother, "who knew him only in society, buoyant and witty, overflowing with animal spirits, the very soul of laughter and enjoyment, may feel surprised at the almost morbid self-condemnation and excessive tenderness of conscience which these journals display, still more at the tone of sadness which so frequently pervades them. For while such persons may remember how his merriest talk generally passed imperceptibly into some graver theme—so naturally indeed that the listener could scarcely tell how it was that the conversation had changed its tone, yet only those who knew him very intimately were aware that, although his outer life had so much of apparent abandon, he not only preserved the habit of careful spiritual self-

* *Memoir of Norman Macleod, D.D.* By his Brother, Rev. Donald Macleod, B.A. 2 vols. London: Daldy, Isbister, & Co. 1876.

culture, but was often subject to grave mental depression, and was ever haunted with a consciousness of the solemnity, if not the sadness, of life." The biographer frankly admits that though he "had deep spiritual affinities, he had also a temperament to which both the world and the flesh appealed with tremendous power; his abounding humour and geniality had, as usual, their source in a deeply emotional religion, rendering him quickly susceptible to impressions from without, and easily moved by what appealed strongly to his tastes." It was, in fact, this rich vein of human feeling which, by making him many-sided and sympathetic, constituted his power, though it also laid him open to peculiar trials. Mr. Macleod has quoted largely from his brother's journals and letters, and there is certainly no better way of giving an idea of his character. The general impression which is derived from them is that of a warm, generous nature, given to sudden transitions from grave to gay, not very profound or philosophical in thought, but strong in instinctive love of truth, common sense, and genuine good-heartedness.

Before entering on the ministry, Macleod had of course to complete his academical education at Glasgow, and he appears to have been a diligent, though rather discursive, student, reading a great deal, but not very systematically. In 1838 he was ordained, and began his ministerial life in the parish of Loudon, where he passed the next five years in hard and conscientious work. The population under his charge numbered about four thousand, of whom the great majority were hand-loom weavers, and the rest farmers and labourers. Many of the farmers were Covenanters, among whom swords and pistols which had been used against Claverhouse were prized as heirlooms, and helped to keep up the old spirit. The weavers, on the other hand, were violent Chartists, with a leaning to infidelity. They were shrewd, fond of reading, and deeply interested in public affairs, but led astray by wild ideas of the rights of man. The general morality of the parish was very low, and Macleod was shocked by the profanity and coarseness which confronted him on every side. He set himself resolutely, however, to his work, and by his courage and earnestness made an impression on the people. We get incidentally a glimpse of the curious relations which subsist between the Scotch clergy and their flocks. The latter are quite willing to exalt the authority of the minister, but at the same time they assume a right to criticize his doctrines and conduct very sharply, and to enforce their own conceptions of orthodoxy. The minister is, by his office, over them; but, as a man, he has to submit to their supervision and control. In some of the more backward Highland districts there is still a class of self-elected lay preachers called "The Men," who in church wear a distinctive dress, consisting of a long blue cloak with a red handkerchief round their heads, and who take upon themselves to sit in judgment both on the minister and the congregation, denouncing all who do not happen to meet with their approbation. Some of these fanatics are honest, if not intelligent, while others are mere noisy impostors. There were no "Men" at Loudon to trouble Macleod, but he had to submit to the catechizing of such of his parishioners as chose to put him through his facings. On his first "diet of visitation" at one of the villages in his parish he called on an old pauper woman who was one of the chief lights of the Covenanters, and who received him formally, seated in the midst of a group of neighbours, and, putting her tin trumpet (for she was very deaf) to her ear, said, "Gang ower the fundamentals"; so he had to bawl his theology until the old dame was satisfied. In another case, a Chartist insisted on discussing the "seven points" with him, and, having propounded his dogmas in a very pompous manner, asked the young minister what he thought of them. "In my opinion," was the reply, "your principles would drive the country into a revolution, and create in the long run national bankruptcy." "Nay—tion—al bankruptcy!" said the old man, who had got a sixpence, meditatively taking a pinch of snuff. "Did—ye—think—sae?" Then briskly, after a long snuff, "Dod! I'd risk it." That Macleod should have been able in a short time to overcome the suspicion and hostility with which he was received on both sides is perhaps the best proof of his peculiar qualities. He made a point of knowing everybody. He opened classes and established a Sunday school. For those who excused themselves from not going to church on account of want of suitable clothes he began special evening services. Some of the Chartists attended in order to make a noise, which he bore patiently at first, but afterwards he appealed to the audience to support him, and the disturbers were ejected. He also got hold of the would-be philosophers by a series of lectures on geology, and brought many of them to church.

The Disruption movement of 1843 was of course a period of difficulty and anxiety to Macleod as to others; at first he took little part in it, but, when the thickening of the storm compelled him to take a side, he shut himself up at Loudon with all the literature of the controversy, and thought it out for himself. The result was that he joined the "Forty" who endeavoured to take a middle course between the two extremes. The general features of the struggle are so well known that it is unnecessary to go over them. One result of the secession was that Macleod received a number of offers from other parishes, one of them in Edinburgh; but he chose Dalkeith, for the sake of a quiet country life, in preference to the excitement of a town. He gradually became known, however, in the General Assembly and elsewhere, as one of the most active and stirring men in the Church, and in 1851 he quitted Dalkeith for the Barony parish, Glasgow, which he held to his death. He had, of course, only the rank of an ordinary parish minister; but his ready eloquence and enthusiasm, his practical tact and sagacity, and genial sympathies, made him an important—one may say, indeed, the foremost—man in all Church matters, and brought upon him a great deal of labour and responsibility. Without any official authority, he exercised a powerful influence, which was the more valuable because it was invariably used to counteract every tendency to narrowness and intolerance. He was exposed to much acrimonious abuse for identifying himself with the centenary festival in honour of Burns, though he took care to mark his sense of the poet's faults, and also for speaking out frankly on the Sunday question. The straiter part of his brethren professed to be shocked and alarmed by his boldness of speech; but there can be no doubt that he infused a new life and energy into the Church. A remark which he made in regard to the Thanksgiving in St. Paul's for the recovery of the Prince of Wales indicates the liberality of his views:—

"I thank God," he said, . . . "for a National Church, without which we could not have such an expression of the national religion. It is all worthy and right. We could not do this in Scotland. Our Presbyterianism is too unvaried in its methods—healthy enough as bringing the soul to deal with the personal God, but there should be room in a Church, which professes to be national and historic, for such a service as this."

His singular activity and capacity for work involved, however, a strain which ultimately proved too much for him. He never recovered from the injury inflicted on his constitution by his visit to India on behalf of the Church; and the demands made upon him in other ways were dangerously exhausting. Here, for instance, is a passage from his diary in 1870:—

Friday, 31st September.—Left Glasgow for Aberdeen at nine, P.M., arrived at Aberdeen at three, A.M.

Saturday, 1st October.—Left for Balmoral. Dined with Her Majesty.

October 2.—Preached a sermon on "War and God's Judgments," which the Queen asks me to publish, and to dedicate to herself, as soon as possible—not a line having been written.

October 3.—Joined my wife in Perthshire, dead beat.

October 4.—Rested my chariot-wheels and greased them.

October 5.—Returned to Glasgow, and answered twenty letters; wrote long Minutes for Sealkote and Calcutta; had prayer-meeting in the evening.

October 6.—Commanded by the Prince of Wales, and left at seven, A.M., for Dunrobin, 220 miles off. Dined at half-past nine, left the drawing-room at half past one, A.M., and smoking-room at half-past three. Left per train at six, A.M., and never halted five minutes, being fast time, until I reached Glasgow at half-past six P.M.

October 7.—A weary Saturday, to prepare two new sermons for Sunday amidst manifold interruptions.

October 8.—Preached twice.

October 9.—Again dead beat, and went to see my old mother the first time for six weeks.

This continued excitement and fatigue necessarily told on him, and towards the end of 1872 he began to have a weary and broken-down look. His sixty-first birthday was in June, and his worn and shattered aspect, his sad, tender bearing, suggested painful forebodings. He died on June 16. His character, both as a man and as an ecclesiastical leader, has perhaps been summed up by none better than by Dean Stanley, who has thus spoken of him:—"If Campbell was too much of a ghost, Norman Macleod is undoubtedly a man of flesh and blood. Of course I have known men of greater abilities and character, but if he be what he seems, I know no one who unites such thorough good sense, honesty, manly independence, with such working, stirring, devout energy, and power of appealing to the masses."

LEAVES FROM A WORD-HUNTER'S NOTE-BOOK.*

IT is hard to tell what to say of this book, which certainly shows some reading and some ingenuity, but which is put together in an odd fashion. Mr. Palmer tells us in his preface that "every page of the volume bears witness to the title that these are truly 'Leaves from a Note-book'"; and he assumes that, "if they are found to be at all interesting and not devoid of information, the candid reader will not be so unjust as to condemn them for not being other than they pretend to be." Now, as long as they remain "leaves from a note-book," no one would think of condemning them on any such score. As long as they stay in the note-book, they do not pretend to be anything but leaves of the note-book; and no one would condemn them for not being something else. But when the leaves come out of the note-book into print, when they are no longer leaves *in* the book, but leaves *from* the book, we are inclined to say that they do, by the very fact of migrating from private into public, pretend to be something more than mere leaves. We doubt whether the most eminent of scholars would have any right to give us mere leaves from his note-book during his lifetime; his literary executors might, or might not, do wisely in giving us such leaves after his death. And again, if these are mere leaves from a note-book, Mr. Palmer's note-book must surely be very unlike other men's note-books. He tells us just before:—

I should perhaps apologize for printing here the rather long chapter which treats of the superstitious beliefs connected with the West and North as regions of darkness. That discussion, though it belongs rather to the province of folklore, was suggested by the preceding chapter on the word "Night," and arose naturally out of it. The interesting nature of the subject may perhaps render its appearance excusable.

Now every man keeps his note-book as he finds conduces most to

* *Leaves from a Word-Hunter's Note-book; being some Contributions to English Etymology.* By Rev. Abram Smythe Palmer, B.A. London: Trübner & Co. 1876.

his own instruction, and no two men will keep it in exactly the same way. Mr. Buckle wrote down in his note-book the most elementary pieces of knowledge; and we never said a word against him for writing them down, but only against those who published them as if they had been something remarkable. But Mr. Palmer's note-book, to judge from the present leaves from it, contains full discussions of difficult points and passages, wrought up with a splendour of diction which seems startling to those whose notion of a note-book is something whose style is perhaps one degree more adorned than that of a telegram. However, we must take things as we find them, whether or not we go along with Mr. Palmer in all his ideas, whether we think that it was worth while or not to put forth his ideas in this particular form and with this particular title. It is certain that Mr. Palmer, from one quarter or another, has got together a good deal which may well set us thinking. It is, in fact, the kind of book in which it does not very much matter whether one agrees with the author's conclusions or not; in either case we are sure to meet with something curious on the way. Mr. Palmer clearly has read a good many books, though we are not clear that he always takes in the difference between one book and another. But, in getting together a good many extracts bearing commonly on some odd or out-of-the-way point, some instructive matter is sure to be brought to the front. Mr. Palmer's subject is professedly etymology; but we are not sure whether he quite distinguishes etymology in the strict sense, the tracing up of cognate words to a common root, from the tracing out of analogies in the history of words which have no etymological connexion. Thus, to take an instance which Mr. Palmer does not dwell on, it is one process to trace *sir*, *sire*, *monsieur*, and a crowd of like words, up to *senior*, and further to trace *senior* back as far as it will go; it is another process to trace the analogous history of *presbyter*, *alderman*, and *sheikh*. We think that Mr. Palmer sometimes mixes these two processes together, and his lists of cognates or synonyms are sometimes too much in the style of Mr. Wedgwood. Cognates without regard to their degree of cognation, and words which are not cognates at all, are often ranged all together without distinction.

This comes out in the very beginning of Mr. Palmer's book, about the word *body*. This is a word about which there is no mystery at all. *Bodig*, *body*, is a perfectly good English word, though its modern use has slightly departed from its original meaning. In Old-English, as Dr. Bosworth says, "the whole body is generally denoted by *lic* or *lichama*, and the chest or trunk by *bodig*." Having got thus far, any one may trace out the Teutonic cognates of *bodig*; he may then see what further cognates they have in the other Aryan tongues, and whether they can all be traced up to any known Aryan root. Then, if any one chooses, he may go on and see whether the Aryan root has any possibly cognate Semitic root. This is the scientific way of doing business. But it is a great deal too long for Mr. Palmer. He rushes at everything at once. "'Body' is (A.-Sax.) *bodig*, (Gaelic) *bodhacy* (O. Ger.) *botah*." Thus "Anglo-Saxon," Gaelic, and Old German are made all to stand in the same relation to modern English. Then come a number of Teutonic cognates to show that *body* strictly means *cask*, mixed up with illustrations of the same idea from other languages. Then we are told:—

> If the above account were not so satisfactory as it is, we would be tempted to see in "body" only another form of "bothy," Gaelic, *bothag*, *both* (a hut, cottage), Welsh, *bod* (a house), *bwth* (a booth). In this case it would be connected with (Irish) *both*, *both*, (Ger.) *bude*, (O. H. Ger.) *boda*, (Polish) *buda*, (Lith.) *budà*, (Scand.) *búdh*, (Dut.) *boede*, (Icel.) *bud*, (Bohem.) *bauda*, *budka*, (Russ.) *búdka*, (Pers.) *bud*—all meaning a house, hut, or dwelling-place, and traceable to the root *bhû* (to exist).

Then Mr. Palmer runs off with a crowd of extracts from all manner of writers in all manner of tongues, illustrating the metaphor by which the body is spoken of as the house of the soul. Then he goes off with the same idea as illustrated by the word *carcase*, a hard word enough certainly, and one about which Diez does not seem nearly so certain as Mr. Palmer. He suggests that it has something to do with *caro* and with *capsus*, which would in truth quite fall in with Mr. Palmer's own notions; but he discreetly avoids committing himself. Mr. Palmer, however, having got together the various Romance forms of the words, goes on to pile words together in this fashion:—

> All these words are connected with (Welsh) *carchar* (restraint, prison), (Gaelic) *carcair* (prison, coffer), (Ir.) *carcar*, (Goth.) *karkara*, (Ger.) *kerker*, (Gk.) *kárkaron*, (Lat.) *carcer* (an enclosure, or prison), (Sans.) *cárukà*, *kárágara*, from the root *kar* (to wound, punish).

This is the way in which Mr. Palmer jumbles words together. Now it is plain that the Teutonic forms must come from the Latin, while, as to the Celtic forms, it is a question for Celtic scholars whether they do or not. But a Teutonic word, cognate with the Latin *carcer*, could not begin with a *c*; and the reason why the Goths or any other Teutonic people should adopt the Latin word is perfectly plain; a prison was a new thing to them. But Mr. Palmer is not satisfied with grouping Aryan languages after a fashion which sets Grimm's Law at defiance; he has, like so many other people, a hankering after the dear Jews:—

> It is curious, though perhaps only a coincidence, that the Talmudic word for the *case* in which written rolls were commonly kept is *carcâ*.

Then we come to *coat*, *hood*, *chasuble*, to show how words which first meant house come to mean clothing. And, lastly, we come at the end of the chapter, to a little preaching and an extract from Pearson on the Creed. In all this there is the same mixture of a good deal of ingenuity and a good deal of out-of-the-way reading with notions of etymology which are quite unscientific, and with the thorough confusion of which we spoke between the province of etymology and the province of purely literary illustration. But in some of the other chapters Mr. Palmer goes off into wilder flights. He wishes to make out a connexion between *tree* and *true*, and, in so doing, he treats us to pages on pages of fine writing, partly his own, partly copied from Mr. Ruskin, so mixed up together that it is not easy for the uninitiated to see at first sight how much is Ruskin and how much is Palmer. And once or twice we meet with little bits of very homely etymology which strike us as odd. He has got among flunkeys and henchmen and legates *a latere*, and generally people who have anything to do with other people's sides or elbows. But among them he puts "compare our sidesmen, parish officers appointed to assist the churchwardens." We had always thought, but we may be wrong, that *sidesman* was a contraction of *synods-man*; at any rate, this latter derivation is so commonly received that the other should hardly have been taken for granted without mentioning it. Then we are told, with a reference to the travels of Sir Thomas Herbert in 1668, that "Booby was once the name of some species of bird noted for its stupidity." Now in a much more recent book, the History of the Mutiny of the Bounty, there is a great deal about boobies and noddies, and Bligh and his companions, when crossing the Pacific in their open boat, were very glad to catch either bird. In another place Mr. Palmer makes *dumbledore* mean a cockchafer, but surely the dumbledore is the same as the *bumblebee*,

ὥσπερ μελιττ' ἡ βομβύλιος εἰσέρχεται.

which is now more delicately written *humble bee*. And, without at all denying that Titus had his brain preyed upon by a gnat which entered his nostrils, we cannot forget that the same story is told of Nimrod, with the addition that to obtain relief he had his head beaten with hammers for four hundred years. So long a time would be quite inconsistent with the few years between the taking of Jerusalem and the accession of Domitian, while to Nimrod the chronologer may give any number of years or centuries that he thinks good. The following note is a little puzzling:—

> *Cf.* (Lat.) *auster*, the warm south wind. Austria, (Ger.) *Oesterreich*, is said to have been so called from its being the *eastern* part of Charlemagne's dominions. *Cf.* Australia (the southern regions).

Did any man before Mr. Palmer ever doubt as to the derivation of any of the endless *Austriæ*? But what has this to do with "Auster" and "Australia"? To be sure, in several names the Latin *Auster* and the Teutonic *East* sometimes get a little confused; we have known some practical confusion arise at the posting of a letter for Australia at an Austrian post-office; and we have even known it asked by way of a pun whether

> Auster,
> Dux inquieti turbidus Hadriæ,

had anything to do with an Austrian Lloyd steamer? But we hardly looked for a serious question about Austria and Australia as cognate names.

Mr. Palmer has much to say about the derivation of "clever" from the older "deliver," used in nearly the same sense as some of the earlier uses of "clever." Here, whether we follow him or not, he appears to much better advantage. He is better able to trace the history of a word in a single language than to do the strictly etymological work of tracing cognates in various languages to a common root. In the last two chapters, about "Night," "East," "West," &c., he goes off into comparative mythology and other kindred subjects. But is there such a word as "eerie"?—"how *eerie* and solemn a thing the night is." Mr. Palmer certainly uses it in his text, and we think we have seen it in the writings of Miss Brontë; but surely it needs explanation quite as much as any word that Mr. Palmer has formally talked about. Then he refers to the dear old story in Procopius about the souls of the dead being ferried over to Britain, and tells us that that island "was anciently regarded by the Galli and Germans as 'the island of the dead.'" But there is no such phrase in Procopius as "island of the dead," nor anything answering to "Galli and Germans," unless Mr. Palmer has got it out of the words Φράγγων κατήκοοι. But he quotes "Procopius, Goth. Bell., *vol.* iv. *p.* 20," instead of book and chapter, which looks a little as if he came by his Procopius secondhand. There is a prodigious deal of fine writing in this chapter, and Mr. Palmer ends with what we take to be an expression of a belief almost more unpleasant than that attributed to "the Galli and Germans," namely, that the devil does live somewhere in the North:—

> In conclusion, we can scarcely fail in the course of our inquiry to have been struck by the strange unanimity with which mankind have conspired to regard night upon the one hand, the west and the north upon the other, the season of darkness, and the regions of darkness, as having been submitted to the more immediate and deadly influence of the Prince of the power of the air; and without indulging in any flights of transcendental mysticism, we may fairly hold it probable that an element of truth must lie at the bottom of a belief which is almost universal.

THE MANCHESTER MAN.*

MRS. BANKS'S novel, although rather old-fashioned in plot and occasionally so in style, is well constructed and has a good deal of varied incident. The story is rapidly carried from point to point, and some of the scenes, such as the "massacre"

* *The Manchester Man.* By Mrs. G. Linnæus Banks. London: Hurst & Blackett. 1876.

of Peterloo and the cruelties of the handsome Laurence Aspinall to his young wife, are described with remarkable vividness and intensity. The novel has, however, a higher claim to attention as a contribution to local history. It is designed as a picture of Manchester life and manners during the first thirty years of the present century. In order that we may have no doubt as to the writer's more serious intention, an appendix to the last volume authenticates many of the incidents of the tale, and even identifies some of the imaginary characters. Old inhabitants of the town must still remember the real personages introduced, one of whom indeed is yet living. Assuming that the work is done, as it is in this instance, with perfect good taste and competent knowledge, there is much to be said in favour of fiction based upon the incidents of recent local history. Mrs. Banks has woven into the story her own reminiscences of Manchester, as well as the recollections of relatives who were eye-witnesses of the occurrences described. Possessing apparently an observant eye and a retentive memory, she has reproduced with unusual success the outward aspects of the cotton metropolis during the period of the French war, the later years of George III., and the earlier years of George IV.'s reign. It cannot be honestly averred that Manchester made picturesque history in those days. The occurrences were mostly of a commonplace kind. But the place had distinctive social features, which differed greatly from those now prevailing there, and which, in view of the future growth and importance of the town, have more than a merely antiquarian interest. In the setting of her story Mrs. Banks has managed to give us the very atmosphere of the time and locality, and this we are disposed to regard as the pre-eminent merit of her book.

The plot, as we have intimated, is simple. The hero, Jabez Clegg, a foundling rescued from a flood in the river Irk, adopted by a poor tanner, Simon Clegg, and his daughter Bess, and educated as a Blue-coat boy on the old foundation of Chetham's Hospital, rises by slow degrees from a humble position in the employ of a small-ware manufacturer to the post of confidential manager, and then to a partnership in the firm, ending at last, so far as the story is concerned, like Hogarth's industrious apprentice, by marrying his former master's daughter. It is an old and well-worn theme, but relieved from the commonplace in this instance by the very slowness of the rise, the minuteness with which the successive stages are described, and the "moving accidents" by which the youth's career is throughout attended. The narrative of the lad's advancement furnishes the novelist with the opportunities she needed for the presentation of the several phases of social life and manners. Thus, the privation and sufferings of the working people during the Napoleonic wars are depicted with quiet force in connexion with the characters of Simon Clegg and his daughter, and the daughter's lover, Tom Hulme, the soldier. The hero's school-days at Chetham's Hospital and the feuds between the Blue-coat lads and the boys of the Free Grammar School bring into appropriate prominence the two great educational foundations of Bishop Oldham and Humphrey Chetham, which link the Manchester of that time and the present with the considerable village of three centuries and a half ago. The Grammar School has altered much of late, but amidst all the changes of the last half-century Chetham's Hospital has managed to retain its primitive, old-world character, and is much the same now as it was during the pupilage of Jabez Clegg. His career as an apprentice illustrates the revolution which has taken place in the relationships of mercantile life. When George III. was King, the Manchester manufacturer lived in the town, generally in a part of the same building in which he stored his goods and carried on his business. Old houses are, or were lately, standing in Mosley Street and Faulkner Street, in the heart of the city, which were once both the warehouse and the home of the merchants who first occupied them. Now they are warehouses only, used during the day, locked up, dark, and silent during the night and on Sundays. The apprentices in Jabez Clegg's time lived in the house. They did not form part of the family, but they were under the same roof and the eye of the master or mistress. Mrs. Banks tells us that

> Jabez went, with his new outfit, to his new home under good auspices, inasmuch as both master and mistress were prepossessed in his favour, and they stood in the foremost ranks of those who began to recognize that English apprentices were not bond-slaves in heathendom. Instead of being crammed to sleep like dogs in holes under counters; left to wash at a pump and wipe themselves where they could; obliged to sit at a table in a back-kitchen, and dip their spoons into one common dish of porridge or potatoes and buttermilk; to eat such scraps and refuse as sordid employers or ill-disposed cooks chose to set before their primitive pre-Adamite forks—instead of a system like this, from which apprentices (of whatever grade) only emerged at the beginning of this century, the Ashton's apprentices had a comfortable dormitory in an attic, there was a coarse jack-towel by the scullery sink for their use, they had their meals with the servants in the kitchen, where was an oak settle by the fire for them when work was over. But work did not end with the close of the warehouse. They were expected to keep their attic clean and in order, to cleanse the wooden or pewter platters, or porringers, from which they had dined or supped; to rinse the horns which had held their table-beer; to fetch and carry wood, coals, and water, for servants too lazy to do their own work; and it was not much rest any apprentice had from five or six in a morning until eight or nine at night, when he went to bed.

In the Manchester trade the apprenticeship system has long been dying out, and is now little more than a name. Just as the master has abandoned the town, and now lives in a country suburb ten or fifteen miles from his place of business, so the apprentice has lodgings of his own, and in his leisure hours is free from all control save that imposed by his own good sense. It is idle to lament a change which in many respects is for the worse, for the conditions of the Manchester trade have undergone an entire revolution within the last fifty years, and arrangements which were possible in the commercial infancy of the town are utterly impracticable now. When the house was next door to the warehouse, it was not unfrequently the custom for the wife to assist in the business. Thus Mrs. Banks says:—

> Mr. Ashton employed a number of young women, and Mrs. Ashton might be found most days in the warehouse, either "putting out" or inspecting the work brought in by them, with a gingham wrapper over her "silken sheen." If the footman announced visitors, the wrapper was thrown aside in a moment, and she stepped into her drawing-room as though fresh from her toilet, and with no atmosphere of dozens, grosses, or great-grosses about her.

In a few country districts in Lancashire the manufacturers' wives do not even now disdain to help in the mill and workshop. The centre of Manchester, however, is no longer the scene of such manufactures. It has become the emporium, storehouse, and exchange of the surrounding towns; the old order has yielded place to new.

The chief of the real personages in Mrs. Banks's book is the Rev. Joshua Brookes. He was perhaps the most remarkable figure in the history of Manchester during the last ten years of the eighteenth and the first twenty of the nineteenth century, and in many respects he was a typical Lancashire man. Chaplain of the then Collegiate Church of Manchester from 1790 to 1821, he is believed to have married, baptized, and buried more persons than any other clergyman in the kingdom. His figure was so odd that the boys of the Grammar School, where he was for many years assistant master, gave him the nickname of the Knave of Clubs; his manners were rough and uncouth, his ways were eccentric. Innumerable anecdotes are told of his strange doings. At both weddings and christenings he was wont to be very arbitrary. He had an antipathy to certain Christian names, as well as to any that were indicative of peculiar opinions. "Name this child," he said on one occasion at the font. "Charles Edward," replied the godparents. "Charles Edward!" exclaimed the irritable chaplain; "I'll have none of your Jacobite names here. George, I baptize thee"—and he calmly proceeded to the end. Another time, as recorded by Mrs. Banks in her appendix, one Cowdroy, a printer of Republican tendencies, gave the name of "Citizen" to his son. "Citizen!" growled the parson, "that's no name. I shall not give the child a name like that!" "I've a right to call my child what name I please," responded Mr. Cowdroy. "Oh, you may call him Beelzebub if you like!" testily replied the Chaplain, and this time he yielded without further demur. His conduct at weddings was equally unusual, especially at Easter, at which season it was then, and continued long after to be, the custom in Manchester for very large numbers to present themselves at the parish church with a view to matrimony. As many as a hundred couples would be married in a single morning. Mrs. Banks has described the scene with much animation, and yet without in the least exaggerating the manner of the officiating clergyman:—

> They elbowed their way into the church, and reached the choir just as Joshua pronounced the benediction over some twenty couples closely packed around the altar. Then there was a jostle and a scramble for "first kisses," amidst which rose the rough voice of the chaplain, "Now clear out, clear out! Do your kissing outside. There are other folk waiting to be wed. Do you think I want to be kept here all day tying up fools?"
>
> That instalment of the married having been hustled away to sign the church books, with their attendant witnesses, Joshua called out impatiently to the waiting couples, among which were Bess and Tom—
>
> "Come, come! How long do you mean to keep me standing here? Do you intend to be married or not? Oh, it's thee, is it? [to Bess]. Well, thah's waited long enough. See that you make her a good husband [to Tom]. Kneel down here," and he placed them, not roughly, almost in the centre of the altar, pulling others to their knees beside them, with scant ceremony.
>
> "What do you want here?" in his very harshest tones he asked a very youthful-looking couple.
>
> To be wed," was the prompt answer of the young man.
>
> "Ugh!" grunted the Parson, "what's the world coming to? I used to marry men and women—now I marry children! Here, you silly babies, take your places."
>
> Another file of candidates being ranged (after some pushing and pulling) in pairs around the altar, Joshua took his book and the service began.

The reverend gentleman was not deterred from an exhibition of his impulsive eccentricities even by the solemn surroundings of the graveyard. He had large, shaggy eyebrows, and the boys when they passed him in the street would draw their fingers across their own foreheads, to his immense annoyance. On the occasion of a funeral, a young sweep seated on the church wall executed the eyebrow movement full in the Rev. Joshua's sight, just as he reached the passage in the Burial Service "I heard a voice from Heaven saying." "Knock that little black rascal off the church wall," he shouted, and as the beadle ran after the urchin he proceeded with the ceremony, imperturbable himself, and perfectly indifferent to the shocked amazement of the mourners. His oddities, however, did not make up the whole of his character. He was an accomplished, if not a profound scholar, an intense lover of books, guileless in all his relations with his fellow-men, an excellent and indefatigable minister of religion, a devoted though sorely-tried son, and a self-sacrificing, warm-hearted friend. Mrs. Banks has drawn a faithful and altogether admirable portrait of the Rev. Joshua Brookes, appreciative alike of its humorous and its serious aspects.

We have dealt mainly with the realistic and historical features of *The Manchester Man*, because the distinctive excellence of the book is to be found in them, and not in the story. The story, nevertheless, has considerable merit. It is vivacious, and often powerful; the characters, too, are life-like, and not mere puppets.

They serve very well to embody the writer's chief purpose—her presentation of manners and of modes of life that have passed away, yet still linger in the memory of many living people; her description of the painful years of a large manufacturing town at a time of much distress, of its growth despite adverse circumstances, and of customs which seem quaint and odd to us, even at this distance of only half a century. It is an interesting study, lacking, no doubt, the higher imaginative art of the novelist, but still interesting us by the keen interest which the writer herself shows in the personages and subject of her story.

KIRKMAN'S PHILOSOPHY WITHOUT ASSUMPTIONS.*

MR. KIRKMAN will have done excellent service even if he shall have succeeded only in compelling us to take stock of the scientific knowledge of the day. We are most of us disposed to forget that coins passed into currency are not necessarily genuine, while for philosophers, as for other men, there is the temptation to regard their geese as swans. The caution that arguments and trains of reasoning should be subjected to the most rigid scrutiny may seem to be no better than a truism, obvious and worthless; and yet there is no warning the repetition of which is more needed. The writer who points out any spurious metal in the philosophic currency of the age deserves the gratitude of disinterested thinkers. The exposure of any single assumption may be the removal of a stumbling-block, and may lead possibly to results of incalculable importance.

That the world of thinkers is at the present moment divided into two hostile armies, the one holding that the foundations of law, morality, and religion are being assailed and undermined by the other, is a fact which few will venture to question. The impression may be right or wrong, but it is both deep and general, that a philosophy which makes thought the material product of molecular action in the brain, which exhibits man to himself as a fortuitous aggregate of sensations and impulses changing from moment to moment, which represents the action of the will as a mechanical process, and limits that action to the present life, leaves no room for faith in God and scatters to the winds the ideas of responsibility and duty. And here clearly we have to decide two points. The fears thus felt may be unfounded, and must be so if the charges are unjust; but if they should be in any measure brought home, it remains to be seen whether, or how far, the philosophy thus arraigned is genuine science or a fabric resting on assumption.

Mr. Kirkman's contention is that the systems of some at least among the philosophers of the age are based on not a few assumptions. Such a charge can scarcely fail to awaken a feeling of resentment in the thinkers thus assailed, whatever may be the moderation of the accuser. The irritation must be increased if the shafts aimed at them do not altogether lack gall. It is quite possible that Mr. Kirkman's satire may be sometimes too pointed and his sarcasm too biting; but for those who are impartial witnesses of a conflict on which the well-being of mankind may depend for ages the one question to be determined is the truth or the falsehood of the charge. The form into which it is thrown is of the least possible importance; and they who feel that interests of infinite value are at stake may be pardoned if their words flow less sweetly than honey. They who hold that man is responsible to his Maker, and that he is so responsible because within his own limits he is an actual originating cause, are at least justified in showing no favour, while they grant a fair field, to theories which represent men as capable of education only because they are machines. No sarcasm could well bite more deeply than that of Dr. Lionel Beale when he dismisses this proposition with the remark that no machine, however perfect and elaborate in its construction, can be trained and educated even to the degree possible in the case of the most stupid dog. Nor is that writer's satire altogether without bitterness when he asserts that people generally "will feel quite convinced that the living leaders of scientific thought are certainly not machines, as no machines could exhibit the inconsistencies and contradictions which characterize their labours"; still more when he affirms that "the very 'machines' which profess to be influenced only by observation and experiment have discarded their professions, and have become somehow transformed into sceptical machines which trust the imagination only and believe and teach fiction." The truth is that we find ourselves in the thick of a battle which is not likely to be lazily contested or to be ended soon; and it is absurd to treat either army as thin-skinned, or to suppose that the conflict can be carried on without hard knocks.

Mr. Kirkman is therefore fully justified in submitting any or all of the forms of modern thought and philosophy to the most rigid tests and the most searching scrutiny; nor can any reasonable objection be taken if he applies these tests with special care to the science now known as psychology. It is easy to treat the inquiry as a gratuitous attack on Mr. Herbert Spencer; but the answer is as little to the purpose as to dismiss exceptions to Grimm's Law as a personal assault on Grimm. Mr. Spencer is the great prophet of the psychological school, nor is it to be supposed that he would wish to evade the responsibilities of a distinguished position. From the point of view of those who do not disguise their adherence to the old belief of human duty to an Infinite Ruler who knows that He is a ruler, Mr. Kirkman is amply excused if he brings all his force to bear on a system of philosophy which juggles a man at once out of his will and his subsisting personality. The charge is a serious one; our business is to ascertain, if it be possible, whether or how far it may be true:—

> Considered as an internal perception [says Mr. Spencer, speaking of the alleged freedom of the human will], the illusion consists in supposing that at each moment the Ego is something more than the aggregate of feelings and ideas, actual and nascent, which then exists. A man who, after being subject to an impulse consisting of a group of psychical states, real or ideal, performs a certain action, usually asserts that he determined to perform the action; and, by speaking of his conscious self as having been something separate from the group of psychical states constituting the impulse, is led into the error of supposing that it was not the impulse alone which determined the action. But the entire group of psychical states which constituted the antecedent of the action also constituted himself at that moment.

It is impossible to deny that Mr. Spencer here asserts the following propositions:—(1) The so-called personal Ego is nothing more than the aggregate of the feelings and ideas of the moment; (2) the impulse leading to an action consists of a group of psychical states; and (3) it is this impulse alone which determines the action. To the uninitiated the first proposition will probably seem much like mere assertion, even if the further objection that it asserts a negative be not taken into account. The second will appear to involve the contradictory statement that an impulse, which must be dynamical and active, consists of a group of states which are passive. Here at once the will vanishes away, and the thinker of the one moment is not the thinker of the next, the fancy that he is so being the illusion which it is Mr. Spencer's special mission to dispel. On this point no room is left for ambiguity. "Psychically considered," the man at any given time "is at that moment nothing more than the composite state of consciousness." If this does not assert that between the Ego of the moment and the state of the moment there is no relation but that of pure identity—or, to speak more strictly, no relation at all, identity excluding altogether the notion of relation—then words have no meaning. But if the words are taken as they stand, it is not too much to say, as Mr. Kirkman says, that, if this be so, "what we call our conscious personal identity from moment to moment is a ridiculous fiction, and the loudest testimony of our inmost consciousness is a perpetual lie" (p. 199). Indeed Mr. Spencer would probably allow that, although the phrases may be strong, yet this is precisely what he meant. But this is not all. Mr. Kirkman puts the argument to the test of a mathematical formula, and it is not easy to see on what grounds he may be fairly debarred from doing so. Mr. Spencer, he tells us,

> speaks and thinks "of a man who is subject to an impulse consisting of a group of psychical states," and the man is a psychical Ego. Let E denote this Ego, and let G denote this group of states. Now at the moment of the consciously received impulse E is by Mr. Spencer's definition identically G; and his conception of the fact of that moment is that G is subject to and conscious of the impulse G. But since the receiver of an impulse must be there to receive it, Mr. Spencer's thought seems to be that G finds itself assaulted by G before G is either assaulted or born.

We cannot, however, stop here, for Mr. Spencer has a further argument for the abolition of the persistent Ego:—

> Either [he tells us] the Ego which is supposed to determine or will the action is present in consciousness, or it is not. If it is not present in consciousness, it is something of which we are unconscious—something, therefore, of whose existence we neither have nor can have any evidence. If it is present in consciousness, then, as it is ever present, it can be at each moment nothing else than the state of consciousness, simple or compound, passing at the moment.

This last sentence is simply amazing. It asserts that the Ego is "ever present" in consciousness; and from this assertion it follows irresistibly that it must therefore be something separate from any transitory and changing conditions of which it may be the subject. Yet the fact which forces us to this conclusion, and to this conclusion alone, is seriously given as the reason for believing that the Ego is identical with the changing conditions of each moment, or with the state made up of these conditions. If this be so, then there must be other conditions in the Cosmos which furnish an analogy to this seeming freedom of the human will which really is not free; nor is Mr. Spencer at a loss to provide the illustration:—

> A body in space [he informs us], subject to the attraction of a single other body, moves in a direction that can be accurately predicted. If subject to the attractions of two bodies, its course can be calculable. If subject to the attraction of three bodies, its course can be calculated with still less precision. And if it is surrounded by bodies of all sizes at all distances, its motion will be apparently uninfluenced by any of them; it will move in some undefinable varying line that appears to be self-determined; it will seem to be free. Similarly, in proportion as the cohesions of each psychical state to others become great in number and various in degree, the psychical changes will become incalculable and apparently subject to no law.

The illustration is not less astounding than the argument which it is supposed to strengthen. Mr. Spencer's astronomical mistake is easily accounted for; though it is not therefore excused. The moon comes exactly under his description, as a body in space surrounded by innumerable other bodies at innumerable distances, some of them belonging to our solar system, others lying beyond it, yet all contributing something to its motion and aiding to determine its path. Mr. Kirkman may well express his surprise that none among Mr. Spencer's friends should have pointed out to him "that the moon does not seem free one bit, that she does not appear self-

* *Philosophy without Assumptions.* By Thomas Pennington Kirkman, M.A., F.R.S. London: Longmans & Co. 1876.

determined, that she is not rambling in any undefinable varying line, that her motion is not apparently uninfluenced by any of the other bodies, although he has actually written and printed about her and every other planet all those incredibly foolish things" (p. 218). What then are we to say when Mr. Spencer brings us to his final alternative? "To reduce the general question to its simplest form, psychical changes either conform to law or they do not. If they do not conform to law, this work in common with all other works on the subject is sheer nonsense; no science of Psychology is possible. If they do conform to law, there cannot be any such thing as free will." The dilemma is not so terrible for others as it may seem to be at first sight. Mr. Spencer talks about conformity to law; his remarks about the movements of bodies in space show, to say the least, that his notions of law are singularly vague, and scarcely entitle him to be regarded as a safe guide. His account of the genesis of what we call moral action involves a contradiction; and, if the truth must be told, Mr. Spencer has fitted the cap to his own head. He has talked nonsense. Yet this fact by no means proves that the building up of a science of psychology is an impossibility. It teaches us only that Mr. Spencer has been building on a wrong foundation, as all must who shut their eyes to the distinction between our active and our passive consciousness, and who refuse, not merely to start from, but even to take into account, the one fact of which alone we have immediate knowledge.

We have taken a single instance, and cannot attempt to follow Mr. Kirkman through the chapters which are designed to show that Hume, Mill, and others have committed themselves to precisely the same errors which vitiate the method and the conclusions of Mr. Spencer. It is enough to say of this negative portion of his task that he has brought against these writers no charge which does not call for the most serious consideration. Of the positive, or constructive, part of his work we must content ourselves with remarking that his philosophy has in it everything to cheer, and nothing to startle, those who believe that they and their fellowmen are the creatures of an Infinite Mind and an absolutely righteous Will.

MEMOIR OF CAROLINE HERSCHEL.*

THE documents collected in this volume make up a long-delayed record—and now the only possible one—of a life given to work which, if done for itself alone, would have been enough to keep alive the name of the worker in after times. But Caroline Herschel's was one of those labours of self-renouncing love and devotion, not wrought for fame or reward, which justly command admiration and sympathy even from those who know nothing of their immediate objects or results. Astronomy can bestow the fitting meed of praise on the diligent observer and calculator, and store up with due honour the fruit of her nightly toil. All men can prize the memory of the sister whose unbounded affection and unremitting zeal made her the constant helpmate of her illustrious brother's research, and an unwilling associate in his renown.

The aid given to Sir William Herschel by his sister is thus described in the Address delivered to the Astronomical Society by its Vice-President in 1828, when the Society's gold medal was presented to Caroline Herschel:—

> Who participated in his toils? Who braved with him the inclemency of the weather? Who shared his privations? A female. Who was she? His sister. Miss Herschel it was who by *night* acted as his amanuensis: she it was whose pen conveyed to paper his observations as they issued from his lips; she it was who noted the right ascensions and polar distances of the objects observed; she it was who, having passed the night near the instrument, took the rough manuscripts to her cottage at the dawn of day and produced a fair copy of the night's work on the following morning; she it was who planned the labour of each succeeding night; she it was who reduced every observation, made every calculation; she it was who arranged everything in systematic order; and she it was who helped him to obtain his imperishable name.

This was the bare truth; yet she was averse to the public mention of it even on an occasion when it was appropriate and almost necessary. Writing in the course of the same year to John (afterwards Sir John) Herschel, she said:—

> I have no time or inclination to think much on this subject, else I could say a great deal about the *clumsy speech* of the V. P. Whoever says *too much of me* says *too little of your father!* and only can cause me uneasiness.

Her tone in speaking of her own work was always the same. She insisted on calling herself a mere tool, or putting herself at most on a level with a trained dog. Thus she writes, in an earlier letter to her nephew:—

> You ask, as it were, if I were satisfied with the way in which you have mentioned me in that paper? If I should answer honestly I should say not quite, for you set too great a value on what I have done, and by saying too much is saying [*sic*] too little of my brother, for *he* did all. I was a mere tool which *he* had the trouble of sharpening and to adapt for the purpose he wanted it, for lack of a better. A little praise is very comfortable, and I feel confident of having deserved it for my patience and perseverance, but none for great abilities or knowledge.

Yet she had discovered several comets on her own account, and she did much useful work on star-catalogues, although she was no longer an observer, for some time after Sir William's death. The whole of her correspondence with Sir John Herschel, extending from her return to Hanover in 1822 to within a year or two of her death, at the age of ninety-seven, in 1848, is full of pride and interest in her brother's astronomical fame and everything bearing on it, not unmixed at times with a jealousy which in her case, if ever, was pardonable and almost laudable. She took pleasure almost to the last in Sir John Herschel's continuation of his father's work. She lived to receive a copy of the Cape observations, completing the Survey of the Nebulous Heavens. Her devotion was throughout a personal one. She does not seem to have had, comparatively speaking, any passion for the stars for their own sake. When the King of Prussia sent her a gold medal as a gift for her ninety-sixth birthday, it was accompanied by a letter from Humboldt, in which he referred to the then fresh discovery of Neptune. It does not appear that this part of the letter excited any particular response; one may even fancy, perhaps, that the new planet appeared to her in the light of an intruder, disturbing the landmarks set to the solar system by Herschel's telescope. But nothing can be safely inferred from her silence at this time, as writing had then become difficult to her, and a few months afterwards had to be given up. A letter written by a niece to Sir John Herschel a few days after Miss Herschel's death goes indeed so far as to say:—"She looked upon progress in science as so much detraction from her brother's fame, and even your investigations would have become a source of estrangement had she been with you." This impression was presumably derived from personal intimacy; yet we prefer to think it exaggerated, for it is certainly not borne out by the letters. We do undoubtedly find there a considerable indifference to the doings of later astronomers, except in so far as they tend to reflect lustre on the name of the elder Herschel; but we find no trace of any feeling amounting to positive dislike to the advancement of knowledge beyond the point where Sir William Herschel left it.

The later correspondence to which we have already referred is perhaps the most important, as it is certainly the most interesting, part of the present volume. The various letters and extracts from diaries that make up the substance of the earlier chapters appear to have undergone but a slight process of selection and arrangement; in fact, they have been brought together without any serious attempt at the exercise of literary skill; and the result is a certain heaviness at the outset which puts the book in some danger of failing to do justice to its subject. At one or two points it may be charged with positive dulness. The mistake has not been avoided which is the most natural and the most common one to fall into in editing a work of this kind; the desire, in itself a most proper one, to miss nothing material has led to the reproduction of many documents and entries which after all are not relevant to the main purpose of the narrative, and have no other than a strictly personal interest. We are by no means sure that it would not have had a better effect, in a literary point of view, to treat the correspondence with Sir John Herschel as the principal part of the work, explaining it only by a prefatory chapter in which a limited selection from the former years might have been introduced. As it is, the points of astronomical interest—which, as we said at the beginning, in this case coincides with a wider human interest—are somewhat scattered in the record of Caroline Herschel's residence in England. The thing which comes out most strongly from the first, and which is the strangest to us in these days of elaborate scientific appliances, is the elder Herschel's forced reliance on the work of his own hands. Most of his instruments were made by himself and under his immediate direction; and his sister's help was not least in these difficult and, to her, uncongenial labours. We find him working hard at Bath in 1775, hardly persuaded to take needful food in the intervals of polishing mirrors. The same private manufacture, though on a larger scale, went on after their removal to Slough. For a long time, indeed, he went on making telescopes for sale, his own astronomical pursuits being unremunerative. Various passages in the diary show that the mechanical operations of the observatory were not only laborious, but occasionally dangerous. After noting how she was laid up for six weeks with a wound from an exposed hook belonging to the machinery of the great telescope, on which she had fallen on a dark night, Miss Herschel adds:—

> I could give a pretty long list of accidents which were nearly proving fatal to my brother as well as myself. To make observations with such large machinery, where all around is in darkness, is not unattended with danger, especially when personal safety is the last thing with which the mind is occupied; even poor Piazzi did not go home without getting broken shins by falling over the rack-bar, which projects in high altitudes in front of the telescope, when in the hurry the cap had been forgotten to be put over it.

Again she says, a year or two later:—

> It would be impossible for me, if it were required, to give a regular account of all that passed around me in the lapse of the following two years, for they were spent in a perfect chaos of business. The garden and workrooms were swarming with labourers and workmen, smiths and carpenters going to and fro between the forge and the forty-foot machinery, and I ought not to forget that there is not one screw-bolt about the whole apparatus but what was fixed under the immediate eye of my brother. I have seen him lie stretched many an hour in a burning sun, across the top beam whilst the iron work for the various motions was being fixed.
>
> At one time no less than twenty-four men (twelve and twelve relieving each other) kept polishing day and night; my brother, of course, never leaving them all the while, taking his food without allowing himself time to sit down to table.

An alarming accident is chronicled further on, in 1786:—

> *Sept. 22nd.*—In taking the forty-foot mirror out of the tube, the beam to which the tackle is fixed broke in the middle, but fortunately not before it was nearly lowered into its carriage, &c., &c. Both my brothers had a narrow escape of being crushed to death.

* *Memoir and Correspondence of Caroline Herschel.* By Mrs. John Herschel. London: John Murray. 1876.

The real test of Caroline Herschel's perseverance and devotion, however, was not in these extraordinary casualties, but in the constant toil, watching, and discomfort which fall to the lot of an observer under the most favourable conditions. One of the minor difficulties on winter nights was that every now and then, as she was writing down observations, the ink was frozen in the bottle. There is a little incident in 1805 showing what a habit of unwearied and unceasing industry she had acquired. William Herschel went away on a summer excursion, and Caroline, who stayed at Slough, employed the vacation in "undertaking an amazing deal of work," among which, as she proceeds to set down, she catalogued and arranged the library.

Some miscellaneous anecdotes and allusions occur which deserve special mention. The astronomical education of princes in the last century is shown in a curious light by the following note:—

> The Prince of Orange has been at Slough to call at Mr. Herschel's and to ask him, or if he was not at home to Miss Herschel, if it is true that Mr. Herschel has discovered a new star, whose light was not as that of the common stars, but with swallow tails, as stars in embroidery. He has seen this reported in the newspapers, and wishes to know if there is any foundation to that report.—Slough, the 8*th* of *August*, 1798.—W. Prince of Orange.

Writing to Lady Herschel in 1840 (within a few months of her ninetieth birthday), Caroline Herschel reverts to the old glories of the forty-foot telescope. She tells how a whole company sang "God save the King" in the tube, and adds this postscript:—

> One anecdote of the old tube (if you have not heard it) I must give you. Before the optical parts were finished, many visitors had the curiosity to walk through it, among the rest King George III., and the Archbishop of Canterbury, following the King, and finding it difficult to proceed, the King turned to give him the hand, saying, "Come, my Lord Bishop, I will show you the way to Heaven!"

In this and other passages the English reader must bear in mind that Miss Herschel's English was an acquired language. We may finally note, as a kind of link between the Herschels and the newer physical astronomy, a letter of Sir J. Herschel's in 1842, mentioning "the sudden appearance of three purple or lilac-coloured flames, which seemed to break out from the edge of the moon," in a total eclipse of the sun. These are the *rose-coloured prominences* which have since been questioned by the spectroscope, and compelled to yield up to us the long-guarded secrets of the solar atmosphere.

HEATHCOTE'S REMINISCENCES OF FEN AND MERE.*

A CASUAL traveller through the Fen country by the Ely and Peterborough branch of the Great Eastern Railway might doubt the interest and attraction of so flat and dull a topographical study; yet not the less is that district an instructive memorial of English enterprise and perseverance. In order to appreciate it one ought to compare the past with the present, and observe the wonderful improvement wrought by engineering power upon miles of country which were once deadly swamp, but are now covered with waving grain as far as eye can reach; and where also the human figures that vary the seemingly monotonous landscape are now strong and lusty, and not, as of old, a lean haggard race, carrying on their faces the tokens of frequent arrest by the Bailiffs of Bedford and Marshland, as the attacks of ague and the inundations of the Ouse were dubbed with a grim, but not inapt, personification. No longer does the Fen border maintain in the precarious trade of "fishing and fowling" a half-starved race of fen-slodgers; the phrase of "Cambridgeshire Camels" (a synonym for stilt-walking to sight flocks or game across the dead level) is no longer illustrated in the Fen district. Rheumatism has been put to flight; and in the towns and country good drainage and a copious fresh-water supply, along with plenty instead of semi-starvation, have brought about a change in the frame of the Fenman for which the idea of it current among strangers would certainly not prepare one. What this idea is the author of *Fen and Mere* shows in an anecdote of the House of Commons Committee on the Middle Level Bill:—

> Mr. Talbot, our counsel, once came up to us and spoke of his notion, when about to receive evidence from the Fens, that they were the seat of ague and fever, and that the inhabitants would bear marks of general bad health. He expressed his surprise to find such robust and healthy-looking men as our chairman, and regretted to admit that he and his colleagues of the long robe were the cadaverous parties.

How this change has been effected Mr. Heathcote, a native landowner, familiar with and fond of his home, has undertaken to describe in the book before us. Though it is scarcely put together with the skill of a practised writer, he has brought to his task a vast quantity of information got at first hand, having himself taken no small part in the great improvements of the district, being in sympathy with its scenery, sports, and old associations, and cherishing an enthusiastic confidence in the future in store for fen and mere. Zeal, observation, intelligence, and personal interest impart to his work a character of reality which fully atones for any lack of compactness or any occasional incoherence of parts.

Mr. Heathcote has called to the assistance of his own observation the oral testimony of old inhabitants and the evidence of various histories of Fen improvement. His book is a record doubtless of delays, difficulties, and drainage of pockets as well as of marsh lands; but the broad fact that within thirty-five years the annual rental of 250,000 acres, or one-third of the area of the Bedford Level, has increased 100 per cent., is an encouraging one for the Fenmen and other people similarly circumstanced. It is interesting to follow Mr. Heathcote as he brings out the picturesque, if unsatisfactory, features of the former state of things, as well as the substantial improvements which have substituted fertility with a good average rental per acre for haphazard subsistence and casual gains by favour of flood, drought, or frost, as the case might be. He describes the Fenlands as a horseshoe-like bay, bounded by highlands, from Hunstanton in Norfolk to Wynthorpe in Lincolnshire; and it may be said that they contain an area of from sixty to seventy miles from North to South by from twenty to thirty broad. Considerable changes have occurred during the lapse of ages as to climate, flora, and fauna, as might be seen, among other examples, by the discovery of late years at Whittlesea Mere of a perfect soil and swaths of grass at eight feet deep through the moor, lying as they were first mown down (p. 2). From this and like facts Dugdale concludes that this vast level was once dry firm land, but that ages ago some great land flood obstructed at its natural ostiaries seaward, by silt choking them after long drought, spread over the whole of it, and the waters ever after covering the same produced a moor, now grown to this thickness. Without dwelling on the data given by the author in the first and third Parts as to fossils, which illustrate this view, we may just glance at the characteristics of the Fen country in the eleventh, twelfth, and later centuries. In 1070 a young Fenman is described as crossing the Fens from Crowland to Spalding with a fir-pole, with an iron ferule and spike at the end, to leap the ditches and test the boggy ground. He would encounter kingfishers and wild ducks, herons and cygnets. He would have a causeway to cross in summer, but in winter a complete morass; and the Isle of Ely is described as a dead flat with here and there an eminence standing up from it as a detached islet, when the spring and autumn rains swelled mere and stream, and covered the flats. Eels were in consequence so plentiful as to be current coin with the monks of Ely, Ramsey, and Peterborough. Pike, tench, and carp abounded in the rivers and meres, and there were swarms of waterfowl and other birds and beasts. In this dead flat, which Adam Mercer in 1505 calls "one of the most brute and beastly of the whole realm," a land of marshy ague and unwholesome swamp, and which, in 1620, first certain undertakers, and then the King, undertook to drain by a system of sewers, several of the prominent islets or oases, occupied at first by religious solitaries, were germs of the afterwards familiar Benedictine convents and abbeys, Ely, Crowland, Ramsey, Thorney, and others. Of these Mr. Heathcote gives an account, and also some capital drawings on the anastatic process. But though there is an antiquarian interest in the passages relating to Crowland, with its quasi-Venetian streets bordered by willow-planted canals, and built on piles, and finally united by a curious triangular bridge (see p. 16); and also in the accounts of Connington, with its associations with Sir Robert Cotton and Mary Queen of Scots, and of Ramsey Island and Abbey—the latter still represented by a ruined gateway, the refectory walls and arches, an oak door, and deeds in the muniment room—we cannot say that the book will suffice for the traveller as an archæological guide. Mr. Heathcote does not mention, for instance, that with the monks of Ramsey is connected the cultivation in early days of the Hebrew language in England; but it is more to his purpose to state in reference to the Connington estate, that in the year 1800 its drainage was begun by the then owner, Mr. J. Heathcote; not before it was needed, if we may judge by his having to get into a gunning-boat for coot-shooting from the dining-room window on the ground floor. But this is only of a piece with Dugdale's description of the environs of Crowland in his day:—"In August they drive 3,000 ducks into one net, and call their pools their fields. No corn grows within five miles of them."

The Great Level of the Fens, some 750,000 acres, was subdivided by a corporation in the reign of Charles II. into Middle, North, and South, with a view to drainage and reclamation. A separation of these levels has been one great work of this century, the other has been the drainage of Whittlesea Mere and the adjoining lands. In the account of this latter undertaking we must be contented to follow Mr. Heathcote very cursorily. Over its area of 1,870 acres of water, now drained—a space of 3½ miles from east to west by 2½ from north to south, and from 2 to 7 feet deep, though depth and area were gradually reduced in 1835 and 1844 by improved drainage and outfall—rich crops have superseded the occupation of amphibious fishers, skaters, boatmen, and reed-harvesters. And part of the interest of Mr. Heathcote's book consists in descriptions of the state of things before the land was laid dry; part in the marvellous transformation after the application and development of engineering skill. Take the earlier aspect of the district. In 1805 we read of a cutter from the Norfolk Broads water-stressed in the Mere, and actually sold *in situ* because, the water sinking, it could not be got away. The Mere was utilized thenceforth for sailing and fishing parties, and one chapter in Part II. gives full particulars of trimmer-setting, and of the take of pike, eels, and perch on special occasions. Some notion of the supply which the Mere contained in those years may be formed from the results of a drought in 1826. The fish perished and lay like heaps of snow on the north shore:—

> The season was dry, and a large proportion of the bed of the Mere was without water. In the mud were large cracks and fissures, and when about a hundred acres of water remained, a great hurricane of wind came and blew most of it into the cracks and fissures, and it disappeared. Many tons of

* *Reminiscences of Fen and Mere.* By J. M. Heathcote. London: Longmans & Co. 1876.

eels, carp, pike, and perch were taken. The water returned in the winter, but there was no fishing for five or six years. The Mere, however, was stocked with fish from the rivers, especially from Bevill's Seam.

The author mentions a picture of a giant pike taken in Whittlesea Mere weighing fifty-two pounds. Amongst other forms of sport, which the undrained Mere afforded, were coot-shooting with a large gun (sixteen at a shot), from November to March, and wild-duck-shooting, which did not yield so much amusement, as the birds got away by diving unless killed at once. Mr. Heathcote quotes Lord Erskine's simile for the minorities in which Ministers were left in 1810. "They were like wild-ducks shot on a large lake—easy to knock down, but very hard to get out." Another excitement was snipe-shooting, which Lord Monteagle pleaded in abatement of the heartiness with which he should otherwise have accepted the conduct of the Middle Drainage Bill through the Lords in 1844. This sport brought many visitors to the Fenland public-houses, where they might haply find as distinguished artists in quest of subjects of the Dutch school as congregate for mountain scenery at Bettws-y-Coed or the Teifi-side, or in the Lake country. Many rare birds—grey shrikes, bitterns, didappers, buzzards, falcons, and fork-tailed kites—have quite disappeared with the advent of good drainage. But snipes, plovers, and wild-ducks were especially the birds of the Fenland, the first being found mostly in boggy pools and short-cut sedge; they were followed with the jumping-pole, with a maximum success of twenty-five couple a day, though the decoy plan for wild-ducks, practised about fifty years ago, sometimes yielded two hundred dozen in a week. When the Fens were frozen, duck-hunting was conducted with a stalking-hedge or a stalking-sledge, the latter process being where a man knelt on a sledge (16 feet by 3 feet) fixed on four marrow-bones and fronted by a fence of reeds, through which projected a long duck-gun's barrel, while the stock rested on dry sedge. The man suitably accoutred knelt at the back and punted himself with two iron-pronged sticks. Thus, unperceived by the wild-fowl, he approached the islands of sedge which harboured them, and the gun, charged with a pound of shot, dealt wholesale slaughter. The aquatic plants and general botany of the Mere are the subject of an interesting chapter, though perhaps a detailed account of the appearance and over-spread of the Anacharis alsinastrum is superfluous, and "Scirpus palustris" need not have been printed *stirpus*, nor Potamogeton *Hotomogeton*. By the way, the inscription on the supposed statue of Alwyn (p. 31 of Brayley's *Huntingdonshire*) is thus concluded by Camden—"Hujus (sacri) cœnobii miraculosus *fundator*." The omission of the last word by Mr. Heathcote must be an oversight.

There is much to interest in the accounts of the turf-harvest, the reed-mowing, the skating-matches, the ice-races, and the regattas held of old on Whittlesea Mere in their respective seasons; but it is time we should pass on to a glance at the change which came over the Fenlands about 1844. Till then, a chief device, imperfect at best, for draining off the water of the fields in a district divided into ditches, was the "Old Fen Mill," turned by sails, and consisting of a large wheel round which horizontal boards were placed at right angles, revolving in a narrow space of woodwork connected with the drain, which scooped up the water from the lower level, and delivered it into the main river. The higher level was protected by banks, between which a stream, with a fall of three inches a mile, found its way to the sea. But this device often failed when the land was very wet and wind was wanting. The drainage then was at a stand for weeks, and the whole country would be drowned in consequence. The Old Fen Mill survives now only in the pictures of the quasi-Dutch school by Mr. E. W. Cook, an enthusiastic admirer of the Fen country. Up to the time of its supersession the worthlessness of all makeshifts for drainage had been evidenced by the comparatively insignificant value of land. In 1844, on the basis of two former proposals of Sir John Rennie to make a catchwater drain below the range of hills to the west, running along the border of the lowlands to Peterborough (no flood highland water to pass into the Fens, and the outfall to be at Wisbeach), and after certain auguries of future fertility had been drawn from experiments of the effect of tidal deposit of soil, Mr. Walker's scheme for separating navigation and drainage was adopted by the House of Commons Committee, and the Act, with some mutilation, became law. Mr. Heathcote states that the Engine Drain, with a cutting 50 yards wide and 8 or 10 feet deep, near the termination of the Holme Lode, which meets one of the main rivers at the engine house, was made "to carry away the waters of the Mere" (75). First, a passage was procured for the water on each side of ground ultimately the central and deepest part of the channel. This was at last cleared, and the black mud and soil wheeled by a wooden stage to the bank. Here solid clay was found at from six to twenty-five feet deep. A hard gravel road has since been made for two or three miles beside the drain, and a further excavation of some hundred yards. The clay taken out was removed in trucks along a temporary tramway, and the adjoining fields covered with it to the depth of four to six inches.

The erection of Appold's centrifugal pump, at the head of the Engine Drain where the Mere waters were to be discharged into the river for passage thence to the sea, followed without delay; and it did its work so well that it finally drained the bed of Whittlesea Mere in 1850, and when in 1852 a flood burst the banks, and once more "drowned" the Mere, it again discharged the water effectually in a given time. Passing over the curious finds in the strata below the Mere bed, we may just add that, after claying and warping the whole area, it was found that, as the soil was rich in animal matter, it was fit for wheat by 1853. The depression of soil since the drainage shows a subsidence of nine inches a year. Fenlands repay claying where clay is found less than five feet below the surface, and though the cost of dry warping is considerable, the statistics in pp. 92–3 show it to be remunerative. Not to follow further the curious facts and experiments recorded by Mr. Heathcote, we think he has established (especially in the case of the North Level) that the essential conditions of successful draining are the best possible drainage, completest natural outfall, and reduction of pumping power to a minimum. Though, between private expenditure and public taxation, the cost of reclamation in the three Levels has been enormous, instances might be multiplied where what was once nothing but snipe-ground has been made to yield in wheat and potatoes no less than 27*l.* per acre. If any doubt still lingers as to the advantages of natural drainage, deep tillage, universal claying, and use of superphosphate in the Fen districts, Mr. Heathcote is at any rate entitled to the credit of having been one of the first to adopt and advocate a spirited and enlightened policy.

THE RED HOUSE BY THE RIVER.*

THE *Red House by the River* is a Scotch novel which does not lose by not being very Scotch. Some of the best-known of our Scotch novelists overload their pages with the broadest and roughest provincial dialect, which is sure to sound uncouth in Southern ears when it is not absolutely unintelligible. The greatest master of the craft wrote too artistically to fall into such an error, and in the Waverley Novels, with all their marvellous fidelity to nature, the national and local forms of speech are rather indicated than forced upon one. We need hardly say that it is only in this respect that we liken Mr. Douglas to Sir Walter Scott; yet Mr. Douglas has written a readable story, which he has made life-like by conscientious attention to details. The scenes are laid in that fertile farming district which lies between the bleak range of the Lammermuir and the troubled waters of the Firth of Forth. The characters are taken from that well-to-do provincial middle class which Galt and his imitators have delighted to depict. It does not perhaps furnish the most favourable specimens of the Scotch people at their best. The men, although decent and respectable to a fault, set more store by money than intellect or cultivation; and, in spite of the impressive warnings of their ministers, consider it the first duty of existence to heap riches together for those who are to follow them. The women are good wives and daughters, and highly estimable in ordinary social relations, but they are worldly notwithstanding their primitive ways, and are vulgarized by ill-regulated social aspirations. No doubt Mr. Douglas, having chosen his theme, was bound to be true to its unattractive realities. But, as we should scarcely care to associate in the flesh with small provincial "swells" of magnificent pretensions, or to mix familiarly in a society whose spoiled darlings are dashing underbred medical students, such associations must sometimes jar upon us in fiction. As for the young ladies who inhabit the Red House, their personal attractions go far to conciliate the too fastidious judgment that is outraged by their boisterous spirits and unconventional indiscretions. We see every reason to suppose that Mr. Douglas is at home with the habits of the people he is writing about. But it startles us far more than it apparently startled her parents and brother when a young lady makes an appointment for a long day with her lover in the city of Edinburgh; travels with him by train; shows herself with him in an open fly in the principal thoroughfares; and is ready indeed to consent to be married offhand, were special licences to be purchased like wedding-rings, as the pair in their innocence fondly imagined. We can conceive a gentleman irresistibly tempted by a vision of beauty slumbering in a hay-field, and rousing her by the audacious kiss he lightly dropped on her lips. Whether she was sufficiently fascinated to forgive him the freedom was a matter that might be settled between themselves. But, the gentleman being a gentleman and a man of the world as well, we can hardly imagine his signalizing his introduction to a pretty girl of some position by rough practical joking; nor can we understand her grown-up brother entering into the spirit of the thing when paper streamers had been attached by fish-hooks to the luxuriant back hair of his pretty sister.

The story is characteristically unconventional in the way in which it opens. Madge Rosewell, the heroine, has dropped into the workshop of Robert Heron, the hero, on a friendly visit. Robert Heron is a carpenter in a good way of business, and Miss Rosewell has come ostensibly on a business errand. But the pair are conversing on the easiest possible terms, and the conversation has turned on playing the fiddle. Robert is strictly respectful at first, notwithstanding the encouragement he receives; but Madge's pretty gestures and captivating attitudes are too much for his philosophy as she makes unsophisticated attempts at bringing something like melody out of the instrument. She is profuse in apologies when she has let his cherished Cremona fall; he is kneeling at her feet, where he has stooped to pick it up, when suddenly he is overpowered by temptation and opportunity. "It was 10 long step from Heron's knees to his feet; he put his arms round her waist, rose, and kissed her." Alarm, if not repentance, follows

* *The Red House by the River.* By G. Douglas, Author of "Brown as a Berry." Tinsleys. 1876.

quickly on the rash act; he fears he has offended past forgiveness. But he had quite mistaken the young lady he had to do with; and indeed, unluckily for himself, he never does come to understand her. Madge in reality was rather taken by his spirit, nor did she greatly object to the embrace. The result is that they begin to argue the matter, and she leaves the workshop the carpenter's betrothed. With an engagement entered into on the threshold of the romance, it is clear that the course of their loves cannot be intended to flow smoothly. It is true that Heron is no common carpenter. He is come of an old family that has been decaying for the last generation or two; but his father is schoolmaster of the town, and is believed to have been accumulating property in the course of a penurious existence. And Robert himself has been saving money, and launching out in speculations in timber. But then old Mr. Rosewell is the provost of the town, and prides himself on his fortune and his style of living. In his case, moreover, "the grey mare is the better horse," and Mrs. Rosewell is looking high for her pretty daughter. And we are inclined to agree with the lady in seeing something objectionably incongruous in the notion of the carpenter from next door presenting himself solemnly at the stately Red House as suitor for the hand of the provost's beautiful daughter. For though, in the words of the bard, a man may be a man for a' that, yet the Rosewells have taken their stand on their gentility, and worthy Robert Heron shows to great disadvantage in the sombre Sunday suit that sits so awkwardly upon him, brightened though it may be by a gorgeous necktie. So, if he has set his heart on the volatile Madge, we feel that he has been more fortunate than might have been expected when he wins her parents' reluctant assent to the engagement, although they stipulate for a probation of a couple of years. Other conditions that are imposed on him sound unreasonable, and even unnatural, as coming from a prudent man like Provost Rosewell, except indeed for the purposes of a novel. Heron is to renounce the flourishing business which promises him a speedy and handsome independence; and as a step to fortune is sent out to America by his future father-in-law to inspect some Canadian oil-wells in which the latter is deeply interested. However, his temporary absence gives the young lady the opportunity of being untrue to him, besides agitating us with a variety of episodes more or less dramatic and sensational. The steamer on which he embarks founders at midnight in mid ocean. His cousin Edna—by the way, she sails in his company unchaperoned, although young and handsome and hopelessly in love with him—signalizes her devotion by a sublime sacrifice which saves his life at the cost of her own. He makes a long ocean voyage in an open boat, going through all the extremities of privation, and escaping a death of agony by the skin of his teeth; and finally he makes his unwelcome reappearance in his native country, scaring Madge and her family like a ghost from the other world.

Take him all in all, Robert Heron is decidedly the best character in the book. Though a sensible man, he constantly does foolish things, but then his passion for Madge is at the bottom of them all. He is straightforward and manly, and resolute to a fault, except where she is concerned. The greatest of the mistakes he has made was in permitting himself to think of her in earnest. We can see from the beginning, what he wilfully blinds himself to, that she never really cares for him. She accepts his admiration because it is the first that has been offered to her in earnest; but, although she is quite capable of enjoying a flirtation with a carpenter, it seems to us somewhat forced to make her think seriously of marrying him. She has been brought up by a vain and empty-headed mother who has done everything in the world to spoil her; and she is vain and volatile enough herself in all conscience. Perhaps poor Robert Heron might be right in thinking he consulted his mistress's taste when he disfigured himself with a flaunting tie. But she was just the girl to be extremely sensitive as to the creases in the ill-made Sunday coat that was only produced on high days and holidays. No one of his speeches appealed more strongly to her feelings than that in which he held out the hope of being able to provide her with a little vehicle of her own; but for that very reason we cannot understand how she should ever reconcile herself to the humble position of his wife. But, if Heron is deluded, the reader knows well what is coming; and when Mr. Maule, Lord Oulhawk's new "factor," appears on the scene, we feel sure he has only to throw the handkerchief to her. So it proves; and when once this Mr. Maule has leisurely made up his mind the courtship makes rapid progress. One of its incidents is extremely characteristic. When it is known in the Rosewell family that this well-connected gentleman admires Madge, her brother, the medical student, playfully forges an invitation to Madge from Maule; she drives to her admirer's country house, accompanied only by a younger sister, and, when mutual explanations clear up the mistake, the girls remain and have a merry time of it. The author evidently means to make Maule an unpleasant character, and he succeeds; but we doubt whether he intends the agent to be in such bad style as he undoubtedly is. Maule might well have fallen a victim, like Heron, to the fascinations of Madge; but before he knew her he made himself happy in the company of those unlicked and underbred cubs her brothers. He is given to swaggering offensively on the strength of his superior position, and does not at all impress us with the idea of a man who has lived in the best London society. We see enough of Edna Heron, whose life is blighted by Robert's blindness to her feelings (she has been brought up under the same roof with him), to know that she deserved a better fate; yet with all her merits and charms we are made to understand easily enough how her cousin should have failed to be attracted by her. Old Mr. Rosewell, a weak, well-meaning man, a fond father and henpecked husband, is very true to nature as husband, father, friend, and citizen. But, although he is represented as shrewd, and we find him in possession of a good fortune, our faith in his business qualifications is entirely shaken in the course of our acquaintance. We have seen how he encouraged Heron to throw up a good business, by way of qualifying himself, in a worldly point of view, for the hand of his daughter; and we learn subsequently that this canny Scotchman has sunk every shilling of a very considerable fortune in the bottomless depths of Canadian oil-wells. Mr. Douglas, by the way, makes free use of contemporary topics of sensation, transferring their distinctive features to his pages precisely as recent events have familiarized us with them. The scandal of the Canadian wells story is given in exact detail; all the author has done is to suppress the real names of the parties mixed up in it; while the collision which sinks the American steamer *Vicksburg*, with her abandonment by the vessel that caused the catastrophe, is borrowed from the affair of the *Northfleet* and the *Murillo*. What he excels in is his local descriptions; we seem to recognize the thriving little town in the Lothians, looking out over the broad prospect of the firth, with the ancient abbey converted into the parish church. And although the country in the immediate neighbourhood is too highly cultivated to be picturesque, yet he makes pleasant pictures of the Cramonds' farm of Newbarns, with the yellow light falling on the hay-fields and the farm-buildings, on the hills behind and the firth in front; with the honeysuckles creeping round the narrow casements, and the tall hollyhocks in the old-fashioned garden. To sum up, we should say that Mr. Douglas has good gifts of description, with the happy knack of telling a story pleasantly—a knack which will probably develop with the experience which will advantageously increase his knowledge of the world.

No. 1,068, Vol. 41. April 15, 1876. [Registered for Transmission abroad.] Price 6d.

THE SESSION TO EASTER.

THE only political section which can derive satisfaction from the conduct of affairs from the meeting of Parliament to the Easter recess must consist of members of the Opposition who may be injudiciously eager to return to office. In its own interests the Liberal party had better wait for a time, though its organization has been partially restored by the blunders of the Government. On more than one occasion Mr. GLADSTONE and Mr. LOWE have proved their ability to compete with Mr. DISRAELI in the art of offending and irritating the feelings of the House of Commons; but rashness and imprudence are more readily condoned when they are committed by independent members. Two party contests on the Fugitive Slave Circular and the Suez Canal purchase awaited the Government at the beginning of the Session. The announcement in the QUEEN'S Speech of a Bill for altering the Royal Title at first attracted little attention, though it was destined ultimately to produce the gravest embarrassment which Mr. DISRAELI has encountered since his accession to office. The debates on the Fugitive Slave question and on the Commission of Inquiry proposed by the Government confirmed the universal impression that both the successive Circulars were objectionable. Lord DERBY, on the first night of the Session, violated a laudable rule by attributing the responsibility of the first Circular to the Law Officers of the time at which it was issued. Lord PALMERSTON'S unvarying practice of shielding all his advisers and agents was more prudent, as well as more generous. Mr. DISRAELI more adroitly affected to adopt the responsibility of the document, although he at the same time declared that he had never seen it before it was published in the newspapers. If the Ministers had not been in haste to devolve on their subordinates the blame which attached to themselves, the candour of the ATTORNEY-GENERAL would have relieved them from the necessity of disclaiming any share in the Circular. The ATTORNEY-GENERAL maintained in the House of Commons the same doctrine which he had embodied in the first Circular; and if his interpretation of the law was questionable, his consistency contrasted favourably with the timidity of his colleagues. The second Circular was, as Lord DERBY stated in the House of Lords, issued under the high authority of the LORD CHANCELLOR. The propositions of law which it involved were still in some respects doubtful; and it has never been shown that there was a sufficient reason for any publication of the kind. Some points of international law are most conveniently left in obscurity, especially in cases where the claims of foreign nations conflict with English opinion or prejudice. The assaults of the Opposition on the Government would have been more effective if it had not been shown that the Indian Government under Lord NORTHBROOK, and the Foreign Office when administered by Lord CLARENDON, had anticipated the policy which the present Government vainly attempted to disclaim. In the closing debate on the subject the LORD CHANCELLOR surprised the House of Lords and the country by adopting the extreme anti-slavery doctrine in the expression of a hope that foreign States should be warned, before an English man-of-war entered their ports, that it might become an asylum for fugitive slaves. The agitation on the subject, which had always been in some degree artificial, has since subsided.

In the debates on the Suez Canal the Government had a winning game to play, though the subsequent course of events in Egypt has abated the satisfaction with which its was at first regarded. The extraordinary incapacity to understand public feeling which seems to indicate Mr. LOWE'S ignorance of human nature was conspicuously exhibited in an elaborate criticism of the financial operations by which the money for the purchase had been provided. An inquiry into the details of the transaction, though in itself perfectly legitimate, was utterly irrelevant to the main issue on which the House of Commons was required to decide. In his eagerness to censure the Government Mr. LOWE left Mr. DISRAELI and his colleagues in possession of the credit of a political measure of seasonable boldness. Mr. GLADSTONE committed the same error of directing his attack against the machinery of the purchase, while it was evident that his main objection was to the principle of an active and ambitious policy. The feeling of the House was so heartily in favour of the Government that neither of the ex-Ministers ventured to proceed to a division. In a later stage of the business the Foreign Office committed the grave indiscretion of publishing a confidential correspondence with Sir DANIEL LANGE, who has long represented the Suez Canal Company in England. The publication was unnecessary and useless, except for the purpose of proving that the Liberal Government had declined an unauthorized overture for the purchase of the Canal. Both Lord DERBY and Mr. DISRAELI aggravated the grave error which had been committed by defending in either House a deliberate violation of the plainest rules of official morality. M. DE LESSEPS had already furnished a sufficient comment on the violation of confidence by peremptorily dismissing the agent who had displayed undue regard for English and commercial interests.

The miscarriages of the Admiralty provided occasion for a not uninstructive debate. Mr. GOSCHEN discussed the loss of the *Vanguard*, the court-martial, and the discontinuance of further proceedings, in a full and temperate speech. Mr. WARD HUNT'S defence was spirited and effective, though it has not altered the general opinion that a second court-martial ought to have been held. The House of Commons has since been occupied on more than one occasion with scientific controversies on ironclad and unarmoured ships, large and small, with the result of feeling a conscious inability to decide between Mr. REED and three or four skilled critics who partially or wholly dissent from his opinions. The increased estimates for the navy were adopted without serious opposition, and Mr. HARDY'S proposals of increased pay to the army had been approved by anticipation. The Budget was the necessary consequence of the large expenditure which had been already sanctioned by the House. Although the receipts of the last year have exceeded the estimates, the elasticity of the revenue has since the winter no longer maintained itself; and it has been thought necessary to impose additional taxation on the Income-tax payers, who are now habitually expected to supply all deficiencies in the national income. They have reason to complain that no Chancellor of the Exchequer has the courage to provide a reserve fund out of the proceeds of prosperous years.

The House of Commons has been for some time past engaged on the details of the Merchant Shipping Bill, which has fortunately not been treated as a party measure. Mr. PLIMSOLL has obtained some concessions from the Government, but his proposal of a compulsory official survey of unclassed ships has not been adopted. In the House of Lords the CHANCELLOR has completed the fabric of the Judicature Act by the establishment of a Supreme Court of Appeal. The House of Lords, which nominally retains the jurisdiction, is reinforced by Lords of Appeal holding official peerages,

who will also fill vacancies which may occur among the paid Judges of the Judicial Committee. The compromise between the claims of the House of Lords and the schemes of more thoroughgoing law reformers has on the whole been received with satisfaction. Lord SALISBURY has carried his Oxford University Bill through its successive stages without serious opposition, though its provisions have been freely criticized. His anxiety to promote the study of science will be more popular in the House of Commons than his solicitude for the preservation of clerical endowments. One of the most animated debates of the Session occurred on Lord HALIFAX'S motion in censure of Lord SALISBURY'S interference with the Government of India. In language of unusual severity the SECRETARY of STATE had reproved the VICEROY and his Council, both for passing their Budget at Simla and for reducing other taxes without dealing with the Customs duties on cotton. In the same despatch Lord SALISBURY required that all important measures should in future be submitted to himself before they were proposed to the Council; and Lord HALIFAX and the Duke of ARGYLL strongly remonstrated against the project of governing India in Downing Street. Lord LAWRENCE added that he would not have obeyed such an order if he had received it as Governor-General. Lord SALISBURY quoted despatches both from Lord HALIFAX and from the Duke of ARGYLL which seemed to be not less imperious than his own; but it was doubtful whether his systematic assertion of supreme power had been anticipated by his predecessors. The general impression produced by the debate was that it would be convenient not to define too strictly the limits of power between the Secretary of State and the Viceroy. In case of collision the authority of the Government at home must prevail; but restrictions on the power of the Viceroy ought to be carefully and habitually disguised.

The unfortunate Royal Titles Bill and Mr. DISRAELI'S still more unlucky speeches are too fresh in general recollection to be profitably recapitulated. From the first introduction of the measure to the recess, the unpopularity of the project constantly increased, nor could the wonderful blunders of Mr. GLADSTONE and Mr. LOWE change the current of opinion. Mr. LOWE in the first debate took occasion to remind the House that India might at some future time be lost. Mr. GLADSTONE was profoundly disturbed by the dread of interference with the independent Indian potentates, of whom not a single specimen can be found. A more casual illustration of Mr. GLADSTONE'S strange ignorance of all external affairs was furnished by his expression of a doubt whether the German EMPEROR was still King of Prussia. That a Prussian Parliament regularly meets under the KING is known to every newspaper reader in England; but, as Mr. GLADSTONE lately repeated, London newspapers are only to be treated with contempt. Whatever nonsense might be talked by his opponents, Mr. DISRAELI improved on their blunders. Not perhaps finding himself at liberty to explain his motives for introducing the Bill, he defended it by the wildest extemporaneous reasons. In the least wise speech ever delivered by a Minister, he stated that the title of Empress was used in a school-book and in an almanac; and then, observing that the House was offended by his frivolity, he suddenly devised the theory that the assumption of the Imperial title would operate as a salutary defiance to Russia. Mr. DISRAELI'S colleagues in the House of Lords naturally abstained from reproducing his fantastic arguments. The LORD CHANCELLOR exhibited his well-known forensic ability in the most plausible apology for the Bill which has yet been delivered; but the division on Lord SHAFTESBURY'S motion was more significant than the debate. Eight dukes and many habitual courtiers voted in the minority of ninety-one against one hundred and thirty-seven which protested against a vulgar and impolitic innovation.

EGYPTIAN FINANCE.

ALTHOUGH the relations of the French Government to Frenchmen asking for its assistance are very different from anything known here, and things can be done at Paris which would be thought impossible in London, yet the French Foreign Office is now managed with far too much caution and good sense to permit a serious danger to be lightly incurred. The French Government has done far more to help the KHEDIVE than the English Cabinet could have ventured to do in face of the sharp Parliamentary criticism to which it would have been exposed, and in view of the reluctance of the English public to see England assume vague responsibilities with regard to foreign finance. The request of the KHEDIVE for the appointment of Commissioners by England, France, and Italy was met at Paris with a prompt acceptance, and the French Government even went so far as to use its influence with Paris bankers to send to London the sum necessary to meet the payment of the April coupons of Egyptian bonds. A Government which uses its influence in this way has to pay for using it, and directly or indirectly any loss sustained by the bankers in the transaction will have to be made good by the State. But when the really critical moment came, and it had to be decided what France would do to save Egypt from bankruptcy, prudence prevailed. If England would do something, then France also would do something; but if England buttoned up her pockets, France would be equally cautious. All the preliminary arrangements had been made for the issue in France of a new gigantic Egyptian loan, large enough to relieve the KHEDIVE from the pressure of the floating debt, and to re-establish the credit of the French societies, who are holders, it is said, of this debt to the amount of one-third of the total. But it is one thing to issue a loan and another to get it taken, and it is obvious that an investor must have some very strong motive to take bonds at par which at the very best can be only on an equality with others which he sees quoted at a discount of fifty per cent. Some change must be introduced totally altering the mode in which a possible investor would regard the investment. Such a change could be introduced only in two ways—either by France assuming a protectorate over Egypt, or by the French Government so encouraging investors that they would be sure that they would be protected against loss. The first plan was one of enormous hazard. It is impossible not to see that sooner or later a collision between France and England would be inevitable if France bought that kind of control over Egypt which could alone save her from the reproach of having made a financial blunder. Even a joint protectorate would in the long run have been almost as dangerous as the sole protectorate of France, for endless causes of dispute would arise when the details of administration came to be carried out. As, however, England declined altogether all suggestions of anything approaching to a joint protectorate, these remoter risks had not to be considered, and Duke DECAZES scarcely needed to consider before rejecting the plan of France acting alone. The other course open to the Government was to give such encouragement to the new loan that investors would have a reasonable right to say that, if a disaster happened, those who had led them into it must indemnify them. This is not an imaginary case. Under the Second Empire a Mexican loan was brought out so strongly supported by the Government, so crammed down the throats of the rural public by zealous functionaries, that after the collapse of MAXIMILIAN the French Government had to compensate the bondholders. But what was possible then is not possible now. The present Government has the virtue and the timidity of a Government which knows that it is on its good behaviour, and it is too honestly Republican to think of rivalling the audacious feats of Imperial finance. The investors, too, would remember that the Empire had a promise of durability, and that the sovereign who got the Mexican bondholders into a scrape lived to be the sovereign who got them out of it; whereas now a Ministry may change any day, and the successors of the present Government might not think themselves at all bound by the foolish and unauthorized acts of those who had gone before them.

The French Government made it sufficiently clear that its final decision was not to commit itself irretrievably in any rash support of the KHEDIVE. But it is probably also true that the KHEDIVE himself ultimately summoned courage to act for himself and to take what he considered to be the best line for his own interests. He appears to be sincerely anxious to pay his debts, and he may with satisfaction compare his past history with that of his Suzerain, and reflect that he spent the money he borrowed on his country, and not in the main on himself. He also is said to be now willing to retrench—to stop works, reduce his army, reform his civil service, and generally to be as good a Khedive as he knows how to be. One great on his resources has been stopped by the collapse of

Turkey, as it seems to be agreed on all hands that the favour of the Porte is no longer worth his buying. Nor is he indisposed to let it be known what money he gets in and how it is applied. He has no objection to even the straitest sect of European accountants. But he naturally does not relish being protected. He is willing to act rightly, but he wants his right actions to be looked on as proceeding from himself, and not forced on him. He would like to settle his floating debt, and yet to keep up some show of independence. Under these circumstances it is not perhaps very strange that he should have started on his independent course by selecting a mild and gentle form of beginning his bankruptcy. He has simply ordered that the Treasury Bills maturing now shall stand over for three months, and carry seven per cent. interest. If he can treat a part of the floating debt in this way, he may be able to treat the whole in the same way. He may convert the floating debt into a permanent seven per cent. loan by the easy process of ordering that it shall so be converted. This is, no doubt, a species of bankruptcy. He may perhaps, by doing this, be making the best provision for his creditors generally that it is in his power to make; but he will not the less have promised one thing and performed another. If a ruler can by a stroke of his pen fund at a moderate rate of interest Treasury bills of a short date bearing a very high rate of interest, he may go on and alter to his advantage the rate of interest which the different classes of his funded debt at present bear. Perhaps, however, there is no other way out of his difficulties than that which he has begun to adopt. He can only pay as much as he can. It will need very good management and much self-control on his part to pay seven per cent. to his creditors all round, and perhaps the best and fairest thing he can do is to divide equally that which his revenues permit him to distribute. In the course of time, if the stipulated interest should be regularly paid, and if he made it evident that he was doing everything in his power to reduce his expenditure, increase his revenues, and pay his creditors, while all that he professed to do was vouched by the testimony of trustworthy European accountants, he might so far restore his credit that the securities now held by his creditors would increase in value until the price represented something not far distant from the sums actually advanced to him.

An unexpected and perhaps premature discussion was raised on Tuesday by Sir DRUMMOND WOLFF as to the management of the Suez Canal. It appears to pain him to find that a Conservative Government is, after all, not much bolder and grander in its foreign policy than a Liberal one; and he thinks that the Ministry has been unduly frightened by the criticisms of the Opposition. The Cabinet would get on very well if it would think only of its ardent and faithful majority; but it may get into great discredit if it listens to the counsels of its weak-kneed friends—a description which, if meant to apply to Mr. GLADSTONE and Mr. LOWE, is equally picturesque and original. The particular act of audacity, however, which Sir DRUMMOND WOLFF advocates is, we are glad to find, not the bolstering up of a rotten state of finance, but merely the further purchase of Canal shares regardless of expense. He is also of opinion that England ought to have a much larger share in the management of the Canal than, so far as is known, is likely to be accorded her by M. DE LESSEPS. Sir STAFFORD NORTHCOTE replied with much cautious good sense. He reminded the House that in much that refers to the use of the Canal there are many different interests to be consulted, and that the assent, not only of the KHEDIVE, but of the SULTAN, may have to be obtained. Towards the close of the debate he gave a conditional undertaking, which Sir DRUMMOND WOLFF seems to have construed into a distinct pledge, that before the meeting of the Canal shareholders in May an opportunity would be afforded to Parliament of considering the position in the administration of the Canal to which England may be held to be entitled. The Government must be supposed to know its own business best, but it would seem to be likely to throw great difficulties in the way of a satisfactory arrangement if its terms were debated in Parliament before they are concluded. Ardent Conservatives might be expected to have as much confidence in their leaders as is felt by the general public, and to credit them with a capacity for settling how many English Directors there shall be, and what sums shall be spent on current repairs and improvements. So long as there appeared to be any of the Ministry passing beyond the mere purchase of the shares already bought, and entering into any combination or plan for raising the price of Egyptian securities and making the KHEDIVE happy at the expense of England in spite of his bygone imprudences, attention was keenly fixed on their acts. But when they are merely engaged in making the purchase they have effected with general approbation as beneficial to England as circumstances will admit, even the strongest-kneed of their friends might be content to let them alone.

AMERICAN POLITICS.

THE rejection by the American Senate of the nomination of Mr. DANA as Minister to England will in some degree console Mr. BUTLER for the suspension of his own political career. No Senator can have doubted that Mr. BUTLER'S charge against Mr. DANA was the result of personal resentment. At a time when Mr. BUTLER was the trusted adviser of the PRESIDENT and the leader of the Republican party in the House, Mr. DANA gave expression to the convictions of all respectable Americans by opposing him as a candidate for one of the electoral divisions of Massachusetts. The party organization proved too strong for an independent candidate, and Mr. DANA was no longer formally recognized as a Republican; but his protest had probably some effect in stimulating the reaction which produced the defeat of BUTLER at the election for the present Congress. When, in consequence of recent scandals, the PRESIDENT thought it expedient to appoint a man of character and education to the vacant post, his attention was naturally directed to the opponent of BUTLER, and the majority of the Senate felt that, by ratifying the nomination, they would affirm the doctrine that personal merit was a higher qualification than party orthodoxy. The issue was raised between honesty and independence on one side, and corruption and faction, as personified in Mr. BUTLER, on the other. The decision of the MORTONS and CONKLINGS could not be doubtful; but still it is surprising that the Senate should unnecessarily advertise its preference of that class of politicians of which Mr. BUTLER is the notorious type. The PRESIDENT has for the most part acted in perfect harmony with the dominant section of the Senate. No functionary in the Union is less open to the charge of puritanical scruples; but Mr. MORTON, Mr. CONKLING, and Mr. CAMERON thought it necessary to remind him that he was not at liberty to deviate in any single instance from his accustomed path. It is not impossible that the scandalous adherence of the Senate to the precedents of political corruption may cause a schism in the Republican party. The Democratic Senators lost a great opportunity when they factiously concurred in the vote by which the nomination of Mr. DANA was rejected.

About the same time the Republicans of the State of New York held their Convention at Syracuse for the purpose of choosing delegates to the Presidential Convention at Cincinnati. The friends of Mr. CONKLING, having a majority of the State Convention, proposed at the first meeting that the Convention should adopt the Standing Orders of the New York Assembly. The meaning of the Resolution was that debate might at any time be stopped by the process of moving the previous question. The minority proposed an amendment to the effect that the Convention should be governed by the rules of the New York Senate, which admit of no previous question. The stronger party, having succeeded in the preliminary trial of strength, then nominated a Committee on Resolutions. It was intended that the Committee should report in favour of an instruction to the delegates to support Mr. CONKLING at Cincinnati; but the opposition had produced some effect on the members; and ultimately Mr. CONKLING was only recommended to the choice of the Federal Convention, while the delegates were allowed to exercise their own discretion. Mr. CURTIS, the principal opponent of Mr. CONKLING, was considered to have achieved a triumph; and probably the delegates will profit by the license which has been conceded to vote for any candidate who may seem likely to succeed. Mr. CONKLING may not improbably secure a considerable number of votes, even if he fails to obtain the nomination. Few politicians represent more faithfully the political system which has for many years past prevailed in the United States. Since his election to the Senate Mr. CONKLING has disposed of the Federal patronage in New York, and he is consequently supported by office-holders and expectants of office. No candidate for the

place may be more implicitly trusted to discourage any organic change in the mode of appointing public functionaries. The framers of the Constitution, who were bent with almost pedantic eagerness on the object of rendering the Legislature independent of the Executive, and the constituency independent of both, would be astonished to learn that the holders of office now in a great measure control elections. Mr. CONKLING some months since organized the Federal officeholders in New York for the re-election of General GRANT. Since it has been known that a third term is impracticable, Mr. CONKLING has become the legitimate heir of the official vote. The State Convention, which supports his claim to the Republican nomination for the Presidency, represents almost exclusively the incumbents of Federal offices. An old-fashioned rotten borough was scarcely more independent of public opinion than the managers of the enormous mass of voters who elect the President of the United States. Those Republicans who have now for a long time disapproved of the corrupt tendencies of the party have taken warning by their defeat at the last Presidential election. There will be neither a Convention of dissident Republicans, nor an attempt to form a coalition with the Democrats. The Cincinnati Convention will formally represent the party; but it is not certain that its recommendations will be adopted by the constituencies. If the Democrats could select an upright and creditable candidate, they would be reinforced by many seceders from the Republican ranks. Unfortunately Mr. TILDEN, who would be the most respectable candidate for the Democratic nomination, is thought to be too honest and too plainspoken on the question of currency. While the Republicans are comparing the respective merits of Mr. CONKLING and Mr. HARTRANFT, the Democrats are engaged in the more arduous task of composing a declaration of principles. The West will not vote for a supporter of specie currency, nor the East for an advocate of inflation. But for the currency difficulty the Democrats would almost certainly succeed; but their internal divisions are deeper than the mere personal schisms of the Republicans.

If the contemporaneous domestic history of the Union is not flattering to the national self-complacency, the results of the Washington Treaty may still be regarded with patriotic satisfaction. The damages which were extorted from England under the Geneva Award were professedly assessed on evidence of losses sustained by private citizens. It was expressly ruled that neither Government could, under the Treaty, recover damages against the other. The agents of the United States asked on behalf of private claimants, and recovered for their clients, 3,000,000*l.* on proofs satisfactory to that remarkable tribunal. As soon as the litigation was concluded it occurred to some members of the House of Representatives that it would be a masterpiece of smartness to repudiate at home demands which had been successfully preferred by the American representatives at Geneva. The claims, which were probably in many cases unfounded or extortionate, were for the first time subjected to a rigorous scrutiny, and there is still a large undivided balance which must apparently have been paid in excess of just demands by the unfortunate English Government. A member of the House of Commons, not unnaturally shocked by a paradoxical proceeding, has asked a question about the undisposed surplus, but it is not necessary for the English Government to trouble itself with the obliquities of American politics. If one rule was applied to England and another to the native claimant, the anomaly is not discreditable to the English Government. A more difficult question may probably arise through the delay of the United States in complying with the provisions of the treaty in the matter of the Canadian Fisheries. Mr. HAMILTON FISH cannot be persuaded to take any active steps, and the Canadians in vain complain that no redress can be obtained either by their own exertions or through the representations of the Foreign Office. The SECRETARY of STATE has lately devised the remarkable excuse that the English Government has not complied with the provisions of the treaty by recommending to foreign Governments the notorious Washington Rules. As the Government of the United States is equally in default, the audacity of the pretext requires no comment. American diplomacy has often been tortuous and overbearing; nor is it likely to have become more deferential or accommodating since the submission which was extracted at Washington. It is also possible that, like every other branch of American administration, the Department of State may be influenced by the approaching Presidential election. A high-handed denial of justice to England and Canada would be more certainly popular than any domestic policy.

ENGLAND AND FRANCE.

THE visit of Lord DERBY to Duke DECAZES on his way from Germany through Paris was awaited with the last faint flutters of a dying hope by those who persuaded themselves that, when the two Ministers met, something wonderful would be contrived to help Egypt and allay the terrors of the Bourse. This result of the interview was not attained, simply because it was impossible. Egypt and those who have helped or spoiled Egypt must go through their very unpleasant quarter of an hour as well as they can. But Lord DERBY'S visit was not altogether fruitless. If it did not cause, it at least coincided with, a significant change that has passed over the spirit of French journalism. The notion that to help Egypt was to annoy England, and was therefore a course of action made desirable by considerations of patriotic pride, died away after it had for a very short time found expression in the utterances of ardent journalists. That, under circumstances in which French susceptibility might have been easily awakened, there was so little response to the appeal made to the national jealousy of England, marks how times are changed. It really seems as if the famous last cartridge of Waterloo had been burnt. It cannot be said that there is any ecstatic friendship between the two nations just now, or any of that enthusiasm for a common purpose which awakened a temporary union during the Crimean war. Special alliances generally leave something of coolness behind them, and the experience of the Crimean war is not likely to make us very anxious to look on companionship in arms as the best means of cementing our friendship with France. Nor did the part we played during the German war win for us much of the affection of France. The private benevolence of Englishmen was energetic and profuse in its endeavours to relieve the suffering which the war caused, and it is very much to the credit of the French that they were grateful for what was done, and showed themselves above resenting kindness. But the political action of England was too impartial to please those who were suffering all the evils of war. The feeling of France to England, and the feeling of England to France, is not that of friendship and intimate union so much as that of a good-humoured wish to get on well together. Under the influence of habit and of increasing intercourse, the old idea that whatever the one nation gained the other lost has gradually died away. A conviction has sprung up that there is room for both in the world if they will but take things pleasantly as they come. It is found that for the most part these wishes are substantially in harmony. The same causes in a large degree determine the policy of both countries, and each constantly exercises a strong, though not very lively, influence on the other.

To the adoption by France of a moderate and sensible foreign policy since the war no one has contributed more than Duke DECAZES, and Lord DERBY adequately represents what has now become the traditional foreign policy of England. Whatever may be the Ministry, it deals with foreign questions on the same principles and in much the same way. There are of course some things that one Ministry will do and another will not do. Within narrow limits each may show its own special kind of courage. The last Ministry had the courage to settle the *Alabama* difficulty by getting arbitrators to fine England, and the present Ministers had the courage to buy the Canal shares. But acts like these only betray minor differences amidst a general agreement. We have settled down into a general wish to hold our own, promote commerce, and try to keep things quiet among our neighbours. At first sight this sort of foreign policy may seem a departure from the old spirited policy of the PALMERSTON days. But this would be to misread the character and history of Lord PALMERSTON. He had to deal with a very different Europe from that in which we now live. All that England is anxious to see upheld was then attacked; it is now left at peace, and allowed to thrive as it can. By a vigorous policy, by constantly showing Russia and France, and, in a less degree, Austria, that he was not to be bullied, he broke down, or at least helped to break down, a vast system of despotism, repression, and arrogant interference. England is peaceful now, because she has got what she

wants, and can afford not to interfere when interference is generally discredited. France has been imbued with a like spirit of moderation, partly by the calamities which she has suffered, and partly by the increase of good sense among all classes, except Socialist and Ultramontane fanatics. Every precedent of a difficulty being settled by the use of a little patience and right judgment makes it easier to settle other questions in a similar way as they arise. When, more than thirty years ago, the QUEEN paid her first visit to LOUIS PHILIPPE, French patriotism grew excited, because it was thought that the KING had lowered his country by going to meet a Sovereign who was not only a guest, but a lady. That even the silliest French journalist should trouble himself about such a matter seems now as impossible as that he should be unhappy about the customs of an African tribe. Those who love to look on the dark side of things are fond of questioning the boasts of general progress; but it cannot be denied that the world has made an advance in the art of treating things sensibly. When we treat a matter of business with France, we simply wish to treat it as a matter of business, and neither give nor take offence. England was able to be of some use to France last spring at Berlin by simply dwelling on notorious facts, and exploding the ridiculous notion that France was arming for an immediate war of vengeance. We may even boast that we have got to that pitch of business-like good sense that we do not mind being laughed at when we feel we deserve it. The Russians have naturally been diverted by Mr. DISRAELI'S quaint notion of baffling them in Asia by giving the QUEEN a new name, and, with a sense of humour which does them credit, they purpose, it is said, welcoming the adoption of the title of Empress of India by a solemn declaration that they quite approve of it. To patronize us by applauding our new engine of hostility towards them is a fair retort on their part, even if it is to amuse themselves at our expense.

In spite of our increasing communications with all the world, and of the rise of other Powers to the front rank, France still remains the only foreign country which really interests Englishmen. Every day the telegraph brings to London a summary of French news which equals the amount of English news in many provincial papers. The career of M. GAMBETTA is followed here perhaps with more attention than that of any English statesman. A murder or an accident in a French department is made as much of here as a murder or accident in Lancashire or Wales. A whole host of benevolent busybodies are on the alert to gain the first intelligence of a French river rising above its usual level, and so win the honour of calling a meeting and starting a subscription. The current literature of France has not perhaps as great an influence in England as it used to have; but this is not because England is not ready to undergo the influence, but because France does not produce a literature adequate for the purpose. What may be said of France on this head may, however, be said of other countries as well. The absolute dearth of youthful genius throughout Europe is one of the most curious features of the age. There is not, so far as our recollection serves, a writer anywhere who has made himself famous at the age at which Lord BYRON died. We ourselves look almost exclusively to one or two novelists and one or two poets of old standing for works of imagination. All we can say is that, if France would but be kind enough to give us a new writer of genius, we should welcome him as gladly as if he had been born in London. On the other hand, we may have the satisfaction of observing that the influence of England on France becomes every day more noticeable, not only in the sphere of commerce and in economical questions, but in the far more important sphere of general politics. For a long time it seemed as if all Frenchmen were like the BOURBONS, and would learn and forget nothing. They appeared to be able to do nothing except very foolish things in the sacred name of Order, or very foolish things in the sacred name of the Revolution. At last they seem to have taken a start, and in what may be fairly termed an English direction. The recent elections were the work of men who seemed anxious to have it understood that they were not quite so childish as had been supposed. It is needless to say that nothing more than a start has been made. The French are far enough still from the days of free but courteous discussion, and of an amiable Conservative Government gently following out Liberal principles. But, in spite of much petty injustice and of the shortsighted triumphs of party violence, they have, it may be hoped, got so far on the right road that, instead of copying the mere forms of Parliamentary government, they have begun to see its real meaning, and to see that it, or whatever may be deemed worthy to replace it, can only rest on the desire of men at once to act for themselves and to make fair allowances for others.

PETITIONS TO PARLIAMENT.

PETITIONS to the Houses of Parliament supply a convenient text for constitutional disquisitions, because, like many other institutions, they survive from an earlier political epoch, and are gradually passing into the stage of fictions. There was a time when a petition to Parliament was the only safe mode of expressing a wish for the redress of a grievance. In times of excitement public meetings held on the pretext of preparing petitions served the purpose of exhibiting the local strength of a party, sometimes not without a secondary purpose of intimidation. It is now more than thirty years since the House of Commons found it necessary to prohibit by Standing Order the debates which formerly arose on petitions as they were presented. At an earlier time the Orders in Council which practically suppressed neutral trade were mainly defeated by BROUGHAM'S pertinacity in denouncing them night after night in speeches in support of petitions. A practice which may even in BROUGHAM'S time have been endurable was necessarily abandoned when the number of Parliamentary speakers multiplied tenfold. FEARGUS O'CONNOR'S Chartist petition in 1848 was perhaps the last attempt to employ the old-fashioned machinery for purposes of agitation; but the form of collecting signatures, and of presenting a large number of petitions on the same subject, is still observed by the promoters of compulsory abstinence, of inspection of convents, of deceased wife's sisters, and of many other minor projects of legislation. A Committee on Petitions performs the modest and useful function of examining all documents of the class, and of reporting to the House their substance, the number of signatures, and any special matters which may call for observation. From time to time petitioners either attempt dull practical jokes, or take the opportunity of venting their passions and prejudices in violent language. It then becomes the duty of the Committee to call the attention of the Speaker, or of the House, to the impropriety; and if the liberal rules of Parliament are violated, the petition, after attaining more than its due share of notoriety, is formally rejected. As might be expected, sectarian bigotry is one of the most fruitful sources of such infringements of Parliamentary order. One or two Dissenting congregations, or perhaps impostors assuming their names, had included in a petition, in support of Sir T. CHAMBERS'S inquisitorial Bill, libels on conventual establishments which were offensive to Roman Catholic members. Mr. NEWDEGATE, who appeared to have presented the petitions, was unacquainted with their contents, and he believed that his name had been used without authority. The petitions were rejected, and the SPEAKER properly reminded members that it was their duty to take care that their petitions were conformable with the rules of the House.

The questions which arise on the Boulogne petition are, if possible, of less practical importance, while they are perhaps more attractive to votaries of curious and useless political knowledge. Many of the respectable inhabitants of Boulogne, including the MAYOR, joined with a number of English residents in a petition to the House of Commons for the elevation of the English Vice-Consulate in the town to the rank of a Consulate. The proposed change is properly within the competence of the Foreign Office, and it is generally not desirable that the House of Commons should interfere with official details. Parliament from time to time proposes restrictions on the cost of public establishments, as when an ill-advised Committee twenty years ago caused the withdrawal of the Embassies from Vienna and St. Petersburg. A motion for increase of rank or salary, though it may not transcend the powers of the House of Commons, is evidently more objectionable. It would be highly inexpedient that public officers should look to Parliament for promotion or advantage. In the case of Boulogne the question was not whether the prayer of the petition should be granted, but whether the petition itself should be received. It is surprising that the SPEAKER, who is the vigilant and accurate guardian of Parliamentary propriety, should in the first instance have inclined to favour the claim of the petitioners. There is no doubt that

foreigners within English jurisdiction are entitled, if they think fit, to petition Parliament for the removal of any grievances which they may suffer, or for any privileges which they may desire; but, if aliens were to take part by petition or otherwise in domestic affairs, their intrusion would be resented and, if necessary, checked. A foreigner residing abroad has nothing to do with English administration, although he may happen to have dealings with an English Consulate. A still stronger objection to his claim to petition is that, in recognizing his pretensions, Parliament would seem to assert rights of its own over the subjects of a foreign Government. If the citizens of Boulogne want anything which the English Government can grant, their regular course would be to apply to their own Government, which can at its discretion direct its Ambassador to make any representations which may be deemed advisable. It may be admitted that the French Government is not likely to express its jealousy of the conduct of the Boulogne petitioners, but matters of form ought always to be regulated by the strictest and soundest principles. A precedent might be found for the Boulogne petition in the ancient practice, which existed within living memory, of appointing at the beginning of every Parliament certain Triers of Petitions from Gascony. When GEORGE III. at the time of the Irish Union tacitly discontinued the claim of his predecessors to the crown of France, a remnant of the not less obsolete claim to the dukedom of Gascony or Aquitaine was still retained for a time.

One among many reasons for rejecting the Boulogne petition is the inconvenience of establishing a precedent for reciprocity. There have been several instances of applications by English subjects to foreign Governments for purposes which were always impertinent, and sometimes seditious. In 1848 Irish agitators organized deputations to the Provisional Government of France; and it was only in deference to the vigorous remonstrances of Lord PALMERSTON that LAMARTINE, then Foreign Minister, answered with a rebuff Mr. SMITH O'BRIEN's requests for aid against the English Government. The mission of members of the Peace Society to the Emperor NICHOLAS, on the eve of the Crimean War, was less culpable in intention; but it was universally and justly disapproved. Many years afterwards a small section of Liverpool politicians applied directly to the Emperor of the FRENCH with the same disregard of sound and established rules. It was lately stated in the House of Commons that three millions of American Irishmen were about to petition Parliament for an amnesty; but a better informed member explained that the petition was addressed not to the English House of Commons, but to the American Congress. Some of the petitioners are probably subjects of the Crown resident in the United Kingdom, but it is not likely that Congress will hesitate to acknowledge their right of petition. An impracticable request is perhaps appropriately addressed to an Assembly which has no power to grant it. Direct relations between English subjects and foreign Governments have always been discouraged. No Englishman can properly accept a foreign order without leave of the Crown, and permission to wear foreign decorations is rarely accorded to civilians. A petition to the House of Commons may be considered to be by one degree more serious and practical than a riband and a star.

The characteristic tenacity of English customs will probably long prevent Parliamentary petitions from falling into desuetude, but the effect which they were formerly intended to produce is now attained by means more consistent with modern habits. Newspapers, in addition to many other functions, serve to some extent the purpose of petitions, by presenting to Parliament both the opinions and the arguments of different political parties. Letters of constituents to their members probably receive more attention than petitions transmitted for presentation, especially when they require an answer. The return of a member to support the Government or the Opposition is equivalent to a petition by the majority of electors for the measures which are respectively proposed by one or the other party. A vote, and the reasons for which it is given, have the advantage of not being submitted to the censorship either of the Committee on Petitions or of the Speaker. The NEWDEGATE petitioners are at liberty to vote for any candidate, if they can find him, who professes to believe in the scandalous figments of their prurient imaginations. The inhabitants of Boulogne are unfortunately not in a position to vote for English members; but they must console themselves with their contribution to the ranks of their own Senate and Chamber of Deputies. On the present occasion they have had the opportunity of calling the attention of the House of Commons to their urgent need of an English Consul. Frenchmen are too patriotic not to admit the force of the objection which has been raised to the interference of foreigners with the public affairs of an independent State. It is only in a figurative and inaccurate phrase that Boulogne, or any other French town, is called an English colony. As THACKERAY said, an untravelled Englishman who wishes to be impressed by the contrast of foreign countries with his own ought to land at Boulogne or Calais, and then come straight home. He will in a few hours have seen a community which is different from Englishmen in looks, in language, and in modes of thought; and which cannot even petition the House of Commons.

FRENCH PARTIES.

THE Chamber of Deputies has sat for a month and has annulled fifteen elections. The majority are probably of opinion that this is not an unprofitable use to put their time to. Most of these fifteen vacancies will be filled up by men of sounder Republican views than the deputies who have been unseated, and the majority, which already has very sufficient power in the Chamber, will have it more abundantly. Of course there is nothing to be said for this mode of deciding disputed elections. It makes a question which should turn entirely upon comparison of evidence, turn entirely upon a comparison of party strength. But, given that the system exists, this particular instance of its exercise has perhaps caused more outcry than it fairly deserves. M. BUFFET made no secret of his determination to manage the elections; and when after all his management they went against him, it was not surprising that the victorious party should scrutinize pretty severely the manner in which he had carried out his resolution. No doubt the fact that a Bonapartist or a Royalist had been returned was the indication of irregularity that first seized on their attention. But among the fifteen elections which have been annulled on the plea of official pressure, there are probably none in which official pressure was not freely exercised. It is always difficult to say which of two parties should make the first step towards mending their ways, but in the present case it would have been hardly reasonable to expect the Republicans to set the example. They had suffered too long under M. BUFFET'S rule not to have many grudges to gratify when they found themselves in power. And among all their grounds of quarrel with him none had been so bitter and persistent as his control of the municipalities. He had been implored to relax his hold on them before the elections, and he had as good as replied that it was only for the sake of the elections that he cared about the politics of a Mayor. There is a special pleasure doubtless in making M. BUFFET see that even in the few places where his plan succeeded it only succeeded for a month. The opportunity for the Republicans to show that they are better than their adversaries will come when the verification of powers has been completed. If the Government are well advised, they will scrupulously abstain from exerting any pressure on the elections which must be held to fill the vacant seats. One side or the other must set the example in this respect, if any real improvement is to be effected, and it is plainly the party in power who have the ability, and ought to have the will, to make a beginning. M. GAMBETTA will be doing a better service to the State if he keeps a close watch on the doings of the Administration as regards the elections than if he devotes his whole strength to out-manœuvring the priests. So far as the clergy pass beyond the region of strictly spiritual influence, they probably do more good than harm to the Republic. Every instance of resort to unlawful means of returning a Legitimist or an Ultramontane is an implied admission that their candidate would have been defeated if only lawful means had been employed. When the illegality is on the side of Republican administration this argument can be employed with still more damaging force.

M. RICARD is about to make a further change in the composition of his official staff. When this has been accomplished, something like five-and-twenty prefects will have been dismissed, besides a still larger number who will have been sent to turn over a new leaf in a new department. It is greatly to be regretted that the Government did not feel itself strong enough to dispense with this display of Re-

publican virtue. France might well have been spared the additional element of demoralization which the practice of dividing the spoils must inevitably introduce. It is strange that M. GAMBETTA, in deference to whom these changes may be supposed to have been made, should not see how immensely the power of an unpopular Government is increased by the practice of dismissing what in England is known as the permanent staff at every change of Ministry. A really popular Government does not need, and consequently does not profit by, these accidental supports; but to an unpopular Government the fact that its subordinates know that their interests are indissolubly associated with those of the Administration is a very great source of strength. If the principle is rigidly carried out, the additional votes that its application secures count for something, and the influence that an official is likely to exercise when he is working for his own interest as well as for that of his employers will be of a more searching and effectual, and, at the same time, of a less easily detected, kind than that which he exercises when he is merely acting in obedience to orders. It is true, of course, that at present only a few specially obnoxious prefects and sub-prefects have been removed, but the system is one which can hardly fail to be applied universally if it is once accepted as applicable to the higher ranks of the service. The same desire to make a change of Ministry felt which now animates the Republican party at Versailles will extend itself to the Republicans in every commune, and the Government will find it difficult to resist the pressure brought to bear upon them by their local supporters to give them the chance of an appointment.

M. RICARD and M. RAOUL DUVAL have exchanged thrusts in the Chamber, with the result of greatly delighting the Left, and very much shocking those who expect Parliamentary business in France to be carried on with as much calmness as in England. The Report of the Amnesty Committee was presented on Tuesday, and the Government proposed to adjourn the discussion of it till after the Easter holidays. The Bonapartists insisted that it ought to be taken at once, and upon this motion M. RAOUL DUVAL made a speech, the principal object of which seems to have been to extend the patronage of the Bonapartists to the Government, with the view probably of damaging them in the eyes of the Left. You and your Republic, he said in effect, are on your trial. If you behave well we shall not oppose you; we may even in time come to give you active support. The MINISTER of the INTERIOR rightly enough saw in this an intimation that the Bonapartists would be ready under certain circumstances to withdraw their claims in favour of the Republican Government, and he was equally assured that to allow this offer to pass unnoticed would be to sow the seeds of discord between the Republican Government and the Republican party. Accordingly he interrupted M. DUVAL with the words, which promise to become famous, "Les partis "déchus n'ont pas à abdiquer." Thank you for nothing; an offer to abdicate can only be in place when the sovereign is still on the throne. After he has been deposed he has no longer any power to give away. He cannot take off with his own hand the crown which has been snatched from his head by others. This is now the position of the Bonapartists. NAPOLEON III. was deposed by a vote of the Assembly, and the Empire had fallen still earlier. It will be time enough for the friends of his son to talk of abdicating in favour of the Republic when they have something to hand over to their successors. The Republic exists in virtue of the national vote, not by the sufferance or support of a deposed party. M. DUVAL said truly enough that he was not accustomed to hear this language from the lips of a Minister; and it has been objected that, in using it, M. RICARD rejected allies who might hereafter have been useful to him, and intensified divisions which it would have been better to heal. This notion of French parties making peace all round and promising to dwell together in unity for evermore may be a pretty theory, but for a long time to come it can be nothing more than a pretty theory. The Bonapartists may talk of abdicating, but we may be quite sure that nothing is further from their thoughts. Their desire has probably been to associate themselves with the Ministry, in the hope that the Left, disgusted at the Imperialist leanings of the nominally Republican Government, would break out into some open manifestations of dissatisfaction, and enable the Bonapartists to draw the moral that the Republican party is not sufficiently homogeneous to have the conduct of affairs entrusted to it. If this was M. DUVAL'S intention, it has signally failed. M. RICARD'S speech has made it clear that the Government will under no circumstances look for support to the Bonapartists, and the cheers with which M. DUVAL'S speech was received by the Right seem to show that the Conservative Opposition is content to bear a distinctly Imperialist character. Nothing could be better for the Ministry than both these results. The discontent of the advanced Republicans will be greatly modified by the discovery that there is no secret alliance between the Cabinet and the Bonapartists, and they may be proportionately less exacting in their demands for proof of genuinely Republican dispositions on the part of individual Ministers. The country will see that the choice which there was supposed to be between the Republic and some undefined form of Conservatism is no longer open, and that the only Government that can replace the Republic is the Government of NAPOLEON IV.

NAVAL DISCIPLINE.

IT is to be hoped that any indiscretions into which Mr. ANDERSON may have fallen in bringing the case of the *Alberta* before the House of Commons will not be allowed to prejudice the consideration of what is undoubtedly a very serious question. There can be no justification for introducing the name of the QUEEN on one side or on the other; and the best way of dealing with the subject is, in fact, to regard it as simply an ordinary case of running down at sea. The singular course which the Admiralty has chosen to adopt makes it difficult to ascertain the exact position of the question. It is known that there has been a private inquiry into the circumstances of the disaster; that this inquiry resulted in what amounted to a verdict against Captain WELCH; and that the Admiralty has accordingly reprimanded that officer. The evidence, however, on which this decision is based is withheld; nor is it known what is the nature of the reprimand which has been bestowed on Captain WELCH. It is possible that the Admiralty, having thus passed sentence, cannot conveniently re-open the question and order a court-martial, though the FIRST LORD says that, if Captain WELCH asks for one, he can have it; but, even on this assumption, it cannot be admitted that there is *nothing* more to be done, and that the question is finally closed. It is clear that there is a *primâ facie* case of manslaughter against one, if not both, of the commanders of the *Alberta*, and no one can doubt that, under ordinary circumstances, these officers would before this have had to answer a criminal charge. Whatever excuse there may have been for delaying this step for a time, there is none now. It cannot be pretended that in such a case the authority of the Admiralty excludes or overrides the jurisdiction of the criminal tribunals, or that the circumstance of an officer being connected with a Royal yacht places him beyond the reach of the law. The case of the *Alberta* and *Mistletoe* is, in fact, very similar to that of the *Franconia* and the *Strathclyde*. In both cases a vessel in broad daylight blindly runs down another vessel. Yet, while the Captain of the *Franconia* is at the present moment in prison awaiting sentence, the officers who were concerned in the other disaster are exempted even from trial. It is true that the offence of the Captain of the *Franconia* was aggravated by his cowardly desertion of his victims, and that nothing could have been more gallant than the conduct of those on board the *Alberta* in this respect. This, however, does not affect the question whether the commanders of the latter should be screened from a criminal prosecution. It is absurd to suppose that the public will accept the result of a private inquiry as a satisfactory settlement of such a question. Nor indeed is it enough that we should know the evidence on which the Admiralty has acted; it is indispensable to the proper administration of justice in such a case that there should be a full and open judicial investigation. It is all very well to say that substantial justice has been done, and that there is no need to rake up unpleasant facts. But the public has at present no means of judging whether the justice is substantial or unsubstantial. It may perhaps be argued that it is not the business of the Admiralty to go beyond its own jurisdiction in dealing with officers; but it is at any rate the duty of the Government to see that the law is equally enforced in all cases, without respect of persons. As far as the public has any evidence before it, a mere reprimand is a very inadequate punishment for such misconduct as

that imputed to Captain WELCH by his own official superiors, and it is necessary to protest against an evil precedent.

All that Mr. WARD HUNT could say in defence of his course in this matter was that it is usual to have confidential inquiries for the benefit of the authorities; but he apparently overlooked the fact that the only object of these inquiries is to guide the authorities as to whether further proceedings shall be taken, and that they ought not to be used as a substitute for such proceedings. For instance, it may have been reasonable enough that a private court should inquire into the question of personal responsibility as regards the command of the *Alberta*; and if it advised that Captain WELCH, and not Prince LEININGEN, was responsible, the Admiralty can hardly be blamed for acting on that opinion. But when the court further decided that Captain WELCH was not only responsible, but to blame, it was plainly the duty of the Admiralty to send him before a court-martial at the earliest opportunity. It must be evident to everybody except Mr. WARD HUNT that private inquiries for the purpose of providing the authorities with confidential advice do not answer the same purpose as the regular processes of judicial inquiry. Yet this is an hallucination which has dangerously pervaded Mr. HUNT'S administration of naval affairs. It is not only in this one case that he has assumed the right of exercising the functions of judge on private information, and disregarding the usual formalities observed on such occasions. The truth is that Mr. HUNT has systematically quashed all public inquiries since he has been at the Admiralty. We have from time to time called attention to his extraordinary proceedings in this respect, and Mr. GOSCHEN on Monday summed them up very clearly. Mr. GOSCHEN, indeed, as a former First Lord, is somewhat tender to his successor. He thinks that Mr. HUNT was justified in overriding the judgment of the court-martial in the *Vanguard* case; but here again Mr. HUNT acted on private evidence, without waiting for or permitting further inquiry by the same or by another court-martial. Again, when an accident happened to the *Iron Duke*, after a misleading official communication had been published to throw dust in the eyes of the public, the matter was remitted to a private court of inquiry, and to this day nobody knows exactly who was to blame, or whether any one was punished for a scandalous oversight which might, under other circumstances, have led to the loss of a second ironclad. Soon after, the running down of a Norwegian bark by the *Monarch* was hushed up in a similar way; and Mr. HUNT now wishes to apply his favourite process to the case of the *Alberta*. It is obvious that if this sort of thing is tolerated, it will gradually harden into a system, and the navy will find itself in the hands of a despot who condemns or acquits entirely at his own personal discretion, and on the strength of secret information. It does not require much consideration to see that this is a very serious innovation, and equally injurious to the service and to the public interests. It is, in fact, Imperialism in its worst form. Hitherto the impartiality of judicial administration in the navy has been secured by open courts-martial in all important cases; but according to Mr. HUNT'S system questions of the gravest character, going to the very roots of discipline and affecting the efficiency and loyalty of the service, are disposed of by secret and mysterious processes which render any check or supervision impossible.

The most impressive speech in the debate was that of Admiral EGERTON, who spoke with the authority of a practical sailor, and no doubt expressed the feeling of the main body of his profession. He said he could not sit quietly and allow the extraordinary theories in regard to responsibility which had been placed before the House to pass unchallenged. In his opinion the principle on which Prince LEININGEN was released from responsibility would involve an entire change in the instructions given to naval officers, and it was unfair both to the PRINCE and Captain WELCH that they should not have had an opportunity of defending themselves before a court-martial. The state of things on board the *Alberta*, as far as the published evidence goes, was certainly remarkable. There was no look-out whatever in the bows of the Royal yacht. Prince LEININGEN and Captain WELCH were both on the steering-bridge, each fancying he was looking out, though neither saw the danger of the *Mistletoe* till the quartermaster roused the Captain by a slap on the back to a sense of his position; and then both the PRINCE and the Captain rushed over to the telegraph bell, and, as the PRINCE himself admits, came into personal collision over the handle of the instrument. It should be added that the view from the bridge is obstructed by the funnel and the shelter-house, and that it was open to any members of the Royal suite—even, it is said, ladies—for gossiping purposes. If loyalty has to be appealed to on such a subject, it ought to excite strong indignation that the life of the QUEEN should have been endangered in this almost incredibly reckless manner. Instead of extra precautions being taken, the most ordinary precautions appear to have been neglected. Most people will share Admiral EGERTON'S regret that some further steps have not been taken to vindicate public justice in this case; but it may be hoped that it is not yet too late to bring the Admiralty to its senses.

PARLIAMENTARY PROCEDURE AT MELBOURNE.

THE recent struggle in the Parliament of Victoria shows that our Australian fellow-subjects would be fully able to hold their own against the stoutest combatants in the United States Congress. The unsuccessful attempt of Mr. BERRY to stop the supplies, and the successful counter-attempt of Sir JAMES M'CULLOCH to silence the minority, are quite worthy of the days when "Old THAD "STEVENS" gave the tone to debate at Washington. Where so much political passion has been evoked, it is painful not to be able to sympathize unreservedly with either party. The only way in which spectators can share the rapture of the strife is by heartily espousing one side or the other; and if there is anybody in this country who can bring himself to feel that great issues hang on the success of the Ministry or of the leader of Opposition, he may be congratulated on the stirring sensations which the account of the conflict will excite in him. Most reasonable Englishmen, however, will see almost equal cause for regret in the discreditable tactics of the Opposition and in the high-handed measure by which these tactics have been defeated. Mr. BERRY is probably one of those politicians who care nothing for Parliamentary institutions except in so far as they can be made to serve their own purposes. Had he been anything better he would have withdrawn his opposition to the voting of supplies rather than allow so dangerous an expedient as the *clôture* to be introduced into Victoria. It was evident that the Ministerial majority was large enough to carry Sir JAMES M'CULLOCH'S Resolution; and if Mr. BERRY had really valued freedom of debate, he would not have left it to sustain a check which, whatever assurances the Minister may give to the contrary, admits of being repeated whenever a majority feels unable to answer, or is irritated at failing to convince, an obstinate minority. Possibly Mr. BERRY foresees a time coming when the weapon which Sir JAMES M'CULLOCH has now forged may be used with equal effect to silence the present majority. Mr. BERRY'S "policy" is apparently summed up in a system of taxation which shall redress, as far as fiscal expedients can do it, the inequality between rich and poor; and some of the recent elections seem to show that this policy has a large number of supporters in the colony. Should it triumph at the next general election, Mr. BERRY will probably be quite as eager to put down the factious opposition of those who have something to lose as Sir JAMES M'CULLOCH has been to put down the factious opposition of those who have everything to gain.

The immediate cause of this singular conflict was the proposal of the Ministry to impose an Income-tax, instead of supplying the deficiency in the revenue and gratifying the popular desire for Protection by further additions to the Customs duties. The Opposition insisted that a scheme of this startling kind ought not to be adopted without an appeal to the electors, even though the Government might happen to command a majority. In fact, Mr. BERRY'S contention is that the Legislative Assembly no longer represents its constituents. It is plain that, if a majority could use this plea whenever they are outnumbered in a division, the conduct of public business would become impossible. Dissolution would follow upon dissolution with no longer interval between them than such as sufficed for the discovery of some colourable plea that the opinion of the electors had changed since the last contest. If the members do not reproduce with sufficient rapidity the variations of those whom they represent, there is no help for it but to wait until the Assembly has come to an end, whether by accident or by efflux of time. Mr. BERRY is

not of this opinion, and when it appeared that a Minister with a powerful majority behind him was not disposed to give the Opposition a gratuitous chance of displacing him, the Opposition delayed by every device known to small Parliamentary tacticians the passing of any votes in Supply. The Government officials remained unpaid for a fortnight, and the date at which they would once more touch their salaries seemed to depend upon the physical endurance of Mr. BERRY and some twenty members of the Legislative Assembly. Under this strain the patience of the majority at last broke down, and Sir JAMES M'CULLOCH introduced a Resolution providing that when any motion has been moved, either in the House or in Committee, a Resolution "that the motion be now put" may be proposed without notice, and that thereupon such Resolution shall be put forthwith without amendment or debate, and no other motion shall be made or question of order raised until such Resolution has been disposed of. If the Resolution be carried, the motion to which it relates shall immediately be put without further debate or question or order. For the purposes of the Resolution each clause or schedule of a Bill is in Committee to be treated as a separate motion. It will be seen that the powers which this Resolution places in the hands of a majority are of the most comprehensive kind. There is no sort of Bill to which it does not extend, and no stage of a Bill at which it may not be applied. Henceforth there will be freedom of speech in the Victorian Legislature for the majority, and for the majority alone. Whenever a majority grows weary of what it considers fruitless argument, it will be tempted to invoke the Resolution, and majorities sometimes consider arguments fruitless as soon as they have failed to answer them. It is true that Sir JAMES M'CULLOCH has assured the Legislative Assembly that the Resolution will only be resorted to to check factious resistance, and that he has no intention of appealing to it for the purpose of interfering with legitimate debate. But who is to determine when the invisible boundary between legitimate debate and factious resistance has been passed? Even in quiet times in England parties have greatly differed upon this point. The very moderate opposition that has been offered to the Royal Titles Bill has been called factious by Ministerial newspapers; and, to go no further back than last Session, the trouble that the Government came to about the Merchant Shipping Bill was set down by their supporters to factiousness taking the comparatively mild form of a profusion of Opposition amendments. When a majority is strong, it more easily gets irritated at the obstinacy of its opponents; when a majority is weak, it is naturally more anxious not to give its opponents the advantage that the chapter of accidents may have in store for them; and either way the temptation to put an end to debate will be likely to have great force.

It may be contended that, weighty as the arguments against the *clôture* may be, they must all yield to the paramount plea of necessity. In the present case, for example, it had become impossible for the Government to go on unless some check could be placed on the recklessness of the minority, and nothing short of the Resolution actually adopted would have had the requisite coercive force. To this it may be answered that, if an Opposition of the kind led by Mr. BERRY does not represent a preponderance of opinion among the electors, its very extravagance is sure to work its defeat. Supposing that Sir JAMES M'CULLOCH, instead of proposing his Resolution, had appealed to the constituencies to judge between him and the politicians who were refusing supplies and preventing the transaction of public business, it is true that Mr. BERRY would have gained a momentary triumph, since a dissolution was the end for which he was professedly working. But this triumph would have been exceedingly shortlived if his demand for a dissolution was not supported by a majority of the electors. The constituencies would have resented the needless trouble of a general election, and the return of a still smaller minority pledged to follow Mr. BERRY'S lead would have shown unmistakably that he had mistaken the road to popularity. Supposing, on the other hand, that the results of the election had shown that Mr. BERRY had read the signs of public feeling aright, and that Sir JAMES M'CULLOCH is holding office against the wishes of the electors, what harm would have been done by the discovery? If the financial policy of the Government is unpopular, the fact cannot long be concealed; and, much as the economical heresies of the Opposition are to be regretted, they are not likely to be converted from them through being kept out of office by the devices of an accidental majority. Probably it was the knowledge that a dissolution would not be granted that made Mr. BERRY so eager in demanding it. The prospect of having to make good his diagnosis of the constituencies at a general election might have been the most effectual way of silencing him.

GREEK IN THE TENTH CENTURY.

WE have before now had occasion to appeal to the light which is thrown on the history of Greek pronunciation by that happy whim of Liudprand which led him to interlard his Latin with Greek words written both in Greek and in Latin characters. If we could conceive such a thing as a Byzantine spelling bee, it is certain that the Bishop of Cremona would have been speedily "ruled out." But this only shows how needful it is to allow a little license in such matters. If Liudprand had spelled all his Greek words right, he might have stood higher among Byzantine scholars in his own day; but it is the fact that he spelled most of them wrong which makes him of such special value to us. He spelled his words wrong; but he spelled them so as to make the same sound, according to the present Greek pronunciation. Therefore the present Greek pronunciation was in use in the tenth century. Q.E.D. But let not the *Fonetic Nuz* claim Liudprand as one of the prophets of its system. It was well that Liudprand spelled his Greek phonetically; but, if everybody had spelled Greek phonetically, we could never have understood the value of his evidence. It is not, however, about Liudprand, or about the sound of Greek in the tenth century, that we wish to speak now, but rather about the tongue itself which Liudprand set himself to spell. A little reading of Constantine Porphyrogenitus will suggest, besides other points for reflection, one or two rather unexpected analogies and contrasts with the history of our own language.

It has often been pointed out that the great phenomenon in the history of the Greek language is one which the classical purist never finds out. He talks about Attic purity, but he has no idea of the wonderful triumph of the Attic dialect which he talks about. In a wider view of the history of language, people have been writing Attic, never mind whether pure or not, for at least two thousand one hundred years, while they have been talking something else. Xenophon wrote as he spoke; Polybios did not; and from Polybios the same state of things has gone on till now. An Ireland scholar might very likely cry out at the Greek of the Imperial geographer; but history cannot always listen to Ireland scholars; and history must claim the Greek of Constantine Porphyrogenitus as Attic. We do not say that he never departs from the orthodox forms of words or the orthodox turns of grammar, as they were understood twelve hundred years before his time. But it is wonderfully seldom that he does so; it is quite certain that he never means to do so. The great Attic writers set the standard of Greek prose for all later ages. Historically the *κοινὴ διάλεκτος* is Attic; so is the Greek of Byzantium; so is the literary Greek of to-day. No one supposes that the learned Emperor spoke as he wrote. No doubt he spoke the natural Greek of his time, very un-Attic indeed. But then Polybios did so also.

But while, with a very few exceptions now and then, the grammar and the forms of words in the Imperial pages would satisfy any reasonable standard of Hellenism, the vocabulary tells another story. If there be a sect with regard to Greek answering to the sect which says that "episcopus" and "imperialis" are not to be used in Latin, such a sect would find plenty of words to shriek at. We open the book at a shot, and find how the Patzinaks *πολλάκις πραιδεύουσι τὴν Ῥωσίαν καὶ ἱκανῶς αὐτὴν παραβλάπτουσι καὶ λυμαίνονται*. Some indeed may be inclined to think well of a people who clearly did some mischief to the Russians, however barbarous may be the language in which their doings are recorded. But *πραιδεύουσι*—with many it would go against the grain to describe the taking of Kertch or Sebastopol by such a word. Why should Constantine have used so horrible a word, when he might have said *ἄγουσι καὶ φέρουσι*, or half-a-dozen other phrases that would have passed muster on the Pnyx? The answer is plain; he talks about *πραιδεύουσι*, and endless other words of the same kind, because he was *ὁ ἐν Χρίστῳ βασιλεῖ αἰωνίῳ βασιλεὺς Ῥωμαίων*. The tongue of the Emperor of the Romans is not without an element drawn from the elder Rome. We turn his pages, and we light on Latin word after Latin word, all of them having that odd look which Latin words in Greek letters always have. The history, the nature, and the extent of this Latin element in Byzantine Greek is the point to which we now want to call attention.

First of all, it must be remembered that Greek was, and is, a living tongue, and not, as those fancy who end their Greek history with the sacrifice of Tissaphernes, a dead one. As such, it could not help in the tenth century, and it cannot help now, taking in words from other languages. It did so in the fifth and fourth centuries the other way; for Xenophon talks about *παράδεισος* and *σαρράπης*, as Herodotus before him had talked about *παρασάγγης*. So in an Empire which had more than enough to do with Saracens at one end and Slaves at another, it is not wonderful if we find a few Arabic and Slavonic words to express Arabic and Slavonic titles or offices. Very odd some of them look in their Greek dress. Things which are now going on may make *βοΐβοδος* clear to any

one who remembers the identity of *bibere* and *vivere*, and a little thought will teach us to see the Commander of the Faithful in the *ἀμερουμνή*, and some lowlier commander in the *ἀμηρᾶς*. But this is only as we ourselves talk of *Emirs* and *Ameers*, spelling them differently according to the parts of the world in which we find them; it is only as we have long talked of the *Shah* and the *Sultan*, and as we have latterly taken to talk of the *Khedive*. A few barbarian intruders like these do not seriously affect the vocabulary of any language. But in Constantine's Greek there is a foreign element of quite another kind, one which does seriously affect the vocabulary, one which supplies some instructive analogies and contrasts to the history of our own tongue. The Imperial pages bristle with Latin words. We soon light on *σάγιττα, φαμιλία, κάμποι, πραίδα, πόρτα, πάκτα, μάγιστρος, κομμέρκιον, μαγιστράτος, ὀστιάριος, στράτωρ, ῥέγων*, and *κουστικουλαρία*. All these easily explain themselves, and *ἀπεκρῆτις* proclaims itself, after a moment's thought, to be *a secretis*. Perhaps, when a man is taken *ὑπὸ τῶν βιγλῶν τοῦ Σολδάτου*, it may need a moment or two longer to recognize the *vigiles*. *Ἐνορδίνως* is more difficult again, but the sense will presently shew that what is meant is *in ordine*. *Δομέστικος, πατρίκιος*, and the like will be familiar to many who have not got on so far as the tenth century. And any man who wishes to dispute about Emperors and Kings, and who does not wish to sink to the level of present and late Prime Ministers and Lord Chancellors, may be supposed to have learned something of the great controversy about *βασιλεύς* and *ῥήξ*. But even this hardly prepares one for *τὸ ῥηγάτον Ἰταλίας ἢ Ἀπουλίας*, for *τὰ πριγκιπάτα* for the Lombard principalities in Southern Italy. *Κάστρον*, we need not say, our *chester*, appears in almost every page, and it sometimes takes the diminutive form *καστέλλιον*.

Thus far all the words are what we fancy that even a purist would acknowledge as classical, whatever he might say to their forms and uses. But *φοσσάτον* for an army, and the adverb *φοσσατικῶς* formed from it, might puzzle him. But, from the *fossa* which surrounded the Roman camp, *fossatum* came to mean, first the camp itself, and then the army, and the word is used in that sense in Latin of the fifth century. So *φλάμουλα, βάνδα, καβαλλικεύειν* in the sense of *cabalticare* or *chevaucher* are all words which some might be inclined to call barbarian; *βάνδα* indeed is most likely actually Teutonic; but they have all got into the living Greek from the living Latin which took them in. Both classical and later words became so thoroughly at home that they could be put to use in forming Greek compounds, and we get *τουρμάρχης* and *ἰδυκαβάλλος*.

Now all these things have a grotesque look. All Western things in Greek letters have. It has a grotesque look even to see Western Kings and Emperors in the Greek dress. We are used to them in every variety of Latin, Teutonic, and Romance, but the Greek dress does not sit easily on them. It has a queer look when we read that certain unbaptized Croatians—far away, be it remarked, from those bearers of the name who are now subjects of Hungary and Turkey—*ὑπήκουσι Ὦτῳ τῷ μεγάλῳ ῥηγὶ Φραγγίας τῆς καὶ Σαξίας*. But get over the grotesqueness, and the whole thing is a most instructive piece of history. Latin words began to creep into Greek to express purely Roman things, as soon as Greeks and Romans had much to do with one another. We see it in the New Testament; we see it in all the Greek writers under the Roman Empire. They translated when they could; they often adopt with an apology; but they could not wholly keep out the Latin element. Here and there a technical word would force its way in. All that we have been going through is the same process carried much further. But it is most instructive to see how far the process went, and at what point it stopped. We may safely say that the Latin words, thick as they are on the ground, are all more or less technical. They all belong to certain ranges of ideas, almost all official and chiefly military. The ordinary vocabulary is not mixed. That keeps its Hellenic purity very little touched, and when it is touched, it is not from Latin or from the West at all. Constantine says *ἄσπρος* for *λευκός*; he does not say *ἄλβος* or *βλάγκος*. The cause of the whole phenomenon is very simple. Latin was for some ages the official language of the Eastern Empire, no less than of the Western. But it was neither the popular, nor the literary, nor the fashionable language. Greek was all those three. Greek displaced Latin as the official language; but in so doing it took in a crowd of official Latin words. We may say that the whole official language is non-Hellenic; if not Latin, it is not Greek. But there was nothing in all this to touch the ordinary vocabulary. Men went on talking the natural Greek of the time, writing the literary Greek of a past age, using the Greek vocabulary of a present or past time. But, in writing on an official subject, it was necessary to use the Latin official words which had no Greek equivalents.

Here is both an analogy and a contrast with the history of our own tongue. The French infusion into English answers in a certain measure to the Latin infusion into Greek. But it does not answer exactly, because the historical circumstances of the two cases do not answer exactly. We have taken many official terms from French, but we have also kept many English official terms. The Sheriff meets the Judge, and the Earl's wife is the Countess. But we have also borrowed crowds of words which are not official. In the Eastern Empire, as we said, while Latin was the official speech, Greek was the popular, the literary, and the fashionable speech. When French and English were struggling in England, English was neither the literary nor the fashionable speech, but it was the popular speech, and French was not the exclusive official speech. The Norman Kings, as distinguished from the Angevin, did not use French, but always either Latin or English, as the official language. Thus, the names of offices and the like sometimes remained English, sometimes became Latin, according to no very certain rule. Here is the difference between the two cases, a difference again springing from earlier causes. Politically the Eastern Empire was simply Roman; it had no Greek political traditions whatever. The Roman Emperor moved his capital to a Greek city, and so brought himself within the reach of Greek influences; but there was no political succession from the Greek. Hence the official language was wholly Latin. In England, though the French-speaking King came in by conquest, yet he claimed to come in by a lawful right; all the English political traditions, and with them many English official names, lived on. The official speech of England was therefore never so purely French as the official speech of Constantinople was Latin; but, on the other hand, as French became the fashionable tongue in England, a great French infusion found its way into the general vocabulary of English, while scarcely any Latin found its way into the general vocabulary of Byzantine Greek.

It would almost seem that Constantine himself did not understand Latin. At least his notices of language are of the oddest kind. We mentioned one some time ago, when speaking of Ragusa, *λέγεται Ῥωμαϊστὶ ὁ κρημνὸς λαῦ*, where *Ῥωμαϊστί* may perhaps mean *Romaïc*, vulgar Greek. So when he says *ἰστέον ὅτι μαστρομήλης ἑρμηνεύεται τῇ Ῥωμαίων διαλέκτῳ κατεπάνω τοῦ στρατοῦ*, the word *ἑρμηνεύεται* must be taken backwards to mean that *μαστρομήλης* (magister militum) is a Latin word. That this is the meaning of *ἡ Ῥωμαίων διάλεκτος* appears from his wonderful account of Zara, and from his saying, strange as the etymology is, that *Σέρβλοι τῇ τῶν Ῥωμαίων διαλέκτῳ δοῦλοι προσαγορεύονται*. Yet elsewhere he tells us *Παγανοὶ τῇ τῶν Σλάβων διαλέκτῳ ἀλάπτωτοι ἑρμηνεύονται*. Yet surely *paganus* is Latin, if anything is. Directly after *τῇ τῶν Ῥωμαίων διαλέκτῳ ἡ χώρα αὐτῶν Ἀρέντα καλεῖται*. But what did he call the tongue in which he wrote? The Slaves in Peloponnesos had *Γραικοί* to their neighbours. The Maïnotes, he distinctly says, are not Slaves. They are Romans; but, because they remained Pagans till the days of the first Basil, men called them *Ἕλληνες. Εἰσὶν ἀπὸ τῆς γενεᾶς τῶν παλαιοτέρων Ῥωμαίων, οἱ καὶ μέχρι τοῦ νῦν παρὰ τῶν ἐντοπίων Ἕλληνες προσαγορεύονται διὰ τὸ ἐν τοῖς πρωταλαωῖς χρόνοις εἰδωλολάτρας εἶναι καὶ προσκυνητὰς τῶν εἰδώλων κατὰ τοὺς παλαιοὺς Ἕλληνας*. The Eleutherolakones were thus called Hellênes for this odd reason, which speaks volumes as to the changes in the use of Latin names. What were the men of Lakedaimonia itself? Romans, Slaves, or what? Clearly not Hellênes, if they were baptized.

FURNISHING.

IT appears probable that a few years hence we may see a strong reaction of taste in favour of extreme simplicity which will influence both dress and furniture. Materials will naturally be more costly and magnificent, but these qualities will no longer be found in mere trimmings. So many people have been bitten with the present madness for decoration—people, for the most part, who have never paused to think what decoration is—that those who have innate good taste, or who have studied ornament on rational grounds, will presently flee in disgust to whitewashed walls and dimity curtains. Such sensitive spirits deserve sympathy. They have been sorely tried. The man cursed with natural or acquired taste walks through the valley of this world as through a place of torture and humiliation. His best feelings are made scourges wherewithal to torment him. After preaching for years the mission of art in the regeneration of the uncivilized, he finds all his pet theories turned against him. He may love Japanese screens where any screens are required, but he might be roasted alive in a friend's drawing-room before he could get one for use. The walls are, so to speak, creeping with Japanese screens, but what cares he how Japanese they be if he has no ladder by him to fetch one down? Blue plates are very well adapted to feed from, and may look very well in the china closet. But, hung on wires in formal rows, they become monotonous. When ladies washed up their own cups after a "dish of tea," as they replaced it carefully in a corner cupboard or on a miniature dresser, it was quite right that such articles of convenience should be as handsome as the porcelain itself. But when ladies no longer tend their own tea-things, it is ridiculous to see sets of cups and saucers ranged on shelves in the drawing-room with a teapot or two in the middle, none of them ever intended for the unhallowed uses of everyday life. Why should slop-basins be studded over the room as thick as spittoons in a bar parlour? They are matter in the wrong place. A pat of butter is none the better for a splendid device on its unctuous surface. Perhaps our lumps of coal will soon be sent up to the drawing-room carved and gilt for the burning. One longs to see ornament in its proper place. Candlesticks that hold no candles, flower-vases empty of roses, copper coal-scuttles of antique form on the tops of cabinets, beer-jugs filled only with dust, such are the contents of modern rooms. Greek tombs, Oriental pagodas, and curiosity shops in Holborn are ransacked to furnish our chambers, and while the shelves are covered with old Worcester and the mantelpiece groans under brazen chargers, our tea is served in Staffordshire stoneware set out on a Birmingham tray. This is turning domestic art upside down and inside out. Though handsomely bound books form the best ornaments for the library shelf, we

seldom think of bestowing, even on what we read, any but the gaudy cloth of the modern publisher. Yet books can be arranged so as to form as harmonious a wainscoting as Indian matting, and are surely a more satisfactory investment than even old oak, while for the purposes of ordinary decoration there is nothing for a moment to be compared with natural flowers. It is in beautifying the things we use that the most lasting satisfaction is to be found, not in buying rows of greybeard jugs or Italian medicine jars.

When a young couple set up house nowadays they are obliged at least to pretend that they wish to furnish artistically. If they have lived outside the circle of art-culture, and have no notion whether they like Gothic, Queen Anne, or Rococo, they send for all the manuals they see advertised about tables and chairs, houses and housekeeping. They study them most assiduously, and make copious notes. But, strange to say, the more they read the further they are from being able to come to any decision as to the colour of the drawing-room paper or the pattern of the dining-room curtains. In the multitude of counsellors there is complete confusion, and they wish in their hearts, though they are ashamed to say so, that they might have the good old mahogany with which their fathers and mothers were happy and comfortable. They do not recognise harmony in colour when they see it. A child in a blue frock holding an orange in its hand gives them no delight; a Greek vase of exquisite proportions has for them no grace. In short, neither by nature nor education have they any taste for art, and they expect to acquire it simply by wishing to be in the fashion. But it is no more possible for a person without natural eye to harmonize colour properly, or choose furniture of just proportions, than it would be possible for any one without natural ear to compose an opera. However, as fashion has to be studied in dress, why should it not be studied in furniture? There are plenty of people who talk glibly about high art and ceramic trade-marks and are only too ready to give advice. Almost every magazine has its articles on the subject. But with a smattering of knowledge the difficulties become greater than ever, and the poor young people, so ready to do what is required of them, become completely mystified and discouraged.

One manual on this subject, written by a lady who has already explained how other ladies may dress on fifteen pounds a year provided they practise strict economy in the matter of under-clothing, looks delightfully practical. There is a list at the end of the various things required in a ten or twelve-room house where two maid-servants and a man are kept. The whole furnishing is to be done for between five and six hundred pounds. Everything seems most complete, and it is perhaps a little hypercritical to remark that two aprons seem a rather small allowance for the butler, and that he must have some difficulty in attending to all the fires with only one coal-scuttle, even though that one be made of copper. Then, too, the cook will be an excellent manager if she can make three bowls serve for beating eggs, mixing sauces, putting by dripping and gravy, storing milk, boiling puddings, and all the other duties for which bowls are required. However, these are small matters compared to the important question as to what is to be the prevailing tint of the room in which the dishes produced in the kitchen are to be eaten. The young couple are advised in small rooms to limit themselves to two colours, for fear the effect should become "messy." Blue is discarded as not being economical and as difficult to manage, because shades that match in daylight do not look well together at night. But some charming combinations are suggested where more liberty is allowed. For instance, a pale primrose wall, a dull canary-coloured carpet, and cheerful green curtains are considered suitable for a room with a "medium aspect"; while "blush-rose walls, a warm crimson carpet, and green curtains, containing a dash of pink," will suit a Northern exposure. The bedrooms may be painted in oak graining, because it is uncommon for a bedroom, but the paper must be "unvexatious." The smoking apartment is to have a "manly pattern" chintz, and the carpet is to be Turkey if possible, because men are such fidgets. Of course it is quite right to have a "manly pattern" in the smoking-room, for even at the Doublesex Club ladies are not permitted to enter the sacred precincts. Our young couple suppose that this is an example of realistic art, and are thankful for the clear definition of a manly pattern as "something in stripes in which red predominates." Having collected all these useful hints, they turn to an æsthetic-looking volume with a fascinating label in white paper. Here they reach a higher, if not a clearer, atmosphere. There are not such explicit directions, but the sentiments are beautiful. In it they find true principles of art decoration; and yet they are allowed to have their "normal surroundings" in harmony with their individual taste, being only cautioned that a "room should be set in a certain key, and, if allowed to fall out of it for the sake of variety, should speedily return into its normal channel." This, they admit, sounds most subtle. How charming to think of colour being harmonized like a glee, and all the things in the room keeping in tune, no matter how much you move them about! But what is to be done with the splendid scarlet table-cover which has been given them, if the drawing-room is to be sage green? It will be like a major chord struck by chance in a minor air, and properly strung eyes will thrill with pain at the sight. But, on reading a little further, the young couple receive much comfort, and find it will not be absolutely necessary to put away all their wedding presents in locked drawers. Even the claims of art, it seems, are to be disregarded when they stand in antagonism to the smallest token of esteem and affection; or, as the writer finely puts the delightful sentiment, "The principle which regards the motive of a gift is deeper than that which contemplates with critical nicety the attributes of the thing given." They are to choose a place as "much in the dark as possible" for the piano, which is a cruel blow, as they sing duets together, but they also find that furnishing should be a thing of the heart as well as of the head, which encourages them amazingly. Presently they come to a passage which dispels half their trouble, for they read that young married people should not scour the country, seeking for the musty old bureaus of defunct ancestors, but have new furniture, and grow old with it. They now make a dash at a bulky catalogue which has been sent them post free, and which they have hitherto been afraid to look at because the things were all new. It seems, however, to combine in the most wonderful manner the practical, the artistic, the useful, and ornamental. It talks of stencilled walls and tinted ceilings, quotes Pugin, Sir Digby Wyatt, Mr. Ruskin, and Mrs. Warren. It is an immense relief to find some one who will take upon himself the responsibility of providing everything from garret to cellar, to whom the furnishing of a house is a "labour of love" for which he will condescend to take money. So it is arranged that the house is to be done up in all the proper tints, to have dados, wainscotings, and varnished floors. "Elizabethan easy-chairs with cabriole legs" and an "elegant walnut Louis-Quatorze lady's cabinet writing-table, handsomely inlaid with marquetrie," are ordered for the drawing-room; Cromwell chairs and "antique carved oak book-cases" for the library. There are to be "baronial" coal-vases with mediæval mountings, an "Athenian hip-bath," an "Eastlake" breakfast service, and Minton tiles in all the fireplaces.

The young couple get into their house at last; they give the finishing touches by placing bits of china and odds and ends of embroidery about the room. They pay their bills, the house is hideous, and they never find it out.

THE PRETENSIONS OF ASSISTANT-MASTERS.

MOST people will agree with Mr. Cross that the discussions which have taken place with regard to Rugby and Eton have not tended either to improve the discipline of the boys, or to encourage parents to send their children to those schools; and a heavy responsibility consequently rests upon those who have thrust such questions before the public. At the same time, if an appeal of this kind is to be made, it is as well that the position taken up by the malcontents should be distinctly understood. "There was no greater mistake," Mr. Knatchbull-Hugessen said, "than to speak of Assistant-Masters in public schools as if they were mere teachers in private establishments. After they had acquired houses, they much more nearly resembled the heads of colleges affiliated to a University, or the Masters of a number of small schools incorporated together." Whether or not it is desirable that public schools should be conducted on this principle is, of course, a question which may fairly be discussed; but there can be no question as to the fact that their actual constitution is, and always has been, of a very different kind. The Act of 1868 distinctly lays down the conditions on which both Head-Masters and their Assistants hold office, and they must all be deemed to be fully warned as to the terms on which they are engaged. These terms are that a Governing Body may dismiss a Head-Master at its own discretion, without giving any reasons, and that a Head-Master has in turn a similar power over his subordinates. It may be thought that such a system is liable to be harshly or oppressively used, but at least its existence is perfectly well known, and it is absurd to speak as if it had been started as a surprise. Very strong evidence in favour of this system was given before the Royal Commissioners, and the conclusion arrived at was that the authority of a Head-Master must be absolute over the whole school. If he shows himself unequal to so grave a responsibility, the Trustees can dismiss him; but as long as they retain his services, they are bound to give him the powers which are necessary for their effectual performance. In the case of Rugby, the Head-Master was met, as it were, on the threshold of office by a cabal of Assistant-Masters who resented his appointment, and who set themselves to obstruct him in his work and to degrade his authority. In this attempt they had unfortunately the support and countenance of some members of the Governing Body; and in the end they succeeded in carrying their point and in driving out the Head-Master. A serious blow was struck at the discipline of public schools when the Assistant-Masters of Rugby were allowed to intrigue with impunity against their superior.

Mr. Knatchbull-Hugessen only referred incidentally to what happened at Rugby, and grounded his case mainly on the recent dismissal of Mr. Oscar Browning, one of the Assistant-Masters at Eton. This raises a personal question which at the present moment it is difficult to discuss. Enough, however, has already come out to show very clearly the position which Mr. Browning occupied, or attempted to occupy, at Eton. Mr. Knatchbull-Hugessen asserted as "a certain fact" that Mr. Browning was abruptly dismissed without having any opportunity of knowing and meeting the charges against him, so as to vindicate his character before the public. This, however, is, to say the least, a mistake. For some time the Head-Master had been dissatisfied with the way in which Mr. Browning discharged his duties, apparently thinking that he did not give that sound prac-

dical training to his boys which was desirable, and that he also sought to establish himself in a position of undue prominence, unfair to the other Masters and injurious to the discipline of the school. Mr. Browning was further accused of seeking, in pursuance of this alleged policy, by an evasion or violation of the College rules to obtain a larger number of pupils than was allowed to a single tutor. At last Dr. Hornby, after repeated remonstrances, wrote to him:—

> I must remind you that in your case particular attention had been called to your violation of the rules last winter; that you had in consequence received a reprimand, and very definite instructions in writing as to your future course. . . For two or three years hardly a school time has passed in which I have not been compelled to undertake the very painful task of calling you to account for neglect of work or violation of rules. I feel that I have carried forbearance in your case beyond the limit which I ought to have observed in strict duty to the school.

This was surely explicit enough; but Mr. Browning, in a published letter of his own, gives some further particulars. He says that Dr. Hornby told him he neglected his work, and added:—"Why don't you read Madvig's Latin Grammar? You lecture to ladies; you examine here and there; you give musical parties on Saturday evenings—why don't you stick to your work?" This also conveys a pretty distinct idea, if not to Mr. Browning's or Mr. Knatchbull-Hugessen's mind, at least to other people's minds, as to what Dr. Hornby regarded as the weak points in Mr. Browning's way of discharging his duties. It will be seen, therefore, that though Dr. Hornby was, by statutory enactment, entitled to act on his discretion and without giving any reasons, he did explain to Mr. Browning the grounds of his dissatisfaction with him. Mr. Browning appealed to the Governing Body; but it had, of course, no power to hear any appeal as relating personally to an Assistant-Master. It had, however, a right to consider whether in such a case the Head-Master had done anything which showed him to be unfit for his post; and as it apparently did not find any reason for forming this opinion, it declined to interfere.

The matter has since been taken up by a number of Assistant-Masters in various public schools, who assert in a petition to the House of Commons that the absolute authority of the Head-Masters under the present system "operates to the detriment of the public schools, by disturbing the cordial relations which have generally existed between Head-Masters and their Assistants, and by discouraging men of high attainments and independent character from accepting and permanently retaining appointments from which they may at any moment be removed by the simple fiat of their immediate superior." In this statement, however, it appears to be left out of account that the Head-Master is himself liable to dismissal by the Governing Body on precisely the same terms. The petition goes on to "disclaim any desire to interfere with the authority of Head-Masters which is necessary for the maintenance of discipline in their several schools"; but it is obvious that if Assistant-Masters were to be at liberty to set themselves up against their chief, and to cultivate the support of sections of the Governing Body, there would be an end to all discipline. The situation is one in which it is impossible to avoid some danger of injustice on one side or the other. If the Head-Master is absolute, he may be hard upon an Assistant; if the Head-Master is to be put on his trial whenever he rebukes or dismisses a subordinate, his life would become intolerable, and his influence as head of the school would be wholly paralysed. And the latter is undoubtedly the greater of two evils. In fact, the plea of the Assistant-Masters might be used the other way, and it might be urged that, if they obtained that power over the Head-Master which they ask for, it would discourage men of high attainments and independent character from placing themselves in so humiliating and helpless a position. We are glad to see, however, that there are many Assistant-Masters who repudiate the demands put forth in their name.

Any one who is acquainted with the working of a public school can see at once the danger which would arise from allowing Assistant-Masters to set themselves up as independent shareholders in a joint-stock enterprise. If this were permitted, the next step would be for them to claim a right to traffic in their proprietary interests, and to sell their shares to the highest bidder. We gather from what has appeared on this subject that Mr. Browning has peculiar ideas as to the proper method of educating boys at a public school. The traditions of Eton—and it may be presumed that they are agreeable to the majority of parents who voluntarily send their boys there—have hitherto been on the side of manliness and common sense. An Eton boy is supposed to be especially equipped against cant, humbug, and insincerity. He may not be very deep or brilliant, but it is supposed that at least he will acquire that sort of tact and cool-headedness which saves a man from making a fool of himself. The great aim is to give a lad a grounding which is solid as far as it goes, and to teach him self-possession, self-reliance, and an abhorrence of pretence and affectation. We do not mean to say that all Eton boys come up to this ideal; but no one who has had an opportunity of knowing them as a class can doubt that, whatever the depth or range of their classical attainments, they do, as a rule, come out of Eton with a peculiar stamp of honest pluck and straightforwardness which is very important to every man, and above all to every gentleman, in his future career. If a boy is a dunce at Eton, he may possibly remain a dunce all his life; but, on the other hand, even though he leaves Eton very imperfectly instructed, he will probably possess certain qualities and habits which will be of immense service to him at the University and in after life. Mr. Browning, however, appears to have thought that there was a great deal of what, in the cant of a certain set, is called "immorality" and "unintellectualism" at Eton, and that it was necessary to give the system a more sentimental and flowery character. If you talk with a Browningite, pupil or parent, you are overpowered with a sense of the immeasurable moral superiority of boys who have passed through Mr. Browning's hands over all other boys educated at Eton. You are given to understand, in fact, that it is really of no use sending a boy to Eton unless it has been arranged that he should get into one particular house there. Within the blessed confines of that establishment "the demon of athleticism"—another "note" of the sect—has been exorcised, while outside is a swamp of materialism and vice. As you pursue the conversation you will probably learn that the reformer of Eton is not one of the ordinary drudging Masters who make boys "grind," and take a pedantic view of grammatical accuracy. He lifts them into a serener ether, a diviner air; he cultivates their talent for universal discussion, and generally inspires them with a fine sentimental enthusiasm. We suspect that old-fashioned people at Eton do not relish what they call this flightiness and taste for flashy accomplishments. They think that what is wanted is to give a boy "bottom," and that the new system tends too much to the development of gossamer wings, which, though pretty to look at, are not good for much. Mr. Knatchbull-Hugessen is very outspoken on this point. He lately predicted that, if Mr. Browning left the school, "everything which tends to exalt physical, and depreciate mental, culture—nay more, everything coarse, impure, and immoral—in Eton would be directly encouraged." This is, of course, an attack on the general administration of Eton, and when it is thus openly proclaimed there is an obvious danger of its exercising an influence on the minds of the boys. There is a story of one father of a boy at Eton who gravely declared that he did not know or recognize the Head-Master, and that he regarded Mr. Browning as the only person he had dealings with. Mr. Browning, however, was not a proprietor of Eton, but only a servant of the Governing Body. It is clear that it is only by the loyal co-operation of the various members of the staff of a public school that the work of such a place can possibly be carried on; and, on the whole, we think Mr. Oscar Browning's friends had better let this subject alone. There is perhaps no class of men for whom strict discipline and subordination are so much required as for young men who leave the Universities to assume comparatively dignified and lucrative positions in the public schools; and it is obviously dangerous that schoolboys, of all people in the world, should be exposed to the influence of examples of successful insubordination.

THE BRISTOL ICONOCLASTS.

MR. CARLYLE once described the population of the British Isles as consisting of thirty millions of people, mostly fools. And assuredly the recent proceedings with reference to the removal of certain statues at the west porch of the Cathedral of Bristol show that there is a considerable number of the inhabitants of that ancient city who can claim no exemption from the application of the obnoxious epithet, which might have been thought some days ago to be rather sweeping in its condemnation.

A disturbance originating with a few ignorant people, amongst whom, we are sorry to say, was found a sprinkling of what are usually designated as respectable householders, has risen from the rank of a mere local quarrel to the importance of a national grievance. We doubt much whether, even in Bristol, the matter would have been regarded in any other light than as the action of a few fanatics, if it had not been for the recent unwise utterances of Lord Penzance on the general subject of images, processions, and the like. When a judge in a civil court takes upon himself the functions of a theologian, and decides that such and such images, pictures, &c. shall not be used in churches, because they describe events which he cannot himself find in the pages of Holy Writ, there is perhaps some excuse to be urged for less learned persons taking upon themselves to decide that images of ecclesiastics who lived after the canon of Scripture was completed shall not stand at the entrance to their cathedral. At least they might excuse their alarm, whether real or imaginary, that the statues of the four great doctors of the Western Church were likely to be adored by the very religious or superstitious people of the nineteenth century, by pleading the dictum of a judge who avowed his fears of the same, and who certainly could defend himself by the authority of the unknown Calvinist of the reign of Elizabeth who penned the homily on the Peril of Idolatry.

As in the case of many other senseless disturbances, it would not be easy to say when or where this folly precisely originated; neither does it matter much. As regards the persons concerned in it, few probably have ever heard their names beyond their immediate neighbourhood. Iconoclasts have in all ages been more famed for zeal than learning, for promptness of action than for maturity of deliberation. No one, therefore, need be surprised to learn that among the more prominent persons in the fray is one who in a published tract showed himself entirely ignorant of the distinction between St. Augustine of Hippo and his less celebrated namesake of Canterbury, or that another should at a public meeting have seriously argued against Ritualism on the ground that the Sermon on the Mount contained no allusion to music, vocal or instrumental. Indeed, when it is remembered that the churches of the city are almost

without exception held by the Simeon Trustees for the express purpose of promoting Puritanism, one need not be surprised to find that the party has a certain amount of following among the more ignorant of the laity. It was a Bristol incumbent who some years ago brought a charge of "Puseyism" against the quiet-going Society for Promoting Christian Knowledge for introducing Romish saints into the Calendar of the Prayer-Book, and who, when challenged to prove his assertion, triumphantly pointed to the 24th of August, and added, "I should like to know who ever heard of St. Barthol." And, now that we have invented all the excuse that we can find for the iconoclastic fury which has led to the demolition of the figures of the west porch of Bristol Cathedral, we must say a few words of the statues themselves and the Chapter who have made themselves so conspicuously obedient to an uneducated clamour.

The restoration of Bristol Cathedral has often been referred to in our pages, but we have no wish now to revive the controversies of a former period. Mr. Wait, a leading citizen of Bristol, and at the present moment member for Gloucester, has contributed munificently to the undertaking, the whole of the new porch, with the statues of the four doctors of the Western Church, being his especial gift. Mr. Street has acted as architect, and the figures were carved by Mr. Redfern. Certainly it would be difficult to fix upon the names of persons more entirely free from suspicion of any Romeward tendencies than those of these gentlemen. The figures of St. Jerome, St. Augustine, St. Gregory, and St. Ambrose are treated of course in the usual conventional way. So unimportant were the details that the architect left the particular kind of ornamentation to the sculptor; and we have not heard it alleged that this gentleman is in immediate communication with the Papal authorities. Mr. Street himself observes that, if the objections applied to the emblems, and not to the men represented, it would have been easy to modify them; but probably the objectors did not stop to inquire whether they disliked the saints or the mode in which they were represented, though perhaps the last ounce that broke the camel's back was the triple crown on the head of Gregory the Great. Perhaps there may have been some who would have condoned the rest, if it had not been for the addition of the Papal tiara and the supposed representation of a cardinal's hat upon the head of St. Jerome. It was like the appearance of the hunting-cap which Mrs. Briggs, after having conceded the point of the breeches and the boots, neither could nor would endure, and which was instantly consigned to the flames. It is not, however, probable that many of these gentlemen were capable of distinguishing nicely between the men and the emblems. Indeed one of them is represented as describing the Madonna "with the emblem" in her arms. The whole thing has to be treated, therefore, as an onslaught against images and statues in general. And it is curious to see how far iconoclastic zeal will still in the nineteenth century carry its votaries beyond their own principles. Probably, at the beginning of this century, the respectable Evangelical party who have so sadly degenerated into modern Puritanism would have hailed with delight the statues of these four doctors as representing men whom they rejoiced to honour for the protest they imagined them to countenance against modern Romish innovations. We can remember the time, not so very many years ago, when that party was active in disseminating religious tracts in some of which Gregory the Great figured as a person greatly to be honoured. Not only was there that pretty story of the Saint noticing the Saxon youths, and the conception of the mission of St. Augustine to Britain, but there was the stock argument against the Papal supremacy which has figured in so many books of controversy, that Gregory had declined the title of universal bishop. In fact, Gregory the Great was quite a popular character, and, though now the head and chief of the offence, was far more approved of, because far better known, than the other three. Not but that the three would have been very popular too, if people had but known a little more about them. St. Ambrose also is connected with a story, which has gained a good deal of currency, but whose truth we will not venture either to assert or to gainsay, to the effect that he was, jointly with St. Augustine, the author of the "Te Deum Laudamus" of the Prayer-book. Assuredly, too, St. Jerome is entitled to the lasting gratitude of all Protestants who value the dissemination of the Bible in the vulgar tongue for having been the indefatigable student who first translated the whole of it into a language more widely understood than those in which the Old and New Testaments were written, and which was in fact the vernacular of those on whose behalf he laboured. Lastly, St. Augustine himself is one whom modern Calvinism has always delighted to honour. Without attempting here to decide whether justly or not, the fact is undeniable that Calvin believed himself to be precisely of the mind of St. Augustine; and the Bishop of Hippo is the single father to whom Calvinists for three centuries have been able to appeal as affording some show, at least, of sanction for their doctrines of election and reprobation, and the indefeasibility of grace. As to the communism which did not stop short of mutilating the representation of that Gospel event, the visit of the Magi to Bethlehem—including the destruction of the figure of our Saviour in his Mother's arms, which must surely fall within the category of "Scripture characters" which the Dean sanctions—we had rather not trust ourselves to speak. The frame of mind which it betokens can only be adequately treated in language which had better be thought than printed.

It is no part of our province to enter on topics of theological controversy, but we cannot help thinking that Bristol iconoclasm has somewhat overshot its mark, and will find but little sympathy anywhere in the kingdom. Lovers of art have been terribly scandalized by the spectacle of the four statues being taken down and carted away. But, after all, it will be asked how came it to pass that a set of people who passed noisy and absurd resolutions, prefaced by still more absurd speeches, could succeed in gaining their end? The answer we have to give was forecast by Byron:—

Lo Alaric and Elgin did the rest.

In whatever hands it lay to remove the statues, it is certain that the persons who originated the movement would have been utterly powerless to effect anything if there had been a Dean and Chapter—we will not say equal to the crisis, for there was nothing worth calling a crisis—but possessed of the ordinary amount of common sense; and the promoters of the objection would scarcely have ventured to hound on their adherents to an act of desecration which it seems the Dean and Chapter have undertaken to perform for themselves. What the ringleaders of so-called Protestant opinion in Bristol would hardly have ventured to do has been quietly effected by the Chapter of the Cathedral. We say quietly, for orders were instantly given to erect a scaffolding for the purpose of taking down the statues. The instructions were given in the night, and the next day, when the clerk of the works came to inspect the progress of the restoration, the four statues were gone, and some of the rest of the work, which could not be removed, had been defaced. To their honour be it said, two of the four Canons have entered an indignant, though ineffectual, protest in the minutes of their proceedings, and the names of the three who have sanctioned this monstrous act of vandalism deserve to be handed down to posterity in company with that of the incendiary who set fire to the Temple of Artemis at Ephesus on the night when Alexander was born. The name of Herostratus would never have been immortalized in any manner but for this deed of wantonness. Let the names of the three perpetrators of this achievement should be forgotten, we will give them such publicity as it is in our power to bestow. The name of Canon Reeve is now for the first time famous, while that of his brother dignitary, Mr. Girdlestone, long known in connexion with social questions, seems destined to attain a similar notoriety in our ecclesiastical annals. As to Dean Elliott, all we have to say is that he once was, and is now no longer, Prolocutor of the Convocation of Canterbury. Of course the matter cannot rest where it is. At any time within our memory it would have been incumbent on those who value the character of the Church of England as an institution in harmony alike with Christianity, civilization, and history, and who are, however indirectly, interested in this particular work, to leave no remedy untried which could cancel an outrage which, if unredressed, would seem to commit that Church to proceedings only to be paralleled by the doings of Herostratus or Will Dowsing. But it is still more obligatory now not to sit still after the energy and good sense of the Dean of the adjacent diocese of Exeter—who, although himself a Low Churchman, is not as Dean Elliott—has succeeded in freeing the Church of England from the taint of iconoclastic Puritanism. As to the insult offered to the donor of the statues by the Dean and Canons whose corporate trust he believed himself to be benefiting, we do not say *noblesse oblige*, for we fear that we might be unintelligible.

THE UNIVERSITY BOAT-RACE.

ONE feels something like compassion for those who are engaged in the pursuit of betting under difficulties. There is only one University boat-race in the year, and there are only two competitors, whose merits become unhappily too well known during the practice before the race. On the other hand, many persons like to back the University with which they are connected, and there is always the "chapter of accidents," although in recent years it has afforded little encouragement to speculation. A party of fifty representatives of the press, however pleasant in other respects, is perhaps open to the objection of being rather too select. Where everybody has a moderate share of observation and intelligence it unfortunately too often happens that everybody wants to be on the same side, and it is really heartrending to hear a gentleman exclaiming "I should like to lay three to one," when there is not within a hundred yards of him another gentleman young and enthusiastic enough to take the offer. The old-fashioned principle that members of the same calling should not eat each other has been exploded; but as everybody declines to be eaten on any pretext whatever, it comes to the same thing. The carrying capacity of a river steamboat is so limited that it is not possible to provide these wild animals of the press with provender, or, in other words, to supply every hungry lion with a tender and juicy ass. There is a story of a veteran jockey who always referred to a particular day as that on which he lost 500*l.*; by which he meant that, not having sufficient cash about him, he was unable to cover a bet, and thereby missed an opportunity of winning that amount.

There were two facts which inclined the public to favour Oxford before the crews appeared upon the Thames. Oxford won last year, and there were six of last year's men in the boat. For these or other reasons, some of the newspapers propagated the opinion that Oxford were the better crew, and this opinion was adopted to a considerable extent, as is shown by the quotation in *Bell's Life* of the 18th March of 7 to 4 on Oxford as the "latest London betting" on the boat-race. But after Monday, 20th March, when the crews were first seen at Putney, an impression prevailed that there was

not much to choose between them, and, before the week was out, Cambridge seemed likely to become the favourite. This promise was fulfilled within a few days, and the same newspaper on the 1st April quoted 5 to 4 on Cambridge as the "latest London betting." If these quotations represent any considerable amount of real transactions, there may have been a good deal of money made out of this race; but in this, as in other cases, it is the early bird that catches the worm, more particularly as the birds bear always a large proportion to the worms. The persons who laid 7 to 4 on Oxford before the crews came to Putney must have had exuberant confidence in somebody's power of observation and comparison, unless they trusted altogether, as perhaps they did, to the old oarsmen and to last year's victory. There is no impediment, except that opposed by storms and floods, to "watching trials" on the Isis or the Cam, or both; and that which is still opprobriously called "touting" on the Turf has become, in connexion with the river, an important branch of literary art. The vivisection of some unfortunate "No. 3" is performed with that indifference to the patient's feelings which distinguishes the devotee of science; and although many of the older members of the Universities think that too much fuss is now made about these youngsters, it must be allowed that their limbs and the use they make of them are commented upon with a frankness that is not always flattering. So much is now thought, said, and written about this race that it almost seems as if some reaction from the interest excited by it must be imminent. Except the few scores of persons who occupy the attendant steamers, nobody now sees much of the race; but they see as much as they see of the Derby, and they understand more: and if weather favours, the consumption of chicken and champagne proceeds equally at both festivals. Probably the people collected along the banks and on the river are among the last in England to learn the result of the race of which they have seen some part. They must depend generally on the first steamboat which comes down the river after the finish; but on this occasion, unless they were very near the starting-place, they could not be in much doubt as to who would be the winners. Perhaps this suspense, so far as it exists, is pleasant, and therefore we hesitate to suggest that it would be easy to contrive a system of signalling along the course. This holiday differs from others in depending on a single event for its excitement, and therefore it may be good economy to make that excitement last as long as possible. When the race is over and the result is known, there is nothing left but to go home, and the only remaining source of interest lies in the chance that yourself or somebody else in a boat may be run into by a steamer and upset. Considering that all sorts of persons in all sorts of boats go upon the river on that day, and that some of them take more than is good for them to drink, the general immunity from accidents is wonderful. There was at least one case last Saturday of a boat being struck by the paddle of a steamer and upset. The three youths who were in it were rescued without difficulty, and they owed their ducking to their own carelessness and flurry.

What are called Inter-University contests have become almost as great a nuisance as International Exhibitions. There is a billiard match and a chess match, and we know not what other matches, and the newspapers talk of dark and light blue as if all these "events" were developments of the boat-race. The only novelty that remains possible is an Inter-University spelling-bee, and perhaps it might turn out that in such a contest the "form" shown by the "teams" would be as moderate as we are told it sometimes is at chess and billiards. If it is in vain to complain of what is established, we may at least express the hope that the older members of the Universities will strenuously oppose any further extension of these unpleasantly public contests. The time consumed by them is enormous, and parents no doubt feel a burden of which it would be difficult to complain. The crews arrived at Putney on Monday, the 20th March, and the race was rowed on Saturday, the 8th April, so that three weeks have been entirely devoted to this one contest, to say nothing of the time occupied in preliminary practice on home waters. There is mischief not only in this large interference with the pursuits which are still supposed to be more properly part of education, but also in the publicity of all the proceedings of the crews at Putney, and in the mixing up of these young men with what are called the "market operations" of the betting world. We observe that the *Times* makes a sort of apology for recording the daily practice of the crews at Putney, and although we do not expect any newspaper to close its columns to this sort of writing, barren and unprofitable as for the most part it is, yet we think that some good might be done by a general agreement among contributors to the press to put aside the betting element in these contests. The persons who choose to bet 3 to 1 on Oxford or Cambridge can of course do so, but there is no necessity that these transactions should be publicly recorded. *Maxima debetur pueris reverentia.* This principle belongs to an age very far from squeamish, and it at least means this, that not everything that men do need be talked about where boys can hear. Law, and we think public opinion also, has lately set itself against betting, even on horse-races, being made an open business, and it must be remembered that the reasons, whatever may be their value, in favour of permitting betting on horse-races, have no application to the boat-race. The prohibition of betting-offices was enacted by a Parliament which certainly had no intention to prohibit betting; and on the same principle there might be a general understanding not to give more importance than can be helped to this branch of the proceedings at Putney. The boat-race is in this respect more objectionable than the cricket-matches which succeed it, because there is not the same protracted preparation for these matches, and as spring changes into summer the attention of the sporting world becomes conveniently divided. But if there should be any disposition to give additional notoriety to "market operations" on cricket or other matches in which the Universities take part, we would hope that the considerations to which we have adverted may restrain it. To put the matter plainly, the boat-race has been quite sufficiently vulgarized, and the line should be drawn now. We regret to observe that the practice of reporting speeches at the dinner which follows the boat-race, after having almost died away, has been to some extent revived. This matter, at any rate, is within the control of those who arrange the dinner, and they would do well to enforce the rule of non-publicity. It is very difficult for anybody to say anything beyond well-worn platitudes on such occasions, and we clearly think that the Universities lose more than the world gains by reporting the speeches of the captains and the coaches.

The representatives of the press have done their best to observe and record for public use what the public with its own eyes could not see. But there could not well have been a more uneventful race than that of last Saturday. Some critics have dealt more leniently than others with faults of steering which, as they could not have affected the issue of the race, need not be further dwelt upon. Since the river has been kept clear, or nearly clear, of boats and barges, the difficulties of steering have been greatly diminished; or rather the unknown and incalculable class of difficulties have been diminished; and the three weeks spent at Putney ought to impart a considerable familiarity with those difficulties which are permanent, or at least depend on permanent causes, such as winds, tides, and currents. The issue of a close race is no longer at the mercy of an obstinate bargee or clumsy amateur oarsman; but still there are many gifts of nature which go to make up a good coxswain besides that of weighing under 7½ stone. It was generally thought after the first half-mile that Cambridge was going rather faster, and considerably better, than Oxford, and after the first mile that which had been opinion more or less confident became manifest fact. We of course remember races that have been won by the crew which did not lead through Hammersmith Bridge going up stream, and, what is much more remarkable, we could mention one race which was won by the crew which did not lead at the Crabtree coming down stream. But in those years there happened to be two nearly equal crews, which was not the case this year. We could call to mind several years in which the Cambridge boat was as distinctly marked beforehand to lose as this year it was to win. One of the best features of this contest is its evenness. Oxford has still one race "to the good," which she owes to the unbroken successes of those nine years when she seemed to have a monopoly of correct and powerful style. Cambridge men who remember the crews of former years must be greatly struck with the circumstance that there were five oars from the same "small" College in the winning boat. Last year the usual elements of Trinity and St. John's prevailed; but even then the only two "small" College men came from Jesus, which has now supplied the majority of the successful crew. It is a good sign for the interest of rowing generally at Cambridge when it has some University oars not belonging to the two large Colleges. It was said, and probably with truth, that practice was more interfered with at Oxford than at Cambridge this year by floods. The fact is that at Cambridge generally there is a very small river to a great many boats, and it is easier to do with too much water than too little. But, if practice at Oxford was impeded, it is not easy to understand why the Oxford crew were made strong favourites in the betting before the boats came to Putney. It would be an error, however, to suppose that backers are always rational, and we certainly do not pity the losses which folly incurs. Unfortunately, what one loses another wins, and we fear that the appetite for speculation on the boat-race will be sharpened by this year's experience.

LIEUTENANT CAMERON'S EXPEDITION.

THE account given by Lieutenant Cameron of his expedition is highly interesting, and the Geographical Society does good service to the country by receiving and approving his report of African exploration. His journey extended over 3,000 miles, and he was continually, or with very short intervals, on the tramp for two years and eight months, and was exposed to all vicissitudes of climate and all kinds of hardship and danger. As regards vicissitudes of climate, perhaps Lieutenant Cameron had not seen the last or worst of them when he left Africa, and we doubt whether anything could be much more dangerous than the change of weather in London between Saturday and Wednesday last. Sir Henry Rawlinson declares that the observations made by Lieutenant Cameron are of extraordinary value, and he expects that the result of them will be that a definite line will be laid down from sea to sea which will serve as a basis for all further exploration of equatorial Africa. Besides circumnavigating Lake Tanganyika and discovering its outlet into the river Lualaba, he has "as nearly as possible" identified this river Lualaba with the Congo. He collected fresh information rendering it matter, not perhaps of positive certainty, but of the highest probability, that the two rivers are one and the same. It seems that he has also discovered a new political power in the chief Kasongo, the most

powerful potentate in equatorial Africa, and he has thus tracked the slave-trade to its fountain-head; for it is with this chief that negotiations for its suppression must be carried on. The Society have unanimously decided that Lieutenant Cameron is entitled to the first place among the geographers of the time, and they have accordingly presented him with the principal gold medal for the year. Among many valuable services performed by naval officers on shore, Lieutenant Cameron's exploration of Central Africa claims a high place, and, considering that he has travelled 3,000 miles on land, he would be well entitled, among other honorary distinctions, to the Colonelcy of the Horse Marines.

We take up Lieutenant Cameron's narrative at his arrival on the shore of Lake Tanganyika. Such, he says, was the immensity of the view, that he fancied the grey lake to be sky, and the mountains of Ugoma in the distance to be clouds. After cruising on the lake and examining many of its tributary rivers, he landed at Kasengé on the western bank of the lake, and thence commenced a march which terminated on the western coast at Benguela. Thus, he started from Zanzibar on the east coast, and crossed the continent to the west coast by a track which lay generally between 6° and 14° of South latitude. It is difficult to trace his route more exactly without reference to the maps which illustrated his address. But we know that he traversed the watershed between the river Zambesi which reaches the eastern coast at about 18° S. and the river Congo, which reaches the western coast at about 5° S. After leaving Kasengé the first country he reached was Uguhha. The clothing of the people of this country appeared to him remarkably scanty, but, compared with what he saw further on, was very ample. It enabled him to observe elaborate tattooing on the women's stomachs. From Uguhha he crossed the mountains of Bambarra, and on arriving at their foot came into a completely new style of country. The huts were all built in long low streets, and rows of oil-palms were planted down the centre. He was detained three weeks at Nyungwe, and thence went by invitation to the camp of a chief named Tipo-Tipo, about eight marches south of Nyungwe. At Tipo-Tipo's camp he heard of a lake which he believed to be the Lake Chebungo, or Lincoln, of Livingstone. Leaving Tipo-Tipo's camp, he went nearly south, going close along the right bank of the Lomami. At many places the people were very friendly, but at others it had been reported that no caravans came near them for any other purpose than getting slaves, and the villages were consequently deserted, and the party was often in difficulties about food. There were also manifestations of hostility, and Lieutenant Cameron, although proceeding with the utmost moderation and forbearance, was obliged, like other explorers of this country, to kill and wound a few savages for the advancement of civilization. As the party were passing through a strip of jungle some people began shooting at them, and an arrow glanced off Lieutenant Cameron's leather coat. He ran the shooter down and gave him a thrashing, but would not allow any of his people to fire in return. He walked straight up to some natives who were in front of him and tried to make a palaver, in which after a time he was successful, and he went on with these natives as the best of friends. In the afternoon women and children came about the camp selling food, and everybody seemed most friendly, and during the night Lieutenant Cameron's pet goat disappeared. Next morning he went into the village to inquire for the goat, a large body of natives collected and began shouting, and at last Lieutenant Cameron allowed two or three shots to be fired, and one native was wounded in the leg. Then there was a parley, Lieutenant Cameron evacuated that village, was harassed throughout his march, and compelled at the end of it to storm another village to obtain shelter for the night. Only four of his men followed him, two or three remained with the stores, and the rest ran away; but as the natives ran the other way, victory remained with the invaders. He burned all the village except four huts, which he fortified and occupied five days. The guide told him he must shoot some of the natives before he could get out of his prison, and at last he was forced to use his gun. "The report of my heavy rifle they soon learned to respect." Lieutenant Cameron has not shot so many men as Mr. Stanley, nor has he written so eloquently about his shootings; but all these explorations necessarily involve bloodshed. A few natives must be killed for the benefit of the whole race. At the end of five days Lieutenant Cameron made peace, his enemies having been frightened by some of their number being killed and wounded. The result of these interruptions was that he had to content himself with a distant view of the lake.

Shortly afterwards he met a chief named Kwarumba marching with a string of slaves. Fifty or sixty wretched women carried heavy loads of plunder, and some of them had babies in their arms. These women represented as many as forty or fifty destroyed villages, of which the male inhabitants had been killed or driven into the jungle. The Portuguese half-castes and the black traders are brutal in the treatment of their slaves; the Arabs, as a rule, treat them kindly. All the country now traversed was very beautiful with hills and woods, and marvellously fertile, but it is defaced by the cruelty of man. The slaves taken from it are carried, not to the coast, but to Sekilitu's country, where, population being scanty, they are exchanged for ivory, and this is sent to the coast, whence perhaps it comes to England, and, bought with the tears of women, adorns some lady's drawing-room. Here, says Lieutenant Cameron, his party began to rise out of the broad valley of the Lualaba, and, as they came to the height of about 2,600 feet above the sea, the oil-palm ceased to flourish. He crossed the route by which Dr. Livingstone passed from Sekilitu's country to Loanda, and found that the people remembered him from his having had a riding ox. At the town of Bike, which is laid down on comparatively old maps, Lieutenant Cameron reached the verge of that civilization which has been diffused from Portuguese settlements. The chief called himself King Antonio Kaguombé, and he was fully aware of the importance of dress in the ceremonies of a Court. The Royal Guards at the palace gates wore red waistcoats with white backs. Whether they wore anything else Lieutenant Cameron does not inform us. Some had bows, others had spears, and a few had old flint-lock muskets. At the Court only a stool was provided for Lieutenant Cameron to sit upon, so he sent for his own chair, apparently with the laudable purpose of maintaining the dignity of the country which for the time he represented. The royal chair was covered with leather and studded with brass nails. The King wore a suit of black clothes, an old wideawake hat, and a Scotch plaid, but had no boots, and was very drunk. He informed his visitors that he was quite a superior kind of chief, and ought to have a corresponding present; but as Lieutenant Cameron had been long upon the road, he should not expect much then, but must be remembered if his visitor came that way again. He also mentioned that he had finer clothes than those in which he appeared, and that his likeness had been sent to Lisbon. He brought out a bottle of aguardiente, and gave the company a drink round, taking care to have the largest sip himself. It is not surprising to find that a native chief thus familiar with the usages of polite society had European neighbours within a day's march.

These details have only the usual interest of travel in a new country; and as regards the important discoveries for which Lieutenant Cameron was thanked by the Geographical Society, we are obliged to take them for the most part on trust. He believes the main point of his discovery to be the connexion of Lake Tanganyika with the Congo system of rivers. Yet this connexion is merely proved by arguments, and has not been seen. "The Lukuga runs out of the Tanganyika. . . . The levels I have taken prove most conclusively that it can have nothing whatever to do with the Nile." If this is not yet clear, it soon will be, as other explorers are certain to follow in Lieutenant Cameron's track, and perhaps, as the Admiralty have many young and active officers unemployed, they might like to fit out a cruising expedition for Central Africa. It would be easy to give a proper nautical character to the party by equipping it with boats neatly packed for use on Lake Tanganyika and the rivers, and any blunders that might occur would be of a new kind, and that at any rate would be refreshing. That "opening up" of Africa to legitimate commerce which Lieutenant Cameron desires would put an end to the necessity which he, like other travellers, experienced of paying tribute to native chiefs. Perhaps we should rather say that the same thing would continue under slightly different form and name, for even in Europe travellers do in effect pay tribute, whether in the shape of hotel bills or otherwise, to the occupants of interesting localities. Already the African chiefs know a better trick than direct force to exact toll from passengers. They and their people simply disappear, removing or destroying all provisions, and they trust that the strangers must either come to terms with them or starve, in which case there will be a pretty spoil of arms and stores. It appears that the Portuguese, who first introduced the slave-trade into Africa, are now its principal supporters. "The great chief Kasongo" is ready to give any man leave for a present of two or three guns to go and destroy as many villages and catch for slaves as many people as he can, and the necessary bribe is certain to be forthcoming from those who are directly or indirectly interested in the slave-trade. The pictures which Lieutenant Cameron gives of the country through which he passed, and the game he found, will be attractive to sportsmen. One morning he saw a couple of lions six or seven hundred yards distant, trotting quietly home after a night out. If there should be an influx of sportsmen into Central Africa, that would be a civilizing agency, and besides there are missionaries and enterprising traders. If King Antonio Kaguombé wore a Scotch plaid, other produce of Scotland might perhaps find a market in his territory. From various causes it may be expected that our knowledge of the upper waters of the Congo will soon cease to be conjectural.

JOHN BERNARD DALGAIRNS.

THE obituary of the *Times* a few days ago included the name of "the Rev. John Bernard Dalgairns, priest of the London Oratory, aged 57." The announcement will of course have an interest for Roman Catholic readers, while to many others also who remember the Oxford of thirty or forty years ago the name of Dalgairns will suggest cherished recollections and associations of the past. Mr. Dalgairns took his degree in 1839, when his name appears in the same class-list with Professor Jowett, Bishop Fraser of Manchester, Dr. Kay, and Dr. Anderdon, a nephew of Cardinal Manning's, who has since become a Jesuit; and he was one of the first batch of Tractarian converts who followed Dr. Newman in 1845 across the Rubicon. Oxford has passed since then through at least three stages of religious transition. When the advance of the Tractarian revival was arrested for the time by the secession of its principal leaders, there set in a period of theological stagnation, which may be said to have lasted till about 1851. The backwater of this great movement, which Dr. Whately had characteristically christened "Newmania," was still felt, but its first force was spent, and in the turn of the tide "the Oxford of

the *Lyra Apostolica*," as it has been observed with considerable truth, "was slowly giving way to the Oxford whose spirit is best reflected by the poems of Clough and Matthew Arnold." Some exception might perhaps be taken to the coupling of two such incongruous names, though both represent a spirit the reverse of Tractarian; but the statement of fact is substantially accurate. With the second half of the century there began at Oxford what may be considered as a reaction against the movement of 1833, which culminated in 1860 with the publication of *Essays and Reviews*, emanating from seven writers of whom five either had been or still were residents and office-bearers in the University. One conspicuous effect of the change, however little intended by those who were instrumental in introducing it, was a sensible diminution in the supply of Oxford graduates, and especially of classmen, for the ministry of the Church. The party for the time in the ascendant, though far from deficient in men of high ability, can hardly be said to have had a leader in the sense in which Dr. Newman had been the leader of that which it had superseded. Mr. Jowett was for the time its hero, on account of the long quarrel about the endowment of the Greek professorship; but neither he nor Dr. Stanley, who then held a chair and canonry at Oxford, and whose social capabilities are unquestioned, was exactly fitted to wear the mantle which the author of Tract XC. had dropped. On the Broad Church reaction supervened a revival, we will not say of Tractarianism—for the Tracts had become things of the past—nor will we call it by the foolish *sobriquet* of Ritualism, which is at all events singularly inappropriate in describing its academical phase. A High Church revival however there was, by whatever name it may be best designated, the force of which is by no means spent. Mr. Pattison, in a recent article in *Mind*, has contrasted it, with some bitterness, with the original movement of 1833, as substituting for intellect and learning the domination of an "ecclesiastical ring." So far, of course, he is right, that there is no leader now with the transcendent gifts of Dr. Newman; but into that controversy we need not enter further here. Our object has been merely to sketch the successive waves of religious thought which have passed over the life of Oxford since Mr. Dalgairns was a member of Exeter College, and one of the most promising among Dr. Newman's younger disciples.

When the crash came in 1841, and Dr. Newman bowed before the storm of academical and ecclesiastical censure, he did not, as is well known, resolve at once on his final step, but retired for awhile to Littlemore, with a band of chosen friends and followers, several of whom did, while some did not, eventually accompany him in his secession. Conspicuous among these "monks," as they were sometimes rather absurdly called, were Mr. Dalgairns and Mr. Anthony Froude, both of whom took part in the Littlemore series of *Lives of the English Saints*, to which Dean Milman refers in his *Latin Christianity* as admirable for their "research and exquisite charm of style," though he complains of their unhistorical character. It is certainly not very easy to recognize the future author of the *English History* in the biographer of St. Neot, though Dean Milman's charge would be applied by many critics to both works alike. By general consent, however, one of the most popular of these biographies was that to which Dean Milman more especially refers, the *Life of St. Stephen Harding*, written by Mr. Dalgairns, who had already challenged attention by his article on Dante in the *British Critic*. His style, as was natural under the circumstances, bore evident marks of the influence of Dr. Newman, though he could not be said to equal that great master of pure English; while, on the other hand, he had too much originality to be merely an even unconscious copyist. In 1858 Dr. Newman finally quitted Oxford and the Church of England, and of those who went with him the two best known, and best deserving to be known, at the time and since, were Faber and Dalgairns. Faber passed away in 1863, after a long and painful illness; and the grave has now closed over his intimate friend and associate for many years, who succeeded him in the headship of the London Oratory. In some respects the two men were very unlike each other. Faber was naturally a poet and orator, and his impassioned delivery of "Roll on, thou deep and dark blue Ocean, roll," in the Harrow Speech-room was remembered long afterwards by his schoolfellows; we are not aware that Mr. Dalgairns ever wrote a line of poetry in his life. As a preacher he lacked the persuasive eloquence and musical intonation of voice which would have made Faber a favourite anywhere, and which helped to account for the large gathering of Protestants, as well as of his own congregation, round the pulpit of the London Oratory whenever he was announced to preach; but in power of thought his sermons were fully equal to Faber's, while in philosophical and historical depth he surpassed him.

There is little of interest to record in Mr. Dalgairns's life after his conversion to the Romish Church. He spent some years abroad in studying theology, and was ordained in France. On his return to England he again joined his old master, Dr. Newman, who was then founding the Oratory at Birmingham; and he was subsequently allied with Faber in the establishment of a branch of the same institution in London, of which he remained a member to the last, though for some years past failing health, induced by overwork of the brain, had unfitted him for active work. To the outer world he was chiefly known as an able and acute, though not prolific, author. Besides occasional contributions on philosophical questions to the *Contemporary Review* and other periodicals, he published two works displaying considerable historical as well as theological research, and an interesting Essay on "Tauler and the German Mystics," which originally appeared in the *Dublin Review*. His earliest Roman Catholic work on the *Sacred Heart* has all the charm of style which won Dean Milman's admiration in the *Life of St. Stephen Harding*; but the Introduction on the history of Jansenism, able and interesting as it certainly is, shows rather the skill of a brilliant advocate than the judgment of a critical historian, though it does not deserve the very severe censure pronounced on it by Dr. Neale, whose strong bias in favour of the Jansenists puts him also out of court as an impartial witness. Both writers require the correction of some really independent authority, such as Mr. Jervis's admirable *History of the Church of France*. The subject of Mr. Dalgairns's principal work, on the *Holy Communion*, offers less scope for religious partisanship, and it contains much of interest to students both of theology and ecclesiastical history, whether they happen to agree with all the writer's conclusions or not. His intellectual tastes seem through life to have lain chiefly in a metaphysical direction, and it is to be regretted that he had not fuller leisure and opportunity for utilizing his familiarity with the general course of modern thought in this subject-matter, and especially his knowledge of the great German metaphysicians. Such acquirements are not too common even in the present day, and are essential for the discussion of many questions which from different points of view have a pressing claim on the attention alike of the philosopher and the Christian apologist. Among English Roman Catholics, Mr. Dalgairns, so far as we are aware, stood almost alone in these, his most characteristic aptitudes. We do not forget Mr. Renouf; but his specialities are not exactly of the same kind, and unfortunately the absorbing duties of a School Inspector leave him little leisure for prosecuting them. It is certainly a noteworthy circumstance that, with the exception of Cardinal Wiseman, all the Roman Catholic writers who have attained any celebrity in this country during the last half-century have been converts, and this remark applies as much to theological as to general literature. It suggests one or two reflections which we must be content, in conclusion, rather to indicate than to work out here.

It has been observed that converts always bring to their adopted faith much more than they gain from it. The statement can at best only be received with considerable qualifications. There are converts and converts, as also there are very great differences between one religious system and another. If "the zeal of a renegade" is proverbial, it is often so entirely disproportioned to either his knowledge or discretion as to be a very questionable acquisition to the cause he has undertaken to support. On the other hand, some systems are so thoroughly rotten that no infusion of fresh blood can be of much service to them, while rival communions are not likely to gain much from the accession of any neophytes trained under them. The Eastern Church, for instance, is probably in want of a good deal of internal reform, but it could not expect much help for that purpose from a contingent of Turkish proselytes. In the particular case we are considering the Tractarian converts, among whom Mr. Dalgairns held a prominent place, did unquestionably bring to their adopted Church an accession of moral and intellectual power out of all proportion to the mere increase of numerical strength. Fresh from the best culture Oxford had to bestow, and having many of them taken the fullest advantage of it, their enthusiasm, however vehement and one-sided, was backed by a solid reinforcement of learning and ability which could not fail to tell. We believe we are correct in saying that about thirty years ago the English Roman Catholics had no single public [illegible] standing. As it happened, two publishers of [illegible] were among the earliest converts, and in every [illegible] easier to do [illegible] literature, from the slender novelette "with a [illegible] at Oxford ladies delight to write as well as read, to the [illegible] logical treatise, convert authors supplied the wares for their [illegible] cus[illegible]. We may add that, again with the solitary exception of C[illegible]man, their leading preachers came to be exclusively conve[illegible] Protestants who would never before have dreamed of enter[illegible] Roman Catholic place of worship—unless it were to hear wha[illegible] used to call "the shilling opera"—came in large numbers to [illegible]en to them. There is of course another side to the picture, which is naturally suggested by the news of the removal of another leading author and preacher of the convert body from the scene. The temporary gain to the Anglo-Roman communion has been manifest enough; but now for several years past there have been very few accessions to its ranks of any importance, if recruits are to be weighed as well as counted. It becomes therefore a question of some interest what will be the net result of the change which has passed over it, when the original generation of converts shall have died out. Even while we are writing, the news arrives from Rome of the death of another of the early Tractarian contingent, Mr. Simpson, whose *Life of Campion* was reviewed in our columns some years ago, and whose literary powers were of no mean order, while his sincere devotion to the faith he had embraced was not darkened by the slightest shade of theological bitterness, and his genial kindliness of disposition and social gifts endeared to him all who knew him. Dr. Newman still remains, and he is a host in himself. But is not his voice as of one crying in the wilderness, and might not the charge he once brought against the Church of his birth be repeated with equal truth against the Church of his adoption?—"Those who would toil for thee thou dost gaze upon with fear, as though a portent, or thou dost loathe as an offence; at best thou dost but endure, as if they had no claim but on thy patience, self-possession, and vigilance, to be rid of them as easily as thou mayest.

Thou makest them 'stand all the day idle,' as the very condition of thy bearing with them." Those who have seen a recent article in the *Dublin Review*, which was noticed at the time in our columns, will be able to supply the comment for themselves.

PRIVILEGED COMMUNICATIONS.

A CASE has occurred lately in which a jury accepted with reluctance a judge's ruling as to what the law calls privileged communications, and it may be useful to illustrate this subject by reference to one or two earlier cases in which it was discussed. In a well-known case the mate of a ship wrote to a friend in London an elaborate and in great part fabulous account of his captain's drunkenness on a coasting voyage. The friend, after consulting two persons well qualified to advise him, determined to show this letter to the owner of the ship. He did show it, and the owner dismissed the captain, who thereupon brought an action against the recipient of the letter for publishing a libel. The judge told the jury at the trial that the occasion and circumstances under which the communication of this letter took place were such as to furnish a legal excuse for making the communication; and that the inference of malice which the law *primâ facie* draws from the bare act of publishing any statement false in fact, containing matter to the reproach and prejudice of another, was thereby rebutted; and that the plaintiff, to entitle himself to a verdict, must show malice in fact. The jury were directed to find their verdict for the defendant if they thought the communication was strictly honest on his part, and made solely in the execution of what he believed to be a duty; but for the plaintiff, if they thought the communication was made from any indirect motive whatever, or from any malice against the plaintiff. The question was argued at great length whether this direction was correct, and one of the judges laid down, in reference to privileged communications, these two rules:—

1. If the defendant had had any personal interest in the subject matter to which the letter related, as, if he had been a part owner of the ship, or an underwriter on the ship, or had had any property on board, the communication of the letter would have been privileged.

2. If the danger disclosed by the letter either to the ship or the cargo or the ship's company had been so immediate as that the disclosure to the shipowner was necessary to avert such danger, then, upon the ground of social duty, by which every man is bound to his neighbour, the defendant would not only have been justified in making the disclosure, but would have been bound to make it.

These two rules would be generally accepted, but the difficulty lies in their application. Another judge said, in the same case, that, if the property of the shipowner was at stake on the one hand, the character of the captain was at stake on the other, and this judge thought that the duty of the defendant not to publish concerning the captain defamatory matter which he did not know to be true was quite as strong as the duty to communicate to the shipowner that which he believed to be true. The Court was equally divided in opinion, and the defendant, who had obtained the verdict, kept it; so that in this case the communication was allowed to be privileged.

In another case, which occurred about the same time, the plaintiff, who was a wheelwright, had contracted for the purchase of some timber, which was just about to be delivered at his yard, when the seller of the timber met the defendant, who told him that the plaintiff was in insolvent circumstances. An action was brought for these words as slander of the plaintiff in the way of his trade, and the judge held that there was no privilege, and the jury found a verdict for the plaintiff. In this case also the Court was equally divided; but here the plaintiff, having got the verdict, kept it. The judge who tried the case thought that the communication might have been privileged if made *bonâ fide* in answer to inquiries addressed to the defendant as to the credit and circumstances of the plaintiff; but as the defendant volunteered the information, there was no privilege. This opinion ultimately prevailed.

An older, but perhaps more useful, illustration of the same legal doctrine is afforded by a case of an action of slander for words spoken of the plaintiff as a journeyman carpenter on three different occasions. It appeared that the defendant, who was a tenant of a nobleman, required some work to be done on the premises occupied by him, and the plaintiff, who was generally employed by the nobleman's agent as a carpenter, was sent by him to do the work. He did it, but in a negligent manner; and during the progress of the work got drunk; and some circumstances occurred which induced the defendant to believe that the plaintiff had broken open the cellar-door, and so obtained access to his cider. The defendant a day or two afterwards met the plaintiff in the presence of a person named Taylor, and charged him with having broken open his cellar-door with a chisel, and also with having got drunk. The plaintiff denied the charge. The defendant said he would have it cleared up, and went to look for the agent. He afterwards returned and spoke to Taylor in the absence of the plaintiff; and in answer to a question by Taylor said he was confident that the plaintiff had broken open the door. On the same day the defendant saw the agent and complained to him that the plaintiff had been negligent in his work, had got drunk, and he thought he had broken open the door, and requested him to go with him in order to examine it. At the trial it was objected, on behalf of the defendant, that these were privileged communications. The judge thought that the statement to the agent might be so, but not the charge made in the presence of Taylor; and in respect of that charge and also of what was afterwards said to Taylor, the plaintiff had a verdict. On argument of rule for a new trial, the Court agreed with the judge who tried the case that the communication to the agent was protected, and that the statement made to Taylor in the plaintiff's absence was not; but the Court thought that the statement made to the plaintiff, though in the presence of Taylor, fell within the class of communications ordinarily called privileged; that is, cases where the occasion of the publication affords a defence in the absence of express or actual malice. The considered judgment of the Court of Exchequer in this case was delivered by the late Lord Wensleydale, and it is constantly referred to as a standard authority in this branch of law. The defendant, it will be seen, complained of the plaintiff's conduct in reference to work done by him on the defendant's premises. He complained to the plaintiff's employer, to the plaintiff in the presence of a third person, and to that same person in the plaintiff's absence. Supposing he could not prove the truth of that which he alleged, would he be liable in an action? We will not enter into the distinction between written libel and verbal slander, but will content ourselves with assuming that some, but not all, matters which would be actionable if written are also actionable if spoken. Premising this, we return to the judgment of Mr. Baron Parke, who says that in general an action lies for the malicious publication of statements which are false in fact and injurious to the character of another; and the law considers such publication as malicious, "unless it is fairly made by a person in the discharge of some public or private duty, whether legal or moral, or in the conduct of his own affairs in matters where his interest is concerned." In such cases, of which that of giving the character of a servant is the most common, the occasion prevents the inference of malice which the law draws from unauthorized communications, and affords a qualified defence depending upon the absence of actual malice. It will, we think, be easy to apply Lord Wensleydale's rule in most cases which arise in the ordinary affairs of life, and common sense will generally tell us whether that actual malice exists which takes away the usual privilege. Thus, in a case where the defendant was giving his reasons for not signing a memorial for continuing the plaintiff in the office of a sort of trustee or manager of parish lands, he said that the plaintiff had left some place without paying his debts. This was pertinent to the question in hand, and therefore was privileged. But, said one of the judges, if the defendant had stated that the plaintiff was in the habit of beating his wife, it might have been different. "Such communications," said Baron Parke, "if fairly warranted by any reasonable occasion or exigency, and honestly made, are protected for the common convenience and welfare of society; and the law has not restricted the right to make them within any narrow limits."

In the case which occurred a few days ago there was a conflict of evidence, and the jury appear to have ultimately adopted that view of the facts which would obviate any question of privilege. But such a question was discussed in the course of the case, and Chief Justice Cockburn stated the law applicable to it in terms which did not seem acceptable to the jury. The plaintiff was a solicitor who had been employed by the defendant on the recommendation of a person whom we will call A. B. in the business of taking a lease of a public-house. The action was for slander, and A. B. was called as a witness for the plaintiff, and said he asked the defendant how he got on in the matter of the public-house, and the defendant answered that the attorney recommended to him had made a blunder, and that he should sue him for negligence, and he blamed A. B. for recommending him an attorney unacquainted with such business; and A. B. stated that he understood the effect of the defendant's complaint to be a censure upon him for having recommended the plaintiff to him. The defendant gave a different version of the conversation, and the jury said, in answer to the judge, that they thought that A. B. might not have correctly recollected what was said. We do not enter further into the facts, and will treat the case as if it were an imaginary one contrived to illustrate the law. It comes, then, to this, that my friend has recommended a solicitor to me whom I have employed, and who has, I think, blundered in my business; and I complain to my friend that he recommended to me an unskilful and careless lawyer. If an action is brought against me for slander, am I bound to justify my words? Suppose that I meet my friend, and he asks me whether I am satisfied with the solicitor he recommended, and I answer that I am not, and give my supposed reason. It appears that in this case there would be privilege. Suppose, again, that I meet my friend, and, before I am asked any question, I tell him that the solicitor he recommended to me has blundered. It appears that in this case there would be no privilege. The distinction may be thought refined, but there will always be cases which lie very close on one side or the other of any line that may be laid down. Mr. Baron Parke, as we have seen, elaborately discussed similar distinctions in the case of a journeyman carpenter, and he distinguished between complaining to the man himself alone, to the man himself in the presence of another person, and to another person in the man's absence. The recent case was that of complaining to another person in the solicitor's absence, but there was the further element that that person had recommended him. The question seems to be whether there is any interest or duty to make the communication, and if I thought, however absurdly, that I was entitled to compensation

from my friend who had given the recommendation, that would probably suffice, for "the law has not restricted the right to make such communications within any narrow limits." But still it is a good general rule to abstain from voluntary communications, except, indeed, in cases of great apparent urgency. In the case of alleged misconduct of the captain of a ship some of the judges seemed to think that there was, and others that there might be, a degree of urgency which would have justified showing the mate's letter. In the case as to a wheelwright's solvency it is clear that, if what was said had been said in answer to a question, it would have been privileged. But it was volunteered, and that, in the opinion of some judges, made the difference. They would have said that one party to the conversation had an interest to hear, but the other had no duty to state, anything as to this person's solvency. The only safe practical rule appears to be to avoid, as far as possible, voluntary statements affecting other people's character and conduct.

AN EXPLODED IDOL.

THERE is a perhaps not unnatural ambition on the part of a certain class of aspiring minds to be select and peculiar. They cannot bear to be mixed up with the common multitude. That a thing is good in itself is not enough for them, if the good of it happens to be equally clear to everybody else. What they want is something which they can appreciate in a close and exclusive manner, so as to show the superiority of their own taste and discretion over that of the world at large. The misfortune of this class of people is of course that, if a thing is really good, it is so difficult to keep it quiet. By and by the truth gets out, and everybody joins in the worship, which immediately loses its flavour for the select devotees who formerly had their idol to themselves. The best thing to do in such a case is to keep the idol as much as possible in the dark, and to be content to brag about its miraculous character in a vague, mysterious way, without giving any proofs which may be questioned. But after a time this fails to satisfy even the most spiritual minds. The world is usually more or less incredulous, and the testimony of a sect is apt to be not very impressive as far as other people are concerned. Besides, there is much force in the argument, "If this wonderful thing of which you tell us is really so wonderful, why do you keep it shut up? Why don't you give us all the benefit of it?" The natural, and perhaps the logical, answer is that the outer world is not sufficiently educated to appreciate the wonder; that a preliminary course of training and meditation is necessary, and that the dazzling effect on eyes unaccustomed to such splendour would be apt to be blinding. It seems to us that this is a very strong position for the sort of idolaters of whom we are speaking to take up; and as long as they keep to it they are safe. They see what they see in their object of worship, because they bring to the study of it certain prepossessions and convictions which enable them to see it, or fancy they see it. Everybody knows that if in a dreamy way you look in the grate, you can, if you choose, see frowning chasms of pine-clad rock, glorious old castles, or radiant landscapes bathed in the ruddy glow of the setting sun. Only enthusiasts of this kind had, perhaps, better not call the attention of sober, practical-minded people to their romantic fancies. Where one sees a hawk another sees a whale, and the picturesque castles on rugged promontories are detected as mere smouldering cinders. Moreover, this sort of isolated satisfaction rarely contents people. They cannot thoroughly enjoy themselves with merely their own sense of enjoyment, and must have witnesses, if not participators. They would perhaps be sorry to have the vulgar body of humanity making themselves at home in the sacred precincts as they do themselves; but they would like to let the outside world have just such a glimpse of the holy of holies as would make them envy the devotees who had the right of entering into it, and would procure them respect and veneration as they passed through the streets, so that common people should say "Lo! these are they who know the inner mysteries, and who are not as other men." We can understand this feeling. It is, after all, human nature; but it is not the less illogical. Unfortunately logic and enthusiasm so seldom go together.

The professors of these secret mysteries should remember that, as long as they keep their idol behind a screen and are content merely to tell people what it is like, they are safe. Sceptics may doubt what they say, cynics may scoff; but they can always reply, "Yes, that is all very well, but you do not know what you are talking about; we do; we hear a voice you cannot hear, we see a hand you cannot see; and we cannot think of letting ordinary people into the sanctuary." This is the Spiritualists' game. Mediums are invariably passive before unbelievers; they bring out their wonders only in the presence of the faithful; and we must say that they show their worldly wisdom in adhering to this rule. A case has just occurred, however, of a mistake in the other direction, which, melancholy as it is, one may perhaps be permitted to refer to. There has for a long time been a good deal of mystic glorification of Blake, the mad painter. Some authorities have declared that he was the greatest poet who ever lived; others worship him as the peerless one in art. There can be no doubt that Blake was a man of genius. There are some of his lyrical pieces, especially his "Songs for Children," of exquisite simplicity and pathos. And as a painter he had no doubt occasionally a flash of curious inspiration. All the same he was hopelessly mad, and his madness is distinctly observable in the greater part both of his literary and artistic works. There is a story that when friends called upon him they had to be cautious how they approached his domicile, lest they should find his wife and himself in a state of airy freedom, which he himself described as "Only Adam and Eve," but which was apt to be staggering to people less thoroughly imbued with the spirit of primitive simplicity. Mr. Blake's profession was that of an artist, and he was a most industrious workman; but somehow his work was not appreciated by the public of his day. As one of his votaries remarks, we are afraid with too much truth, "he was reverentially admired within a narrow circle, and offered for public acceptance poems and pictures which encountered a superabundance of public rejection." The *cultc* of Blake has, however, descended to the present day. A class of artists who maintain their reputation by, perhaps wisely, keeping their pictures as much out of sight as possible, have taken up Blake as a matter of religion in the nearest approach to that frame of mind of which they are capable. For some years past the innocent public has been practised upon by writers of this kind, who have glorified Blake and insisted that Michael Angelo, Raffaelle, and other painters conventionally regarded as great, are not fit to hold a candle to him. Here alone, we have been told, is real inspiration, real genius. It has happened that very few people have had an opportunity of seeing anything of Blake's, and that the splendour of his achievements has had to be taken pretty much on trust in literary criticism. The possessor of the largest collection of Blakes is said to sleep in the midst of them, and it is of course a delicate thing to invade a gentleman's bedroom. The seclusion in which the works of the great man have hitherto been kept has of course put a good deal in the power of his disciples in the way of exaggeration and mystification. They could say anything they liked, because there was no means of checking their delusions. But this judicious policy has lately been broken through. We have no idea how it happened. It may have been the scheme of some wicked heretic who saw through the farce, and wanted to expose it; or it may have been the suggestion of a fanatic who forgot that other people were not all as infatuated as himself. However this may be—and it may perhaps hereafter be one of the problems of history—it has, in fact, happened that a well-known Club devoted to the interests of art has got up a collection of Blake's pictures and opened it for exhibition to its members and their friends. We ought to say at once that this is a most respectable Club, largely composed of clergymen, and there is no reason to doubt that the Committee has been innocently deluded into opening this singular exhibition, which, we are bound to say, is at once the most grotesque and, to put it mildly, the least suited for indiscriminate inspection that has been seen in town in modern days. The worst of it is that it did not occur to the Committee to give a hint to their members of the nature of the show; and the result, it is said, has been to produce a good deal of consternation among unprepared visitors. The Scriptural simplicity of the pictures might perhaps not be too overpowering for strong-minded gentlemen who could take a quiet look at them by themselves; but it may be conceived that the study of works of art of this peculiar description is rather trying when conducted in the presence of a butterfly gathering of the other sex. We will not go so far as to say that, as soon as the Committee saw the sort of fish which had come into its net, it should have sent them back, because we think it is perhaps just as well that the truth should be known on a subject about which so much nonsense has been talked and written; but the Committee might at least have given some warning of the character of the exhibition.

We must humbly confess that we feel ourselves quite incapable of giving any adequate idea of this startling exhibition; but we have had the advantage of reading an article by Mr. W. M. Rossetti in a weekly contemporary, which may perhaps convey some idea to others, though to us it is highly mysterious. The writer begins by admitting that, without a catalogue, the pleasure he expected to derive from "this extraordinary and splendid spectacle was somewhat diminished," which means, we suppose, that there were a good many things he could not make head or tail of. The critic then goes on to say that "the painter's splendid powers of ideal or mystic invention and imaginative design, and his mastery of the glamour of colour, now in the simplest elements, and anon in wildly arbitrary combinations of richness and force, are amply exhibited in this collection." He admits, however, that Blake's "defects become no less manifest than his excellences; but with these we do not concern ourselves." "We see before us the most exalted, creative, and solitary spirit in British art." And he winds up thus:—"The aureole of immortality brightens with ever-augmenting lustre round the brow of Blake in every instance where his spirit, made palpable to sense, revisits thus the glimpses of the moon." We admit that the moon, in the old sense, has a good deal to do with this worship of Blake; and we might fancy that some of his disciples have a touch of the madness of their master, if we did not know the insidious influence of crotchety vanity on those who are exposed to it. As far as our own observation goes, this exhibition of Blake's works is simply a nightmare collection of pictures of naked men and women in all sorts of grotesque and fantastic attitudes. There are one or two pictures of moderate merit, but, as a rule, the drawing is stiff and unmeaning, and the colouring wild and absurd. The subjects which are chiefly treated, such as "The Spiritual

Form of Nelson guiding the Leviathan," "The Spiritual Form of Pitt guiding Behemoth," "Elohim creating Adam," "Satan, Sin, and Death at the Gate of Hell," and the "Lazar House," show the mystic tendency of poor Blake's mind, while the erotic influence of his insanity is also painfully apparent. A large proportion of the pictures consists of a monotonous repetition of the endearments of Adam and Eve in Eden; and one of the most familiar figures in the collection is a grotesque caricature of the Deity. We do not deny that an exhibition of this kind has a curious psychological interest; but we may go the length of saying that it is not exactly suitable for ladies, and perhaps the Committee will take the hint.

REVIEWS.

MERIVALE'S GENERAL HISTORY OF ROME.*

IT is hardly worth while saying that we ought to have reviewed this book long before; in any case the best practical apology that we can make is to set to work upon it without more ado. Dean Merivale, after having dealt with a considerable and important part of Roman history at full length, has now undertaken to deal in a more summary way with the whole story in its conventional extent. It is curious to see how very different is the execution of different parts of the book. It is admirable in all the parts which Dr. Merivale has treated in his other works; wherever the field is absolutely new, we see signs of haste. That this should be the case is an inborn weakness of human nature. The one part must, from mere familiarity, have long ago become a labour of love; the other, from mere comparative neglect, is likely to be looked on as task-work. But we suspect that the cause of the difference lies somewhat deeper. Any one who reads Dr. Merivale's preface will see that his earlier choice of subjects was not at all a matter of chance. He took to that part of Roman history which best suited his own taste, and to which his powers were best adapted. He divides Roman history into three periods, the Antiquarian, the Dramatic, and one for which he cannot find a satisfactory name, but of which he hints that the characteristic feature is that with it we enter on a history of opinion. The second of these periods is Dr. Merivale's own period, that at which he has thoroughly worked, and which he has already dealt with in two forms. The third he has studied and dealt with, although in a slighter way than the other, from one particular side of it. The first period Dr. Merivale has also of course studied, for without its study he could not have done what he has done for the later history. But there is no sign of his having made it a subject of special study, of such study as he has given to the second period, or even to the third. From the point of view of Dr. Merivale's earlier works there was no reason why he should do so. All that he has as yet written might be perfectly well written without any special work at the earlier times; it might be done without anything more than that kind of knowledge of them which a scholar of Dr. Merivale's class cannot fail to have. While Dr. Merivale has been working at the Emperors, a vast mass of work has been done at the Kings and the early commonwealth, to which it is quite possible that he may not have given any special attention. The case is, in a less degree, like the case of Ranke. While Ranke was working at one end of English history, others were working at the other end, and, as he took no heed to their labours, his early part was simply an utter failure, which it would have been kind to cut out of his book. Now this is very far indeed from being the case with Dr. Merivale; yet one can see almost at a glance that the first part of his book is not equal to the third, and that the third is not equal to the second. The truth is that the three periods have to be written from three very different kinds of materials, and according to three very different methods. We can quite understand that Dr. Merivale's thorough familiarity with one of the three would be a real hindrance to an equal treatment of the other two, especially of the first.

It is easy to see from Dr. Merivale's earlier works, and he may be said to avow as much in his present preface, that the part of Roman history in which he is really at home, the part which is the real period of his choice, is what he calls the Dramatic period. "From the Scipios to M. Aurelius," he tells us, "we seem to traverse a long gallery of national portraits, every one of which brings a real individual man before us." So it is, and in that gallery Dr. Merivale is thoroughly at home. His present shorter sketch is, as he tells us, chiefly abridged from his larger work. He adds, "I hope that in the lighter touch with which they are here treated, I have not failed to preserve the truth and spirit of their portraits." On that score Dr. Merivale need not fear. In all this part he shows no falling off from the standard of his greater work; in some things we even see an improvement. His miniature of Tiberius is, we think, distinctly better than his former full length. Indeed generally compression has made his portraits clearer and more forcible. That Dr. Merivale is in some measure Cæsarian he would hardly himself deny. But, when we come back to him after some writings which have appeared in the meanwhile, it is wonderful to see how mild his Cæsarism looks by comparison. He has no sympathy whatever with the paradoxical school whose greatest exploit is to turn Catiline into a popular hero. Yet, even in this part of the book, there are some curious signs of haste in the correction either of pen or press. Dr. Merivale has suffered once or twice from that odd temptation which sometimes, in cases of strong opposition of ideas, leads a writer to put down the exactly opposite word to that which he means. His meaning is so clear to himself that he forgets which of the two opposite words is the right one to express it. It is only in this way that we can account for a sentence in p. 328, out of which we can get a meaning only by reading "Cæsar" where the word printed is "Cicero"; and one in p. 364, where, in the like sort, we venture to read "republican," or something to that effect, instead of "Cæsarian."

In the later part of the book, taking in Dr. Merivale's third period, his attention seems mainly fixed on the relations between Paganism and Christianity. This is indeed a noble subject, and one which, as earlier works of his show, has occupied much of Dr. Merivale's thoughts. In his preface he says:—"As it seems to me to be the worthiest object of all literary ambition, so it is perhaps the most delicate and difficult of any. To such a task," he adds, 'I have long since confessed myself unequal." Yet we can remember finishing the last volume of Dr. Merivale's larger History with a distinct feeling of regret that he stopped where he did, and did not go on directly to grapple with it. To judge from the second part of the present book, we fancy that, if Dr. Merivale had already treated the subject in several volumes, he would now have given us a valuable summary. As it is, the treatment of the third period does not show the same grasp as the treatment of the second. The narrative stops at A.D. 476. We cannot help thinking that this point must have been somehow fixed from outside; it surely could not be Dr. Merivale's own choosing. To stop at that point is of course fatal to any full setting forth of the œcumenical position of Rome. More and more are we convinced that the true point for a History of Rome to stop at is the one chosen by Arnold, the coronation of Charles the Great. From the point of view of universal history no centuries of the life of Rome are more important than the sixth and seventh of our era. And in the sixth the interest again gathers round the local Rome in a way in which it had not done for several ages before. Down to the Christmas of 800, the two elements of later history stand side by side. When the same man was German King and Roman Emperor, we have the outward sign of their fusion.

In this later part, then, Dr. Merivale is partially at home. We suspect that, if he had gone on a little further, he would have been more at home. He regrets the lack of distinct portraits in the latter part of his story. He would have got them again with Theodoric and Belisarius and Gregory the Great. But he is far more at home in this latter part than he is in the earliest part of all. In a general view of the whole subject he is doubtless at home in both. The very beginning and the very ending of the book, the comparison between Greek and Roman history with which it opens, and the picture of the position and working of the Roman Empire on mankind with which it winds up, are both alike in Dr. Merivale's very best manner; and the latter especially makes us wonder how he could bear to stop where he does stop.

When we turn to the narrative of the early history, it gives us throughout the impression of having been irksome to the writer, of having been done to fill up a plan rather than from any real love for it. Dr. Merivale seems not to have very definitely decided on any particular method for the treatment of the mythical and half-mythical periods. We need not say that he does not believe the legends, like the eccentric sect which looks on Romulus as a real man suckled by a real wolf. On the other hand, he does not tell them as legends like Arnold; nor does he, like Mommsen, leave them out altogether unless they prove something. It is certainly hard to deal with this kind of subject on a small, or even a moderate, scale. That is, it is hard to do so if the writer would avoid either long discussions on the one hand, or a look of confident dogmatism on the other. Dr. Merivale draws the distinction between legend and history clearly enough, but he hardly carries out the distinction in the tale itself. The plain truth is that his turn of mind leads him much more to the other two parts of the subject, and the natural result is that the first part is not done with the same power or clearness. We see constant signs of haste even in the mere composition. For instance, before he comes to the decemvirate, Dr. Merivale brings in L. Sicinius Dentatus in what is his right place for his earlier exploits and for his tribuneship:—

> As tribune in the year 452 he gained a victory over the opponents of his party, and compelled them at last to concede the measure pressed upon them by Terentilius. To himself, indeed, this victory was fatal, for the patricians vowed to get rid of him by any means; and at no distant period Q. Fabius, who commanded the army, caused him to be despatched by a band of soldiers with whom he was sent to reconnoitre the enemy.

We really looked to see whether there was any rival story, making Sicinius perish before the decemvirate. But no; we get into the decemvirate, and after the last two tables, "which altogether failed to obtain general approbation," we read:—

> Then it was that these ten tyrants, as they came to be regarded, constrained the people to go forth to battle, and effected by treachery the slaughter of their hero Dentatus.

Then again, directly after this, Valerius and Horatius are made to be two of the decemvirs. Presently "Pyrrhus returned in utter discomfiture to his own country, and soon after perished in an obscure combat with his own countrymen at Argos." The turn of the sentence is odd, and it is only in a very vague sense indeed

* *A General History of Rome, from the Foundation of the City to the Fall of Augustulus.* By Charles Merivale, D.D. London: Longmans & Co. 1875.

that the people of Argos could be called the countrymen of Pyrrhus. But we were really startled at finding, in p. 141, Capua described as "the chief city of Magna Græcia," "the home of all the highest art and luxury of Greece," "the Greeks of Capua," &c. This is that kind of thing which is so startling that it makes one think for a moment that it may be right, and that one has hitherto lived under some great delusion. Yet nothing is more certain than that Capua never was Greek; there is not even a legend giving it a Greek founder. And the following account of the "urbs ampliseima ornatissima" of Cicero has an odd sound:—

> The city and its territory were declared to be Roman property, and the place was eventually repeopled by a swarm of Roman occupants, to retain for ages in the paltry condition of an Italian country-town the bare tradition of its old Hellenic cultivation. Thus degraded and vulgarized Capua still enjoyed a certain repute in the imagination of the Romans as the fair Circe whose charms had enervated the host of Hannibal.

So we come continually on some little slip of expression showing that the thing has been slurred over. Thus at the famous scene at the Isthmian Games, Dr. Merivale tells us how "it was declared with sound of trumpet that the Roman Senate and T. Quinctius, its general, had liberated the whole of Greece from the power of Macedonia." Such a proclamation was never made, and it would have been an insult to all the Greek allies of Rome. The proclamation in Polybios does not speak of "the whole of Greece," but names, one by one, those parts of Greece which had been under the Macedonian power. The whole treatment of this part is confused. So again it is hard on Marcellus to say (p. 188) that "he threw into the sea the sacred fowls which refused to present him with favourable omens." It is quite another Claudius, P. Claudius Pulcher (see Valerius Maximus, i. 3, 4), of whom that story is told.

THE INDIAN PROBLEM SOLVED.*

THE author of this work starts with the profound remark that no subject can be more important than the material progress and happiness of two hundred and fifty millions of people in India, and that no single person can do full justice to it. The first part of this proposition is a commonplace; the second is what the author, as far as his treatment of it goes, has amply confirmed. In truth, scissors and paste have been employed at high pressure in order to produce a very pretentious, disconnected, and inconclusive book. The writer does not give his name in the title-page, but from sundry laudatory notices stuffed in at the close of the work we are inclined to suspect that this affair of shreds and patches must proceed from a gentleman who has already published a work on mills and factories of jute, cotton, silk, and other products, as from practical experience in Bombay he thought himself entitled to do. In an evil hour some injudicious critic seems to have hinted that, if a man would do for agriculture what had thus been done for manufactures, he would become a public benefactor. On this instigation, unless we are mistaken in our conjecture, the compiler set to work to get together all the wise and all the silly utterances that have come from the mouths of statesmen, journalists, members of Parliament, diviners of great prescience, and satirists of scathing pens, on one of the most difficult and controverted of questions. Authorities of every degree of value have been laid under contribution; and there is a table of contents in which some faint indications of a controlling design can be traced. But while there is a preface, and a purpose in the opening chapter, there is neither middle nor end to the book. Authorities for and against certain measures are arrayed in succession, but we find no attempt at reconciling discrepancies, exploding fallacies, or bringing order and method out of acrimonious minutes and vehement diatribes. Then sundry chapters and sections are prefaced by curt, snappish denunciations in big print, levelled at defaulting statesmen or incompetent Governments. Government is on the "march to bankruptcy"; its "attitude" is "mean and cowardly," or else it is "cruel and barbarous;" or it has established some institution which is simply "a disgraceful imposition on India." Does the author really think that his compilation, with its sensational title, will float into general acceptance by the free use of these ugly names? He has also so contrived to marshal his forces in what he thinks is the array of battle, that it becomes extremely puzzling to say where one inspired prophet finishes and another begins. Sometimes it is a celebrated officer of engineers with an imagination that can carry himself and a whole fleet along a canal of three feet in depth at twenty miles an hour. Sometimes, though we cannot be certain of this point, it may be the author himself who is speaking. Sometimes it is a bishop, and on one occasion a Polish *savant* who travelled in Goozerat, in Western India, about ninety years ago, and who is dragged in to illustrate some urgent want of to-day. There is, in fact, an entire want of cohesion, sequence, arrangement, and digestion of accumulated facts. Palpable blunders are not corrected; deficiencies are not supplied; legitimate deductions are not drawn, even when the author seems to have got on the right scent.

Another characteristic of the book is that India is occasionally treated as a country where absolutely nothing has been done, and to which an opinion uttered in the last century would be as fully applicable as a warning from Mr. Fawcett at the present day. In order to convey to purely English readers a correct notion of the management of an abstruse Indian question by this writer, we must ask them to conceive a prominent topic of the day—say, household suffrage in the counties, or the education of the people, or the liberty of the press, or local and Imperial taxes—treated in a similar manner. Suppose we take the franchise in the counties and the redistribution of seats. Let then our readers imagine that a writer should select, out of the legacies of journalists and debaters, an aphorism by Mr. Disraeli, a speech by Lord Grey delivered in the year 1831–2, half a column from the *Daily Telegraph* of yesterday, and a short leader from the *North Briton* of John Wilkes; that, to avoid monotony, he next dragged in side by side some answers of Lord Palmerston before the Committee on official salaries which sat rather more than twenty years back, and some recent autumnal harangues of the member for Stoke-upon-Trent; that he concluded by parading two citations from Burke, and the half of an address from Mr. Odger; that all these various luminaries, high and low, were allowed to jostle each other with neither comment nor addition; and that the extracts were often so detached from the context as to begin you cannot exactly say why, and to leave off just at the very point when you expect something germane or pertinent to follow—let our readers, we say, picture to themselves any familiar English topic disposed of in this fashion, and they will be able to appreciate the manner in which this discursive annalist teaches us how to do our duty as an Asiatic Power. We know nothing like it except flaming advertisements intended to catch the eye; "no more colds," "no more smoky chimneys," and such like. Lord Derby, in a recent speech at Edinburgh, warned his hearers against ranting; that is, treating "very little matters as if they were big ones." If the cautious Foreign Secretary ever had time to read this book, he would, we think, warn the writer against the converse, or another most "unpleasing form of unwisdom"—to wit, that of writing of big or imperial questions as if they could be disposed of with the unceremonious facility of parochial details. Famine in a vast province is discussed in these pages like relief in St. Pancras, or as if it were no greater feat to make five hundred miles of canal in an Indian Presidency and to get the Ryots to pay for the water, than to clear away the snow and slush from the centre of Grosvenor Square. It may well be the duty of a Vestry to see that ratepayers get a decent roadway, and of a Viceroy to take care that thousands of lives do not perish, and millions of money are not thrown away. But all we say is that such a compilation is of as little use practically to Mr. Jones the Vestryman as it would be to Lord Lytton. We must add that the execution in minor details is most slovenly and discreditable. Constant misprints, for which the printers cannot alone be responsible, produce a feeling of irritation. Surnames are mutilated; strange Christian names are bestowed upon well-known persons, for which the author, and no godfather, is responsible. Indian titles, always a source of perplexity, are freely altered and curtailed; and though the year of an official despatch is of great importance when intended to point criticisms on official shortcomings, the date of one letter from the Government of India is given as 1868, when it should clearly have been 1864–5. Of those members who are made to sign it in 1868, at Calcutta or Simla, one was then in England, another commanding the forces in Ireland, and a third was Lieutenant-Governor of Bengal, and not in the Viceregal Council at all. Indian officials may every now and then complain that their good deeds do not follow them home, or that they are not recognized in their retirement. But what casual reader is to guess offhand at the real names or services of gentlemen who figure in this book as DURNUD, HARRY REVETT, and CASSELO?

It is of course out of the question for us in the space of a column to attempt to do what should have been done by the author. Amongst "our authorities," numbering one hundred, we cannot separate the wheat from the chaff, or say what conclusion has been pressed too far, where unavoidable or pardonable shortcomings have been exaggerated into high crimes or misdemeanours, or in what the Indian Governments may fairly be censured either for expensive parsimony or improvident and ineffectual waste. But, in justice to the subject, and not to the author, we shall try to select the leading idea which pervades this combination of thundering denunciations and wise saws.

It is impossible for us to say whether the author of this work has committed himself unreservedly to the guidance of others, and especially of one well-known member of the corps of Engineers, who thinks that there is nothing like water to save India. But, from the prominence given to Sir Arthur Cotton, and to a sketch-map of canals, we are inclined to infer that this is the case. Now, in the opinions that point to canals as one mode of enriching the State, of securing the agriculturist against calamities greater than war or invasion, and of facilitating the exchange of commodities and the intercourse of distant provinces, we cordially agree. To some parts of India irrigation is a vital necessity. The rainfall in Bikanir, for instance, would be of no account even in a temperate climate. In others a more copious rainfall might well be husbanded by artificial means for irrigation in spring-time when showers rarely fall, or in autumn when they fail prematurely, with telling effect. Even where cereals can depend on moisture and dew, irrigation is indispensable for green fodder or expensive crops. A hoarded supply of water keeps cattle alive, comes in aid of arboriculture, and, as Sydney Smith said of Mackintosh's style when he playfully imagined the historian

* *The Indian Problem Solved. Undeveloped Wealth in India and State Reproductive Works. The Ways to prevent Famines, and advance the Material Progress of India.* London: Virtue, Spalding, & Co.

to write about pepper, "approximates the distant regions of the earth, explains the objects of commerce, and justifies the industry of man." But, for all this, the irrigation question is not free from hindrances and difficulties. If canal water drives out or staves off cholera, it lies open to the suspicion of introducing low fever. Agriculturists cannot always be induced to take it, and there are political difficulties in the way of compelling an industrial population to pay for the water which they are confident that Indra, the rain-god, will not fail to send them. Something has already been done in the way of opening nearly fifteen hundred miles of canals, and a thousand miles in addition are in process of construction; and there is no fear, after the experience of the Behar famine, that the subject will pass out of sight. The great Ganges Canal is a work of which Italian engineers might be proud. The Jumna Canal, that of the Bari Doab, the works in Behar, Orissa, Scinde, Madras, are all worthy an enlightened Government, and contribute to the improvement of existing agriculture and the conversion of wastes into cornfields. But it is absurd to ascribe to any possible series of canals the political and social advantages of railways, or to imagine that troops could be conveyed on a waterway three feet deep and thirty feet wide, with the same rapidity and certainty as on the East Indian or the Great Indian Peninsular lines. Banks will fall in; beds will silt up; and cyclones and tornadoes may make as wild havoc with an artificial channel as with an iron road. No one public work more than another can be guaranteed immunity from the violence of nature or the corroding effects of time, as is hinted in some of these opinions. And to announce that, with irrigation canals, we "should have a far greater military command of the country," or that we might "possibly dispense with half a dozen European regiments," is absurd. To some parts of India canals are wholly inapplicable. Assam and Eastern Bengal, for instance, are here included in a scheme which is to encircle India just as the Homeric Ocean encircled the ancient world. It is sufficient to say, in answer to this wild project, that these countries have a tremendous rainfall and a natural system of rivers already; and that in the worst famine that could be apprehended it would be a work of less costliness and difficulty to carry rice by boats, elephants, or carts for that year into the very heart of each district, than it would be to excavate canals which, for forty-nine years out of fifty, would be regarded only as evidences of madness in high places. We might as well start Companies for carrying ice to Nova Zemblya or palm oil to negroes under the line. The plain matter of fact seems to be that canals, railroads, and ordinary roads may, each in their several ways, be material agencies in saving the lives and stimulating the productive faculties of our Indian fellow-subjects. The proportion which any one of these works ought to bear to another is a matter to be decided by a variety of considerations—the character of the soil, the peculiarities of the population, political and military exigencies, financial capability, and the relations of divers tributary States to our own Government. There are in the original materials now laid under contribution means for coming to a conclusion on each head; and even in the ill-assorted fragments of those materials now huddled together in heaps, there is something which might assist a discerning and patient reader in coming to some decision. But in this short paper on a very big subject we cannot attempt to do for others what the author has not done for himself.

YONGE'S LIFE OF MARIE ANTOINETTE.*

IT would be difficult to find a finer subject for biography than that which Professor Yonge has chosen. After all that has been written of Marie Antoinette there are still almost boundless opportunities for a writer to stir his reader's blood in telling her story again. There are few more interesting characters than hers in history; there is nothing more moving than the tale of her sufferings. A writer equal to his task might, in relating what befell her and representing the growth of her character from the time when she came to the French Court until the day of her murder, have compelled the attention and admiration of the most indifferent readers, and have roused the most lethargic to excitement. He might, while confining himself strictly to matter of history, have produced a book which should have a more enthralling interest than the most powerful of romances. If any writer should be inspired to attempt such a work as this he need not fear that Professor Yonge has forestalled him. We cannot but admire the industry with which the Professor has, according to his preface, studied a large number of French volumes on his subject, and we cannot but regret that it was employed for a purpose which he is unfitted to carry out. He has not a spark of the fire which even the most precise historian should have when he deals with fiery themes; the pedantic style of his writing is unrelieved by any touch of grace or humour; and, although his views are sometimes startlingly decisive, it cannot be said that the persons and scenes of his history derive any fresh interest from the consideration he has given to them.

The opening sentence of Professor Yonge's work is no bad specimen of the art of clothing commonplace reflections in language which has about it a curious air of instruction:—"The most striking event in the annals of modern Europe is unquestionably the French Revolution of 1789; a Revolution which, in one sense, may be said to be still in progress, but which, in a more limited view, may be regarded as having been consummated by the deposition and murder of the Sovereign of the country." What the "consummation" of a revolution may be Professor Yonge probably knows better than we do; but, taking the word in its ordinary sense, this statement is somewhat surprising. We should be more disposed to regard the time when the Terror swallowed up those who had produced it as the completion of the revolution. Having delivered himself of this authoritative assertion, Professor Yonge goes on to describe after his fashion the character of Marie Antoinette; and here we get another typical instance of the style which he affects when we are told that, "from the moment of the birth of her first child, she performed those new duties which, perhaps more than any others, call forth all the best and most peculiar virtues of the female heart in such a manner as to add esteem and respect to the good-will which her affability and courtesy had already inspired." It is a relief when the author leaves his consideration of a character which requires to be drawn by a stronger hand than his, and comes to the record of facts. Marie Antoinette, youngest daughter of the Emperor Francis ("Emperor of Germany," according to Professor Yonge) and Maria Theresa, the Empress-Queen, was born on the 2nd of November, 1755, the very day, as it happened, when the earthquake that destroyed Lisbon did its worst work. Maria Theresa had been anxious to have a son, and the Duke of Tarouka, who had made a bet with her that the event would be according to her hopes, wished to convey some consoling compliment with the payment of his stake. Metastasio helped him out of the difficulty with these ingenious lines:—

> Io perdei, l'augusta figlia
> A pagar m'ha condannato;
> Ma s'è ver che à voi somiglia
> Tutto il mondo ha guadagnato.

Maria Theresa early entertained the notion of a marriage between Marie Antoinette and the Dauphin, which she hoped might be the means of making a sure alliance with France. The project fell in with the views of Louis XV., and the first negotiations for the marriage were set in motion by Choiseul in 1769, when Marie Antoinette was but fourteen years old. In the next year the proposal for the marriage was formally made and accepted. Festivities were held at Vienna to celebrate the occasion; among others, a masked ball, a form of entertainment which was then especially fashionable. Professor Yonge's love of inserting foot-notes needlessly, if not irrelevantly, which has been observed in former works of his, is present also in this. The masked ball gives him an opportunity for referring in a note to the well-known bitter saying about the French nation being half tiger and half monkey, and observing, as a "singular coincidence," that Walpole, speaking of masquerades, should have said, "It is very lucky, seeing how much of the tiger enters into the human composition, that there should be a good dose of the monkey too." If the author had discovered that the saying was borrowed from Walpole, the fact might have been worth noting; but to have tacked together a masked ball at Vienna, an epigram on the French people, and a saying of Walpole's into a singular coincidence must be regarded as a misplaced piece of ingenuity. Professor Yonge gives a dry description of Marie Antoinette's journey from Vienna to Versailles, varied by such flights of language as are obtained by calling the samples of wine presented to her at Strasburg "a luscious offering."

The troubles which beset her in after life were foreshadowed even at the triumphal outset of her career. When a State ball was given on the occasion of the wedding, the nobles took offence because to the Princess of Lorraine, cousin of the Emperor Francis, was given precedence next to the Princes of the blood, and they refused to attend the ball until the King sent a command for their presence. A worse trouble than this was the panic that took place among the crowd assembled to see a display of fireworks on the 30th of May, which ended in the death of some six hundred persons. This event, however, gave Marie Antoinette an opportunity for gaining for a time the love of the same people who afterwards rose against her in blind fury, by the sympathy she showed for the sufferers, and, to quote Professor Yonge, "by the tears which she mingled with those of the widow and the orphan.' Extracts from her letters to her mother give an interesting picture of the daily round of Court life at Versailles in the first year of her marriage:—

"At twelve," she proceeds to say, "what is called the Chamber is held, and there everyone who does not belong to the common people may enter. I put on my rouge and wash my hands before all the world; then the men go out and the women remain, and I dress myself in their presence. Then comes mass. If the King is at Versailles I go to mass with him, my husband, and my aunts; if he is not there I go alone with the Dauphin, but always at the same hour. After mass we two dine by ourselves in the presence of all the world; but dinner is over by half-past one, as we both eat very fast. From the dinner-table I go to the Dauphin's apartments, and if he has business, I return to my own rooms, where I read, write, or work; for I am making a waistcoat for the King which gets on but slowly, though, I trust, with God's grace, it will be finished before many years are over. At three o'clock I go again to visit my aunts, and the King comes to them at the same hour. At four the Abbé comes to me, and at five I have every day either my harpsichord-master or my singing-master till six. A half-past six I go almost every day to my aunts, except when I go out walking. And you must understand that when I go to visit my aunts, my husband almost always goes with me. At seven we play cards till nine o'clock; but when the weather is fine I go out walking, and then there is no play in my apartments, but it is held at my aunts'. At nine we sup, and when the King is not there, my aunts come to sup with us; but when the King is there, we go after supper to their rooms, waiting there for the King, who

* *The Life of Mary Antoinette, Queen of France.* By Charles Duke Yonge, Author of "The History of the British Navy," &c. London: Hurst & Blackett. 1876.

usually comes about a quarter to eleven; and I lie down on a grand sofa and go to sleep till he comes. But when he is not there, we go to bed at eleven o'clock."

The Dauphiness incurred, by her very kindness of heart and desire to be courteous to all the world, various vexations caused by the rigid system of etiquette held in honour by many people about the Court. Professor Yonge refers to these in a sentence of curious construction:—

Foremost among these sticklers for old ideas was the Countess de Noailles, her principal "lady of honour," whose uneasiness on the subject speedily became so notorious as to give rise to numerous Court squibs and satirical odes, the authors of which seemed glad to compliment the Dauphin and to vex her ladyship at the same time; but who could not be deterred by these effusions from lecturing Marie Antoinette on her disregard of her rank, and on the danger of making herself too familiar, till she provoked the young Princess into giving her the nickname of Madame Etiquette; and, no doubt, in her childish playfulness, to utter many a speech and do many an act whose principal object was to excite the astonishment of the too prim lady of honour.

In 1774 came the death of the King, and one of Marie Antoinette's first efforts in her new dignity was to purify the Court from the licentiousness which had too long been fashionable there. At the same time she relaxed many of the strict and senseless rules of etiquette which had been so distasteful to her when she was Dauphiness. What was more important than either of these acts was her remitting the tax of "the Queen's girdle." She and the Dauphin had already, before the King's death, relieved the distress prevailing in Paris by a gift from their private purse, and with the tax of the Queen's girdle that of the "happy accession" was also remitted. This, it may be supposed, met with almost universal approval, but the Queen's reforms in Court manners were looked on with distaste by people like Mme. de Noailles, who saw in the change a liking for Viennese rather than for French fashions, and revived the name of "the Austrian" which had already been given to Marie Antoinette by Mme. Adelaide. The Queen set herself also to the encouragement of literature and the arts, among which she had a special liking for music. Professor Yonge tells us that she still "devoted a portion of almost every day *in* taking lessons on the harp," and in order to bring Gluck (whom Professor Yonge persistently calls Glück) to Paris she offered him a pension of 6,000 francs. One night when she was at the opera his *Iphigénie* was given; and in the course of this Achilles, turning to his followers, says, "Chantez, célébrez votre reine." Le Gros, the tenor, changed the text to

> Chantons, célébrons notre reine,
> L'hymen que sous ses lois l'enchaine
> Va nous rendre à jamais heureux.

So says Professor Yonge. The second line should of course be

> L'hymen *qui* sous ses lois *l'enchaine.*

The enthusiasm of the audience was tremendous, and the author is careful to inform us that the Queen did not "at such a moment suffer her feeling of the evanescent character of popularity among so light-minded a people to dwell in her mind." A check was given to the pleasant course which events seemed to be taking by the visit which the Queen's brother Maximilian paid to her in 1775. He came in the style and name of Count de Burgau, and the Princes, refusing to recognize his real rank, demanded that the first visit should be paid from him to them. The infamous Duke of Orleans made use of the opportunity to stir up a dislike to the Austrians, which was helped by the difficulties then existing about the price of corn, the dearness of which was attributed by the enemies of Turgot, the Controller-General, to his measures for freedom of trade. Soon after this came the coronation of Louis, and not much later Marie Antoinette did one of the unwise acts of her life in admitting Mme. de Polignac to intimate friendship with her, one consequence of which was the dismissal of Turgot. In 1777 the Emperor Joseph paid a visit to his sister, to whom he left some excellent, if somewhat severe, advice in writing; and in the next year, in opposition to the opinion which he had given clearly enough on the subject, a treaty, to quote Professor Yonge's words once more, "was concluded with the United States, as the insurgents called themselves"—a proceeding which was for France somewhat disastrous. It was at this time that La Fayette rose into notice. We are disposed to agree with the author in the low estimate he has formed of this personage; but it is curious that he has omitted to quote an incident which might better convince his readers of the justness of his views concerning La Fayette than the epithets which he liberally, and to our thinking justly, bestows upon him. La Fayette, being by nature awkward and not endowed with those qualities which give a spurious glitter to vice, was yet anxious to show that he could be gay and dissolute as well as another, and the chief object of his emulation was his brother-in-law, the Duke de Noailles. La Fayette once attempted to rival him at a convivial meeting, and, when he was carried away in a hopeless state, found just enough sense and energy to cry, "N'oubliez pas de dire à Noailles comme j'ai bien bu!" It was to the Queen's influence that La Fayette owed the restoration of his commission, which he had forfeited by leaving France for America, as well as the command of a regiment of dragoons. In the year of his return came the birth of the Queen's first child, a daughter, and in the spring following the Queen was attacked by measles, when four nobles, the Duke de Coigny, the Duke de Guines, Count Esterhazy, and the Baron de Besenval, volunteered to watch by her bedside. Professor Yonge describes them as "sick-watchers," and with his usual love for foot-notes states in small type at the bottom of the page that "garde-malades was the name given to them." This is almost as good as the story of the traveller who, writing from Milan, headed his letter "London Hotel (Albergo di Londra they call it here)."

We pass on to the well-known story of Lamotte, or, as Professor Yonge writes it, La Mothe, and the diamond necklace, of which the author gives an account so bald that it becomes utterly uninteresting. We need only pause to quote one decisive and singular statement which he makes:—"The Cardinal (de Rohan) was acquitted, as well as a notorious juggler and impostor of the day, called Cagliostro, who had apparently been so entirely unconnected with the transaction that it is not easy to see how he became included in the prosecution." Mr. Carlyle and various other writers have held different opinions as to Cagliostro's connexion with this affair, the importance of which Professor Yonge appears not to have estimated rightly. He has dismissed it drily, which he probably could not help, and also briefly, which he has given sufficient proof elsewhere that he could have helped. He says hardly a word of the influence which the suspicions excited by it against the Queen obtained. It is of course impossible to gauge accurately the relations of cause and effect at this distance of time; but it is far from impossible that, but for the destruction of the forged papers in this case—which by the way was due to a former lover of Lamotte's—a different turn might have been given to the terrible events of which Professor Yonge gives his version in the second volume of his work. Through that volume we do not think it necessary to follow him. He has succeeded in it in reducing a most exciting theme as near to dulness as may be, and in writing with prosiness of a character whose very name might have inspired him with poetical feeling.

THROUGH AND THROUGH THE TROPICS.*

MR. VINCENT tells us in his short preface that the great and unexpected favour with which his first work was received has emboldened him to write a second, and to offer it in the presumption that it will not be less fortunate. We sincerely trust that it may prove so; for Mr. Vincent is an intelligent traveller and an agreeable writer, and, in spite of the many volumes of travel one is perpetually reading, we have pleasant recollections of the days we passed in his company in the *Land of the White Elephant*. But we greatly fear that he may be doomed to disappointment, although his present book is extremely readable. In the former case he was exceptionally fortunate in his subject. Few people know much of Siam, of the manners and customs of the fantastic semi-civilization that prevails there, or of the treasures of mysterious architecture that have been half forgotten in its forests and those of Cambodia. On the other hand, the countries he is describing to us now have become very familiar to most of us. Not a few of his readers may have visited them for themselves; and at all events Polynesia, Australasia, and India have been so thoroughly "done" by indefatigable bookmakers that a man may easily accomplish his "thirty thousand miles of travel" without bringing back much novel information. The charm of any book of this kind has come to depend almost entirely on the freshness of the treatment and on the value and interest of the author's personal impressions. At the risk of being considered tedious, he must take the topics that suggest themselves casually on the beaten tracks as the theme of observations more or less original; he must lighten his pages by his treatment of incidents more or less trivial; and so the brevity which is generally a merit may very easily become a blemish. Perhaps Mr. Vincent may object that, if he had not striven to condense and to confine himself chiefly to outline, his modest little work would have assumed portentous proportions, and we admit that the comprehensiveness of his scheme of travel lands him necessarily in an embarrassing dilemma. As it is, we have him hurrying us from point to point, as he feels bound to neglect none of the famous cities, buildings, and scenery on which every fairly-read man should be prepared to pass a creditable competitive examination; while, when he has once drawn on his seven-league boots, he thinks nothing of dismissing many hundred miles of adventurous travel in a sentence or two, and we temporarily lose sight of him just as a passing allusion to coming difficulties is preparing us to follow his fortunes with interest. For example, he and his companion had decided to go overland from Sydney to Melbourne. He tells us that, "on making known our intention, we were met with all sorts of lugubrious forebodings, among which were accidents by field and flood." We may presume that the obstacles which loomed so large in the fancies of apprehensive friends dwindled before his determination to confront them boldly, for only a paragraph or two later we find him established in Melbourne. And all that he has said to satisfy our excited curiosity is that the journey called for no long description, and that they completed the trip of eight hundred miles in less than a couple of weeks. The chief interest of his volume centres undoubtedly in his visits to the Northern cities of British India. It is true that, thanks to the pens of the Special Correspondents who have followed in the train of the Prince of Wales, the public has lately heard more than enough of these. But Mr. Vincent, who, by the way, is an American, has something of his countrymen's genius for making way with distinguished foreigners,

* *Through and Through the Tropics: Thirty Thousand Miles of Travel in Polynesia, Australasia, and India.* By Frank Vincent, Junior, Author of "The Land of the White Elephant." London: Sampson Low & Co. 1876.

although we have no reason to suppose that he can be charged with vulgar obtrusiveness. He was received with great affability by several of the mediatized Indian potentates, was entertained by them in the gorgeous seclusion of their palaces, was invited to be present at their amusements and to admire the contents of their barbaric treasury-houses, while he won so far on the good will of his ceremonious hosts as to be dismissed with valuable introductions which gave him the "open sesame" to fresh marvels.

Mr. Vincent made his start from New York in a comfortable old sailing-tub, bound round the world on a trading voyage, with San Francisco for its immediate destination. The *Golden Fleece* had the luck to go nearer to "the Horn" than most vessels, passing "within a mile of its rugged sides. . . The promontory is simply a steep, black rock about five hundred feet in height. Such a picture of barrenness and desolation I have rarely seen. There stood the gaunt and lonely hill, its naked sides lashed by the ravenous billows, its base worn into caverns hung with terrific and inscrutable gloom." But although it was the height of the Antarctic summer, the voyagers were destined to experience the proverbial treachery of the malignant climate of the Cape of Storms. A sudden squall burst upon them, although it came fortunately off the land, and drove them straight southward into the Antarctic Ocean. But time was of little consequence on board the *Golden Fleece*, which had apparently been sent to sea with a very roving commission. For, after a brief stay at San Francisco, the captain "concluded" to run 2,000 miles westward to the Sandwich Isles, on the chance of obtaining some extra freight, in which, by the way, he failed. As Mr. Vincent's visit to those islands took place half-a-dozen years ago, his descriptions of Hawaiian politics and society have become comparatively ancient history, while Miss Bird, Mr. Boddam-Whetham, and other recent writers have exhaustively anticipated his account of the volcanic wonders of Hawaii. Landing at Kealakekua Bay, he moralizes on English ingratitude to the illustrious memory of our great circumnavigator. The only memorials of Cook which he found there were some copper tablets attached to the stump of a cocoa palm, and bearing inscriptions by officers of ships on the station; and the latest of these was dated in 1846. We are told that a sum had been subscribed in the Sandwich Islands for a suitable monument, which had actually been half completed, when it was pulled down by order of the Consul, as being out of keeping with the design. We are under the impression that the design has been carried out since Mr. Vincent paid his visit to the place. We are sure he is mistaken in supposing that it is not generally known that Cook's body was cut into pieces and distributed over the island. The negotiations with the savages arising out of the circumstances are narrated at length in the history of the melancholy occurrence which is embodied in the standard edition of the Voyages.

From Honolulu Mr. Vincent made a flying voyage to Sydney, sighting on the way some of the more famous islands of the South Sea groups, but merely stopping at Auckland to coal. He had intended to sail to Tahiti from Auckland, but was obliged to give up that idea, as he had subsequently to renounce his more audacious project of seeking out the Grand Lama in the inhospitable capital of Thibet. He has nothing that is new to tell us of Australasia, and the single chapter in which he dismisses the fifth of the continents smacks of the guide-book more strongly than any of the others. However, on the voyage from Melbourne to Calcutta he did pick up one piece of information, which might have considerable interest for the Dutch had it been confirmed by subsequent events. "We passed," he writes, "within two hundred miles of Acheen, a town on the north-western extremity of the island of Sumatra, with whose Sultan and people the Dutch have just concluded a successful war." At Calcutta he had an audience of the ex-King of Oude, and as he had sailed up the Hoogly to Garden Reach, and as the gardens of the dethroned potentate stretch along the banks of that channel of the Ganges, we cannot understand why he should speak of having the first glance of "the sacred river" on his arrival at the railway station of Sahibgunge, which is 220 miles higher up its course. In the holy city of Benares he was treated with great hospitality by the Rajah of Vizianagram, the descendant of that famous Cheit Singh who figured so conspicuously under the administration of Hastings. Nothing indeed could be more courteous than the demeanour of the Rajah, "quite an old gentleman of large and fleshy person, with a keen intellectual countenance, and very bland and pleasing." He insisted on mounting his American visitor on one of his elephants, on which Mr. Vincent made a state progress through such of the native thoroughfares of the crowded city as would admit the animal's bulky frame. As for the nautch which was given in his honour, although he seems to have been exceptionally fortunate in finding some of the dancers "possessed of extraordinary beauty," he came away with the impression that, like the attar of roses that was offered to him, "a little of it goes a long way." *Apropos* of his subsequent sojourn at Umritsur in the Punjaub, he gives a rather curious account of the manufacture of the attar of roses. It is a staple industry of the place, although the quality of the Umritsur essence is commercially inferior to that of Cashmere; and a single shopkeeper had no less than a dozen gallons in store, which he kept preserved in wicker-covered jars. The process of manufacture is as follows:—Forty pounds of the rose leaves are placed in a still with an equal weight of water, and, as the fumes disengage themselves, cold water is thrown on the refrigerator. The distillation goes on slowly, until half the water has drained into the receiver. Then that rose-water is distilled over again with another forty pounds of the leaves, until twenty pounds of water is obtained the second time. That product is exposed to the night air in jars of earthenware. "In the morning the attar will be found congealed, and floating on the surface in globules, which are then skimmed off with a thin shell, and poured into *chatties* or small jars." But as the roses of the Punjaub yield comparatively little essence, it has become the practice to adulterate them with sandal-wood; and if, as we are informed, the roses cost 25*l.* per ton in the raw state, the inducement to adulteration is quite conceivable. Those who care for detailed descriptions of the gems of Indian architecture by an appreciative enthusiast who has travelled widely in Eastern countries will do well to study Mr. Vincent's descriptions. Especially he goes into raptures over the Taj Mahal, which he pronounces "the most noble and perfect art-ideal of the kind ever embodied by man." His thoughts by day, he tells us, were Taj-haunted; at night, his dreams were of a silver palace floating in the air. Each morning regularly he made an expedition to it from the city; each time he discovered new beauties. But he tore himself away at last from Agra, passed through the Punjaub and Sindh to Bombay, and thence on to Madras, taking leave of our dominions at Binlipatam. He expresses himself forcibly as to the blessings that have been conferred on Hindustan by British rule, and it is his opinion that "the present political outlook for India is most encouraging. Proofs are not wanting that still greater reforms will be instituted; that Western science and philosophy will eventually supersede Eastern ignorance and superstition; and that a noble civilization, waxing nobler with advancing centuries, will lift those glorious old lands of the Hindoo and the Mogul to an indefinitely higher level than any that they have yet occupied." So that, in spite of the ominous forebodings of Mr. Lowe, Mr. Vincent at least does not contemplate for a moment the contingency of the sceptre of India passing out of English hands.

MADAME CAVERLET.[*]

THE Paris Correspondents of our daily newspapers have already made the name of this play familiar to the English public, as well as its social purpose; but the play itself, as usual in such cases, has been withheld from publication till it had been for some time on the stage. Although M. Emile Augier is an accomplished versifier, he has preferred in this work, as in many others, the more faithful medium of prose. The dialogue is contrived with great skill, so as to convey the story gradually to the reader, just as much of it being told as he requires to know at each stage of its progress; and no one who has been accustomed to the highly developed state of dramatic art in modern French writing of this class can fail to appreciate the extreme ability and ingenuity with which the author of this work has managed the action of his characters in view of the final effect upon the audience. The purpose of the play, as our readers are probably aware already, is to persuade the French people of the desirableness of a great social change, the institution of divorce. The influence of the Church of Rome, so long as France was really *la fille aînée de l'église*, effectually prevented the establishment of a system which is contrary to her doctrine about marriage. If Henry V. had ascended the throne immediately after the fall of M. Thiers, it is probable that this play would never have appeared. The foundation of the Republic has encouraged innovators of all kinds to suggest their remedies for the evils of the time; so M. Augier offers his suggestion in his own way as a playwright. In France the playwright has more influence than any one else who addresses the cultivated public, and we are almost afraid to think how many sermons will be required to neutralize the effect of *Madame Caverlet*.

The argument embodied in the play is that, in the present state of French law, a woman who is cruelly ill treated by her husband has no chance of establishing a safe kind of domestic happiness in another connexion, and that France is particularly ill provided in the legislation affecting marriage. In the present state of the law the woman easily becomes the victim, and has no redress but separation, which does not give her anything like absolute independence. M. Augier has contrived the plot of his play so as to bring before an audience in a striking manner the hardships which a woman may have to undergo in the present state of things, and he lets us understand that in his opinion the establishment of divorce would be her best protection. Just as M. Gambetta wishes the French Republic to borrow from England her liberty of the press and of political meetings, M. Augier wishes to borrow our Divorce Court. We have no doubt that, if our Divorce Court could cross the Channel and *fonctionner* at Paris for a month or two every year, there would be plenty of applicants for its services. The difficulty in France is the religious one. It is quite possible that a Republican majority in the Assembly may be willing to establish civil divorce before many years are over, and so give to a divorced woman who has married again all the protection of the law; but the Church of Rome never changes except to assert her principles more loudly and uncompromisingly than ever. She will therefore neither marry a woman who has been divorced, nor acknowledge her second marriage as anything but a state of open

order to bring about the condition of things which M. Augier and many other Frenchmen desire, there must be two conflicts with the Church; the first, a legislative battle, which will probably be won in the Chamber of Deputies, and possibly in a future Senate,

[*] *Madame Caverlet.* Pièce en quatre actes, en prose. Par Emile Augier, de l'Académie Française. Paris: Lévy. 1876.

and so disposed of in a week's debating; the other a social war which will never come to an end so long as the Church of Rome exists.

The story of Mme. Caverlet is as follows:—She is separated from her husband, and is living, when the story opens, with another man whose name is Caverlet. Their residence is by the side of the Lake of Geneva, near Lausanne, and the first scene is one of peace and felicity near the lake, with Mont Blanc in the distance. Henriette, who is Mme. Caverlet, and her two children, Fanny and Henri, are together on the terrace, sitting out of doors in the usual Continental fashion, when a Swiss friend of theirs, called Bargé, comes to call upon them. The first thing to be noted is that Henri asks M. Bargé how a foreigner can get naturalized in Switzerland. Henri complains that he has no country. Bargé answers, "But are you not an Englishman?" This opens the play completely, for the answer to this question involves the truth or falsehood of a received story of his mother's divorce. The story is, according to Mme. Caverlet herself, that she is the divorced wife of an English gentleman, Sir Edward Merson, and that her two children, Fanny and Henri, were born during the time of her married life with Sir Edward in England. The conversation turns upon Sir Edward's conduct both towards his children and his wife, a subject which might have been avoided had not the question about naturalization led to it suddenly, as one thing so often leads to another:—

Fanny. Et Sir Edward Merson ne fera pas de difficultés, je suppose. Il ne s'intéresse pas assez à nous.

Henriette. Fanny! ne parle pas ainsi de ton père.

Fanny. Il s'intéresse à nous! Il t'a donné de ses nouvelles? il t'a demandé des nôtres? tu sais où il est?

Henriette. Non. . . . mais ne l'accusons pas, ma fille. L'arrêt qui, en prononçant notre divorce, m'a adjugé les enfants, a blessé au cœur Sir Edward. Il est bon, mais il est orgueilleux.

M. Bargé rather indiscreetly observes a little further on:—

Voilà le point noir du divorce. . . . la situation morale qu'il crée aux enfants.

The young daughter perceives that this observation gives pain to her mother, and offers a word of consolation to heal the wound:—

Fanny. Ne te reproche rien, ma chérie. Tu nous as donné un second père.

Henriette. Oui, il est bien bon, et vous l'aimez bien, n'est-ce pas?

Fanny. Tendrement.

Henriette. Et toi, mon fils?

Henri. Il est mon meilleur ami. Je lui suis reconnaissant des soins paternels qu'il a eus de nous, et surtout du bonheur sans nuages qu'il t'a fait.

The real situation is this:—Henriette's first husband, Merson, was not an Englishman, but a Frenchman; consequently she is not a divorced wife re-married, but a separated wife who has formed a *liaison*. The man she lives with in Switzerland (Caverlet) is very kind to her, and has been so for many years. This question about her son Henri's naturalization is disquieting for her, because it cannot take place without a communication with his father. Another serious difficulty for her will be her daughter's marriage, because then it will be necessary to produce a certificate of birth with the real name of the father and the real nationality, after which her secret can no longer be kept. This difficult situation is brought about very rapidly in the development of the plot. Reynold, who is the son of M. Bargé, the *juge de paix*, declares to Henri his attachment for his sister Fanny. In the next scene Fanny comes in, and by Henri's indiscretion matters are brought to a point with such precipitation that Reynold declares his attachment to Fanny herself, and she avows in a prettily innocent way that she expected some such declaration, and is glad of it. When her mother knows this she is troubled and distressed at the idea that her true position will have to be revealed. Caverlet, with a masculine bluntness of perception, is happy to think that matters have turned out so well, for he counts upon Bargé's friendly feelings, and thinks that the difficulty they both dreaded may disappear:—

Caverlet. Dieu nous permet d'achever notre vie ensemble! Il envoie à Fanny le seul amour, le seul mariage qui ne nous forcera pas à nous séparer. Bargé nous connaît et nous aime assez pour ne pas reculer devant la révélation que nous avons à lui faire, pour comprendre et absoudre le malheur de notre situation. Il a pour vous une sorte de culte que notre confidence ne refroidira pas, j'en suis sûr. Il aime Fanny, il a pour son fils une adoration qui va jusqu'à la faiblesse, et Reynold n'est pas homme à se desister devant un préjugé.

Henriette does not hope so much even yet. "Vous me rendez *un peu* d'espoir" is all that she can say. On this, Bargé arrives in full dress like a man who is going to ask for a young lady's hand. Caverlet at once goes to the heart of the matter and explains the situation clearly. Bargé on hearing this changes his manner, but Caverlet goes on telling the story in its details, which are as follows:—At the age of twenty-five, already separated from her husband, Henriette was left without the means of existence, for her husband had spent nearly all her dowry, and did not even pay her the pension fixed by the decision of the Court. She went to Avranches to live with an old aunt, rich, avaricious, and devout, whose only heiress she was. At this time Henriette met with Caverlet on the coast of Brittany in a quiet village at that time unknown to tourists. The two could not help feeling strongly attracted to each other, but their friendship went no further, and on the day when they said farewell a letter was put into the lady's hands. The letter was from her aunt, and it forbade Henriette to return to her house "since she had a lover," or rather we ought to say it in French to convey the full meaning of the word—"puisqu' elle avait un amant."

Having thus nobody to care for in the world, and her good name being already lost by the malice of slanderous tongues, Henriette goes to live with Caverlet, who conceives the idea of the fiction about the divorce to explain the existence of the children. His first idea had been to say that Henriette was a widow, but this seemed objectionable to her from a sentiment that she had not the right to make her children orphans, and to "suppress" their father in their hearts. The idea of the imaginary divorce conciliated everything:—

Bargé. Le mari ne vous a jamais inquiétés?

Caverlet. La piste d'Henriette était perdue, et il n'avait pas intérêt à la retrouver, bien au contraire, puisque le seul lien qui lui restât était une pension à servir.

Bargé. Sucripant!

Caverlet. Pas positivement; c'est un viveur à qui manque absolument le sens moral.

Bargé. Ces gens-là vont quelquefois plus loin que les vrais méchants. Mais, s'il ne vous a pas donné signe de vie depuis quinze ans, il est peut-être mort?

Caverlet. Non. Il habite Paris, où il mène une vie de désordres et d'expédients. Nous avons de ses nouvelles par un vieux notaire, qui est le parrain d'Henriette et l'ami de sa tante.

This notary so contrives that the rich old aunt pardons Henriette, who may therefore now expect to inherit her fortune when she dies.

Bargé goes home without asking for the hand of the young lady for his son. Henriette sees clearly the full meaning of this, and says to Caverlet, "Ah! mon ami, c'est l'expiation qui commence."

The second act is very cleverly managed in one respect. The first scene is between Henri and Reynold, the two young friends being full of the most frank and cordial gaiety. Then comes the evil spirit of the piece, Merson, Henriette's husband. He arrives at Caverlet's house when Caverlet himself is absent, and his wife and daughter are both gone to Geneva to make preparations for a journey to Italy. Henri is at home, however, and Henri is the person whom his father wishes to see. The secret reason for Merson's arrival is that he knows of the death of the old aunt at Avranches, and has set off at once for Lausanne to *réintégrer le domicile conjugal*—of course, from the most interested motives:—

Merson, seul. Elle part pour l'Italie, donc elle n'a pas encore de nouvelles d'Avranches. . . . J'arrive à temps. Dans huit jours, madame ma femme aura hérité de sa tante, mais elle aura réintégré le domicile conjugal, si je ne suis pas un maladroit, et il n'y aura plus à s'en dédire. . . . . hélas!—Je me fais l'effet d'un veuf qui convole avec sa défunte! Hoffmann n'a rien inventé de plus fantastique. O mes créanciers! dressez-moi un autel. Assurons-nous d'abord un auxiliaire dans la personne de mon fils. Lui seul peut décider sa mère à me suivre. Si prévenu qu'il soit contre moi, il me bénira comme un sauveur quand il connaîtra la véritable situation. Le tout est de la lui révéler sans en avoir l'air.

Amongst the clever bits of invention is the meeting between Merson and Bargé's son, Reynold, whom he takes for his own son, and receives most tenderly, folding him in his arms:—

Merson. Le voici, . . . (Avec émotion) Mon fils! (Il le serre dans ses bras.)

Reynold, stupéfait. Qu'est-ce que c'est que ça?

Merson. Henri!

On this the real Henri enters. Merson finds out his mistake, and laughs at it and at himself:—"Allons, bon! pour une fois que je m'attendrais je joue de malheur!" Then comes one of the strong scenes of the piece. Merson asks Henri, not for his filial respect, but for his friendship. This leads to a revelation of Merson's nationality, and Henri sees that his mother is not married to Caverlet. Merson takes advantage of his emotion, and offers to take Henriette back again as his wife. Henri is quite persuaded of Merson's good intentions, and thinks that he has a "noble cœur sous cette légèreté apparente." Then there is rather a pretty scene between the brother and sister—the latter, of course, according to well-bred French ideas, not being at all admitted into the confidences of her elders about the conjugal situation of her mother. As Fanny is going out of the room, she is met by Caverlet in the doorway, and he gives her a kiss on the forehead. On this Henri, who is in a state of intense, though suppressed, excitement, bursts out at once, and forbids Caverlet to touch her with his lips:—

Henri. Je vous défends de toucher de vos lèvres le front de cette enfant.

Caverlet. Tu me défends? . . . Qu'est ce que cela signifie?

Henri. Cela signifie que depuis quinze ans je crois vivre dans l'honneur et que je vis dans l'opprobre, que je sais tout, et que je vous hais autant que je vous ai aimé.

The sudden revulsion of feeling against Caverlet is one of the few things in the play which seem excessive. It may be doubted whether a young man in Henri's situation, who had always from infancy felt the strongest affection and gratitude for his mother's companion in life, would hate him quite so suddenly and intensely as this on learning that there had been no divorce. We should have supposed that, on arriving at the full knowledge of the situation, Henri would have been amazed, shocked, saddened, but not violently hostile, and that he would have waited at least till Caverlet had time to say whatever he might have to say. Caverlet gives a terrible picture of Merson's conduct after his marriage. At last Henri is shaken and does not know what to think. It is decided that, when Merson comes back, all future arrangements are to be made entirely in accordance with Henriette's wishes. Henri finishes the second act with an apology—"Monsieur Caverlet, j'ai été dur et ingrat envers vous. Je vous en demande pardon."

We cannot say that we like the scene between Bargé, the Sw *juge de paix*, and his son Reynold, in the third act, when

father offers 20,000 francs to his son that he may go to Paris and become immoral, which he has not been as yet in the quiet healthy life he has been leading at Lausanne. The father thinks that this will be the best way of making him forget Fanny. It is a pity that there should be this blemish in the piece, for it is utterly unnecessary to the development of the plot, and Bargé is intended to be a decent sort of fellow, who forgets himself on the present occasion in his extreme anxiety to avoid an alliance with a family in which there has been a scandal. The next scene is between Merson, Bargé, and Reynold, and here Merson manages to convey the impression that he is a generous character with the most elevated intentions. Then comes the inevitable tête-à-tête between Merson and Henriette. Here, of course, the excitement increases, and we have a situation. Merson asks Henriette to go back to Paris and live in his house:—

HENRIETTE, amèrement. Voulez-vous me prouver, Monsieur, que vous nous avez fait à moi et à mes enfants une position impossible? Car c'est bien vous qui nous l'avez faite; vous ne songez pas à le nier, je suppose.

MERSON. J'y songe si peu, Madame, je me sens si bien responsable du passé et de l'avenir que je viens vous offrir la seule réparation efficace, qui est de reprendre votre place de mère de famille à mon foyer.

HENRIETTE. Rentrer chez vous! moi!

In this dialogue Merson, being a cynic, has perfect command over himself and a considerable superiority to his wife, especially when he threatens to take the children away with him. In scene vii. a letter arrives from Paris announcing the old aunt's death, and thus accounting for Merson's arrival. This makes a wide difference in his son's opinion of him; so Henri refuses to leave his mother, and Fanny appreciates Merson's paternal sentiments at their true value. Reynold says he has "une affaire à Lausanne." Henri says, "Il a une idée. . . . Il va tenter quelque chose . . . tentative sans espoir qu'il n'ose même pas me confier!" In the third scene Bargé comes and tells Henriette that Merson has come to him, as *juge de paix*, to require a statement of the position in which Henriette is living, with a view to legal proceedings the object of which will be to recover the guardianship of his children. Henriette and Caverlet want to give Merson money, being sure that money is his only object; but Bargé justly observes that the only consequence of this will be the gradual giving away of their whole fortune; so he recommends a separation between Henriette and Caverlet, that the law may not find evidence against them. Then comes a touching scene between Henriette and Caverlet just before their separation, and a painful one between Henriette and Fanny, in which Henriette represents her case as that of a friend of hers:—

FANNY. Elle n'avait donc pas d'enfants?

HENRIETTE. Elle en avait.

FANNY. Elle ne les aimait donc pas?

Much skill is employed by the author in so managing matters that from first to last the *jeune fille* never understands the real situation of her mother. The *dénouement* of the piece is brought about by naturalization, which was the subject of the first conversation. Reynold's "idea" turned out to be perfectly practicable. He went to Lausanne, saw Merson, and proposed that he should first get himself naturalized as a Swiss, and then get divorced from his wife, in return for which he should receive a property in Switzerland worth 20,000*l.*, offered by his wife to facilitate his Swiss citizenship. After this, of course Henriette can marry Caverlet, and matters will really be as they were in the habit of representing them. We protest against the last word in the piece as too ridiculous. Bargé, the *juge de paix*, is made to turn up his eye to heaven and exclaim "Daniel!" on which the curtain drops. Now this "Daniel" is nothing but the name of his grandson that is to be. We wonder if old Swiss justices of the peace look forward with such tender sentiment to the arrival of unborn grandchildren. Perhaps they do.

It is unnecessary for us to expatiate much upon the moral of M. Augier's play. He has not thought it necessary to expatiate upon it himself, but has left his audience to draw their own conclusions. We cannot enter here into the grave social and moral question which he deals with in a method that is striking rather than satisfactory. The dramatist, like the novelist, is privileged to create his own facts, to marshal them in his own way, and to base the broadest conclusions on the narrow foundation of individual cases, and those fictitious ones. We are in a world where impression and feeling are made to do duty for argument, and sober reasoning is of course at a disadvantage. We will only say that if divorce is ever legally established in France, it will be the heaviest blow dealt against the authority of the Church in that country since the establishment of civil marriage and the registration of births instead of baptisms.

NORTH'S CHURCH BELLS OF LEICESTERSHIRE.*

[illegible] almost of paradox in saying that antiquaries are constantly engaged in finding out new subjects. Yet nothing can be more true than that many branches of investigation yet remain untouched, though so much archæological inquiry has been abroad of late. People who collect have constantly to complain of the dearth of scientific manuals. Enamels are but half classified; ivories have been well described within the past few years; but lace, notwithstanding all that has been written and printed, is still an occult subject. And a yet more important class of ancient remains has never had a manual of any kind devoted to it; for, though we have books innumerable on mediæval painting and sculpture, no handy and cheap volume has yet been produced by which the dates and countries of mediæval manuscripts may be identified. There is nothing easier than for an expert to distinguish a book of hours from a missal, to say where it was written, and whether it is of English, French, or Italian production. But we still require a book which will make such distinctions known to any one who cares to know, and to explain for us the grounds of an insight which often appears almost miraculous. Among these new old subjects bells have lately claimed a great share of attention. Mr. Ellacomb, and now Mr. North, have done good work for the guidance of future seekers. And it must be conceded that bells, standing, as they do, on the confines of so many different kinds of art and science, deserve more notice than they have hitherto received, in England at least. Whether the history of bells is regarded as musical, scientific, or artistic, it is clearly interesting to many people. The sound of church bells is dear to most of us. Chimes take their place with carols and Christmas greetings and many other pleasant things. The tolling of the death-knell, the merry marriage peal, the mere striking of the church clock, are all bound up with our most warmly cherished recollections. And how many, too, are the popular superstitions connected with them—often perhaps pointing to some fact now forgotten. When the bells of St. Stephen's Chapel, at Westminster, were rung, "men fabuled," says Stow, "that their ringing soured all the drink in the town." The great Dunstan was a bell-founder, and bells have always been believed to frighten away evil spirits. Our first impressions of a Continental tour are strangely mixed up with the jangle of numberless little bells, as at Antwerp and Bruges. And bell-ringing connects itself with some of the most remarkable scenes in our national history; as, for instance, when the Archbishop with a dozen prelates and other great men were present in Westminster Hall to hear the violator of Magna Charta denounced "with bell, book, and candle." The Legate was always received with bell-ringing, and when Archbishop Boniface made his unfortunate visit to St. Bartholomew's in 1250, it was amid the ringing of bells. There is a pretty story, too, in Matthew Paris of the death of Robert Grosseteste; how, the night he died, Fulk Basset, Bishop of London, heard a chime ringing in the sky, and said it was a sign of the departure of his brother bishop to the heavenly regions; and how, the same night, two friars journeying toward Buckden, where Bishop Robert died, heard a melodious peal, and one bell of exceeding sweetness clear above the rest, with a distinct and regular note. The oldest-dated bell, however, now remaining in England is that of St. Chad's church, at Claughton, in Lancashire, and the year marked on it, 1296, is more than forty years after Grosseteste's death; and the first Englishman known to have followed bell-founding as a trade was Roger de Ropeforde, who made four bells for Exeter Cathedral in 1284.

Portable bells seem to have been very early in use in Ireland; and Pope Sabinian, in the early part of the seventh century, is said to have first employed them in the regular services of the Church. But perhaps the earliest recorded use of a bell in England is that mentioned by Bæda, who says the nuns of Whitby were called to prayer by a bell as early as the year 680. Egberht about the middle of the eighth century ordered bells to be sounded in every church. But there are very few of any great antiquity in England. They were very apt to get broken, and almost all those now in our church towers have been recast at some period not very remote. Of the thousand bells of Leicestershire "only one hundred and forty-seven can be said, with any certainty, to have been cast before the year 1600," and the largest number of old bells in any one church is only three. The oldest-dated bell in the same county, Mr. North further informs us, is that of Dalby on the Wolds, which bears an inscription stating the name of the donor, Andrew Nouel, or Noel, "esquier," and the date 1584. It is of his brother Henry Noel that Queen Elizabeth is said to have made one of her many puns upon names. Commenting on his extravagance, she wrote what Burton, in his *Leicestershire*, calls "this Enigmatical Distich":—

The word of denial and letter of fifty
Is that gentleman's name that will never be thrifty.

Mr. North has been perhaps too sparing of anecdotes, but they are often useful, as in this case; for many people who find a difficulty in remembering exact dates may be able to connect Elizabeth with the age of the bell at old Dalby. But of quaint inscriptions there is no lack; some of them are very amusing, as when on one bell is found—

I'm given here to make a peal
And sound the praise of Mary Neale;

or when one of the five at Silsby records that it was cast "In honorem Gulielmi Cumbriæ Ducis rebelles Scotos victricibus armis debellantis, 1745." The same event is commemorated at Fareham, in Hampshire, where one of the bells bears six lines, the last two of which are loyal enough:—

Then may great George our King live for ever to see
The rebellious crew hang on the gallows tree.

A parallel to these bell-verses must be sought for at the antipodes; for in 1869 a peal of bells was cast for a tower at Ballarat in Australia "to perpetuate the joy of its inhabitants at the failure of the murderous attempt on the life of H.R.H. the Duke of Edinburgh while on his memorable visit to these shores." The loyal

* *The Church Bells of Leicestershire.* By Thomas North. Leicester: Clarke. 1876.

colonists who hung these bells were evidently of the same opinion as the people of Fareham, and were by no means content with hanging the poor lunatic who assaulted the Prince. One of the most common inscriptions is of course "God save the King," and one of the eight bells in the "very tuneable ring" at Hinckley was made in 1782 "by the voluntary contributions of the friends of Church and King." But there is greater simplicity in one modern inscription, whether it be meant for rhyme or not:—

The parson and his people gave me,
1873.

If this is a rhyme, it is clearly borrowed from the concluding couplet of Thackeray's famous poem; but there is a sad want of poetry in the inscriptions generally, and the best line in Leicestershire is probably this—it adorns a bell dated 1613 at Croxton Kerrial:—

Mererem mestis letis sic leta sonabo.

This is better the verse on the old tenor bell at Barkeston, which ran:—

y roaring sound doth notice give
t men cannot here always live.

Thirty-two of the Leicestershire bells have inscriptions in honour of the Blessed Virgin and some bear the names of Michael and Gabriel the Archels. Some, again, have only the letters of the alphabet by way of inscription; but a majority of those mentioned in Mr. North's volume have the name either of the founder or the donor. The bell-founders of Leicester were at one time famous, and the fourth bell at St. Mary's, Oxford, bears the legend:—

Be yt knowne to all that doth me see,
That Newcombe of Leicester made me. 1612.

This is the bell, so dear to campanologists, which has a madrigal tune written round it. The air is said by Dr. Rimbault to be somewhat in the style of a well-known glee, "In going to my lonesome bed," and has been fully written out and published. The Newcombes began to cast at Leicester when Thomas Newcombe married Margary, the widow of an older bell-founder, William Millars, who had died in 1506; and the family, of which Mr. North gives a tabular pedigree, continued to carry on the business for upwards of a hundred years. The Newcombes constantly used the same form of inscription; but it is not improved upon by a Worcester founder:—

John Martin of Worcester he made wee,
Be it known to all that do wee see.

Next in interest to the inscriptions are perhaps the local bell-ringing customs. Thus we read of the Ludlams, that, being the oldest family in Oadley, they always claimed the distinction of having a chime at their funerals. The vicar in 1844, on the occasion of the burial of Richard Ludlam, an old Peninsular veteran, had the bad taste to forbid the continuance of this quaint custom. A great many bells and benefactions for ringers are connected, in reality or by tradition, with the accident, so common formerly, of losing a track at night or in a fog. But Mr. North disposes of such a story in the case of Sibstone, where a field was said to have been left for the purpose of ensuring the ringing of curfew, because the field has formed part of the glebe from very early times. A former inhabitant of Ashby-de-la-Zouch lost the path and wandered about nearly all night, and, when nearly exhausted, found his way home on hearing the clock of St. Helen's church. To mark his gratitude he conveyed to the trustees of the grammar school certain property, since called the Day-Bell houses, upon trust, among other things, that they should cause one of the church bells to be rung for a quarter of an hour at four o'clock every morning. In 1807 the inhabitants of Ashby, to whom the early bell had become an annoyance, obtained leave from the Court of Chancery to discontinue it. Special bells mark the age, sex, and condition of the deceased at funerals in some places; and Mr. North mentions Barwell in particular, where at the funeral of a wealthy maiden lady "the corpse was welcomed to the church with a merry peal." At Sapcote a lady who died so recently as 1847 was received at the church door with a chime. Mr. North records many local usages of the kind, especially as to the knell, "the passing bell," the so-called curfew, the harvest and gleaners' bells, and as to the number of strokes to indicate the sex of the departing or departed. At Frisley or elsewhere these tolls are called tellers, and it has been suggested that the old saying—

Nine tailors make a man—

is a corruption of a saying arising from the thrice three tolls, or tellers, as the close of the passing bell:—

Nine tellers mark a man.

Mr. North has avoided typographical errors, for the most part, and his book is prettily got up and well illustrated. There is a capital index, but the chapter on "Latin Inscriptions" would be the better for a few references to the other lists. Mr. North's heraldry is doubtful in one or two places. We read at page 70, for example, of "a greyhound erased," but we are not disposed to find fault with what will prove to many readers an unexpectedly pleasant book. A specimen of Mr. North's anecdotal style must conclude our notice:—

I heard the following tradition in Melton some years ago:—When the Prince Regent visited Belvoir Castle early in the present century, he stayed at Melton to see the horses belonging to the many sportsmen then in that neighborhood. The ringers hearing of his approach rang out a full peal, and by the time made their application to the Prince for a gratuity. This, however, not being forthcoming, they began to hint, then to say [illegible] very opposite of a gentleman, and the townspeople being generally of the same opinion, they saluted him upon his appearance in the streets with a strong volley of snowballs, no doubt very much to his astonishment. We have dictated to several of our monarchs and beheaded one, but this is the only instance probably in which a monarch, or his representative, has been dealt with in such a style as that in which the Bellringers of Melton, according to this tradition, expressed their opinion to the Prince Regent.

PARLEY MAGNA.*

WITH much to recommend it, clever, good-humoured, and at times vivid enough in description, *Parley Magna* is nevertheless a disappointing book; falling short of the promise held out in the beginning, and, though interspersed with clear and vigorous passages, for the most part presenting a confused and broken kind of surface—the kind of thing which painters call "spotty"—which materially lessons its interest and damages its power. Between the two extremes of telling a story in that dragging, monotonous manner of narration which almost wholly dispenses with set scenes or characteristic conversations, and this of jerky, fragmentary, and often quite unimportant scenes and dialogues, there is the true dramatic method of mingled action and narrative, where all the circumstances are interdependent, and to take one away would mutilate and render less intelligible the rest. This is the true scientific method, that of growth and evolution, of things coming about by foregone causes, and not as if they sprang out of nothing, like ghosts or "materialized spirits." But this is just the method for which we so often look in vain, having to content ourselves with sometimes three volumes full of dreary narrative, with scarcely any break of dialogue or action; sometimes with nine hundred pages filled with talk that has no kind of value in the delineation of the characters, and with incidents that do not help in the development of the plot.

It is rare to find among our English novelists any signs of the study usually held necessary for the satisfactory practice of an art, any sign that they rank their craft as an art at all. As, indeed, how should it be with people who think that nothing is wanted for the production of a readable romance but a sufficient stock of paper, pens, and ink, and that every one who can write intelligibly at all can turn you out a three-volume novel with no more trouble than if it were a few letters to intimate friends or the daily jottings in a diary? English more or less offending against grammar and elegance; characters either copied so closely from life as to be "fogged" and distorted, or else which are mere dummies taken from the stock properties of romance-writers, with nothing of nature or reality in them; circumstances presumably illustrative of ordinary life, but like nothing that is transacted by sane folks within the four seas, or, if according to human nature and society as we know them, then of so trivial a character as to sink below the dignity of art altogether—these are the materials out of which a novel is to be constructed; and we can scarcely wonder if the result is at times less than satisfactory. If a man were to attempt to paint a picture before he had learnt drawing, composition, or perspective, he would be set down as a presumptuous bungler, whose first lesson must be taken in gauging his own ignorance; but a novel, which is as much a work of art as a picture, and demands the same kind of technical study, is dashed off anyhow, and "inexperience" is pleaded as an excuse for failure.

Mr. Whitaker is one who might, we think, do infinitely better than he does if he would but study his art as an art, and not content himself with merely writing out a certain number of pages into which he puts his story with more hope than certainty that it will "come right." Parts of *Parley Magna* do come right, very right indeed; but other parts are pitched in anyhow, and are all wrong. A little more care would have made the rough places smooth and the crooked ways straight, and we should have had a really good book all through, instead of, as now, one full of pleasant promise, of partial fulfilment, of disappointing indications, of evident cleverness, and of as evident haste and negligence. The story deals, as did *Lucy Fitzadam*, with the disagreeable circumstance of illegitimacy; only that here we have two cases—one real, the other believed to be real, but proving in the end false. It is the hero, Arthur Amory, who, having lived through all his childhood and youth under the stigma of illegitimacy, is proved at the end to be the lawful son of his mother, and the inheritor of his old grandfather's title and estates. The real bequeather of shame is pretty Poppie Shaw, the rustic beauty of whom Arthur makes his first ideal, and who, saved by his own high principles from himself, falls into less scrupulous hands, and is disgraced by the young squire, Roy, Arthur's dearest friend. It was a difficult subject to manage with skill and delicacy, but we are bound to say that Mr. Whitaker has quite succeeded in his treatment of it. There is not a coarse suggestion, not a doubtful passage, in the whole of the love-making between these two young people, and the exposition of Arthur's feelings is very natural and well sustained. All the same we think that subjects of this dangerous kind are best left alone, and that skill had better be shown in other ways than in touching pitch yet keeping the fingers clean. Beside this love affair, there is also one with a young lady, Agnes Willoughby, who, engaged to Roy, loves Arthur. But Arthur does not love her in the beginning, though he comes to a better perception of things later, and recognizes in her his true mate. Of plot properly so called—of plot more than this—there is really almost none; for *Parley Magna* is a book

* *Parley Magna*. A Novel. By Edward Whitaker, Author of "Lucy Fitzadam." 2 vols. London: Smith, Elder, & Co. 1876.

made up of disjointed episodes, not of connected events whence is evolved the story. Thus there is the initial episode of Poppie Shaw and Arthur's conduct to her, how drawn towards her with the young man's natural but dangerous love, now standing aloof in terror at the probable end of all this pleasant peril; then there is his accident, which sobers him for the time; afterwards the unpleasant episode of Poppie with Mr. Roy. Then come Arthur's acknowledgment of Agnes Willoughby's sweetness and womanly charm, their engagement, and the discovery that he is not a nameless waif and stray born into the world by the left hand, but the rightful owner of noble estates and the rightful bearer of a stainless name; and then the cruel end of all, when Arthur is burnt to death in his endeavour to save others. By which terrible catastrophe Agnes is left widowed and bereaved, though Poppie marries her true-love, one John Highworth, who overlooks the fact of her slip with the Squire, and whose love both purifies the past and exalts the future.

Thus it will be seen that the plot proper of *Parley Magna* is very slight, and is moreover unduly overweighted by the tragedy at the end. Certain stories are destined from the beginning for tragedy. It would have been absurd to make Rebecca in *Ivanhoe* end in conventional white muslin and satisfaction; Lucy Ashton could never have been turned into a contented, homely housewife; and Fenella as a methodical bookkeeper of the period would have been as absurd a presentation as Nydia endowed with sight and deprived of song. But in *Parley Magna* there are no such fated lines of original construction by which the catastrophe must needs be tragic. On the contrary, the book is written throughout in a light and jocund manner; and when we come to the gloomy ending, it falls upon us with a certain shock, a certain sense of inharmoniousness and exaggeration, as if a butterfly were broken on the wheel. It would have been so easy to make everything end happily. The stain on Arthur's birth had been removed, and he had come into his inheritance not only of fortune but of a fair name; his heart had found its rest, and poor Agnes Willoughby had been so far rewarded for her long years of waiting and fidelity; Poppie Shaw had been rehabilitated in the esteem of her fellow-villagers, and had been "assoiled" by the faithful love of her true swain; there is not a hitch anywhere; when Mr. Whitaker barbarously destroys all this fair fabric and burns poor Arthur in the fire, for no purpose whatsoever that we can see. We think that we have the right to object to such an unnecessary act of cremation, and that the author has committed a mistake in the harmony of his art. The natural ending of such a book as *Parley Magna* was undoubtedly a cheerful one; and to make it of a highly tragic kind was an undeniable mistake.

There are certain scenes and characters in this book which are of excellent quality. When Arthur, having led poor little Poppie to that point of self-betrayal which places a woman at a man's feet, suddenly pulls up and says that it is for her happiness they must part, and the girl breaks down into quivering self-pity and childish sorrow for the loss of her young gentleman lover; when Arthur confides his trouble to Roy, and Roy, balancing between his cynical amusement at such unusual purity of mind and his honest admiration of so much nobleness and strength, allows the latter feeling to have the upper hand, and so strengthens Arthur's better resolves—in both of these scenes are real power, real observation, and a deeper and truer sense of human nature than is often found in novels. In the character of Miss Jauncey, too, we have the same bold, yet subtle, touch. Strong and clear-sighted, loving and shrewd, she wins the reader's admiration and deserves it; and her conduct to Arthur all through is singularly well told. We may infer that just a slight sense of womanhood mingles with her liking for "that generous, imaginative, chivalrous boy, Arthur Amory"; more especially as she is careful to close her soliloquy with the words:—"But my liking shall continue to take the shape it has always taken—that of a constant and helpful friendship towards him." Coming, as these words do, immediately after her self-communing, when she reasons upon her appearance thus:—

> "Might I not, however, even now be accepted by some in a kind of imperial light? May not the figure still be held commanding? [Here the good lady drew herself up.] May not 'a noble woman, nobly planned' perhaps yet be the impression produced on certain minds? Why, then, should I completely abandon ——"
>
> "Pooh!" exclaimed Miss Jauncey loudly, suddenly retreating from the position in which vanity—still sometimes heard in her mental councils—had placed her. "Let truth be told. I am old and plain; or at least [another look in the mirror at this point, the hand-glass being raised that the effect of the profile might be caught]—at least, not strictly handsome"—

and ending with "a tear," we see no other explanation of her feelings than the "feminine gratification" of regretting that she was not young and beautiful, for the sake of the chivalrous boy whom she loved so well, and guarded from all possible danger with so much zeal. Yet, if we praise certain isolated scenes and characters on the one hand, we must condemn as fatiguing and stupid all the village life and Mrs. Titt on the other. All, however, can live up to their highest powers if they only resolve to do so; and we believe that Mr. Whitaker might, if he were so minded, write a really good novel, smart, telling, and equal, instead of giving us only parts of a good novel, alternating with sterile tracts impossible to be commended.

MINOR NOTICES.

WE are glad to think that Dr. Westland Marston's collected edition of his dramatic and poetical works* appears at a moment when there is some chance of its being appreciated. It is satisfactory to notice the healthy taste for the poetical drama which has sprung up in recent years. The success which has attended the various Shakspearian performances is due to this cause quite as much as to any special histrionic power which may have been displayed in them; and, for the same reason, audiences have significantly welcomed any attempt on the part of contemporary writers to rise above the dull level of mere mechanical contrivance. The popularity of such a play as *All for Her*, with an unprepossessing hero and an ill-constructed plot, is a remarkable illustration of the favour with which any honest effort to be imaginative is regarded by the educated public. Mr. Gilbert's fairy pieces are works of very moderate elevation in their way, but their poetical flavour—though only a flavour—makes them acceptable. It is difficult to say what *Queen Mary* may prove to be on the stage, but it is at least a promising sign that a manager exists who thinks it worth while to produce it. It is strange, indeed, that managers generally should fail to see the advantage of cultivating a class of drama which would not only raise the character of the stage, but give it a firmer hold on the support of intelligent audiences. Nothing can be more forced and artificial, or more commonplace in idea, than the ordinary run of pieces, such as those of Mr. Byron, which at present occupy the stage. They give one the impression that they are written by some call-boy or prompter who knows by heart all the old stock incidents and witticisms, and by a mere turn of the hand throws them into a slightly different combination, just as a child does with the bits of glass in a kaleidoscope. It is a relief to turn from this arid and mechanical stuff to the fresh, genuine sentiment and intellectual range of Dr. Marston's plays; and every one capable of appreciating the higher order of dramatic literature must regret that some at least of these charming works are not to be seen in the sphere for which they were intended. The writer shows that he can be grave or gay, but there is usually a touch of noble motive or emotion even in his lighter pieces; while in those of a more solemn cast he rises to a high range of human feeling. Dr. Marston's earliest work was *The Patrician's Daughter*, which was produced at Drury Lane in 1842, and had the good fortune to be interpreted by a company which included Miss Helen Faucit, Mr. Macready, and Mr. Phelps. Political feeling ran rather high at that time, and the play was applauded or condemned from different points of view. The story is that of Mordaunt, a young man of humble birth, who has by his genius risen to importance in public life, and who is courted on this account by an aristocratic statesman, the Earl of Lynterne. Mordaunt falls in love with the Earl's daughter, Mabel, and, tempted by her apparent encouragement, and worked upon by the Earl's sister, who wishes to nip the contemplated marriage in the bud, he abruptly proposes, and is refused by Mabel, who is really in love with him, but has been led to believe that the motive of his suit is solely personal ambition. Mordaunt is deeply wounded by this repulse, flings himself more ardently than ever into politics, and acquires such authority that he is able to compel the Earl to give him the hand of Mabel in return for his support. This he does in ignorance of Mabel's love for him, and in order to punish the haughty treatment he was formerly subjected to by rejecting her on the day fixed for the marriage. Ultimately the misunderstanding is explained, but the poor girl pines and dies. There are some fine touches in the play, and we can readily imagine that in the hands of Macready and Miss Faucit it was very effective. But we cannot say that it seems to us one of Dr. Marston's happiest efforts. After all, Mordaunt's conduct is extremely unheroic, and sympathy is naturally against him. It is amusing to find that this play, which was intended, as the author tells us, to exhibit the conflict between the pride of Aristocracy and Democracy, was regarded by some as an effusion of Radicalism, and by others as a vindication of Tory principles. *Strathmore*, a tragedy, in which Mr. and Mrs. Charles Kean appeared in 1849, is much more to our taste. It is a vigorous, concentrated piece, full of eloquence and feeling, and with distinctly marked characters. The scene is laid in Scotland during the war of the Covenanters, and the plot turns on the conflict between love and duty through which Strathmore has to pass. *Life for Life* contains some strong dramatic situations, but strikes one in reading as rather stagey, though this might be less obvious in a theatre. *A Life's Ransom*, in three acts, is a genuine romance, in the best sense of the word; and *Anne Blake*, which is in five acts, though it might possibly be reduced to three, is full of spirit and character, and would, if well acted, be certain to have a good run. Another play, in a single act, which we like very much, and which seems to be of a kind much wanted on the English stage, is *A Hard Struggle*. The lighter comedies are perhaps better designed for acting than reading. The continuous epigram which is effective on the stage is apt to pall in a book, and the artifices of construction are also more apparent. On the whole, however, these volumes are pleasant reading, and in this way Dr. Marston may be sure of a good audience. It must, however, strike any person

* *The Dramatic and Poetical Works of Westland Marston*. 2 vols. Chatto & Windus.

of discrimination as a melancholy proof of the vulgar obtuseness of managers that such pieces are excluded from the common theatrical *répertoire*. It should be added that the collection also comprises some miscellaneous poems of a superior kind.

Mr. J. F. Campbell's *Circular Notes** is in some respects a clever, and in others a very unsatisfactory book. Starting westwards on July 6, 1874, he spent the succeeding twelve months in travelling round the world. He is evidently a shrewd, observant person; he had good opportunities of seeing what was to be seen; and, if he had cared to take the trouble, might no doubt have written a very interesting work. But then he is apparently too great a person in his own estimation to stoop to such drudgery. While he was travelling he wrote hasty letters to his friends at home, and other jottings, which, with certain excisions, are now reproduced. Scrappy notes, however, which are good enough for one's indulgent relatives, are not the sort of thing which ought to be put before the public in a book. If, as Mr. Campbell hints, it was too much of a bore for him to write a book, he should have let it alone; but if he made up his mind to publish his experiences, he was bound to take the trouble to throw them into a readable and connected form. So much crude, slipshod literature is nowadays published, that it is necessary to make a protest in a case of this kind. Mr. Campbell is evidently more anxious to air his own whims and affectations than to supply his readers with useful information, and more than half the book is filled with trivial observations which might well have been spared. He carefully records how much he weighed from time to time, when he had a dinner to his liking, and other details as to his health and spirits. The mischief is that one has to wade through pages of small gossip in order to pick up here and there a grain of sense. Another of Mr. Campbell's literary vices is a love of slang. In the lowest depths of American verbiage there is perhaps hardly any phrase more idiotic than that of "some pumpkins"; yet Mr. Campbell, who, as an educated Scotchman, might be expected to have a sense of rational language, frequently uses it, and other expressions equally vulgar and foolish. He thinks it funny to call himself a "globe-trotter," his letters "Circular Notes," a Negro "an Africaryan," the Japanese "Japs," and the United States "Yankeedoodledom." When he makes a familiar quotation he nearly always misquotes it. It is quite possible that, as we are assured, this sort of thing "amused the writer and his friends," but other people have a right to expect something better. At the end of September he had got to San Francisco, and writes triumphantly, "I have travelled a good deal more than 9,000 miles since July 6th, greatly to my own satisfaction, comfort, and personal advantage"; but it cannot be said that he has much to tell which is of any advantage to his readers. The best part of the book, and almost the only part worth reading, is that which relates to Japan, where circumstances obliged him to travel comparatively slowly, and he had leisure to look about him. He speaks very highly of the Japanese as quick, intelligent, and good-natured, and much superior in everything except size to the Chinese. "As for the people," he says, "they seem to be the most polite, civil, good-humoured, well-washed, clean critters I ever fell in with. I have not seen one hurt a creature. I have not heard a cross word spoken since I came to Japan. I hardly hear a child cry." And again:—"Fun is the expression of the genius of the people. They are always laughing, and always apt to take a joke or make one." The Japanese are also very hard workers. Men, and even women and children, haul heavy loads on carts. They will go five miles an hour carrying or pulling a great weight; indeed Mr. Campbell's men drew him along in a jinrikisha, or sort of cab, at eight miles an hour, in spells of twenty miles. Their pay is about a penny a mile. Japanese food is not bad, though bread is scarcely to be had. Rice is to be had everywhere, with shell-fish and eggs, and vegetables of many sorts, oranges and persimmons, and cakes made of beans, and many curious viands. Tea can also be got when wanted, and *sake*, a light wine made from rice. The writer attributes great importance to the revolution in which the Daimios were overthrown, but perhaps scarcely makes sufficient allowance for changes previously in progress. "The great interest in Japan," he says, "is to see a whole people changed within ten years; they have changed their habits and their clothes; they have railroads, gas, telegraphs, and steamers, an army and navy; and national debts, paper money, and wideawake hats. Ten years ago they cut down strangers and put them in cages." Mr. Campbell was at first very much startled and disturbed by the Japanese habit of bathing naked in public places, but got used to it. In some places there is an open shed over a pool of steaming hot water, in which naked men, women, and children disport themselves freely, and couples, like Adam and Eve, walk quietly along the street on pattens under a paper umbrella; and this exposure takes place even in the coldest weather. Mr. Campbell gives some account of the popular literature of Japan, and also of the drama. In one play which he saw, a Daimio pounced upon a carpenter who had betrayed him in some way, kicked and beat him, and then crucified him on the stage. "There he stood on his cross, with spears thrust through him, and streams of blood pouring out of him, till the Daimio solemnly stuck a sword into his throat. Then much more blood ran down the man's naked breast, he gaped and gasped and died, and the act ended." After many more acts the ghost came and vanished, and the wicked Daimio drew his sword and stuck it into his own bowels, dying like a gentleman. The writer does not explain the stage-machinery by which all this was done. In all the big towns bookshops and print-shops abound, and new sets of prints, chiefly caricatures, are continually coming out. Mr. Campbell's verdict on the Chinese is that they are "rogues, dirty dogs, and disagreeable"; "everything is sham, and costs a dollar." Mr. Campbell all through the book makes a great fuss about his drawings, but the samples given are very indifferent.

The collected edition of Lord Houghton's poems * contains much that will probably be new to many readers. His first poems were published in 1840, and his "Palm Leaves" in 1844; but he is, we imagine, chiefly known at the present day by some of his shorter pieces, such as "The Men of Old," and "The beating of my own heart." The latter, written on a moonlight drive, was thought unworthy of print by the author and others; but ten years later a traveller heard it parodied in a chorus of slaves in the cotton-fields of Western America. There can be no doubt that, on the whole, this collection will tend to inspire respect for Lord Houghton's muse; but it may be doubted whether it was wise to swell it with so much matter which is now rather out of date. In the preface the author confesses that he has often thought he would like to review his own poems as he has done those of others, "conscious that distance of time and change of temperament would render him perfectly impartial"; but he contents himself with suggesting that "whatever hold they may have taken on their time is owing to their sincerity of thought and simplicity of expression." We think that this criticism is just, and that these are certainly the characteristics of Lord Houghton's best work; but this remark does not apply to the whole of the collection. Various pieces have been admitted which, as the writer himself remarks, are due to "the lyrical faculty of early years," and are "acceptable only to certain casual moods and temperaments"; while others of little import are included because he has "often derived gratification from the revival of the events of his time in the memory." We are afraid that a good many of the pieces in the second volume fall within this category if impartially judged. It is easy to conceive the sentimental fondness of the writer for such pieces as "Good Intentions," "Love and Nature," or "The Voice of the People," but they hardly merit reproduction at this distance of time. The first volume, which contains "The Memorials of Travels in Greece and Italy," "Palm Leaves," "Eastern Thoughts," and "Other Scenes," displays the poet in his highest efforts. The versification is mellow and dignified, and both the language and ideas give an impression of delicate taste, breadth of culture, and sympathetic feeling. Lord Houghton modestly observes that he has found a familiarity with these pieces among those who have trodden the same ground and felt the same associations which otherwise he had no hope to attain; and this will be readily understood by those who read them. They leave no doubt that, if Lord Houghton is not one of the great poets, he possesses genuine poetical instinct and imagination.

Murray's *Handbook to Russia*†, of which Mr. T. Michell, late of the British Embassy at St. Petersburg, is the editor, now appears in a third edition, which may be regarded as almost a new work. In order to adapt it to the changes and improvements in the mode of travelling, it has been to a great extent rewritten and enlarged. The Caucasus and Finland are now fully dealt with; and the highly competent and accomplished editor gives the results of his personal observation and study during a long residence in Russia. This handbook, in short, is not a mere dry guide, but an interesting picture of the country and people, and does for Russia what Mr. Ford, in another famous handbook of the series, did for Spain. Mr. Michell gives a good historical notice, an alphabet and vocabulary, a sketch of the national literature, and ample and minute directions as to travelling. The account of a Russian dinner is worth looking up on its own account, and there is also a useful chapter on sport. There are now, it seems, some three thousand British residents in St. Petersburg and its vicinity.

The author of that delightful bit of fun, *Alice's Adventures*, has just produced another specimen of his peculiar humour. The *Hunting of the Snark* ‡ is shorter and slighter than his former efforts in this way, and it is perhaps doubtful whether a form of nonsense which depends in a great measure on being surprising can be kept up successfully when its novelty has passed away. The reader is then too well prepared for the absurdities which await him, and their effect is consequently weakened. Nevertheless there is in this case a fascination in the familiar matter-of-fact way in which the most ridiculous and incoherent things are strung together which it is difficult to resist. The story is in verse, and describes an expedition of various lunatics, conducted by a mad bellman, in search of a mysterious object, of doubtful place in natural history, called the Snark, which, it appears, is sometimes a Boojum, and when the latter is encountered dreadful things happen. It would be unfair to disclose the secret of the five unmistakable marks by which one may recognize the "warranted genuine Snark," but we may say that they afford materials for endless speculation as to what it is. There is a touching passage descriptive of the difficulties of navigation which irresistibly recalls some recent incidents in real life. The bowsprit, it seems, "got mixed up with the rudder sometimes," and

‡ *The Hunting of the Snark. an Agony in Eight Fits.* By Lewis Carroll. With Illustrations by Henry Holiday. Macmillan.

crew by such orders as "Steer to starboard, but keep her head larboard." It may be mentioned that in the end the Snark does turn out to be a Boojum, but readers had better go to the work itself to learn the details of the catastrophe. The illustrations display that strange want of any sense of fun which distinguishes most comic draughtsmen in these days.

Dr. Abbott's edition of Bacon's Essays * contains, not only the carefully revised text, but a long introduction and notes, which give a complete account of Bacon's life and system of philosophy. There are chapters on him as a philosopher, theologian, politician, and moralist. The editor, while acknowledging his great obligations to Mr. Spedding for materials, differs from that writer in some respects in his interpretation of Bacon's character. Without ignoring his faults, Dr. Abbott recognizes beneath them a child-like hopefulness and simplicity, rendering him happily blind to difficulties, as well as, unhappily, to inconvenient moral distinctions; a vast, serene, yet pitying philanthropy, and a high, unselfish purpose, left for a time, but never utterly deserted; so that the heart is drawn towards him as not only great, but, in the main, good. The notes are abundant and acute, and are especially serviceable in bringing together references to the same subject from different parts of Bacon's writings.

Mr. J. Pierce and Mr. W. T. Pierce have compiled a valuable and entertaining volume of English chess problems, consisting partly of a selection from the best problems by English composers, living and lately deceased, and partly of a set of new ones, specially composed for this work.† The editors in their preface give a brief sketch of the progress of the art of composing chess problems, in which they show that problems were originally little else than ingenious end-games; but a more subtle and scientific style of composition has gradually been developed, in which "extreme elegance and accurate construction" are blended with "grace and beauty of conception." They also offer some judicious hints on problem construction which deserve the attention of tiros. They point out that the great charm of a problem is that it should be thoroughly artistic, and brought out by simple and natural play. Hence, though it is good to give Black as great a defensive power as possible (as long as the unity of the idea is not obscured), it is a mistake to aim at giving him a stronger force than White. The employment of the least force suitable for the purpose of the movement is in fact the golden rule, by adhering to which a clumsy crowding together of pieces, unnatural and impossible positions, and other faults may be avoided. At the same time, this principle of economy of force is not inconsistent with giving Black a varied and powerful defence. As regards strategy, the writers show their appreciation of the more romantic aspects of chess by observing that, besides the mere artifice employed, there "is a nameless something, an exquisite balancing of force against force, a manifestation of skill and tact in concealing the sacrifice, or the reserve of energy concentrated by some apparently aimless *coup*, which constitute the beauty and strength of a position." Accordingly they advise a beginner to avoid positions in which an idea is evolved by successive checks, because these, whatever may be their ingenuity, and however numerous the variations, are comparatively easy, and belong to a lower order of composition. Again, it is wrong to make the main idea consist in a series of sacrifices. "The finest conceptions are those where, by some move or set of moves difficult to see, either through their subtlety or the manifold resources in defence, a store of energy is laid up which breaks out at last and ensures defeat."

Mr. Blyth's *Dictionary of Hygiène and Public Health* ‡ is a useful contribution to sanitary literature. At first the author intended only to give an adaptation of Professor Tardieu's work, but as he went on he found it necessary to incorporate additional information, and his Dictionary is therefore to a great extent of an independent and original character. It gives a survey, not only of modern sanitary science, including chemistry, engineering, the dietetic value of foods, and the detection of adulteration, but of the law dealing with such matters.

Mr. Barry's work on Railway Appliances§, though, we presume, chiefly intended for engineering students, contains much to interest other readers. He gives a general account of the details of railway construction, rolling stock, and working; and also points out various matters which seem to require improvement. For instance, the friction of the wheels on the rails is at present very destructive to the latter, and it is suggested that an effort should be made to reduce the weight on the driving wheels as much as possible. The chapters on signalling and on the block system are especially interesting. It appears that a tell-tale arrangement has been devised for recording automatically the events of the day in signal-boxes as a check upon the signalmen. A paper revolving on a time cylinder, driven by the clock of the signal-box, is so connected, electrically or mechanically, with the block system instruments, the speaking instruments, the point and signal levers, and by a treadle with the trains passing the signal-box, that every movement of signals and of trains is recorded on the paper cylinder at the exact time when it happens. A fresh paper can be placed on the cylinder every morning, and in this way the irregularities both of signalmen and engine-drivers may be detected, and those conflicts of evidence which invariably occur in inquiries into railway accidents prevented. Mr. Barry is strongly in favour of the block system, which, though liable to mismanagement by human fallibility, is not more so than other systems to which it is superior in other respects. The great object to be arrived at, he says, is to simplify the signalman's work, to arrange that every signal between two signalmen shall be checked in order to ensure its correctness, and to facilitate the transmission of signals between the signalmen and the engine-drivers. On the subject of breaks, the writer mentions that with the Westinghouse automatic continuous break, and under favourable circumstances, a train of thirteen carriages, travelling at the rate of fifty-two miles an hour, can be brought to rest on a level line, with the rails dry, in a distance of 913 feet, and in 19 seconds. He adds that up to the present time the power available to arrest a train has been altogether disproportioned to the necessities of railway travelling, and to the forces at work in a train at full speed; and that probably none of the breaks have yet reached the limit of rate of retardation possible or practicable. At least it is clear that the amount of retarding force which may be applied to a train without injury to its inmates has hitherto been much underestimated.

A new edition of Fenn's well-known work on English and Foreign Funds *, with an appendix by Mr. Nash, bringing down the facts to the early part of the present year, has just been issued. It is a valuable compendium of financial information, and as such must be indispensable to all who engage in such speculations. Some idea of the prevalence of borrowing may be gathered from the fact that during the two years since the latest edition of this work was published, sixty-six new Government and City Loans have been brought out. Although there has since 1862 been a decrease in our home debt, the debts of the colonies have greatly increased, and so have those of Egypt, Turkey, Italy, and Spain, which were then comparatively small debtors. France, too, has added 500,000,000*l.* to her debt. Altogether, as Mr. Nash calculates, the world's debt has increased by nearly 2,000,000,000*l.* in the course of the past ten years.

We have here two more volumes of Mr. Gustave Masson's excellent series of annotated selections from French literature †—one containing Regnard's *Le Joueur* and *Le Grondeur* of Brueys and Palaprat, and the other extracts from the memoirs of De Retz, Saint-Simon, Montpensier, and Mme. de Motteville, with some specimens of the rhymed gazettes of the period. The biographical notices prefixed are brief, but thorough, and the notes are all to the point. Even a fair French scholar might profit by some of Mr. Masson's criticisms and explanations.

Among other publications of the Clarendon Press Series are extracts from Addison, with an introduction and notes by Mr. T. Arnold ‡, and a second edition of *Typical Selections from the Best English Writers* §, with notices by Dean Stanley, the Rector of Lincoln, Professor Goldwin Smith, and others.

Mr. Gill ‖ has reprinted a series of lectures on various systems of education which have been tried in this country, from the first teaching of English in the grammar schools to the Act of 1870. It gives in a compact form a very clear and intelligent account of the different systems of education, and even those to whom it reveals nothing new will find it useful for reference.

A Voice from the Sea ¶ is a sensational picture of the perils to which seamen are exposed by wicked shipowners who send out rotten ships. It is dedicated to, and contains a preface by, Mr. Plimsoll, who apparently is equally ready to support his views by fiction or by facts.

Mr. Coghlan, Judge and Sessions Judge of Jumna, has prepared an epitome of some Hindoo law cases ** as a guide to the law reports and to the standard text-books. Apart from its professional value, it presents a curious picture of Hindoo customs and ideas on various subjects, such as marriage, family ties, &c.

Wharton's perennial Law Lexicon †† has just been adapted to the new condition of the law brought about by the Judicature Act. The task of revision has been ably performed by Mr. Shiress Will.

Dr. Poore's text-book ‡‡, dealing with the use of electricity in medicine and surgery, is, as he tells us in his preface, written from the point of view of a physician who has access to many therapeutic agents, and is expected to use his judgment in the selection

‖ *Systems of Education.* By John Gill. Longmans, Green, & Co.

¶ *A Voice from the Sea; or, the Wreck of the Eglantine.* By the Author of "Margery's Christmas-Box." Hodder & Stoughton.

** *An Epitome of some Hindu Law Cases.* By W. M. Coghlan. Stevens & Haynes.

†† *Wharton's Law-Lexicon: a Dictionary of Jurisprudence.* Revised and enlarged. Edited by J. Shiress Will. Sixth Edition. Stevens & Sons.

‡‡ *A Text-book of Electricity in Medicine and Surgery.* For the use of Students and Practitioners. By George Vivian Poore, M.D. Smith, Elder & Co.

of a remedy for any particular case. He takes care to point out that, while the judicious employment of electricity is often of the greatest service, its abuse is fraught with mischief and danger. Dr. Poore has observed at the Royal Infirmary for Children and Women the utility of galvanism in cases of infantile or essential palsy, not so much in restoring the power of individual muscles as in improving the general nutrition of the limb. The headings of the chapters, such as Electricity as a Stimulant, as an Anodyne and Sedative, as a Caustic, as a Cautery, indicate the range of the author's observations. He also explains the methods of using electricity; and there are useful chapters on the treatment of aneurism by galvano-puncture, and on what are called "fatigue-diseases."

Dr. Youmans has rewritten and revised his *Class-Book of Chemistry** so as to adapt it to the new system of chemical doctrine, which, however, he is cautiously disposed to regard as at present somewhat transitional. The author addresses himself not so much to special students as to the class of readers who wish to obtain a general knowledge of the subject, but have not the opportunity to work it out in detail.

To the series of short treatises on British manufacturing industries†, edited by Mr. Bevan, three new volumes have been added, treating of metallic mining and collieries, textile fabrics, acids, alkalies, oils, &c., by competent writers, such as Professor Warington Smyth, Professor Hull, and others. The object of the series is to bring into view the remarkable development and present position of the more important industries.

Nuttall's Spelling-Bee Guide ‡ is a selection of hard words from the dictionary of that name, intended as an aid to spelling-bees, which these publishers confidently describe as "an endless source of amusement and instruction." They must at least help to promote the sale of dictionaries.

Mr. McBean has been for some years pondering on the subject of direct railway communication with India §, and has come to the conclusion that the British nation ought to construct, at its own cost, a line from Scutari to Kurrachee, which might be connected with the Continental system at Constantinople either by a tunnel under the Bosphorus or by steamers capable of conveying an entire train across the Straits. He undertakes to show that for an expenditure of £1,000,000*l.* Bombay might be brought within eight days of London, and Cairo within four days, and urges that ultimately the line ought to be extended to China. Every one will admit that "a highway from London to Pekin, over which trains can travel forty miles an hour throughout in safety," would be "a grand consummation in the march of railway progress"; but it may be thought that Mr. McBean would be more likely to promote the enterprise by dealing with the practical difficulties which surround it than by enlarging, as he does, on the advantages of the railway when completed which are indeed obvious enough.

The useful shilling lists of members of the House of Commons ‖, peers, baronets, and knights, edited by Mr. Walford, have undergone their annual revision.

Mr. W. M. Kuhlow has prepared eight coloured charts ¶ showing the wrecks, casualties, and collisions which have taken place on the British coasts during the period from 1864 to 1874, with the causes which led to them. In this way one can see at a glance the burden of the ships, the number of hands employed, the parts of the coast where the disasters happened, the force and direction of the wind, and so on. At the present moment, when this subject is exciting so much interest, these charts are especially valuable.

Messrs. Marcus Ward & Co. have produced a number of cheap atlases **, from sixpence upwards. They are printed in colours, and are very distinct and agreeable to the eye. The Portable Atlas is of a handy size. The same house has also issued a new and improved edition of Mr. Crane's *Mrs. Mundi*; and celebrated Easter, after the new fashion, by a shower of illuminated Cards.

The third part of Messrs. Audsley and Bowes's *Keramic Art of Japan* †† has just appeared. We have already (*Saturday Review*, January 29, 1876) spoken so fully of this admirable work that we need at present do no more than record its progress and renew the expression of our best wishes for its success.

* *A Class-Book of Chemistry on the basis of the New System.* By Edward L. Youmans, M.D. Re-written and revised. Henry S. King & Co.

† *British Manufacturing Industries.* Edited by G. Phillips Bevan. E. Stanford.

‡ *Nuttall's Spelling-Bee Guide.* F. Warne & Co.

§ *England, Palestine, Egypt, and India Connected by a Railway System; Popularly Explained.* By S. McBean. W. H. Allen & Co.

‖ *The Shilling House of Commons, Peerage, Baronetage, and Knightage.* Edited by E. Walford. Hardwicke & Bogue.

¶ *Graphe-Statistical Charts of Wrecks, Casualties, Collisions, and their Causes, on and near the coasts of Great Britain, from 1864 to 1874.* By W. M. Kuhlow. F. Bruckmann.

** *Marcus Ward's Atlases. Mrs. Mundi at Home.* Second Edition. M. Ward & Co.

†† *Keramic Art of Japan.* By G. A. Audsley and J. L. Bowes. H. Sotheran & Co.

Cruelty—A Methodist Pilgrim's Progress—The Manes of Tyburn—Skating Rinks—Fashion in Criticism—The Battle of the Wheels—Deceased Wife's Sister Again—The American "Dog"—*Measure for Measure* at the Haymarket.

Wyatt's Room of Queen Anne—Burnand and Cunn—Norman Macleod—Leaves from a Word Hunter's Note-Book—The Manchester Man—Kirkman's Philosophy without Assumptions—Memoir of Caroline Herschel—Heathcote's Reminiscences of Ken and Mere—The Red House by the River.

London: Published at 38 SOUTHAMPTON STREET, STRAND, W.C.

ADVERTISEMENTS.

THE SOCIETY of PAINTERS in WATER COLOURS.—The EIGHTY-SIXTH EXHIBITION will OPEN on Monday, April 24, 5 Pall Mall East. Admission 1s.
ALFRED D. FRIPP, *Secretary.*

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRETORIUM," with "Dream of Pilate's Wife," "The Night of the Crucifixion," "In Vinculis," "Soldiers of the Cross," "Christian Martyrs," "Gaming Table," &c.—DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission, 1s.

CHRISTIAN WILBERG'S WATER-COLOUR DRAWINGS and SKETCHES in OIL of Italian subjects, including "A View in Venice," the property of Her Majesty the Queen. EXHIBITION now OPEN at BURLINGTON GALLERY, 191 Piccadilly. Ten to Six. Admission, including Catalogue, 1s.

ARTISTS' GENERAL BENEVOLENT INSTITUTION, for the Relief of Distressed Artists, their Widows and Orphans.
The ANNIVERSARY DINNER will take place, in Willis's Rooms, on Saturday, May 13, at Six o'clock.
His Grace the Archbishop of YORK in the Chair.
Donations will be received and thankfully acknowledged by:
JOHN EVERETT MILLAIS, R.A., *Honorary Secretary.*
FREDERIC W. MAYNARD, *Secretary,* 24 Old Bond Street, W.
Dinner Tickets, including Wines, One Guinea.

ROYAL LITERARY FUND.—The EIGHTY-SEVENTH ANNIVERSARY DINNER of the Corporation will take place at Willis's Rooms, on Wednesday, May 3. The Earl of DERBY, President of the Corporation, in the Chair.
The Stewards will be announced in future advertisements.
10 John Street, Adelphi, W.C. OCTAVIAN BLEWITT, *Secretary.*

CHELTENHAM COLLEGE.—TWELVE SCHOLARSHIPS, Eight £40, Four £20. Election, Second Week in May.—Apply to the Secretary, the College, Cheltenham.

HIGHGATE SCHOOL.—ELECTION to FOUR SCHOLARSHIPS, £75, £50, £40, £40, in June.—Application to be made to the HEAD-MASTER, School House, Highgate, N.

UNIVERSITY COLLEGE, LONDON, SCHOOL.
Head-Master—H. WESTON EVE, M.A., late Fellow of Trinity College, Cambridge.
Vice-Master—E. R. HORTON, M.A., Fellow of St. Peter's College, Cambridge.
The SUMMER TERM, 1876, will begin, for New Pupils, on Tuesday, April 25, at 9 A.M.
The School is close to the Gower Street Station of the Metropolitan Railway, and only 5 or 6 minutes' walk from the Terminal of several other Railways.
Discipline is maintained without corporal punishment or "impositions."
Prospectuses, containing full information respecting the Courses of Instruction, given to the School, Fees, and other particulars, may be obtained at the Office of the College.
HARRY BROWN,
Assistant-Secretary to the Council.

MR LOWE AT RETFORD.

A DINNER given at Retford to a Liberal candidate who had fought a good fight and nearly attained success has afforded Mr. LOWE a welcome opportunity of making a general denunciation of the Ministry in his most vigorous and slashing style. He has some old scores to wipe off, and cannot have forgotten the days when he as a Minister was attacked with equal pungency, and the famous pink fly was revived or invented for his annoyance. Those who complain that politics are in these quiet times a poor milk-and-water sort of affair may read with comfort the thrilling periods of Mr. LOWE. When Mr. LOWE has got his war paint on there is no mistake about his whooping. It is his professed business to scalp Conservatives, and he does it to the very best of his ability. It is perfectly fair play. The abuse lavished by Mr. DISRAELI on the GLADSTONE Ministry rose to a height of prodigality and bitterness which Mr. LOWE has not as yet rivalled. Nor can it be said that sound wholesome abuse of a Ministry produces no effect. Mr. DISRAELI's attacks on his opponents contributed, as they keenly felt, to their downfall; and Mr. LOWE may hope that, if he pushes the Conservatives hard, he may send them a little way down the hill. Not that he wished to encourage his hearers with false hopes. The compact majority of the present Parliament is not likely to be broken up. It is no use, as Mr. LOWE plaintively remarked, arguing with them. Their critics may perhaps convince them, and Mr LOWE enjoys the triumph of thinking that he has often out-argued and occasionally convinced that portion of the opposite party which is capable of following trains of reasoning. But as to inducing a Conservative to vote as reason would bid him, that Mr. LOWE renounces as utterly hopeless. He also candidly owns that, even if the present Parliament were dissolved, there is no ground for supposing that the Liberals would gain any great accession of strength. The possible enthusiasts of Retford were thrown into a healthy state of discouragement by being reminded that—to say nothing of such natural dislike as the wisdom and energy of the GLADSTONE Government excited in the weak and jealous hearts of ordinary men—the Liberals have undergone a serious diminution of their numerical strength, which makes their prospect of attaining office at present very faint. They have, in short, got no further bribes to give their Irish allies; and the support of the Irish is not to be had on any other terms than those of pure bargaining. It is creditable to Mr. LOWE, and useful to the Liberal party, that he should have spoken quite clearly on this point. He will have nothing to do with purchasing Irish votes by concessions which he thinks contrary to public policy. He would rather be out of office for the rest of his life than gain power by a sham alliance with Home Rulers. It is indispensable to the Liberal party, if it wishes to regain the confidence of English electors, to be as decided on this head as Mr. LOWE. It ought to be the first axiom of the party that it will never accept the ignoble slavery of office in dependence on the huckstering support of impracticable Irishmen.

Mr. LOWE has been exceedingly fortunate in one thing. His enemies have delivered themselves into his hands. No Ministry on record ever made so long, serious, and unbroken a series of blunders as the present Ministry has crammed into six months. In many departments of administration it succeeds with a success beyond the average. If it does little in legislation, it came in to do little. The country wished for repose, and in domestic the Government has given it repose. But when the Cabinet comes to act as a Cabinet, or, in plain language, when the personal influence of Mr. DISRAELI tells, it seems to lose its head. It is always after something grand, and then slinks out of its grandeur in the humblest way. It exhibits a constant mixture of pomp and weakness. It wriggled out of its foolish Slave Circular by the feeble subterfuge of a Royal Commission. It spoilt its own success in purchasing the Canal shares by its management of Mr. CAVE's unfortunate mission. First it stated that the Report showed the indisputable solvency of the KHEDIVE. Then it suddenly burked the Report, and as suddenly restored it to life; and when the Report was published, it appeared that the KHEDIVE was insolvent unless England would assume a Protectorate over Egypt, and that England had no intention of doing anything of the kind. It is useless to recapitulate the long controversy about the Royal Titles Bill; but it must not be forgotten that it is only by dwelling on its ludicrousness that Englishmen can cover the indiscretion of Mr. DISRAELI's challenge to Russia. Mr. LOWE asserted publicly at Retford what has been freely rumoured for weeks in London, that in sanctioning the title of Empress Mr. DISRAELI only yielded to pressure which had been in vain brought to bear on two of his predecessors. It is quite unnecessary to bring the QUEEN's name or the QUEEN's wishes into the discussion. It is to the PREMIER, and to the PREMIER alone, that the nation has to look in such a matter; and it is not the QUEEN's fault if she has not a wise and statesmanlike counsellor at her side. But, whatever may be the truth as to the origin of the Bill which at any rate has the demerit of dividing the nation for the first time since the [illegible] accession on a question touching the Throne, it is unquestionable that the Ministry has a curious tendency to make itself pleasant to those whom it is agreeable to befriend. Mr. LOWE spoke strongly, but not at all too strongly, of the stifling of public inquiry into the disasters of the *Vanguard* and the *Mistletoe*. All the rules of the service were set aside, all the honourable traditions of the navy violated, in order that one or two worthy, amiable, and influential persons might be screened. It is true that Mr. LOWE was not always precisely fair. In an invective a politician cannot be expected to be always fair; and Mr. LOWE may have thought that, if he was not more unfair than Mr. DISRAELI used to be when out of office, his conscience might be easy. That the Agricultural Holdings Bill should be permissive, and that fresh exertions should be made to pay off the National Debt, were points which were settled by Parliament last year, and it is no good going back on them; and the jobs with which the Government is reproached—the creation of a place for Lord HAMPTON and the appointment of Sir SEYMOUR FITZGERALD—might perhaps be paralleled in the history of recent Ministries. Nor is it just to reproach the present Ministry with the whole growth of the national expenditure. More money had to be spent on the army and navy to make them efficient, and the ordinary civil expenditure must increase as the duties of Government become more onerous and complex. If, again, there were to be new funds applicable to the extinction of debt, they must be found somehow. What is new in the matter is that the burden of this increased effort to pay off the debt is made to fall exclusively on the payers of income-tax. It is not the nation, but the richer section of it, that is to have the glory of this patriotic act. No doubt this is a bribe to

the poorer part of the constituencies, and is a fresh step in a path of great danger. The letter in which Mr. GLADSTONE condemns this "dangerous and socialistic tendency" shows that on this point he and Mr. LOWE are prepared to act together. But the colleagues of Mr. GLADSTONE may remember, with modest shame, that it is not the present Cabinet that first started the idea of bribing the constituencies with projects regarding the Income-tax. The present Cabinet has, in fact, paid its predecessors the compliment of not only leaving their successes untouched, and adopting most of their principles, but also of copying many of their faults.

Mr. LOWE professed to speak as a prophet prophesying in vain. It was in vain that he rent his garments and covered his head with ashes; a doomed nation would go on all the same, contented with its Conservatives. Part of this language must be ascribed to the vexation of an able man who sees the years slipping away, and things managed badly before his impatient eyes which he thinks he could manage infinitely better. In some measure, too, as he had to read his hearers a lesson, he was right to read it forcibly; and it was highly judicious to point out that the Liberals greatly need practice in the arts of organization before they can rival their opponents, and that the necessity of their being henceforth independent of the Irish vote has seriously damaged their strength. But even if all allowances are made on these heads, it must be owned that Mr. LOWE overstated his case. However firmly established a Ministry may appear to be, it is not reasonable to suppose that it is really secure in these days if it loses all its credit. Ministries with a docile majority fall slowly, but their fall is sure, sooner or later, if they displease the nation. That the English nation will not be some day displeased by a mixture of pomposity and weakness in the conduct of its affairs seems very unlikely. This is only a general proposition. No one can pretend to say how or when the present Ministry will fall. But it is safe to say that no Government can go on blundering as the present Government has gone on blundering lately and keep long in office. Enthusiastic Liberals have, however, to take into account that it is by no means impossible that the Ministry may mend its ways. The Cabinet contains many men of high character and a high order of ability, and it ought not to be assumed that they will fail to learn wisdom in time. No doubt they have a great danger to face, for it is their chief who is the main source of their troubles, and a Cabinet distrustful of its chief can never be a very happy body. Mr. DISRAELI has long been accustomed to impose his will on his colleagues, and he will not easily subside into a position of equality. But his authority with the Cabinet may become a little less when it has become much less with the public. For the most part the Ministers do their work well, and it would be in many ways a misfortune if the country lost their services. But good services are not everything; and they cannot employ the Easter recess better than in pondering over the causes of the errors into which, as a body, they have been betrayed.

THE AMERICAN EXTRADITION DISPUTE.

A CONFLICT has arisen between the obligations of the Extradition Treaty with the United States and the distinct provisions of an Act of Parliament. The American Government has, on the application of the Governor of Massachusetts, required the extradition of one WINSLOW, who is charged with forgery. By the Treaty of 1842, which was duly ratified, it is provided that the two Governments shall respectively deliver up to justice all persons who, being charged with certain crimes, of which forgery is one, committed within the jurisdiction of either, shall seek an asylum or shall be found within the territories of the other. The international obligation is complete in itself, except that it must have been known to both contracting parties that the Executive Government could not perform its undertaking until it had acquired authority from the Legislature to apprehend and surrender accused persons. The English Act of 1870 which now regulates extradition contains the following enactment:—"A "fugitive criminal shall not be surrendered to a foreign "State unless provision is made by the law of that "State, or by arrangement, that the fugitive criminal "shall not, until he has been restored or had an "opportunity of returning to HER MAJESTY'S dominions, "be detained or tried in that foreign State for any "offence committed prior to his surrender other than the ex-"tradition crime proved by the facts on which the surrender "is granted." The English Government, while it is willing to surrender WINSLOW, insists that the American Government ought to make an arrangement by which the accused person shall be exempted from trial on any charge except that of forgery. The answer is, that the obligation of surrender under the Treaty is unconditional, and that the American Government can take no notice of impediments caused by municipal law. By another provision of the Act of 1870 the surrender of accused persons is prohibited when the offence charged is of a political character, or when the requisition appears to have been made for the purpose of punishing or trying him for a political offence. It might be contended that this exception also contravenes the provisions of the Treaty, and that the English Government is consequently not entitled to refuse the surrender of a person who, being notoriously a rebel, may also be charged with an ordinary crime. In this case, as in that of a person who may be charged with two felonies or misdemeanours, the obligation of the Treaty is complete; and yet both Governments would agree that extradition could not be granted. An admitted exception to any proposition proves that it is not universally true.

In a recent case in the United States Circuit Court of New York, LAWRENCE, a Custom House defaulter, who had been surrendered under the Extradition Treaty of 1842, was tried for forgery. His counsel contended, under a plea to the jurisdiction of the Court, that he could not be tried for any offence except that for which his extradition had been required. It appeared that the PRESIDENT had directed the ATTORNEY-GENERAL to give effect to the restrictions of the English Act; and the question for the Court was whether the prisoner was entitled to the benefit of the exception. The plea to the jurisdiction was overruled in an elaborate judgment, which seems to have been unimpeachably sound. The Court declared that its own authority could not be controlled by the action of the PRESIDENT, and that it was immaterial how a criminal had been brought within its jurisdiction. Even if the Court could have inquired into the circumstances of the extradition, it was held that an Act of Parliament passed long after the ratification of the Treaty could not affect the international duty of the English Government. It was perhaps unnecessary to notice the conflict between the treaty and the English law. In the absence of a legislative enactment to the contrary a competent Court in America, as in England, is bound to take cognizance of any crime committed within its jurisdiction. If the prisoner had been kidnapped in a foreign country and brought to New York by lawless violence, he would not the less have been liable to trial and punishment for any offence which he might have committed. The foreign State might have ground of remonstrance on account of any violation of its territorial rights, but the accused person could claim no immunity either for an ordinary or a political offence. There seems to have been an express agreement between the English and American Governments that LAWRENCE should not be tried for any crime except that on which the extradition was demanded. The PRESIDENT had apparently exceeded his power, and a criminal Court has nothing to do with international comity. It is not clearly explained why LAWRENCE was indicted for an offence different from that charged in the demand for extradition. Although the PRESIDENT could not control the proceedings of a Court, he could probably regulate the conduct of his own law officers. Perhaps a private prosecutor may have intervened without the consent of the ATTORNEY-GENERAL.

A special cause makes the Act of 1870 peculiarly inapplicable to a Treaty of Extradition with the United States. In the words of the Act, provision must be made by the law of the foreign State, or by arrangement, for the qualified immunity of the person whose extradition may be demanded; yet a law passed by Congress for the purpose would be entirely inoperative, and the Executive Government of the Union can make no arrangement of the kind. The Government of the United States has in ordinary cases no original criminal jurisdiction. An American criminal offends against the law, not of the Union, but of the State to which he immediately owes allegiance; yet no State can hold diplomatic intercourse with any foreign Power, nor can the English Government either take notice of a law of any State or make with a State an arrangement such as that which is contemplated by the Act. Neither the PRESIDENT

nor the Governor of Massachusetts has any power to supersede the jurisdiction of the Courts by any kind of agreement or arrangement. If the Legislature of Massachusetts had passed an Act in conformity with the provisions of the English statute, it would have obviated the difficulty which has arisen in the case of WINSLOW; but it would be difficult to induce thirty or forty States to adopt uniform legislation; and the laws of the States could be but indirectly and informally known to the English Government. If WINSLOW is once surrendered, he may be tried in Massachusetts for murder or burglary or any other crime which he may be supposed to have committed. The English Home Secretary has no discretion as to the surrender of criminals. Unless he can obtain the security required by the Act that the alleged offender shall only be tried for the crime specified in the demand of extradition, he must at all risks refuse to fulfil the obligations of the Treaty of 1842.

As the Treaty of Extradition has been in force for more than thirty years, and the Act of Parliament for six years, it would seem that one or both Governments must have been hitherto content to connive at some infringement either of the Treaty or of the law. The rights which arise from contracts of free trade in criminals may well admit of a liberal construction. Although it is desirable for the ends of justice that offenders should not ensure impunity by escaping into foreign countries, either community may, except in atrocious cases, be content to know that it has got rid of a bad character. If WINSLOW is guilty either of forgery or any other crime, he is not a desirable visitor to England. Continental States have often connived at the irregular apprehension within their domains of fugitive criminals by English policemen. In former times reciprocal courtesies of the same kind were sometimes practised in England; but it is now practically impossible to get rid of a foreign offender except by the regular process of extradition. The conflict of obligations under the Treaty and under the Act ought, as far as possible, to be prevented from recurring by some diplomatic or legislative action, or by a combination of both methods. The exception under the Act of 1870 of political offences must be maintained, especially as the policy of the United States entirely accords with that of England. No treaty would induce the American Government to surrender an Irish Fenian or a Parisian Communist; nor could it remonstrate against the maintenance of its own doctrine by the English Government. The prohibition by the Act of 1870 of the surrender of criminals who may be liable to prosecution for other offences seems to be unnecessary. Before any person is surrendered the magistrate who issues the warrant must be satisfied that there is evidence against him sufficient to have warranted his committal if the offence had been committed in England. If a foreigner is *primâ facie* guilty of one crime, it would seem that his claim to immunity is not enlarged by the accident of his having committed other offences. It would be an error to refuse to the American Government any reasonable concession in a matter in which the interests of both countries are identical.

ENGLAND AND INDIA.

THE English public is much indebted to Professor MONIER WILLIAMS for one of the most instructive and interesting communications as to India that have been published for a long time. Although it is only the impressions of a traveller who stayed but a short time that Mr. MONIER WILLIAMS has to give, yet his acquaintance with the languages of the country, and the definite purpose of uniting more closely Oxford with Oriental life and study which he had in view, enabled him to learn more and to see more than can be possible for the ordinary run even of very clever travellers. Like most travellers, however, he seems to have been possessed by an innocent wonder that he should be doing what many others might do, but do not do. If Englishmen want a warm, healthy winter climate, why, he asks, do they not go to India? If they want variety of scenery, India can give it them. If they would like to geologize, India has got specimens of all possible strata to offer them. If they prefer zoology, the ants alone deserve to be studied for months. There is some reason to think that Mr. WILLIAMS is only anticipating with the prevision of enthusiasm a not very remote future. India is now so quickly and so easily reached that it may very well become the fashion to winter there, and it would be greatly to the benefit both of England and India that such a fashion should arise. Mr. WILLIAMS does ample justice to the excellence of Indian administration; but he comments with much good sense on the highly official character of Indian officials, on the seclusion of Europeans, on the distance between the conquerors and the conquered. Centralization advances in India with alarming rapidity. Everything that regards the infinite variety of races, creeds, and customs over the vast surface of the country is supposed to be better understood at Calcutta than on the spot, and in the India Office than at Calcutta. It is, as our traveller remarks, so easy to telegraph, and so easy to suppose that the ideas of the Western man at one end of the wire are compatible with the circumstances of the Eastern man at the other. Some check on this might be exercised if there were in England a non-Indian public acquainted with India. At present there is really no check on a Secretary of State, except the presence in Parliament of two or three eminent Indian ex-officials and one ex-Governor-General. Before long Lord NORTHBROOK will arrive to reinforce Lord LAWRENCE, and everything Lord NORTHBROOK says in the House of Lords will be treated with the respect due to his impartiality, courage, and consistency. But Englishmen, as a rule, know very little of India; and although the direct action of Parliament in regard to India can seldom be desirable, yet the indirect action of a body of critics who formed their judgment on personal knowledge would be of value, not only as a check, but as a support to the Secretary of State. Such a body could not have a better opportunity of testing at once its weakness and its strength than under the rule of Lord SALISBURY, who combines a great contempt for critics with a great willingness to learn.

Mr. WILLIAMS has the highest possible opinion of the natives of India. In fact, his opinion is so high that it is impossible not to wish that he had had a longer time in which to form it. We can hardly believe that we have the honour to be the fellow-subjects of such a delightful set of people. "I have found," he says, "no people in Europe "more religious, none more patiently persevering in "common duties, none more docile and amenable to "authority, none more courteous or respectful towards age "and learning, none more dutiful to parents, none more in-"telligent." When we read in a subsequent part of his remarks a criticism on our humble attempts to convert and educate these people, it is impossible to resist a wish that they would in turn come to convert and educate us. We certainly do not appear to be very successful in our attempts to benefit them. On the difficult and complex subject of the relations of Christianity and Oriental religions Mr. WILLIAMS writes with a courage, good sense, and reverence that do him the greatest credit. Over the unhappy results of our well-meant efforts at giving a higher education to promising natives Mr. WILLIAMS laments in terms that deserve attentive study. What we really do is, in plain fact, to produce a host of shallow, discontented place-hunters. These prize specimens abandon their ancestral religion—which, however, if Mr. WILLIAMS is correct in his estimate of the religions of India, cannot be much loss to them—despise the callings of their fathers, and look upon knowledge as a mere stepping-stone to Government situations. At a place called Kurnoul, there were on a recent occasion 500 applicants for a municipal post worth only fifteen rupees a month, or a shilling a day. The 499 defeated competitors were, we may be sure, not only made unhappy by the loss of this magnificent appointment, but greatly irritated with the Government that tantalized them with delusive hopes of so dazzling a prize. Those who are unsuccessful, Mr. WILLIAMS writes, will not turn to manual labour, but remain discontented members of society and enemies of our Government, converting such education as they have received into an instrument to injure us by talking treason and writing seditious articles in native journals. This is not a pleasant spectacle for the intelligent English traveller to contemplate, and Mr. WILLIAMS evidently inclines to favour the opinion of those who think that, with some few rare exceptions, the scale of our educational efforts should be pitched more lowly and their area extended.

When tramps repair to a workhouse, the first thing that is done with them is to wash them from head to foot. This is very good for them. It makes them, for a few short hours, moderately clean; it subjects them to a

wholesome discipline; it starts them on the first stage in the ideal career through cleanliness to godliness. But the tramps do not at all like it. They would much rather be roaming about, following their own sweet will, and clothed in their familiar, pleasant shell of close-fitting dirt. When a traveller like Mr. WILLIAMS anxiously inquires how the natives of India really like our rule, he finds that they are very much of the same mind as the tramps. They own that we give them security, just administration, equal laws; but they much prefer the easy, unregenerate ways of native tyranny. The very superior natives, who have got so accustomed to our bathing them that they see all the real advantages of the process, are more satisfied. They have come to look on their interests as in the main identical with ours. In fact, as Mr. WILLIAMS remarks, they recognize the fact that, if we were swept away, they would be swept away too. But, if he is right, the native princes, however loyal they may be to us, have no real influence over their subjects. They do not infuse their new ideas into the stubborn minds of the population. Some respect and much fear are the foundations of our hold on India. Possibly we have ourselves increased unnecessarily the alienation of the natives from us. We may have flurried the timid, custom-ridden native mind by the eagerness of our haste to introduce improvements. Mr. WILLIAMS goes so far as to say that we have in some instances gone a whole century too fast, and that things have been done already which the lapse of a hundred years could alone make opportune. He also speaks with some pain and indignation of the airs of vexatious superiority with which the natives are treated by their masters. In this respect, however, the present generation of officials has, as is generally admitted, exhibited a marked improvement. Nor is it possible that a member of the conquering race, which is but a drop in the total ocean of the population, should be either safe or respected if he had not somewhat of the bearing of a conqueror. We come back to where we started, that nothing would do more good both to the natives and their rulers than the extension of intercourse with England. The English official would find a salutary check on such arrogance as the circumstances of his life may be apt to evoke in the society of his non-official countrymen fresh from the manners and traditions of home. And the native could not but be gratified by discovering that his race has the singular gifts and the varied virtues which impress travellers so strongly on their fresh arrival, if the example of Mr. MONIER WILLIAMS may be safely treated as a precedent.

SPANISH CONSTITUTION-MAKING.

NOT taking warning from numerous and recent failures, the Spanish Cortes are at present engaged in the unprofitable pastime of making another Constitution. In the last sittings before the Easter recess they indulged in a long debate on the proposal that the provisions relating to the Crown and the dynasty should be adopted without discussion. Some of the most eloquent theorists of the Cortes had the opportunity of explaining at length the reasons why the KING and his prerogative should or should not be considered as topics excluded from the competence of Parliament. At last an overwhelming majority adopted the proposal of the Ministers; and, as long as the Constitution lasts, or as long as it is observed, King ALFONSO may reign by indefeasible right, and retain all the customary attributes of royalty. It would perhaps have been more logical to withhold from the consideration of the Cortes the enactments to which they have now silently assented; but if the Spaniards can accustom themselves to regard the throne as inviolable, one condition of order and freedom will have been at last secured. Señor CASTELAR, the only Republican in the Cortes, took occasion formally to renounce some of the illusions which were practically dispelled during his short tenure of power. He admits that he is now convinced of the necessity of a strong Executive, of a standing army, and generally of a vigorous and efficient Government; but, like many proselytes, he clings to a nominal consistency by still adhering to the Republican faith. His speech will probably have alienated all his remaining adherents; for, with the exception of himself, there are no moderate Republicans in Spain. He had perhaps no wish to conciliate opponents who reasonably triumph in his conversion, notwithstanding the continuance of his protests against Monarchy. The PRIME MINISTER not unfairly ridiculed Señor CASTELAR'S novel regard for order and for authority, while he informed him that the Royalists were prepared to defend Conservative principles without asking aid from a repentant Republican. Other speakers in the debate expressed a theoretical preference for the Constitution of 1845 or of 1869, but eventually the prerogative clauses were adopted by a nearly unanimous vote. The other provisions of the Constitution will furnish abundant matter for Parliamentary eloquence. The Ministers will have no difficulty in ultimately passing into law the project which they prepared before the meeting of the Cortes. In the meantime it may be as well to provide the Assembly with harmless occupation.

The Constitution will have been the third within seven years. If it survives longer than the experiments of 1869 and of 1873, its good fortune will result, not from its intrinsic merits, but from the comparative stability of the Government. Señor CANOVAS DEL CASTILLO reasonably contended in the preliminary debate that a Constitution drawn up by irresponsible persons under the instructions of the Ministry was likely to be as good as if it had been framed by a Committee of the Cortes. If Spanish legislators have any regard for English precedents, they will approve of the practice by which important measures are framed and introduced by a responsible Government. The numerous Constitutions of modern Spain have generally been constructed on general principles, with the smallest possible regard to practical convenience or expediency. Projectors find it comparatively easy to declare that all men shall be equal before the law, or that they shall, as far as possible, distribute political power equally among themselves. The Constitution of 1869, which was framed by one of the few Cortes which have been fairly and freely elected, provided large securities for personal freedom; and the Legislature completed its work by prohibiting in any circumstances the abolition or suspension of legal safeguards. Even in case of insurrection, the provisions of the Constitution were to be sacred. Within a year or two the Carlists began the disturbances which ended in the civil war; and the Republicans from time to time organized petty insurrections in the more turbulent towns. The consequence was that the Government of the day suspended without opposition or remonstrances all the guarantees of liberty which had been sedulously provided in the Constitution. There has generally during the last half-century been one law in Spain for show and another for use. Neither the Government nor the subject has attached the smallest importance to the authority of constituent Assemblies. When the Ministers of King ALFONSO at last made up their minds to convoke a Cortes, nothing was said of conferring on the Legislature constituent powers. Any future revolutionist may plausibly contend that the present Cortes have exceeded the mandate of their electors. It is true that the abolition or maintenance of the Constitution will depend, not on any question of the right of the Cortes, but on the comparative strength of parties, or perhaps on the ascendency of some military leader. Any Constitution which is likely to be adopted will probably serve its purpose sufficiently as long as it is in force.

The religious or ecclesiastical question is much more important than any controversy which can arise on other parts of the Constitution. According to the latest telegraphic accounts, the Government has determined to maintain the ambiguous clause which purports to secure some degree of religious freedom. As the Catholic religion is declared to be the faith of the State, and as all public ceremonies of other sects are prohibited, it will be easy for an intolerant Government to persecute or to discourage nonconformity; but Rome, which is always logical in the science of reducing doctrines to absurdity by exaggeration, is not content with an enactment which implies the possibility of exercising common sense or justice. In one of his hysterical declamations the POPE condemns the proposed article of the Constitution as a violation not only of Catholic truth, but of the Concordat which he still affects to treat as valid. Señor CANOVAS DEL CASTILLO had so far furnished an excuse for the Papal pretensions that, to prevent the POPE from recognizing Don CARLOS, he thoughtlessly undertook to maintain Queen ISABELLA'S Concordat. Some months afterwards, when the rivalry of the Pretender had ceased to be formidable, after informing the NUNCIO that it was impossible to keep his promise, he went through a form of penance by

temporarily retiring from the Government, though he still influenced its policy. The POPE now speaks of the extinct Concordat as if its validity were indisputable; and he even condescends to appeal to the ladies of Madrid against backsliding statesmen. The PRIME MINISTER, as he has more than once been told, overdid the customary practice of packing the Cortes with his own partisans; for a section of the Moderate majority, as the most violent faction is called in Spanish political nomenclature, is disposed to countenance the extravagant demands of Rome. It might have been supposed that the POPE would have been contented to secure for the Church a position which it has ceased to hold in other Catholic countries; but, with the suicidal violence which habitually characterizes his policy, he makes concessions only a pretext for additional demands. Those who are more dispassionate and better informed believe that the legal prohibition of nonconformity is one of the few abuses to which modern Spaniards will refuse to submit. It would be interesting to learn the feelings with which Catholic dignitaries residing in schismatic countries regard the partial triumphs and the unlimited demands of the Holy See in Spain. The sympathy of Cardinal CULLEN or Cardinal MANNING for schemes of religious uniformity may perhaps be qualified by doubts whether it is wise to remind an unbelieving world that the POPE is fully as intolerant as in the most flourishing days of the Inquisition.

It may be presumed that the ecclesiastical arguments of the POPE and his agents are not seriously considered by Spanish statesmen. Señor CANOVAS DEL CASTILLO and his colleagues are in doubt, not whether the wrath of Heaven will be provoked by the celebration of Protestant services, but how far they can dispense with the support of the Church, and what is the extent of clerical influence among the rural population. The demonstrated folly of the Republicans in provoking the opposition of the priesthood has perhaps produced an excessive reaction in popular opinion. There is no reason, especially since the collapse of the Carlist armies, for paying unqualified deference to the clergy, who must in self-defence support a Government by which they are favoured and protected. The most ignorant parish priest must be aware that, if the present dynasty were overthrown, he could scarcely hope that another Government would be more friendly to his order. Except in some of the great towns, the Catholic clergy will not be offended by the vicinity of dissenting congregations, nor is it probable that Protestantism will at any time find favour with any but a small and intelligent minority of the middle classes. The nobility, a large portion of the peasantry, and the women of all ranks are inveterately orthodox; and the rest of the male population is, as in all other Catholic countries, indifferent to theological doctrines. The bulk of the clergy have no motive, beyond professional sympathy with their superiors, for desiring either the forcible suppression of heresy or the re-establishment of the Concordat. As long as they are ostentatiously courted by the Government, they will prefer extravagant demands; but it is not worth while to pay an exorbitant price for their political support. In some future Cortes the Progressists and the Republicans will probably be represented, and it is not for the interest of the present Government to provide them with a point of attack. It is not known whether the KING has yet formed any definite opinion on political or ecclesiastical questions. His early training is as likely to have produced repugnance to the doctrines of his mother as deference to the pretensions of the POPE.

FRANCE.

THE Easter holidays have produced a complete lull in French politics. Neither Chamber has been at the pains to give the public anything to think about during the recess. The Senate has more than rivalled the English House of Lords in its dignified repose. If the Second Chamber is the strength of the French Constitution, it is assuredly a strength which shows itself in sitting still. This inaction of the Senate is really remarkable, considering how much importance was attached by the Conservative party to its creation, and the number of experienced politicians who have seats in it. The explanation may perhaps be that the Conservatives are so disgusted at the composition of the Senate that they have ceased to interest themselves in its proceedings. In that case they will have given another proof of their inability to fight an uphill battle. If they expected to make the Senate an instrument for undoing the constitutional work of last year, they have certainly cause to be disappointed; but the complexion of the Second Chamber is decidedly more Conservative than that of the Chamber of Deputies, and it is undoubtedly their cue to make the most of this distinction. The temper of the French Right sometimes suggests a doubt whether at bottom they really believe in their own professions. So long as they think they see a prospect of bringing about a Restoration, their activity is unwearying. They preach that the fate of morality, of the family, of property, hangs in the balance; and they call upon the friends of order and religion to sink all minor differences in support of the Monarchy. When once this prospect has faded away, and it has become clear that, if morality, or the family, or property, is to be defended against attack, it must be by some other agency than a Restoration, it might be thought that the Right would practise what they have preached, and show themselves ready in their turn to sink minor differences in support of the most conservative kind of Republic. They do nothing of the kind; on the contrary, the Bonapartists themselves do not look upon the possible advent of anarchy with greater complacency. Religion and order are very well in their way, so long as the invocation of them serves the cause of Monarchy. But if the cause of Monarchy can be better served by a temporary triumph of irreligion and confusion, the alternative seems equally agreeable to the French Royalists. It is possible, however, that the inaction of the Senate may be due to another cause. The idea which its author entertained of a Second Chamber was probably that of a simple check upon the license of the First; and the Senators may plead that, until the Deputies have done something wrong, the time for setting them right cannot be said to have arrived. In that case the members of the Senate cannot be congratulated on their political insight. If the Senate is to be a really influential element in the new French Constitution, it must devise for itself a part which shall be something more than negative. A Chamber which has no traditions, either of dignity or usefulness, cannot too soon set itself to justifying its own existence. The five years that have passed away since the war have necessarily been years in which barren political discussions claimed far more than their share of the Legislature's thoughts. France must be very much ahead of other European countries if one result of this misuse of time has not been to deprive many questions possessing social importance of the attention which they might justly claim. If the Senate wishes to be accepted as a permanent factor in French legislation, it must show that it knows how to spend a Session usefully.

As yet it would almost seem that, if the Senate means to do nothing until the Chamber of Deputies provides it with something to undo, its inaction is likely to become permanent. The Deputies have hitherto been entirely occupied with determining who shall and who shall not have the honour of sitting among them. Very few disputed elections now remain to be fought over, and when these have been disposed of, the business of the Session will perhaps begin. A Session which does not open till after Easter is not likely to find time hang on its hands; and the Budget, the long-promised Municipal Reform Bill, and the modification of the law permitting the foundation of free Universities, will probably furnish sufficient occupation for the spring and summer. It is well, on the whole, that M. GAMBETTA'S energies should be so distinctly turned in the direction of finance. Whenever a Frenchman's hands are idle the particular form of mischief which is found for them is tinkering with the Constitution, and the less this subject is thought of between now and 1880 the more chance there is that, when 1880 comes, no serious changes will be effected. There is no question that French finance admits of amendment in several respects. The tremendous exigencies of the years immediately following the war, coupled with the disposition of M. THIERS to bring back Protection by a side wind, led to the raising of an unduly large proportion of the revenue by indirect taxation. The real revision of the French tariff is still to come. M. LÉON SAY is not opposed to an Income-tax in principle; and even the school of financiers who object to it as a permanent source of revenue will admit that it is an indispensable instrument during that provisional period in which large readjustments of the national burdens are being effected. The Assembly disliked an Income-tax very keenly, but then the Assembly accidentally represented a larger proportion than usual of

the classes on whom an Income-tax would mainly fall. The great Railway Companies seem to share with the Customs duties the place of first object of M. GAMBETTA'S financial detestation. An article in the *République Française* enumerates, as three of the principal objects which the Republican majority ought to propose to itself, the cessation of all further subventions, the rigid repayment of the advances which have been already made, and a careful revision of tariffs with a view of lessening the cost of transport.

The news that an International Exhibition is to be held in Paris in 1878 promises to irritate reactionary Conservatives beyond endurance. They have all along persuaded themselves that their lives and properties are their own only for the moment, and that so long as the Republic lasts any approach to political security is impossible. The public imagination is easily taken hold of by the spectacle of a long course of preparation for an event which is not to happen for two years; and though the blindness of the old world in the time of NOAH will no doubt be freely appealed to by the Royalists as an example of folly scarcely greater than that of the Republicans who suppose that France will be tranquil enough in 1878 to have any thoughts to spare for an Exhibition, the steady progress of the Exhibition buildings will probably make more impression than any discouraging predictions as to what the state of affairs will be by the time the buildings are finished. The Republic will at least have shown that it believes in itself; and in France the assurance that a Government has no fears for the future is a considerable source of strength. Certainly, if it could ever be possible to regard the opening of another huge bazaar as a source of satisfaction, it would be in the present instance. Paris has so long held an exceptional place among European capitals that her return to the old ways is a matter of congratulation, even if these ways are no better than those of international shopkeeping on a large scale. When the time arrives, a great deal of nonsense will doubtless be talked about the fresh career of victory upon which civilization is entering, and the religious, moral, and intellectual benefits to be derived from seeing in a "court" the ribbons and jewelry which in ordinary years are only to be seen in shop windows. But International Exhibitions have become a regular element of European trade, and, as a convenient means of comparing the products of different countries and showing the workmen of one nation what to imitate or what to avoid in the work of another nation, they have a useful place of their own. A vote of 120,000,000 francs is to be asked for from the Municipality next week in order to enable the PREFECT of the SEINE to put the city into a proper state of preparation. It is true that under the Empire Paris had abundant opportunities of learning the lesson that salvation does not come by public works; but the war, the Commune, and the period of political and financial exhaustion which followed upon those two events, have left a long tale of arrears to be made up before Paris will be abreast of other capitals in the work of municipal improvements. It is certainly expedient that the Republic should not show any distrust of its own ability to meet the reasonable wants of the capital as liberally as any former Government.

THE *EDINBURGH REVIEW* ON RAILWAY ECONOMICS.

THE *Edinburgh Review* has occasionally contained treatises on the economy of railways which have been rather fanciful than instructive, but the oddity of an article on Railway Profits and Losses in the current number of the *Review* has seldom been equalled. The writer intimates that he is himself an engineer, and that he has had experience in constructing railways; and his soundest suggestions relate to matters belonging to his own profession. He more than once expresses an opinion that railway managers ought to be subordinate to engineers, or rather that the management should be entrusted to engineers. The experiment has been tried often and on a large scale; but great engineers have managed railways successfully, not by reason of their technical knowledge, but because they have possessed administrative ability. They would themselves be the first to admit that other managers who have never belonged to the profession were in their own department fully their equals. A competent railway manager can easily master all the mechanical facts and formulas which affect the rapid and economical conduct of traffic. It might almost seem that the article in the *Edinburgh* was the first literary effort of the author. The first rules of composition must be unknown to a writer who begins an essay with the statement that heat is a mode of motion, and ends it with the conclusion that railways cannot afford to carry coals at ½*d.* per ton per mile. Want of literary skill may be readily excused in a statistical treatise, especially as the article is evidently written in perfect good faith; but, like many other railway theorists, the Reviewer wavers between two different or inconsistent objects. Sometimes he defends the interests of shareholders, which are, as he thinks, damaged by the facilities afforded to unremunerative traffic. More especially he protests against the practice of running passenger trains which are not full enough to return the largest proportion of profit. The extreme discomfort which is caused to passengers by the contrary system, as it prevails on the Continent, is never appreciated by stern railway economists. As far as the Reviewer's meaning can be ascertained, he would either suppress all railway traffic in minerals, or charge much higher rates; yet he elsewhere remarks that the competition by sea carriage from the coal-fields of Northumberland and Durham is the main protection to the public against exorbitant railway charges. He also refers, with apparent credulity, to an absurd suspicion that Railway Companies have obtained possession of some Northern ports for the purpose of discouraging the use of sea-borne coals. The French Government is applauded for compelling the great Companies to construct subsidiary lines which are not likely to be profitable. When a similar result is produced in England by voluntary enterprise it is regarded as a waste of money.

It is not only in his mention of the properties of heat that the enthusiastic advocate of some indefinite change in the administration of railways begins with the beginning. The shoeing of horses was an early step in the progress of discovery which has now reached the stage of the latest improvement in locomotives. "The term 'iron-footed' we "have not found applied to the horse earlier than by "NONNIUS (*sic*) in the fifth century of our era." It may be remarked that horses were ridden and driven twelve centuries earlier. Turning over one or two pages, the admiring reader will find himself in the midst of a calculation which proves that in England alone a million and a quarter years are annually added to human life by the saving of time produced by railways. In another place the discursive writer, finding that passengers are charged more highly in proportion to weight than minerals, is puzzled to understand "why it should cost eighteen or twenty "times as much to convey a ton of passengers over a "given distance of railway as it does to convey a "ton of minerals over the same distance." Perhaps his difficulty will be diminished if he considers that cost and value are not equivalent terms. Wine which is sold at ten shillings a bottle is probably not produced at twenty times the cost of wine which is worth sixpence a bottle; but customers are willing to give the larger sum for the growths of the best vineyards; and fifteen passengers care more for their own conveyance than for that of a ton of coals. If the rate for minerals were the same as that for first-class passengers, minerals would not be sent by railway. On the other hand, Railway Companies can scarcely be expected to carry passengers for the thirtieth part of a penny per mile.

The writer in the *Edinburgh Review* is orthodox as an engineer, though he sometimes bewilders himself in labyrinths of statistics. He justly condemns the project of substituting narrow-gauge lines with light rolling-stocks for the existing railways; and he has the courage to vindicate BRUNEL'S seven-foot gauge against modern prejudice. As he truly says, the working expenses of the Great Western Railway were for many years extraordinarily low in consequence of the use of the broad gauge; and it was only because the break of gauge offered serious impediments to traffic that it became necessary to adopt the gauge which had been accidentally adopted in the rest of the country. It may be presumed that the writer belongs to an early railway generation, because he mentions with regret the golden age in which railways paid dividends of ten per cent. The first railways were constructed in the most profitable districts; and it is true that the Manchester and Liverpool, the London and Birmingham, and the Grand Junction for a time paid ten per cent., and the Great Western eight per cent. The railway

mania of 1845 and 1846 was the natural result of the first burst of prosperity. The *Edinburgh* writer passes over, almost without mention, the enormous increase of working expenses within the last six or seven years. If wages and materials had remained at the level of 1868, several of the principal lines would have paid from eight to ten per cent. during the last half-year. A return of four or five per cent. on 600,000,000*l.* is a more remarkable and more satisfactory result than a return of twice the same percentage on 60,000,000*l.*

From a confusing mass of relevant and irrelevant figures the writer at last jumps to the startling conclusion that the mineral traffic of the railways in the United Kingdom is conducted either at an infinitesimally small profit or, more probably, at a loss. He even positively asserts that the Midland Railway Company incurs serious loss by the carriage of minerals. It is surprising that Boards of Directors and railway managers should have wasted millions of money on undertakings which a casual critic at once sees to be wasteful and ruinous. The Midland Company brings nearly 2,000,000 tons of coal annually from Derbyshire to London, with an average run of 120 miles at about ½*d.* per mile. The Great Northern Company has a run of about a hundred and sixty miles from South Yorkshire; and the London and North-Western brings coal over a longer distance from Lancashire. The mineral traffic of the North-Eastern Company is enormous and constantly increasing. The officers and directors of all these Companies are incessantly scrutinizing their accounts; and they have never doubted that every increase of mineral traffic tends to the advantage of their shareholders. Within three or four years all the mineral Companies have constructed or encouraged branch lines to coal-fields previously unaccommodated, and during the same time the Great Northern and the London and North-Western Companies have obtained power to make an independent line to the Derbyshire coal-field. In Scotland the Caledonian and North British Companies are eagerly competing for the supply of Glasgow and other markets; and an independent Company has been formed for the purpose of giving additional accommodation to the Bothwell coal-field; yet no railway expert has ever suspected that the Companies were disinterested public benefactors. The *Edinburgh* projector is not unprepared to find a practical use for the mare's nest which he has discovered. He is convinced that canals furnish the proper mode of carrying minerals, and he laments that about two-fifths of the total mileage of canals has been appropriated by Railway Companies. In this instance he has forgotten the interest of his clients, the shareholders, to become a champion of consumers and freighters. If canal carriage is cheaper than railway carriage, it might be supposed that it would be used to the utmost possible extent by Railway Companies which own canals; yet it is notorious that in the majority of cases the railways supersede water-carriage. It may be added that coal brought by railway is gradually displacing sea-borne coal, which has no tolls to pay, not only in the London market, but in the Southern counties as far as the coast of the Channel. The freighters are satisfied; the Companies are satisfied; but the *Edinburgh* Reviewer has convinced himself that both are mistaken; and he will probably find disciples, for there is nothing too paradoxical to be believed if only it seems to reflect discredit on railway administration. Those who are acquainted with traffic managers will be slow to believe that they are a body of innocent dupes. Mr. Lowe informs Civil Engineers once a year that they are the salt of the earth. Perhaps he may hereafter condescend to relieve from the charge of helpless stupidity the Allports, the Oakleys, the Forbeses, the Grierssons, and the Underdowns.

AN IRISH SHINDY.

THE riot at Limerick, in which the Home Rulers and Nationalists mauled each other the other day, is in itself perhaps a very paltry matter, but it is highly instructive as an illustration of Irish character and of what would naturally be the result of giving over Ireland to the Irish. There is an old saying, which is in fact the recurring lesson of Irish political history, that, whenever an Irishman has to be roasted, there is always an Irishman ready to turn the spit. If Mr. Butt and his friends had their way, the bloodshed which has just stained the streets of Limerick would probably be extended to other regions, and it is only the authority of the Government which keeps the different sections of Irishmen from flying at each other's throats. It is just as well that a sense of this danger should be brought home, not merely to Liberals on this side of the Channel who may be tempted to coquet with sedition for party purposes, but to the Irish themselves. Nothing can be more unfair than to identify the great body of the people of Ireland with the extravagance and violence of certain classes of agitators, and of the ignorant mob who are misled by them; but the difficulty of dealing with at least some sections of the population is shown, not only in this disgraceful riot, but in the perverse and systematic endeavour of Irish juries to obstruct the course of justice by refusing to return a verdict of guilty even in the clearest and most atrocious cases of murder. The distinction between the Home Rulers and the Nationalists or Fenians is apparently only one of form rather than of substance. They both wish to see Ireland placed under an independent Government; but the Home Rulers profess to be willing to try what can be done by political agitation, while the Nationalists scorn such humble-minded ways, and demand the liberation of their country as a matter of right, which, if necessary, they are prepared to enforce. It is not surprising that on neither side are the objects in view very candidly avowed. The Home Rulers, however gentle themselves, naturally feel the necessity of competing with the Nationalists, and the latter have reasons of their own for not too openly acting the part of Fenians. The Roman Catholic clergy, alarmed by the outbreak of Fenianism—a conspiracy which repudiated their authority—have steadily supported the Home Rulers, as a weapon which may be used against the British Government without compromising their character for loyalty; and in the case of the recent demonstration at Limerick the Roman Catholic Bishop and a number of his clergy expressed approval of the intended proceedings. The Home Rulers had apparently, in the first instance, no expectation of being attacked; but a private warning which had been sent to the leaders received confirmation from an attack which was immediately afterwards made on the place where the Home Rule bandsmen kept their instruments with a view to render them useless. On Sunday last a formal defiance to the Home Rulers was placarded in Limerick, and it was reported that reinforcements were being collected from Tipperary by Nationalist agents. Nevertheless the Home Rulers on Monday mustered in great force and paraded the streets with fourteen bands of music. Their procession was suddenly attacked by a party of Nationalists, about a hundred in all, who drew out sticks from under their coats, and began what is described as "a tremendous onslaught on the processionists." The latter fell back for a moment, and then pelted their assailants with stones. A fierce contest, it is said, ensued, and the peaceful citizens "fled in terror when they "saw men and women lying insensible, and the street "stained with blood"; but it is not improbable that the violence of the conflict has been somewhat exaggerated. After the disturbance had been put down Mr. Butt delivered an address which had apparently been prepared in expectation of a more agreeable meeting. He actually expressed pride at the triumphant reception given to him, as proving that no violence would mar or dissension disturb the councils of Ireland in its path of freedom. It may be well for Mr. Butt to deprecate violence and dissension, but it is evident that they cannot be left out of account in any calculation of probabilities in Ireland. As long as there is a Home Rule party there is sure to be a Nationalist party, and if by any chance these two parties were amalgamated, a third would no doubt immediately discover an opening for itself. Even if political differences were healed, personal jealousy would sow the seeds of abundant dissensions. We need only go back to the old Irish Parliament to see how the national leaders continually turned on each other from motives of rivalry and ambition. The fight at Limerick is a significant indication of the spirit in which the various Irish factions, if left to themselves, would proceed to adjust their differences. Public questions would be discussed with bludgeons and stones, and the most effectual argument would be to crack an adversary's crown. It must be remembered that the outbreak at Limerick is by no means an isolated and exceptional occurrence. There have been other cases in which Home Rulers and Nationalists have come to blows; and if such things are done in the green tree, it is easy to imagine what would be done in the dry.

Mr. Butt's speech is also instructive as forecasting the

sort of policy which might be expected from an independent Irish Government. He drew a melancholy picture of the state of various parts of Ireland which had once been the seats of busy industry, but had now ceased to be so. He pointed to the Shannon, and asked how many ships would be on its waters if it were in England. "Would they be "debating now whether we should have an American "packet station on the Shannon, or would it be referred "to the miserable arbitration of five merchants to say "whether that magnificent river was to be one of the great "ports of the world? Would it be a question whether "Galway or Limerick should be a Transatlantic station? "Both would be Transatlantic packet stations if Ireland "had a native Parliament to foster native industry "and enterprise." It is with such visions as these that Mr. Butt and his friends endeavour to flatter and delude their countrymen. Ireland has at present every reasonable opportunity of developing her resources, and in point of fact they have been largely developed in recent years. Mr. Butt remarked very truly that he had seen many projects for the improvement of Ireland break down which had been started with the fairest hopes; but he forgot that schemes inspired by patriotic enthusiasm, without regard to the practical conditions of success, are not very likely to flourish. Everybody knows that, if it were possible to convert Limerick or Galway into a flourishing port, there would be no difficulty in finding capitalists who would be glad of so profitable an investment, and Mr. Butt could not do better than employ his eloquence in demonstrating the feasibility of such a scheme. Nothing, however, can be more pernicious than the idea that it is possible for a Government to do for a country what the country is unable or unwilling to do for itself. Mr. Butt affects to look to "the spirit of freedom and the "power of self-government" to foster the energies of the country; but it is evident that he also contemplates other agencies. There can be very little doubt that one of the first things which an Irish Parliament would do would be to waste the resources of the country in subsidies to all sorts of speculative enterprises, and in protection to special articles of trade; and it is easy to conceive the manner in which the favours would be distributed, and the kind of strife to which they would give rise.

It seems to us impossible that at the present day the condition of Ireland can be regarded as purely an Irish question; but it would be well if Irishmen themselves would seriously consider the prospects which would lie before them if there were any chance of the dreams of Home Rule being realized. It may be presumed that when the leaders of that party talk of an Irish Parliament, they have in view a Parliament in which they will themselves be in the ascendent; but no impartial person can observe the language and conduct of this set of men without seeing how utterly destitute they are of those qualities of intelligence and character which are essential to even the lowest kind of statesmanship. It is impossible to imagine a more striking and conclusive argument against Home Rule than the exhibition which the Home Rulers are good enough to make of themselves, and there must surely be some considerable number of people in Ireland shrewd and sensible enough to understand the fatal peril of ever falling into such hands. It is curious to observe the inconsistency of Mr. Butt's remarks with regard to the British Parliament. He said he had come back from it with the conviction deepened and intensified that never would Ireland have prosperity, contentment, and freedom until her people recovered the power of making their own laws. Yet in the next sentence he spoke of the smallness of the majority against the proposals for Parliamentary and municipal reform as virtually a triumph, and said that he expected that both measures would be carried. When we put these statements together, they come to this, that Mr. Butt despairs of ever getting justice for Ireland from the British Parliament, although he admits that whenever he has a plausible case it receives fair attention. If, instead of vapouring about Home Rule, and doing all they can by low tricks and dodges to obstruct business in the House of Commons, the Home Rule members would avail themselves in a candid and conciliatory manner of their opportunities of procuring beneficial legislation for their country, they would have a better claim to the title of patriots. As it is there is little chance of Ireland making a proper use of her political influence until she awakes to that sense of self-respect which would make her ashamed of a large number of her present representatives.

FACTORY DIFFICULTIES.

IF Mr. Cross is really bent upon recasting the whole body of factory legislation next Session he will have abundance of work upon his hands. The confusion in which the whole subject is at present involved would of itself give the consolidator no small trouble. The overlapping of jurisdictions, on the one side of the officers whose business it is to enforce the various Factory and Workshop Regulation Acts, and on the other side of the School Boards, answering as it does to a meaningless and mischievous diversity of obligations on the part of parents, makes it impossible to deal with the question comprehensively until some conclusion has been arrived at with regard to educational compulsion. The accumulated proofs that the majority of the dangers at present arising, whether from machinery or from unwholesome processes of manufacture, are strictly preventable impose a new duty upon the Government, while the corresponding growth of evidence that the workpeople often dislike the necessary precautions makes its fulfilment additionally difficult. And, to crown all, there is too much reason to believe that the obstacles thrown in the way of the Government Inspectors are largely due to the unwillingness of the local magistracy to enforce the law.

The contents of the half-yearly Reports of the Inspectors of Factories make it increasingly clear that the first step towards any real reform is to relieve them of one whole section of their present duties. Mr. Redgrave gives a piteous account of the anomalies with which he has to deal, or rather with which he is powerless to deal, in the matter of attendance at school. In many of the agricultural districts handicrafts of various sorts are carried on, and the children employed in them are subject to the regulations of the Workshops Acts, and are consequently compelled to attend school. These same children, when they leave their handicraft and take work from a farmer, come under the Agricultural Children's Act, and consequently, the Act being in all but a very few places wholly inoperative, are not compelled to attend school. Mr. Redgrave naturally finds it difficult to convince a widow, struggling for subsistence by straw-plaiting, that the law is fair which makes her send her child to school before it is allowed to earn a few pence a week, and imposes no similar stipulation in the case of her neighbour, whose child is employed in agriculture. In some districts the only result of setting up a School Board has been to deprive the Factory Acts of some of their stringency, the School Board having power to exempt children from attendance at school at twelve, while the Workshops Act enacts that they shall remain at school till thirteen. One result of this inconsistency is that a child who is kept at home or allowed to idle about the streets may claim the benefit of the exemption, while, if the child finds works at a factory, the obligation of sending it to school revives. Thus as long as a child of twelve is of no use either to its parents or to its employer, its education may be neglected; so soon as it becomes of use to either, its education is at once resumed. The only remedy for these inconsistencies—inconsistencies which do so much to bring the law into disrepute—is to reduce all the many shapes which the process of getting children to school against their own will and against their parents' will now assumes into some regular and uniform obligation, regularly and uniformly enforced. If every parent were compelled to send his child to school up to a certain age, there would be no need for sending Inspectors all over the country to see, not that children go to school, but only that children employed in certain industries go to school. The time of the Factory Inspectors would then be left free for those parts of their work which already make greater demands on them than they are well able to answer. There is quite enough to occupy their full energy in the investigation of cases in which children above the school age have been kept at work for more than the legal number of hours, or in which the protection against avoidable accidents which workmen in factories may claim from their employers is illegally withheld.

The difficulties which beset an Inspector in bringing home charges of overwork are forcibly shown in a Report from one of Mr. Baker's Sub-Inspectors. This officer hears that a young Polish Jewess has been kept at work for twelve hours on Sunday, for twelve hours again on Monday and on Tuesday, and Wednesday for twenty-four hours at a stretch. The girl swears to these facts, and as

regards the Sunday her testimony is borne out by the evidence of the woman with whom she lived, who swears that a messenger came from the tailor to say that she must come to work at once, and that she did not return till after ten at night. The case is dismissed because two friends of the defendant swear that on the Sunday the girl did no work at all, while a woman whose sweetheart works for the defendant swears that she went to the shop at 11 o'clock on Tuesday night, and saw the girl sitting there, not working. In another case a Jew tailor was charged with working a girl after 9 P.M. The Sub-Inspector went to the workshop at 9'45 P.M., saw the workroom lighted up, and heard the noise of sewing-machines. He could not get admission for some minutes, and was then told that the girl he was inquiring for had gone home. Noticing a suspicious swelling in a bed which stood in the room, he turned down the clothes and found the girl completely dressed. This case also broke down, because the girl swore that she had left off work at 9 P.M., and instead of going home, had lain down under the bedclothes to cure a headache. It would not have argued any special incredulity on the part of the magistrates if they had refused to believe the evidence for the defence in either of these cases. The inducements to girls not to inform against their employers are very strong, and where, as in both these instances, a girl, even on the defendants' own showing, is found on the premises at unlawful hours, it is not an unnatural presumption that she was there for the purpose of doing work. Neither the surroundings of the workshop nor the company of the employer are usually attractive enough to detain girls after their work is over. To all appearance, some modification in the statute is required which shall make the proof of a breach of the law more self-acting.

A large part of these Reports is as usual taken up with details of the injury to health resulting from unwholesome occupations, such as the manufacture of white-lead, and of the mutilations caused by the use of unfenced machinery. As regards the former, a great part of the difficulty arises from the unwillingness of the workmen themselves to take the precautions which are recommended to them. The wearing of respirators very greatly lessens the injury done by breathing in poisonous matters, and the use of over-clothing lessens the action of these same poisonous matters on the skin. But where these respirators and over-suits are provided by the employers the workmen often make difficulties about wearing them, and though conscientious manufacturers insist on these objections going for nothing, there are many of course who think that their obligations are sufficiently fulfilled when they have given their workmen the means of protecting themselves if they like. In some processes it is difficult for the employers to ensure that children are not allowed or ordered by the adult workmen to incur serious risks for the mere purpose of saving a little time or a little trouble. Thus a large number of accidents can be traced to the practice of cleaning machinery whilst in motion. Even when this is strictly forbidden by the master, and printed notices forbidding it have been posted in every room in the factory, the men often order children to break the rule, with the frequent loss of their fingers by way of consequence. It has been suggested to the masters that, in engaging workmen to superintend machines, they should make them sign an agreement to pay, by way of deduction from their wages, a certain compensation to any person who may be injured from this cause. Their answer has been that the men would not consent to any such contract, and that an attempt to require it of them would only lead to a strike. Of course an obvious objection to such a provision would be the difficulty of proving that there was not a tacit understanding between master and man that a certain amount of work was to be done in a given time, and that any regulation which conflicted with this understanding should be disregarded. It would be easy to dismiss a man who failed to get the prescribed minimum of work done, and those who, rather than be dismissed, continued to have the machinery cleaned without any regard to the agreement about compensation in case of accident would feel that the contract, instead of being a means of getting the law more strictly obeyed, was in reality only a means of shifting the cost of disobeying from the master's shoulders to theirs. The whole subject bristles with difficulties; but at the same time it so nearly concerns the health, and even the lives, of a large and important class, that it is not the less the duty of the Government to give it careful and early attention.

THE FAMILIAR TEMPER.

IT is a saying of Pascal's that in proportion as people are themselves thoughtful and intelligent they find originality in others. Common minds, he observes, see no difference, and think all men alike. This remark throws light on that habit of easy familiarity towards all created things which is to be noticed as a characteristic of common minds, or as constituting the common side of a class of minds that in other respects are not to be included in the same category—a patronizing familiarity as opposed to that deferential posture of mind which is natural where more is assumed than meets the eye, which is respectful as not knowing what may be behind, and as yet undiscerned, in any object to which attention is given. There is a tendency in some people to bring down whatever comes before them to their own level in order to comprehend it, and, in comprehending, to believe that they rise above it. They must find out some quality in which they are equal, if not superior, and adjust all to this scale. Until they can patronize they are at sea; their use of speculation and judgment is to reduce everything to their own standard. This done, they are happy. In what they do understand they lose the thought of what is beyond them. Nothing tends more to self-complacency than divesting things of their mystery, seeing through and through them and knowing all about them, or, which is the same thing to this sort of people, assuming that they do. By a chemistry of this kind we see the loftiest matters easily disposed of by men of the meanest intelligence, who cannot be at rest under a sense of mystery, not being really able to entertain such an idea otherwise than vaguely, as something uncomfortable and superfluous, to be hustled out of the way and out of sight, and finally ignored and forgotten. So they bring to the front the least august quality of the object before them. They accommodate the point of view to their habit of mind, which is patronage; in patronizing the mystery they set themselves above it. We see this strikingly in the religious language of the vulgar, which always patronizes the object of its professed devotion, as the artificer first made his idol and then bowed down to it. Respect is the one quality always absent in vulgar enthusiasm; it recognizes nothing beyond its own sight or vision, and assumes that it knows all that is to be known, or at least that need be contemplated or dwelt on. As an instance we may take old age as the attribute in greatest favour with the crowds in Gospel Halls and Hallelujah Bands. Of course old age is venerable, but the popular idea of it usually implies patronage. "Old" is the common expression of familiarity, of knowing all about a man. It is the pet prefix; brothers and sisters, boys and girls, call one another "old"; and it always means, if we go deep enough, a perfect out-and-out knowledge of the character. The member of the family who is most clearly seen through is called old. Moreover, as applied popularly, the word is never wholly dissociated from weakness or decay, or, at best, from wonder that decay has not set in. In truth, perennial youth is the more fitting idea to attach to things spiritual; and to talk of "the good old Bible" and "the good old Church" is almost to insult them. We feel indulgently towards this promiscuous use of the term in the hymns and devotions of negroes, as an effort of their self-respect endeavouring to place themselves on a level with awful themes and subjects, whether benign or terrible; but their Ole Zions, Ole Moses, Ole Satans, Ole Pharaohs are not phrases to imitate; and we could well have spared the signal example of Mr. Gladstone's wide range of sympathies shown some time since in a popular address, where he warned the assembly not to seek the remedy for the deeper sorrows of the human heart in art or science, but in something which in a well-known hymn is called "The old, old story," and referred his hearers, who encouraged him with their cheers, to the teaching of the old, old story to be found in the Good old Book. The Gospel is not an old story; it is good *news*, and, if half the Bible bears this epithet, it is emphatically explained why; because the new supersedes it, and that which decayeth and waxeth old is ready to vanish away. And, as the New Testament is always new and the Gospel always news, so is the Church never old, but always the Bride. We may properly enough call the fabric old, because it is an admitted fact that fabrics decay, but never the living body.

This turn of mind, where it exists, exercises itself on the whole sphere of observation. The habit of appropriation, of connecting self with the thing observed, and so establishing a ground of easy familiarity, is self-assertion, and therefore is not likely, when once it has got a hold, to die out for want of practice. The word *dear* is constantly applied to the same use as *old*, as indeed are many other cognate epithets. Used playfully and by chance, it is a pleasant expletive, but the habitual recourse to it betokens the patronizing turn of mind, as is shown by the instinct of choosing out the least dignified quality in the object thus taken to the bosom of intimacy. Thus we hear of the "dear old man"; the "dear little fellow"; "this dear old beau of mine," as Miss Austen makes Mrs. Elton say. Persons more or less distinguished, and intellectually or socially superior, are often taken down and brought to the speaker's level by this method. The use of the Christian name where intimacy does not sanction such freedom is a very marked habit of the familiar temper; it is a favourite means of self-assertion, of saying "I am at least as good as you." There may have been a time when the liberty was not a liberty; but the habit is clung to the more resolutely the less it harmonizes with present relations, often jarring on the listeners' ears with an annoyance beyond what reason justifies. But the truth is, our Christian name is one of our most private and personal possessions; and as it is, as is often asserted, among the most delicious of sen-

sations to hear it first used where an increase of intimacy, or more than intimacy, is desired, so it offends the ear where the right is assumed on grounds in which we cannot acquiesce. This personal aspect of the question lies indeed in the background; but it probably quickens our sympathy when we hear the liberty taken with another in cases where it amounts, as it sometimes does, to an outrage. But if this method of singling out and establishing a personal relation where none such fairly exists is irritating on the one hand, the familiar, free and easy temper can shock our taste equally in the opposite direction by classing in a lump persons who have a right to be individualized. It is a failure in manners to convey the impression that you class indiscriminately as one of a number or multitude, with no further recognition of him, a man who has arrived at the age and station to be known as himself; and this is an incivility very common with people of this temper, who act on the same principle whether they put themselves on an equality with a superior by too familiar a designation, or attempt to place themselves above their equals by ignoring their individuality. Of course there are cases of the use of this easy tone where the impulse belongs to human nature collectively, where there is no private or personal end, but a united effort to assert a common humanity. All great men who play a conspicuous part before the world are distinguished by some epithet, abbreviation, or nickname used to bring them down to a level, on some one or more points, with the meanest. When the English army called Wellington Old Nosey, and the French called Napoleon *le petit caporal*, it was a natural effort to suggest that their conquering heroes were but men after all, men like themselves, with the conditions of ordinary humanity varied only by some undignified eccentricity. Such natural vents of feeling are a necessity; without them the world could not stand the various tyrannies under which it is governed.

This tone is absolutely opposed to the poetical temperament. For, while shallow minds lose all thought of what may be deep and hidden, in the hurry to establish some personal relation to what is beyond and above them, and are thus led instinctively to attach their observation and interest on the obvious or the weak side, the poetical spirit always assumes more than it sees, and approaches every object with reverence and a strong belief that much is hidden from view. Poetry guesses, and still thinks that more remains behind; the familiar, patronizing temper believes what it sees to be all, or that what lies unseen can be inferred at a glance from what lies open before it. Take, for instance, the field of observation that lies out of doors, and is only indirectly connected with humanity. The one temper professes to understand all that it sees; the other bows before a mystery hidden everywhere. It is the way with some people to interpret every action of the lower creation, to account for every movement, to give a reason for all that puzzles other folks. The designs, motives, affections, antipathies, inclinations, of birds, beasts, and fishes, are a printed book to them. It is a busy, cheerful habit of thought, and one can hardly say that there is any harm in it; yet it excites a certain feeling of irritation, and a sympathy towards the creatures thus analysed, which is probably the result of a sense of personal grievance—our turn may come next. That every created thing has a secret not to be penetrated is our counter argument against this audacious insight. Everything has its incomprehensible side, its mystery not to be reached by professed interpreters. To acknowledge no such arcana is an outrage on the universal reserve. One is sometimes almost disposed to resent for a robin, a spider, or a worm, this affectation of absolute intimacy, this knowing the why and the wherefore of everything. Horatio was probably one of these too clever philosophers, provoking Hamlet at last to the immortal set-down. Poetry is as observant as these self-wise observers, but stops short of explaining and accounting for all things. It is not ashamed of ignorance, and is contented to give its guesses simply for guesses; dignifying by the recognition of a hidden unattainable meaning all that it cannot comprehend. Wordsworth has happily expressed this perplexity in his pastoral of the "Pet Lamb," where little Barbara Lowthwaite is made to speculate on the lamb still tugging at its cord after she had done all that human thought could do for its ease and delight:—

> It will not, will not rest! Poor creature can it be
> That 'tis thy mother's heart which is working so in thee?
> *Things that I know not of belike to thee are dear,*
> And dreams of things which thou canst neither see nor hear.

True intimacy is the test, whether the subject be man or beast. Everything has a character of its own, superadded to its character as one of a species. Nothing can be read offhand. The whole matter is a question of the state of mind. Where there is no undue self-assertion our taste will not be offended. The point of course is where, and before whom, to patronize. We all patronize and read each other off in the sanctity of real intimacy. What we object to is the habit which transgresses these bounds and takes a stand, whether towards things or persons, which the reality of the position does not warrant.

A CENTURY OF AMERICAN RELIGION.

THE close connexion of religious and political ideas is a commonplace both of philosophy and of history, and, in spite of all appearances or presumptions to the contrary, it is not less strikingly exemplified in the annals of the New World than of the Old. The elder Adams showed a sound instinct when he advised the Abbé Mably not to treat the War of Independence without first mastering the Church system of New England; and another acute critic of American society and political economist argues from his observations of it the necessity of a harmony between the religious and political schemes suited to a people. The religion of a people has in fact always, and especially since the introduction of Christianity into the world, been an integral part of its history. And there is perhaps no period to which this remark more obviously applies than to the last century. The wild attempt of the old French revolutionists to obliterate the very name and memory of the Christian faith from the human mind seems only to have foreshadowed, if it did not introduce, a time when, in the vulgar cant of a school of modern writers, "the religious question is the order of the day." Nor is the force of this observation at all diminished by the fact, if such it be, that a great deal of the anti-Catholic or anti-Christian feeling prevalent in France just now is due to the abiding influence of the two great writers who are at once the masters of French style in its two predominant forms, and the leaders of perhaps the most formidable assault ever made on Christianity—Rousseau and Voltaire. For in no countries are politics and religion so inextricably mixed up at this moment as in Germany and France. But if we cast back our glance on the last century of European history, the prominent part played by religious ideas in its development becomes more signally conspicuous. Since the temporary downfall of the whole ecclesiastical system in France, every European country has been disturbed by some variety of the great contest between Church and State which shook Christendom to its foundations in the days of Hildebrand. In the South the Pope has been finally stripped of the temporal sovereignty enjoyed by his predecessors for upwards of a thousand years; in the North a great Protestant Empire has come into being which treats his spiritual authority with as little respect as Italy has shown to his civil crown. In our own country the air has been ringing with the din of religious controversies both in the civil and the ecclesiastical sphere. The repeal of the Test Acts, Catholic Emancipation, Irish Disestablishment, are the outward symbols of a religious revolution which found expression in the spiritual domain in those two great movements, the Evangelical and Tractarian, that have swept successively over the face of the Established Church and have left on it their indelible traces, while the second is still in active operation. The same fermentation of thought which in one case gave birth to the French Revolution, and in another to the Catholic or Catholicizing reaction in England and France, has issued in Germany in a rapid succession of philosophical and theological schools, which it would take us too far from our immediate subject even to recount, still more to characterize. What, then, during this century of keen religious enthusiasm and conflict in Europe has been the religious condition of our Transatlantic brethren? They had rejected, we know, with angry disdain, the bloated aristocracies and pampered hierarchies of the Old World. But what was said of nature may be applied as truly to religion—*expellas furcâ, tamen usque recurret.*

A remarkable paper which has appeared in the Centennial number of the *North American Review* may help us to answer this question. "It belongs," says Leiber, "to American liberty to separate entirely from the political government the institution which has for its object the support and diffusion of religion." Yet even to this day the programme has been but imperfectly carried out, and it remains to be seen whether it will be found capable of easier application in the future. At the time of the Revolution there was some sort of civil recognition of the religious principle in all the thirteen Colonies, though not the same in all. Everywhere there were religious tests, and in the Southern colonies the Episcopal Church enjoyed a legal status; in New Jersey and New York, though not formally established, it basked in the full sunshine of official favour and support; in Delaware and Pennsylvania the franchise was denied to all who did not profess faith in Christ; in Maryland, founded on principles of complete toleration by a Roman Catholic, the rites of Catholic worship were strictly forbidden. Nor was this state of things entirely or abruptly swept away by the Revolution. On the contrary, the constitution of every State framed under the Declaration of Independence, except that of New York, retained some connexion of Church and State. The exclusion of Roman Catholics from the franchise for a time survived in all. In Maryland and Massachusetts belief in the Christian religion was required for all public offices; in Pennsylvania a belief in God and in the inspiration of the Bible; in Delaware a belief in the Holy Trinity; in Georgia and the Carolinas a profession of Protestantism; in Maryland and South Carolina the State recognized the duty of supporting religion. And publicists and statesmen still maintained in the strongest terms the absolute necessity in every well-ordered State of the public support of Christian worship and its ministers. Simeon Howard of Boston even insisted that a Government which neglected this obligation was guilty of "a daring affront to Heaven." Chief Justice Parsons and Judge Story spoke in the same sense. The great change which has occurred since then is attributed to three co-operating causes; partly, of course, to the progress of the modern theory of a purely secular State, but partly also to the practical difficulties arising from the great number and diversity of religious organizations in America, and from the conscientious objection entertained by some of these sects to the acceptance of any civil recognition or support. The result may be traced in the difference

between the language of the Declaration of Independence, which includes a solemn appeal to the Supreme Judge of the world, and of the (later) Federal Constitution, which contains no reference to religion, except in the shape of a strict prohibition of all religious tests. And the legislation of the separate States was gradually revised on the same model. For the first time, therefore, since the establishment of Christianity under Constantine, all the different Christian communions were left free to jostle each other on equal terms; and it becomes on all accounts an interesting inquiry, how their relative strength asserted itself under these novel conditions.

At the beginning of the Revolution four large bodies towered conspicuously above the rest—the Congregationalists, Baptists, Anglicans, and Presbyterians. First in influence and numbers came the Congregationalists, with some seven hundred churches, and a well-trained ministry who prided themselves on their learning, and enjoyed a high social standing and authority. Next in numerical strength, but at a long interval, must be reckoned the Baptists, with about half the number of churches, and insisting, unlike the Congregationalists, on the claims of "lowly preaching," and an unlearned ministry. Third in order stood what was known as "the Church of England in the Colonies," which was the oldest religious body in the country, and embraced a majority of the higher classes. But, notwithstanding the political support and prestige it had hitherto enjoyed, it had a fatal element of weakness in the want of a native Episcopate, and in its consequent dependence on the mother-country for its supply of clergy, who were always more or less liable to the suspicion of subserviency to the political designs of the Home Government. It appears also that in Virginia and Maryland, where the Church was most powerful, the careless lives of the clergy had alienated popular sympathy; and when the Revolution came, their influence was still further damaged by their impolitic, though no doubt conscientious, adherence, as a body, to British interests; many of them even scrupled, like the Nonjurors in England a century earlier, to take the oaths required by the new Constitution or to omit the prayers for the King from the public service. In Pennsylvania Dr. White was for some time the only clergyman. The Presbyterians were about equal in the number of their laity, though not of their clergy, to the Episcopalians, and had some three hundred churches, their main strength lying in the Middle States, and their original members being almost exclusively of Scotch or Irish extraction. They aspired, like the Congregationalists, to a learned ministry, but their preachers were carefully trained to speak without notes, and so strong was the objection to written sermons "that a man's reputation would be ruined should his manuscript be seen." Unlike the Episcopalians, they took the popular side in the Revolution, in accordance with their democratic principles. The remaining Protestant bodies were of very inferior importance, while the whole number of Roman Catholic clergy in the country did not exceed twenty-six, and the Catholic service was only solemnized publicly in Philadelphia. If we contrast the relative position of these various communities a century ago and now, the change is very remarkable. The Congregationalists, who then doubled the size of any other body, now stand seventh, while the Wesleyans, who were then nowhere, rank conspicuously first. The Baptists are still second in numerical order, and the Presbyterians come third; but then follow Roman Catholics, "Christians," Lutherans, Congregationalists, Episcopalians. Tested, however, by the number, not of "sittings," but of churches, the Congregationalists and Episcopalians would come next to the Roman Catholics, while, according to the standard of Church property, the Roman Catholics rank second and the Episcopalians fifth. But for a due appreciation of their comparative numbers we must bear in mind the growth of population, which has multiplied eleven-fold during the interval, while the churches have multiplied thirty-seven-fold, presenting now 72,000 churches for a population of 38 millions, or one church for every 529 souls, instead of 1,950 churches for 3½ millions or one for every 1,700 souls. It is certainly a striking illustration of the working of the voluntary principle, that a Church which seemed at the time to be shipwrecked by the Revolution, and which, moreover, had previously been accustomed to depend mainly on State support, should now rank fifth in the amount of its property. As the writer to whom we have referred observes, in America "the Church of Hooker and Tillotson has certainly shown herself able to go alone." But still more remarkable are the rich endowments of the Methodists and Roman Catholics, who a century ago had nothing at all. These statistics go far to prove, on the most superficial view, that the ecclesiastical and hierarchical principle is not dependent for its vitality on State connexion or support. On the other hand, the violent religious controversy about the education question which is raging at this moment in the United States, and which must at no distant date challenge the attention of the Legislature, would sufficiently illustrate, if any proof were needed, the practical impossibility of drawing a sharp line of demarcation, under whatever system of established or unestablished Churches, between secular and ecclesiastical politics. On the internal development of religion in America during this same period we may have something to say on a future occasion.

A HAPPY DAY.

PICTURESQUE writers have often described in attractive colours the delights of a public holiday, when careworn toil casts off its usual grimy costume and disports itself in primitive gaiety of heart. It is pleasantly supposed that on such occasions the hard-worked artisan obtains a necessary respite from labour and fatigue, and returns to his everyday tasks refreshed and invigorated. Judging, however, from the experience of successive Bank holidays, it may be doubted whether holiday-makers really derive so much pleasure and exhilaration from these festivals as is theoretically assumed. There can of course be no question as to the good intentions with which the Bank Holidays Act was passed, but the practical conditions under which it is carried out are certainly not conducive to enjoyment. As far as Easter is concerned, it would be impossible to choose a more inappropriate season of the year for holiday-making. The weather is almost invariably dank and dismal, and unfavourable for excursions, especially in the case of people who cannot make sure of shelter. Good Friday of course stands by itself, and nothing can be more natural and proper than that business should be suspended on that day. But there is no reason why Easter Monday should be made a statutory holiday on its own account, and it is obvious that it falls at a time of year which is absurdly unsuitable for holiday purposes. It is simply throwing away a holiday to take it at such a season; and, indeed, we believe that the Eastertide holidays, coming as they do at a period when they cannot be comfortably used for open-air recreation, do much more harm than good. The public-houses offer a tempting retreat from the inclemency of the weather, there is a vast expenditure on liquor and very little real pleasure, and a large majority of the holiday people go back to work, not invigorated, but fagged and exhausted, and with a loss in pocket, health, and spirits. In short, a holiday which later on would be agreeable and beneficial is at Easter simply a weariness of the flesh, suggesting hopes of enjoyment only to disappoint them. It would be interesting to ascertain how much money is foolishly spent at this time, and how many cases of rheumatism, bad colds, and other sickness are due to exposure to the treacherous weather which usually prevails. Apart, however, from the special disadvantages of holiday-making at Easter, there is something in the nature of a universal holiday which is necessarily destructive of enjoyment. There is no doubt for many people a certain fascination in gregarious amusements; but any one who has seen the tumult and confusion which are caused by overcrowding at the favourite places of resort on a general holiday can hardly fail to come to the conclusion that this source of enjoyment is decidedly overdone. The crowd has to fight for places in the railway trains, to do battle for refreshments, and is all day long engaged in a constant physical struggle which must have a very irritating effect on nerves and temper, and is utterly opposed to the idea of salutary recreation. It requires very little consideration to see that, if large bodies of people insist upon making holiday on the same day, they must expect to find themselves very much in each other's way. The accommodation which is sufficient at ordinary times is quite inadequate when invaded by such a multitude, and hence the conflict for beer, and the perpetual warfare of the railway trains. If the holiday folk could only agree to take their pleasure in moderate-sized detachments, they might be comfortably served; but when they go out *en masse* they render it impossible to supply their wants with any approach to comfort or even decency. Besides, as the holiday becomes more general it is continually bringing a larger proportion of the community within its range; and every year the number of people willing to work on such an occasion is steadily decreasing. Thus we find it stated that on Monday last there was a marked scarcity of cabs in the streets, most of the cab-masters having given their men a holiday. There is no reason why, as the passion spreads, other classes may not insist on joining in the holiday, which will then be universal in a curious way. On the other hand, there must be a large body of people who, though compelled to suspend business on these days, are debarred from getting any enjoyment out of them, and are driven to immure themselves at home on account of the general uproar, confusion, and obstruction of the ordinary means of communication.

Some of the newspapers have given very full accounts of the sort of amusements provided for the public on Easter Monday, and we must say that they leave on the mind an unpleasant impression of monotonous vulgarity. Those who have a weakness for the kind of pastime associated with recollections of Greenwich Fair may be consoled for the suppression of the booths and mountebanks on their old site. An enterprising manager has, it seems, been holding what he calls "a grand Carnival" in the neighbourhood of Kensal Green. The programme, we find, "embraced all the sports of ancient Rome—chariot racing, Roman racing, men standing upon bare-backed horses, pony racing, flat and hurdle racing by thoroughbred horses, and Great Elephant Race." The visitors to this scene of delight could, it appears, choose between "three Circus Rings and three Circus Companies performing at one time." Then there were "Fire Kings and Salamanders," a "great Stag Hunt with a real stag and pack of hounds," a grand ascent of three monster balloons at one time, and a great collection of wild beasts, the whole concluding with a display of fireworks. "Seven hours of enjoyment" of this kind were offered by the spirited entertainer for the small charge of a shilling. Again, we find that "the largest combination of Star Artists ever seen in London" was to be seen at the Agricultural Hall, where the programme included races between bicycles and ponies, French wrestling, "Colleen on the invisible wire," a troupe of acrobats, a Royal Regiment of performing dogs, flying clowns and bar performers, Russian lady skaters, a great trotting match of five miles, ridden by professional jockeys, and two military bands. It must not be supposed, however, that the more pretentious institutions for cultivating a taste for art and science allow the ordinary showmen to get the

At the Ale- and-

...y of elevating the public mind, the public was offered "twelve hours' constant amusement, wet or fine," of which the following were the chief elements. First, a negro dwarf, who, we are told by an admiring reporter, "can be seen without any of those unpleasant feelings which nature's freaks on mankind sometimes produce." Next there was "a marvellous equine phenomenon" in the shape of the hairless horse Caoutchouc; and we have the assurance of a respectable journal that, as "the smallest silver coin will admit to the presence of either curiosity, possibly many visitors will not be content without seeing both." The Alexandra also boasts of a trained animal show, which appears to have afforded great delight to the representative of the *Times*. "Some of the feats," says this simple-minded person, "performed by members of the troupe were astonishing." One of these astonishing feats was a monkey dancing on a tight-rope, and a dog which rode on a pony; but it is odd that the *Times*, which did not in other days think it worth while to devote its columns to the booths of Greenwich Fair, should now be so impressed with such cheap marvels. "A dog," we are further told, "danced so admirably as for a time to make one fancy it was human." The audience at the Alexandra Palace also had an opportunity of "revelling," as the *Daily News* puts it, "in sweet sounds," these being provided by the concentrated noise of four brass bands and the grand organ. The Crystal Palace was equally energetic in keeping up its well-known reputation for high art and refinement. "Mdlle. Rose Lee went through some very graceful evolutions on the low rope"; there were negro serenaders and acrobats, French clowns, performers on the bicycle, a stage Irishman of the Epsom Downs type, and so on. It is melancholy to reflect that, after all the fine things we used to hear about this and other kindred enterprises, they should have sunk to this depth of vulgarity and degradation; and it is perhaps still more surprising, though not without a painful significance, that respectable newspapers should lend themselves to the puffery of acrobats and dancing dogs. Why are the Punch and Judy shows in the streets and the "Happy Family" neglected? The *Daily News* even stoops so low as to publish a flattering notice of Cremorne, and we may expect that it will next give a glowing account of the Argyll Rooms. We hardly know whether Dr. Kenealy's gathering of the rabble in Hyde Park is to be included among the amusements of Easter. But the silly fellows who went about with placards asking (quite superfluously) "Are you surprised to find we are some of the fools and fanatics?" were certainly grotesque enough. Perhaps, however, the lowest and most disgusting entertainment of the day was the wretched farce, at once ridiculous and brutal, of worrying a tame stag, which was performed under the most distinguished patronage in the neighbourhood of Windsor. Prince Christian honoured it with his presence, and Lord Hardwicke, who might be supposed to have some sense of honest sport, directed the proceedings. That such an institution should survive to this day is certainly a curious commentary on the progress of humanity and civilization. There can be little doubt that, but for the auspices under which it is carried on, it would be put down by the police.

That there is at least a considerable section of the public who are capable of deriving pleasure from sights of a higher class is proved by the crowds who visited the Tower, Westminster Abbey, and the Houses of Parliament. It is unfortunate that, of those who went to the Tower, the majority were precluded from seeing it on account of the crowd and that even the fortunate ones had to be hustled through in batches of thirty every five minutes; and there is a curious perversity in keeping the Houses of Parliament swathed in dingy wappings when thrown open to the public. It is possible that in the course of time people may learn to make a better use of a holiday, and also that the organization of public amusements may be raised to a higher standard; but in the meantime it may be doubted whether a public holiday is either such a happy or improving day as sentimental people are fond of representing it. It is at least certain that as long as people insist upon all going out on the same day to the same places there will be little chance of peace and comfort.

WORKING OF THE JUDICATURE ACT.

THE Judicature Act has now been tested by nearly six months' working, and it may be useful to observe some of the practical questions that have arisen under it. The Acts and Orders are for the most part largely, not to say loosely, drawn, and the Judges have shown commendable caution in using the extensive powers conferred upon them. Pleading is generally allowed to be the weak point of the new system, and it is amusing to find a Judge saying (in effect) that even in the Schedule of Forms annexed to the Orders you would not find anything quite so absurd as the "statement of claim" submitted to him. The new style is something like this:—"The defendant went out to tea with Mrs. Jones, and, after the seventh cup, told her that he owed money to the plaintiff, but meant to resist payment as long as he could." These forms for the most part are neither fish nor flesh; they are too wordy for Common Law and too brief for Equity. The notion that the same method can be applied to a trumpery claim for goods sold and to a suit for the execution of complicated trusts involving property of large value could only be entertained through want of experience in legal business. Happily, errors of theory can be tacitly corrected by the good sense of practitioners.

One of the most valuable provisions of the Orders is that which allows one action to do the work of two. In the last century it was held that a plaintiff who had agreed to build a race-booth for twenty guineas was entitled to recover the whole price, although the booth was so badly constructed that it fell down during the races, and it was admitted that the defendant might bring a cross-action on that account against the plaintiff. After a few years this strict rule was relaxed. A carpenter brought an action against a farmer for work and materials employed in putting a roof on a barn. The defendant offered to prove that the work had been done in a grossly improper manner, and the evidence was admitted. The rule was now laid down that, if there had been no beneficial service, there should be no pay; but if some benefit had been derived, though not to the extent expected, that should go to the amount of the plaintiff's demand. The claim should be co-extensive with the benefit. Afterwards the Courts said that there were exceptions to the practice of allowing the defence of the inferiority of the thing done or supplied to that contracted for, to be applied in reduction of damages. And even where this could be done, the purchaser could not in such a case give evidence of any consequential damage, as, for instance, of the loss of a bargain from the resale of goods. He could only recover such damage by a cross action. Thus stood the law up to the passing of the Judicature Act, and innumerable cases might be cited on this distinction between that which was matter of defence to the seller's action and that which must be matter of action by the purchaser. It would almost seem as if the lawyers' occupation must be gone when all these matters are allowed to be settled in a single action. Experience, however, shows that modern legislation causes more litigation than it cures.

But it is not so his'am by a defendant that can be tried in the plaintiff's gang with us, there was an action for assault and slanderous and the eccl the defendant set up a counter claim for breach ac Emancipaant to repair. It appeared that the plaintiff and mbols of a reli disputing about the repair of a house, and, in thpiritual domainment, the defendant spat in the plaintiff's face, and Tractaria thief. The Judge ordered this counter claim to be of the Ext an action on a bill of exchange, the defendant alleged delible tr antiff was suing merely as trustee for another person, whe same indebted to him, and he set up a counter claim ag the that person, and it was allowed. A shareholder in a Limited Company circulated among the other shareholders a letter charging the directors with conspiracy and fraud. The plaintiff, who was one of the directors, sued the author of the letter for libel, and the defendant set up a counter claim for loss sustained in respect of shares bought on false representations. Here the Judge ordered the counter claim to be struck out, on the ground that "it would be very difficult to keep the jury from mixing up the two claims." An action was brought to recover the balance of money due on the sale of a public-house, and the defendant desired to set up a counter claim for the return of money paid as deposit on false representations alleged to have been made by the plaintiff and another person. Thus A. sued B., and B. wished to bring a counterclaim against A., and to join C. with him as defendant; a separate Act allows this to be done in a proper case. The Judge said that a defendant may set up any counter claim that is not so incongruous as to be incapable of being conveniently tried with the original claim. A claim for the return of deposit-money on the ground of fraud might be very conveniently tried in an action for the balance of purchase money on a sale where the whole defence to the action was on the ground of fraudulent representation by the agent. There would be some delay in the trial owing to the joinder of C., but that could not be avoided. In an action by builders for work done under a contract to build a church, the defendants desired to serve a third party with notice that they claimed indemnity from him; and this the Act allows to be done in a proper case. It was alleged that the architect had ordered costly extras, having no authority to order them, and must therefore indemnify the defendants. Leave was given to serve notice on the architect. The Order under which this was done is likely to have wide application. Thus, suppose an action is brought against a surety, and he claims contribution from another person as co-surety, his course would be to obtain leave to serve a notice on that person. Again, suppose an action brought against the acceptor of a bill of exchange, who claims to be indemnified by another person on the ground that the bill was accepted for his accommodation, the same course might be pursued. And it would be applicable also in the case of an action on a contract of sale, where the defendant claims to be indemnified by another person on the ground that he made the contract as that person's agent.

The defects which have appeared in working the Act are not very considerable, and, as Parliament is sitting, it would not be unreasonable to expect some help from it where necessary. Complaint has been made that the Judges have limited the use of interrogatories in a way that is both inconvenient and illegal. But a recent decision of the Court of Appeal has affirmed the construction placed by the Judges sitting in Chambers on the Orders, and upon the point of convenience there is something to be said both ways. Formerly a Bill in Chancery used to be divided into the "stating and charging" and the "interrogating" part, and the genius of prolixity manifested itself in no more striking way. The defendant was required to answer on oath on every point, although on many no contest was likely to be raised. "Whether the said A. B. did not depart this life on or about such a day, or at some other time, and when, and if not, why not, or how otherwise"—this is no great exaggeration of the antique style, which some practitioners, as it seems,

desire to restore. We cannot help thinking that there is much force in Mr. Justice Lindley's objection to go back to the old bad practice of interrogatories in Chancery, particularly as we are now told that brevity is to be the soul of pleading. It is apprehended that the Chancery Judges will not be able to get through their work now that evidence is generally taken *viva voce*; but perhaps further experience may suggest some mitigation of this new practice. There are many questions which may be tried quite as well and more expeditiously by affidavit, and it is only a minority of cases which require examination of witnesses in open court. The expense of unnecessary affidavits, although a serious abuse of the old system, may perhaps turn out to be less than that of bringing up witnesses to London. If a difficulty arises in adjusting the arrangement of business between the Common Law and Chancery divisions, and if the good sense and public spirit of the Judges do not suffice to remove it, recourse might be had to Parliament. But the Judges, or some of them, have been working, we might almost say not wisely but too well, in carrying out the supposed intentions of the Legislature. A Court for trying common-jury cases lately sat at Westminster till everybody was sick of it, and Judges rushed up from circuit and formed a "scratch" Court in *banc* to hear some of the many cases that have arisen on the construction of the Acts and Orders. It would be idle to expect that many such cases would not arise. If there be any possible method of attaining perfection in law-making, it is certainly not the method that is adopted by the British Parliament.

The authors of the Act must not, however, be held responsible for the obstinacy of litigants or the pertinacity of lawyers. The Queen's Bench division was lately occupied with an appeal against the order of a Judge transferring an action to the Chancery division. After reading long affidavits, the Court was enabled to see far enough into the case to affirm the Judge's order, and the appellant had to pay costs. It would be well indeed if no greater fault could be found in the working of the Act than this case presents. As long as foolish or perverse people have money to spend, there will be unnecessary litigation. The same Court was much exercised on the same day with the question whether a Judge had power to order a patent case to be tried before a Judge and scientific assessors, when the defendant insists on trial by jury. If the Court had been supplied with an edition of the Judicature Act which we have had the advantage of consulting, they would have known that, by Order 36, Rule 3, "the Palladium of British liberty" is preserved. It is certain that a defendant has power under this Rule to object to his case being tried in the only way in which it can be tried, and it is highly probable that the Rule was intended to give this power. Parliament may, if it thinks proper, take away this power, but we do not expect that Parliament would think proper. And even if it gave the Judge at Chambers a discretion in this matter, that discretion must be subject to appeal, and on appeal voluminous affidavits would be forthcoming to explain or obscure the nature of the question to be tried. We have already given some instances in which the "third party" clauses of the orders would be practically useful. In further illustration we may mention a class of cases which occurred frequently in the days of the railway mania. A surveyor was employed by a provisional Committee in making surveys and plans for some line which proved abortive, and he picked out some one Committee-man who was tangible and solvent, and sued him for his bill. This Committee-man, being thus compelled to pay the whole amount, sued his fellows, or as many as he could find, for contribution, but he could only do this by separate actions. If such a case occurred now, the "third party" clauses would be applicable to it, at least in the contemplation of the authors of the Act. But in a recent case a Waterworks Company sued a mechanical engineer for damages caused by a defective crank, and the defendant wished to bring before the Court the iron-founder who had forged the crank. The language of these clauses is so wide that it would be rash to say what they do or do not include, but at all events the Court has a discretion to exercise in applying them. The question has not yet been finally decided, and therefore we offer no opinion on it. All we can say is that in many cases these "third party" clauses would be useful. It ought to be added that the *Times* renders public service by its full reports and discussion of questions on the working of the Judicature Act.

PARIS THEATRICALS.

PASSION week in Paris must have given a hard blow to the superstition prevalent among a good many English people, that that amusing city is the home of perpetual brightness in its climate as well as in the light-heartedness of its inhabitants. For the greater part of the week the sky was grey and heavy, there was an intermittent fall of snow, sleet, or drizzling rain, the asphalte was slimy with mud, and you were cut through and through by a constant blast of angry wind. Even on the two days when the sun shone out and it was delightful to sit and bask in its warmth within the square of the Palais Royal, the moment one went out into the open streets this wind met one on the bridges or at the corners of streets with all the unpleasantness of an insisting creditor. The dramatic spirit of the Parisians, however, is superior to the accidents of weather, and on Thursday night in last week, when the pavement was thick with half-melted snow—the most penetrating form of dampness and discomfort that can be found—a full audience assembled at the Variétés to see the well-known *Vie Parisienne*, which has been remounted there in consequence of the failure of *Le Roi Dort*, with its most dramatic act for some inexplicable reason cut out. Hearing this pleasant piece of absurdity again, one cannot help wishing that M. Offenbach had always been as fortunate as he is here in the words for his music, and had taken equal pains with his part of the business. The acting is in the true spirit of burlesque; the most ludicrous and improbable things are done as if their doing were a mere matter of course which would at once suggest itself to any one in the position occupied by the people concerned. Thus when De Gardefeu (M. Cooper) is giving an account to Bobinet (M. Baron) of a ride in the Bois de Boulogne, they both fall naturally into the attitude of a man on a rapidly trotting horse, and it evidently never occurs to them that any other course could be pursued. When they are both dead tired, their exertions are only stopped by one saying to the other, "Si nous allions jusqu'au Cascade?" M. Dupuis, as the Swedish Baron, preserves an imperturbable simplicity and air of foolish wisdom which are intensely ludicrous, and many of the actors manage to sing pleasantly without any voice; an accomplishment which seems almost as peculiar to France as that of keeping an audience amused throughout such a piece as *La Vie Parisienne*.

All the theatres of Paris are closed on Good Friday, and those which enjoy a subvention are closed from Thursday night in Passion week until Easter Sunday—a rule to which the Gaîté, not yet under Government protection, submitted itself by way of asserting its future honours. The playgoer driven to the Boulevard on Saturday night might have done worse in a search for amusement than by going to see a "drame in five acts and six tableaux" which is running at the old Théâtre Lyrique, now called the Théâtre Historique. This piece, *La Maison du Pont Notre Dame*, which oddly enough was till a few days ago being played also at a small theatre in the outskirts, is a fair specimen of an old-fashioned melodrama. The leading idea is worthy of better workmanship than has been bestowed upon it by the authors. A young man, Pascal de la Garde, returning home to a large fortune and the prospect of marrying a beautiful girl, is assassinated by his uncle, with the connivance of a rascally innkeeper. Five minutes after the body has been concealed and the uncle has escaped, a man, whom the innkeeper takes at first for the ghost of the victim, comes into the tavern. On recovering from his terror, and learning that the young man is a nameless adventurer (he is, in fact, Pascal's illegitimate brother), the innkeeper, to serve his own ends, proposes that he should personate the dead Pascal, and the deception is carried out. The notion might be worked into a striking play, and such an actor as M. Fechter might play the double part with surprising effect; but the piece as it stands is constructed with wonderful clumsiness, and at inordinate length; and the spectator's amusement at the Théâtre Historique has to be derived chiefly from the players' attempts at impressive acting, and the delight with which well-worn incidents of melodrama are received by the gallery. The house on the bridge of Notre Dame, from which the play takes its name, has two stories, and, as its front is removed for the convenience of the audience, a double action is seen going on inside. It is possible that, with well-arranged mechanism, this device might be effective; at the Théâtre Historique the arrangement of the stage is remarkable for its likeness to a gigantic Punch and Judy show. The street Punch, with its atrocious crimes, bustling action, and final retribution, is indeed the archetype of old-fashioned melodrama; and one cannot help wishing that the actors in *La Maison du Pont Notre Dame* had as little to say as those concerned in Punch. However, the gallery is pleased with the house, and the exciting incidents that take place in it; and when, in another act, there is a combat between four gentlemen and a band of brigands, its enthusiasm knows no bounds.

At the Français M. Got has been playing his old part of Le Duc Job in Léon Laya's play of that name, and thereby proving how far a piece of fine acting can go to redeem a play which is ill constructed and ill written. The drama abounds in long involved sentences, which would be a terrible infliction but for the skill brought to bear upon their delivery. It would be difficult to point to anything that is not admirable in M. Got's performance. He is by turns ironical, impassioned, and pathetic, with the highest success; and he gives interest even to the dullest of the long speeches assigned to him, overcoming the difficulty of their length by a rapidity of utterance which yet is never hurried. In one scene he sits down to breakfast with the usual uncle of comedy; he is overcome with grief, wearied with a sleepless night. He drinks, and the wine gives him a momentary brilliancy, until his exhaustion and the stimulant with which he counteracts it combine to send him into a sudden sleep. Only the very finest acting can rouse one's sympathy for such an incident, and this M. Got fully succeeds in doing. Mlle. Reichemberg, as the girl whom Le Duc Job loves and finally marries, displays a singular grace and tenderness.

Full audiences still flock to hear M. Dumas's exposition of the theory that Providence always intervenes to get rid of an inconvenient ruffian at the desired moment, illustrated by marvellously skilful acting. M. Dumas has seen that the truth of this theory may possibly be doubted, and to one who objects that he has often seen the wicked flourishing, Dr. Rémonin, who propounds the theory, replies, "C'est que vous ne regardez pas assez longtemps." No one can prove that this is not the case;

only in real life one may have to wait a good deal longer for the triumph of virtue than one has in *L'Etrangère*, where the difficulty is of course solved in the last act. But in this play, as in many others of M. Dumas, it does not strike one that the virtue which triumphs has much more claim upon one's esteem than the vice which meets with punishment. A change has been made in the final winding up of the piece since the first nights, when, after Clarkson the American had killed De Septmonts in a duel without witnesses, the mysterious Mistress Clarkson relieved her husband from all difficulties by using her authority, whatever that might be, as a member of the secret police. Now she contents herself with saying that she will take care of his affairs, and the one explanation is about as plausible as the other. One or two little blunders which do not strike one on first seeing an exciting play come into view after it has been acted for some time. For instance, a good point is made by Clarkson, on being introduced to the Duke de Septmonts, gruffly saying, "Bon jour, monsieur," clapping his hat on his head and walking out of the room. An Englishman in Clarkson's position, and overwhelmed with business, might do this, but the instinct of an American is to be extremely ceremonious when he is introduced to a stranger. Again, when Clarkson challenges the Duke, he proposes to use the small-sword, saying, "That is your best weapon," and adding, in an aside, "and mine too." We are given to understand that Clarkson has fought many duels, chiefly in America, and we are left to wonder how it happens that he should be more skilled with the French sword than with the pistol that must be familiar to his hand. Professors of fencing do not abound in California. But Clarkson's character is, in truth, almost as inconsistent as his wife's, and the skilful make-up and forcible acting of M. Febvre cannot entirely cover the author's mistakes.

On the reopening of the Français three short pieces, *Les Fourberies de Scapin*, *La Joie Fait Peur*, and *Le Mariage de Victorine*, were given. Scapin is played by M. Coquelin, whose comic force is irresistible, but, as in other parts, he is apt to exaggerate the farcical element. It is unnecessary that, when threatened by his master, he should wallow on the ground and cry like a child. In the scene where, having put Géronte into a sack, he imitates the tones of various assassins, and, under cover of their personality, beats the unhappy Géronte, the actor triumphed with singular success over the difficulties put in his way by a peculiar voice, and his expression when Géronte discovers him was the essence of comic terror and discomfiture. Mme. Girardin's *La Joie Fait Peur*, tolerably well known here both in the original and by means of two English versions, is one of the most touching pieces ever written. It turns, as will be remembered, upon the sudden appearance of a young sailor supposed to have been lost, and the gradual breaking of the news to his mother. M. Got's command of humour and pathos is seen at its best in Noel, the old servant, to whom the returned son first appears. He is alone on the stage and is talking of the folly of giving up all hope, when his young master enters unobserved. "For my part I should not be surprised," says Noel, "if he were to stand before me now and say, 'Noel, I have come back, you see. Pray go and order me something to eat'"; and the moment the words have left his mouth they are repeated by the young man. Noel gasps and staggers back. He turns pale, his jaw drops, his body becomes rigid, and he is falling heavily forward on the ground when the young man catches him. The effect of M. Got's acting at this point was thrilling. Two girls, the young man's sister and betrothed, are played admirably by Mlle. Reichemberg and Mlle. Broisat, who makes a singularly pleasant impression in a part where there is little to do beyond looking grief-worn at the beginning and joyous at the end of the play. One felt, however, a strong interest in the character through Mlle. Broisat's interpretation. Mlle. Reichemberg's performance of the sister could hardly be improved. The subdued pathos at first, the joyousness which follows and expresses itself in girlish playfulness, the conflict of emotion when she is trying to give her mother some idea of the truth without going too far at once—all this was given as well as possible. The somewhat sombre tone of the piece is relieved by the brightness and grace of M. Delaunay's acting as the young man. He has the art of speaking the most commonplace words and performing the most ordinary movements so as to give them grace and interest; and when he has to deal with emotion, he never misses his mark. The meeting between brother and sister drew tears from many of the audience. The only unsatisfactory part of the performance is Mme. Guyon's playing of the mother. The actress goes through all the gestures and intonations which are commonly taken to represent the emotions she has to express, but she fails to impress the spectator with any sense of reality. Mlle. Favart might play the part finely, but Mlle. Favart has an unwise objection to playing any but young characters. *Le Mariage de Victorine* is a proof that George Sand's writing can at some times be as outrageously dull as it is exciting at others; but the piece is well acted, and gives especial opportunities to Mlle. Baretta, who came to the Français from the Odéon, and who is very valuable in *ingénue* parts.

A success second only to that of *L'Etrangère* is obtained by *Les Danicheff* at the Odéon. The piece is announced as by M. Pierre Nevsky, but it is well known that it passed through the hands of M. Dumas, who is a friend of M. Nevsky, before it was put on the stage. M. Dumas's writing is indeed evident enough, both throughout the character of Roger de Taldé, the French attaché, and in passages where the biting if somewhat mechanical wit peculiar to M. Dumas is easily recognized. Roger de Taldé has nothing whatever to do with the plot; he is not even employed as a chorus; but a French audience will not readily accept a play in which there is no French interest, and so Roger de Taldé is introduced among the crowd of Russians to deliver a lecture in M. Dumas's best style upon the classification of women, and to utter a thinly-veiled defiance of Germany and hope for a Russian alliance. The character is played pleasantly and with a quiet force by M. Porel; and one cannot regret De Taldé's presence in the piece, although the construction of the piece might be more artistic without it. The situations of the play are striking. The action passes in 1851. Wladimir, the hope of the Danichells, is in love with Anna, a serf of his mother's whom she has brought up almost like a daughter, and announces his intention of marrying her, to the horror of the Countess his mother. After a stormy scene the mother, a hard, proud woman whose chief interest is found in the kittens and dogs that run about her room, appears to make terms with her son. He is to go to St. Petersburg for a year and pay his court to the Princess Lydia Wladanoff. If at the end of that time he still wishes to marry Anna, all shall be arranged. Meanwhile she is to know nothing about it. He accepts the condition joyfully, and the moment he is gone the Countess sets Anna and Osip, her coachman, free, and has them married. Osip, however, has a noble soul, and, though he loves Anna, when he learns her love for his young master, resolves that he will go through the marriage ceremony with her by way of blinding the Countess, but will never be more to her than a brother. The second act passes at St. Petersburg, and is occupied with the Princess's love for Wladimir, and his discovery of his mother's breach of faith. In the third Wladimir returns home, full of fury against Osip, which changes to gratitude when he learns the faithful servant's sacrifice. Osip proposes to obtain a divorce, and the Countess, who has also returned, seeing that her schemes have failed, agrees to this. Here the play should end; but there is a fourth act, which is needlessly taken up with the machinations of the Princess Lydia to prevent the divorce, and their defeat by a somewhat clumsy combination of circumstances. The play is not well constructed, and its tone is too sombre, but it contains many fine incidents, and there is in it a clearer atmosphere than in the pieces where a breach of the Seventh Commandment is arrived at to the accompaniment of slow music. Mme. Picard plays the difficult and unpleasant character of the Countess with surprising success; M. Masset, who has for this part modelled his face and gesture after M. Faure, would be more impressive as Osip if he were less uniformly tearful. M. Marais, who came straight out of the Conservatoire to play Wladimir, exhibits both in the lighter dialogue and in bursts of passion qualities which, if properly directed, may lead him to a very high place on the stage. It is to be hoped that he will not be induced, like many young French actors, to sacrifice an assured future to the brilliant chances of the present.

IMPOSSIBLE COUNSEL.

MR. JOSEPH BOULT, F.R.I.B.A., whose discourses on Early English matters we have noticed once or twice, has again undertaken to give the world some further enlightenment from his special stores; and we are the less likely to pass by what is offered to us, since, in graver columns than our own, we have seen Mr. Boult made the object of a very curious and friendly admonition. His industry, research, &c. &c., are said to be very praiseworthy; only he would do well to learn some comparative philology. The state of mind of Mr. Boult's adviser is almost as great a study as the state of mind of Mr. Boult himself. We received not long ago several diagrams accompanied by some elaborate calculations, which were altogether beyond our understanding, but the object of which was to prove that the sun is much smaller and much nearer the earth than astronomers have for some ages taught us that it is. If we had been in the same state of mind as Mr. Boult's adviser, we might have congratulated the calculator on his valuable researches, but might have recommended him to learn some astronomy. But such a precept would go on an altogether false view of human nature, or at least of the type of human nature which comes to light in Mr. Boult and his astronomical likeness. To tell them severally to learn astronomy and comparative philology is to tell them to cease to be themselves. They have severally the fullest conviction that they have learned those sciences, that they have learned them incomparably better than any master of them whose authority could be quoted against their own special views. We find no fault with the man who, never having been taught any better, thinks that the sun is a few miles off and is of the size of a cart-wheel. And the Greek philosopher who first taught that the sun was as big as Peloponnesus had made no small scientific advance. To counsel men of either of these classes to go and learn some astronomy would be a perfectly rational precept, and one which they would very likely gladly obey. But it is vain to give such counsel to the man who knows perfectly well what scientific astronomers have to say on the matter, but who thinks that he has an argument of his own which proves that the scientific astronomers are all wrong. It is not that he lacks research, or that he lacks thought. He has no doubt read and thought and calculated a great deal; only his reading and thinking and calculation are all utterly misdirected. With such a man it is useless to argue; he must be left where he is. He is the useless man of Aristotle who neither finds out what is right for himself, nor listens to other people who have found it out.

Now the really instructive thing is that, while nobody would treat the astronomical craze seriously, people are found who treat the philological or historical craze seriously. People who can read and write and get into print do, as a rule, know the first rudiments of astronomical science. They very often do not know the first rudiments of philological and historical science. If a man says that the earth is flat or that the sun is a few miles off, every one sees the absurdity at once. If a man makes historical or philological proposals which are on exactly the same level, many people do not see the absurdity; they talk about "controversies," "differences of opinion," and the like. The *Times* thought it was a matter of "controversy" when certain people chose to affirm that Alfred founded University College. It was very hard to make people understand that that proposition was exactly on a level with the proposition that the earth is flat. So the Oxfordshire annalist who in his book puts Richard King of the Romans before Cæsar knows perfectly well that other people put him in the thirteenth century; only he thinks that he is right and that the others are wrong. And we have not the least doubt that many people who would at once laugh at the notion of the sun being only a few miles from the earth would look on the age of King Richard as a fair matter of controversy on which each side "had a right to its own opinion."

What is the cause of this difference? Why is an absurdity in physical science so much more generally recognized as an absurdity than an absurdity in history or philology? There must be some intelligible reason for such a difference. If the answer be made that the one kind of knowledge is more generally diffused than the other, this, so far as it is true, is not the cause of the difference, but one form of the difference itself. And it is only partially true that physical science is more generally known than historical or philological science. The real masters of philology are very likely quite as many as the real masters of astronomy, and the smatterers in astronomy can hardly be thicker on the ground than the smatterers in philology. But there is this difference between the position of the two studies, which is in truth the difference which we have already stated. A great number of people, without having really gone at all into the study of astronomy, without being able to give any reasons for the propositions which they accept, have got ideas on elementary astronomical points which are accurate as far as they go. They know that the earth is round; or, as that phrase is not quite scientifically correct, at least they know that it is not flat. They know that the earth goes round the sun; they know that the planets also go round the sun and that the fixed stars do not. But beyond this they do not go very far. They have a correct general notion of the cause of an eclipse; but how astronomers can reckon that an eclipse will happen at a particular time is a perfect mystery to them. Now people who are in this frame of mind, whose ideas go but a very little way but are accurate as far as they go, recognize the absurdity of a misstatement within their own range as readily as the scientific astronomer does. When they are told that the sun is only a few miles from the earth, they cannot, like the scientific astronomer, prove beyond gainsaying that it is otherwise. But the idea seems as grotesque and absurd to them as it does to him. Now with regard to history or philology there are comparatively few people who are in this exact state of mind. As a rule, people know either more or less. People who have a correct notion (as far as it goes) about the sun and the earth perhaps never heard of Sanskrit, perhaps think Greek is derived from it, perhaps think that all languages are derived from Hebrew. The notion that Richard King of the Romans lived before C. Julius Cæsar does not seem so absurd to them as the notion that the sun goes round the earth. And in a sense they are right; it is equally wrong, but it is not equally absurd. Like nearly every popular mistake or confusion, there is an element of truth in the thing. Historical and philological propositions are not capable of mathematical proof. They depend on the same kind of evidence on which men act in their ordinary affairs; they are not capable of that kind of proof by which Euclid proves his propositions. If a man chooses to say that the facts of philology are all accidental coincidences, or that the documents on which history rests are all forgeries, we cannot convince him of his error in the same kind of way in which we can convince the man who says that he has seen a triangle whose three angles were not together equal to two right angles. Historical and philological proof both seems to be and is less rigid, less technical, than the proof by which the astronomer calculates the time of an eclipse or measures the distance between the sun and the earth. It is a kind of proof which both seems to be and is more within the reach of every man's common sense than the other. It is a kind of proof which, besides a certain natural gift, calls for tact and practice fully to appreciate it. But it cannot be of the nature of rigid demonstration. A man will therefore think himself quite capable of judging for himself on a philological or historical matter, he will cast away the authority of those who know better than himself, at a stage of knowledge at which he will humbly accept the teaching of experts in a matter of astronomy. He sees that astronomy is not a matter of guessing, because the proof is rigid. But because philology is not capable of the same rigid proof, he thinks that it is all a matter of guessing, and he thinks, perhaps truly, that his guess is as likely to be right as another man's.

Hence there come two consequences. In philological and historical matters the right thing does not get the same undoubting acceptance which it gets in astronomical matters, while the wrong thing is much more likely to get acceptance. Anything that has a learned air will impose on people, and the wrong thing often has quite as learned an air as the right thing. Mr. Boult and his counsellor are a case in point. Mr. Boult, who has already put forth several pamphlets of the kind, has, since the beginning of this year, put forth another, headed *Notes on Early Social Grades in England*. Now Mr. Boult has, in a kind of way, read some of the sources of early English history, quite enough to give a learned air to what he writes. But he has a craze, half historical, half philological. He is one of the sect who think that Englishmen are Welshmen; and he tries to confirm this belief by taking every plain English word that he meets and making a Celtic derivation for it. His etymology, we need hardly say—indeed some of our readers may remember earlier specimens of it—is very much in the style of "Alexander the Great" from "All-egge-under-the-gnate," which may be taken as typical of this school of philology. Nay, whereas his Celtic ought, to prove anything, to be ancient Welsh, a good deal of it happens to be modern Irish, while some of it is of a class to which Welsh scholars decline to give any name at all. At the attainments of Mr. Boult's nameless counsellor we can of course only guess. But our guess would be, that he knows philology enough to see at once that all this is nonsense, but that he does not know much about Old-English Laws, and that he is therefore impressed by Mr. Boult's air of learning on those matters. He therefore does not see that Mr. Boult's philological craze is the essence of the whole thing, that without his craze Mr. Boult would not be Mr. Boult at all. To him the craze seems to be only the weak side of otherwise praiseworthy researches, and he counsels him to go and strengthen himself by learning philology. He speaks, in short, to Mr. Boult as he might have spoken to Sir F. Palgrave when that great scholar fancied that the word *king* was of Celtic origin. Sir F. Palgrave's mistake was simply an isolated mistake, which might be corrected, which a little philological study doubtless would have corrected. Mr. Boult's Celtic etymologies cannot be corrected away in this sort; they are the essence of the whole thing. If we are to have Mr. Boult at all, we must have him with his Celtic theories.

As for the particular etymologies, a philologer will stop to discuss them when an astronomer stops to discuss the theory that the moon is made of green cheese. But it is worth noticing that Mr. Boult does not put forth his grotesque etymologies in sheer ignorance of the real ones. He knows them, but he thinks that his own are better. As Englishmen are not to be Englishmen, it is only carrying the doctrine a little further to rule that *men* are not *men*. To be sure they are something greater:—

> In sochemanni the primary syllables are of course due to the same root as in socage; but the termination I conceive should not be assumed to be the word "man" latinized. That word does so appear occasionally, but in many cases it is ascribable to K. *mramnach* (may nach), from *mamn*, glossed by O'Reilly manifest, famous, illustrious; but in the word under notice used to distinguish the agriculturist from the mere ploughman. I think a similar application may be found in "Ceninmagni," a tribe early settled in East Anglia, and in "Ealdormanni," "Rademanni," and "Lagemanni."
>
> "Ealdor" is for "il-dor," "great door," and the Ealdorman is "the principal person at the great gate." "Ceorl" is "from K. co-ar-il (carcel) the great ploughland." "Demesne" is "land free from tax. K. *demeas-ne*, not of assessment." The lady of this demesne should surely be a Phrygian or Lydian *dam* or *dav*, and, next to Nephelokokkygia, no more fitting place can be found for the estate than the "Chersonesus Cimbrica."

Mr. Boult would seem to be hindered by his profession from being made a canon; but it is surely hard that he is not a Professor somewhere.

DISTRICT NURSING.

YEARS of suffering have not quenched Miss Nightingale's early enthusiasm. She has the same passionate interest in her old subject, the same determination to mitigate for others the pain which she bears with such unselfish fortitude. Confidently and eloquently she appeals to the public for help to establish a great National Nursing Association for the Poor. The prospectus of such an institution has been drawn up, and a central home started where already a beginning has been made. That Miss Nightingale should advocate the aims of the Society cannot fail to inspire confidence that it may become worthy of its name. When Miss Nightingale's public labours began we thought skilled nurses were only required for wounded soldiers. Mere fevers or epidemics, it was supposed, must run their course. Children came into the world and for the most part went out of it with only the assistance of Sarah Gamp. Those who walked the hospitals even twenty years ago have a lively recollection of the race of robust, hard-swearing charwomen, or worse, who were then dignified with the name of nurse. But we are now on all sides endeavouring to attain to ideal Hygeias. Correct statistics of the death-rate in different places enable us to put our finger on an unhealthy spot and insist upon investigations as to the cause of the mortality. We can now boast of crowded districts in London which are as healthy as most country parishes, and we can point to Bristol and Portsmouth as examples of successful sanitary reform. We no longer pity Salford and Newcastle for their unhealthiness; we reproach them for homicidal neglect. What has been accomplished during the last few years in the prevention of illness only shows us how much more might have been done. The mortality of this country might still be largely reduced if we could ensure the

enforcement of ascertained laws. And here lies the greatest difficulty of the hygienic reformer. He can prescribe, but who will administer his prescriptions? He can direct, but who will carry out his directions? The life may be saved by care, but who is to take the care? In surgical cases the hospital is no doubt the best resource of the sick poor. They have the most experienced physicians, and for the most part tolerably competent nurses. But there are even surgical cases which might with advantage be nursed at home, if there was any way of ensuring to the sufferer even a moderate amount of care and comfort.

It would be almost impossible for any one who had not visited among the London poor to realize the abject misery which illness produces in an airless, overcrowded room. There are thousands of struggling people who find it difficult at all times to keep their heads above water, to provide the barest necessities of life, and pay the week's lodging. Sickness is the last straw, the additional weight yet required to sink them into hopeless pauperism. In cases of fever it is a great matter to have such an institution as the Fever Hospital at Islington, where patients are kept until all fear of contagion is past. Isolation is always difficult in a town house. But in chronic diseases, or where it is only cold and neglect, which make a slight attack serious, it is often most desirable not to break up a home which it may never be possible to re-establish. The home may be a draughty garret or a damp cellar, and yet be a better place in which to bring up children than the workhouse. But a helping hand is needed beyond what the district visitor is able to supply by her bread or meat tickets. Something more is required to help convalescence than the bottle of medicine from the dispensary. So long as the mother of a family is able to get about, things are not utterly hopeless unless she drinks. But when she is confined to bed and has several young children, the case becomes desperate and recovery very uncertain. Perhaps after a sleepless night she begins to doze as her husband rises to go to his work; too often hardened by adversity he is careless of her sufferings; but if he has come in sober the night before and has his faculties about him, he makes an awkward attempt to light the fire and put on the kettle before he tramps away. Then the children waken and want their breakfast. There is none prepared for them, the coals are not lighted, and they must be contented to gnaw a dry crust in the corner. In the bed beside the invalid is the baby wringing her nerves with a piteous unceasing wail; her illness has robbed it of its proper food, and there is no money in the house to buy milk. The eldest girl does her best with slack and a bit of paper to rekindle the fire, and with vigorous use of the bellows the kettle boils at last. A new misery now arises in the danger lest she should pull it over and add a scalded foot to the other woes of the family. The mother listens to each step on the stairs, hoping perhaps some friendly neighbour will come and look after the little ones and raise her in the bed. But all of them have more to do than they can manage, and if a gossip knocks at the door to have a talk, she goes away again without interfering with the family arrangements. The children, unwashed, unkempt, half fed, endanger their lives on the staircase, or add to their mother's anxieties by wandering about the streets. It is needless to follow the course of the weary day until the husband's return from his work, tired, and perhaps wet, no supper ready, everything wretched and in disorder. It is not surprising that he adjourns to the "Queen's Head," and reveals towards midnight, by unsteady steps on the stairs and the thickened utterance of his many oaths, that the money for to-morrow's food has gone in betting and beer. By degrees everything is pawned, even to the blankets, and the invalid leaves the bare walls of what was once home either in the parish hearse or the workhouse van. It is not only amongst the abjectly poor that illness is so terrible a calamity, such a crushing misfortune. It is just as much felt in the home of the struggling tradesman, perhaps more. Thousands of valuable lives are sacrificed every year simply for want of proper nursing. The hard-working clerk with a large family might have lived to provide for all his children if the temperature of his room had been kept equable when he was laid up with bronchitis. The grocer at the corner would still be selling adulterated mustard if, when he was in rheumatic fever, proper nourishment had been given him throughout the night. The widow who was supporting her family respectably by dressmaking need not have left them orphans if a little care had been taken of her when she was recovering from diphtheria.

The National Nursing Association, fully alive to the present culpable waste of human life, propose to train and provide skilled nurses for the assistance of the sick poor in their own homes, and to establish a training school in connexion with one of the London hospitals. A beginning has been made, and a Central Home started in Bloomsbury Square; others will be established by degrees in the different metropolitan districts, and the Committee hope to extend their operations into the country as soon as funds are raised. The nurses are to be taken from the educated classes, to have comfortable homes provided for them, where they will have none of the cares of housekeeping, but be able to devote their time and talents entirely to their work. They must go through, first, three months' probation, in order to find out if they are suitable candidates, then a year of hospital training, and thirdly three months of special instruction. The expenses incurred by the nurse amount to about fifty pounds during the time of training; she then gets a salary of thirty-five pounds a year, rising by three pounds per annum, until it reaches fifty. Uniform is supplied and washing, so that she has only her personal expenses to provide for. It is particularly desired that the nurses may not be looked upon as almoners, as from workhouse and parish organization a sufficient supply of nourishment and other necessaries may always be counted upon. Miss Nightingale points out that great care must be taken not to demoralize and pauperize families; that when a man is given to drink he may be induced to deny himself to help a sick wife; whereas, if everything is provided for her, he will only have additional temptations to self-indulgence. District nurses will necessarily be of a class superior even to those in a hospital, because it is necessary that they should be able to supplement in some degree the office of the doctor, and that, too, without the usual hospital appliances. It is requisite that they should be able to keep an accurate record of the pulse, temperature, and symptoms of the patient, so as to enable the doctor to know how and when to vary his treatment. Among her most important duties will be that of calling attention to the sanitary condition of the house. Dustbins, water-cisterns, drains, must all be inspected and watched, and in cases of defective arrangements reports made to the proper authorities. This will be an arduous part of the work, as it is most difficult to cope with landlords and with the legal difficulties which constantly arise. It will not be easy to go into a man's house as a nurse, and not only to insist on his leaving it as soon as possible, but also to take steps for having it shut up and pulled down. Even Miss Octavia Hill, with all her energy and resolution, finds such a task not without its difficulties.

The scheme which Miss Nightingale asks the public to support, and that generously, is evidently the result of much careful thought and wide experience of the wants of the sick. The arrangements made for the comfort of the nurses are wise and far-seeing; the limiting of their work to eight hours in the twenty-four is no doubt real economy, as it enables the staff in times of emergency to do much more than if they did not ordinarily get proper rest and recreation. The great question now to be solved is not whether money will be forthcoming to carry out the establishment of a great national institution, nor whether the poor are willing to pay a small weekly sum for skilled nursing, but whether it will be possible to procure the raw material out of which Miss Nightingale's ideal nurses are to be manufactured in sufficient quantity to fill the places provided for them. She wants a refined educated gentlewoman, too much a lady to think any service she can render menial; with sufficient tact to steer clear of offending a most easily offended class, and yet with determination enough to insist upon her reforms being carried out. This lady nurse must be strong enough to bear the most sickening smells, the most loathsome sights, the most agonized deathbeds, without being made ill by them. She must be brave enough not to be frightened at the abuse of a drunken man, or at having to walk through the streets alone at the dead of night. She must be a Sister of Mercy without her early training or her faith in works, a doctor without his pay, a sanitary inspector without his power, at once a servant and a teacher, a tender nurse and a strict disciplinarian.

A FEAST OF HORRORS.

BEFORE the Wainwright murder has quite faded from popular recollection, we have a new accumulation of atrocities, and the people who delight to gorge themselves on horrors of this kind are no doubt rejoicing over the particularly racy entertainment now provided for them. Such luck is almost more than could have been expected, and at such a dull time as the present it will no doubt be especially welcome. It is fortunately unnecessary for us to repeat the sickening details which are so profusely recorded by the morning papers. As to the supposed murder at Chelsea, it is evident that there must have been foul play of some sort. The poor woman was robbed, but whether her death was intended is a question which has yet to be decided. The chloroform which is suspected to have been administered may have been given only for the purpose of producing stupefaction, and indeed the medical evidence as to the very weak condition of the victim would seem to suggest that terror alone might have been the cause of her death. In the other case we have a frightful example of the fiendish elements which occasionally break out in humanity. Cases of this kind occur from time to time, and, though insanity is usually pleaded, there is seldom any ground for accepting this excuse. There is a reluctance on the part of refined society to face the fact of the appalling depravity which comes within the range of our common human nature. It is thought to be necessary, as it were, for the honour of the family, to explain away such aberrations on the ground of insanity. It shocks respectable people to think that they share the nature which is capable of perpetrating such atrocities, and the fiction of lunacy is invented to keep up the reputation of the race. There is of course a certain amount of foundation for the mad doctors' pet theory of homicidal mania, but in the majority of instances murder and other atrocities are committed, not from any weakness of mind, but from sheer wickedness. Such a case as that at Blackburn is an impressive, though painful, lesson as to the depth to which a man may sink when once moral restraint has begun to be impaired. At the same time, although it may be well to take the warning which such incidents offer, they are certainly not things to be gloated over and made the subject of an amused curiosity.

The morbid interest taken in Wainwright's case was a sufficiently disgraceful exhibition, and it is to be hoped that we are not

to have a repetition of the mawkish sensationalism which was then displayed. There can be no doubt that in Fish's case the ordinary machinery of justice is quite capable of doing whatever is necessary, and there is therefore no excuse for the officiousness of certain newspapers in publishing all sorts of private gossip and mere rumour. The facts will come out in the criminal proceedings, and it will probably be found that all that is essential might be put within a very small compass. Nothing can be more scandalous or demoralizing than that a romance should be made of such a horrible story; but we are sorry to see that there is in certain quarters a disposition to commit this offence. The *Daily Telegraph*, for instance, supplies its readers with minute details as to the appearance, manners, and antecedents of the prisoner. More than one reporter is employed in this nauseous task, and while one sends a rumour that Fish once hung four kittens by the tail until they died, and that his eyes are light grey and his features deadly pale, another writes that he has inspected the prisoner in his cell, and found his eyes much inflamed, as if with weeping, but otherwise "quite fresh and healthy looking." One of these literary scavengers did not scruple to torture the prisoner's wife by his impertinent inquiries, and duly photographs her for the benefit of his customers. Though suffering keenly, she seemed much better than he expected to find her. "She had an infant at her breast, and one about three years old was running about apparently unconscious of anything serious." It is perhaps fortunate that the age of the child prevented the poor creature from being subjected to an unwarrantable inquisition. In a later account we have a picture of the prisoner in his cell, "apparently weighed down with remorse, sitting at a table with his face buried in his hands," while from outside is heard the music and uproar of an Easter fair. It appears to have been thought worth while to make an examination of Fish's "phrenological developments," and the reporter obtained from an expert in such things an opinion that his bumps are scarcely of a murderous type, though that of destructiveness is somewhat prominent. A touch of romance is given to the case by a sketch of the room in which the remains of the girl's body were found. On one of the walls is said to be a picture of a bloodhound sniffing at a huddled heap which seems to disclose the human form. What on earth has all this to do with the case? Nothing; but then of course it makes it more like a story in a "penny dreadful." It may readily be believed that "some very curious stories are current amongst Fish's neighbours," but why should they be raked up in order to gratify a diseased curiosity? It is brought up against Fish that, as a barber, he was strangely taciturn; "he sometimes would not speak a word for a week"; but it is to be hoped that barbers generally will not be led to suppose that they are likely to be suspected of crime if they do not deafen their customers with endless chatter. Here is another great fact which, when it first struck the reporter, evidently suggested to his mind the promise of interesting developments. "Contiguous to his shop is the 'Fishers' Arms' public-house." So the reporter interviewed the barmaid; but his hopes were soon damped. Fish never visited the "Fishers' Arms," "professing to be a teetotaler"; but his wife had been known to fetch him of a night a small glass of port wine. This artist in horrors, by way of making his tale as grim as possible, thinks it necessary to proclaim to the world that Fish's wife, on hearing of his confession, exclaimed, "I am very thankful, let him be hanged; if he is guilty, hanging is too good for him"; but there is happily no necessity to believe the statement to be true. Morgan, the bloodhound which scented out the human remains, also comes in for a share of the sickly enthusiasm which seems to be excited by this event. Morgan, we are told, is "a quarter bloodhound, quarter bulldog, and half setter," and fawn-coloured; and "is much petted by thousands of the people of Preston." "Many stories are told of his wonderful capabilities," and no doubt, if an unabashed Paul Pry were to print all the stories he picked up in the streets and elsewhere, he would soon fill many columns. But is this respectable journalism? It is said that an offer has been made by a caterer of public amusements at Blackburn to pay 5*l.* a night for a certain number of nights in order to make a public exhibition of the dog.

It is impossible to imagine anything more disgusting than this silly and morbid excitement about the most trifling and remote details of a horrible affair; and there can be no doubt that the effect on the public mind must be very injurious. The jumbling up of everything in a mass of rubbishy gossip, to be read merely as a thrilling story, tends to diminish the impressiveness of judicial proceedings undertaken in grave earnest and under serious responsibility. The gratification of a morbid curiosity and appetite for vulgar sensation dulls the natural feelings which ought to be stirred on such an occasion, and accustoms people to regard the most horrible and revolting aspects of life as a legitimate subject of amusement. This is a matter to which we have more than once had to recur, and there can be no doubt that it is a serious evil. In a former case the *Daily Telegraph* defended the publication of some nasty details on the ground that, "in view of the devilish wickedness which has been perpetrated, it would be an act of unjustifiable squeamishness to hush up one circumstance of horror"; and the *Telegraph* has certainly contrived to avoid any failing in this respect. There is no reason, of course, why the facts of a crime should not be published, but there is obviously the widest difference between reporting the hard matter-of-fact evidence given in a court of law and dishing up what may or may not be facts, so as to make up a sensational tale. Enough is not yet known of Fish's state of mind and habits to enable one to form a diagnosis of his character; but we should imagine that nothing would be so likely to produce imitation of his unnatural callousness as the habit of brooding over such details as those with which the newspapers nowadays pander to a depraved taste. People who have a sense of enjoyment in the horrible interest of such narratives are, we are afraid, clearly on the road to take a similar interest in the torture of animals, which, whether truly or not, is ascribed to Fish as one of his favourite amusements. The lesson of all such crimes is the warning they afford of the precipice on which human nature stands, and the danger of any approach to the edge of it. Imagination, and especially the imagination of dull and ignorant people—for imagination, it must be remembered, does not necessarily mean intellect—is a dangerous thing to play pranks with. If allowed to range too loosely, and to poke about in all sorts of foul and unhallowed corners, it is apt to get a devilish mastery over those who yield to its seductive influence; and from indulgence in imagination to indulgence in practice is but a short step. The morbid curiosity of Eve, the desire to test imagined sensations in a practical way, survives among her children, and there is perhaps no poison which is at once so insidious and so fatal in its influence. People may think that they can now and again go in for a dose of *Daily Telegraph* sensationalism about crime, and enjoy the creeping of the flesh which it produces—"I feel as if it made my back open and shut," said a housemaid once, who was a great admirer of this kind of literature—without suffering any permanent injury; but this is a mistake. There is no taste which grows so quickly on people as a bad one; and, when corruption of mind and feeling once sets in, it spreads rapidly. It is impossible to say how much harm is done by such narratives as those of the fight between Brummy and the dog, and of the various horrible crimes which from time to time come to light, by which the *Telegraph* cultivates popularity among the least intelligent classes of the community. There is nothing which it is more dangerous to foster than a taste for nasty and horrible things as a fillip to a stagnant imagination.

QUEEN MARY AT THE LYCEUM.

IT was proper that this play should be brought on the stage, and an attempt, in itself far from hopeful, might be made under most favourable conditions at the Lyceum. Few readers of the play probably have felt any strong desire to see it acted, and the characters of Queen Mary and Philip of Spain will always remain thoroughly unprovocative of sympathy. Let us say at once that Miss Bateman and Mr. Irving did all that was possible for these characters, as the manager did for the play generally. It was not long, yet it was tedious; and although Queen Mary took an unconscionable time in dying, we remember that the spectacle of her sickness might be preferable to a description of Cranmer's burning. At the close of the first performance Mr. Irving declared his intention of telegraphing to the author that the play was "a confirmed success," and it is true that a full house bestowed plentiful applause, with a barrow-load of bouquets for Miss Bateman. There is a story of a Frenchman who used to take a good place every night at a spectacle of performing lions in order that he might be present when the lion-tamer's head was bitten off. It may be suspected that many persons went to the Lyceum on Tuesday night to see the fun of what used to be called the damnation of a new play. But respect is due even to misdirected art. There are many lines in *Queen Mary* at least good enough to remind us of the author's better lines elsewhere, and if such a play had been written fifty years ago, it would certainly have been performed, although we do not think that even then it would have succeeded. It would have been produced as a sort of tribute by the stage to literary eminence. The manager of the Lyceum has undertaken to supply in this respect the want of a national theatre, and failure properly evokes sympathy. But failure beyond doubt there was. Even the usual remedy of the pruning-knife is here inapplicable, for much has already been cut away from the poem, and we feel utterly impartial between that which has been taken and that which has been left in adapting it for the stage.

No poetry and no acting can make us take an interest in the love of Queen Mary for Philip of Spain. The line

> I am eleven years older than he is

unluckily recalls to mind a quotation lately made by Mr. Lowe in the House of Commons; and to the following question—

> But will he care for that?—

we should be disposed to answer that, men, and particularly princes, being what they are, we decidedly think he would. Philip's notion, according to the poet, seems to have been that it was for the advancement of the Catholic faith that a son should be born to him by Queen Mary, and that, if only enough of heretics were burned, the blessing of Heaven would rest upon their marriage. The Queen was neither young nor healthy, and had never been beautiful, but the flames of Smithfield would be more potent than the torch of love. Only put on a few more heretics and poke the fire. In a damp and detestable climate the smell of Cranmer's burning was the only comfort which a pious but chilly Spaniard could discover. His apathy towards the Queen grows into disgust, and, while affecting regret at his own departure, he, with more truth than politeness, indicates that he prefers supper to conjugal endearments. The

picture is painfully natural, but perhaps it need not have been exhibited. There have been bad harvests and sickness has been rife in England, and what shall its poor Queen do for it? Burn more heretics, says her husband. He protests in the same interview that he "never loved her more," and we entirely believe him. The affairs of his many kingdoms call him, and he must away; but presently a political reason is suggested for his staying longer. A prudent counsellor asks if he may not say that Philip stays to please his wife, and Philip answers that he may "if he cares to put it so." The complaint of Philip to his wife—

Your people are as cheerless as your clime—

is fully supported by the author, who has represented England, sometimes called "merry," as a dismal swamp interspersed with gibbets. It is always to be remembered to the credit of Queen Mary's reign that there were no railway accidents, and perhaps the general tenor of life was not much affected by those scenes of violence and cruelty which in the page of history impress our minds so strongly. We can believe, too, that a farmer of Islip would start early in the morning with three hard eggs in his pocket to get a good place at the Oxford burnings. But all attempts at reproducing such scenes of everyday life must be either grotesque or horrible. At Queen Mary's Court heads stand so lightly upon shoulders that a lover's sigh would blow them off. The Princess Elizabeth's meditations are too lugubrious to be relieved even by the farcical incident of Sir Henry Bedingfield's dirty boots, and on the whole it may be said that the Laureate's tragedy is less depressing to the spirits than his comedy or farce. One of the most hideous features of the story is the proposal made by Philip for Elizabeth's hand while Mary is rather too slowly dying. The Ambassador explains in soliloquy that, if this proposal be accepted, he and his master will break in this princess and correct her bad habit of swearing. We could wish that at the same time she might be taught not to make puns. The acting of these and other minor parts is neither good nor bad, and none of the actors, we should think, could feel the slightest interest in the scene in which they appear. Mr. Irving conveys only too forcibly the idea that Philip hates England and is tired of his wife, and that is really all that he can do. Thus the weight of the play rests upon Miss Bateman, and dramatic students will of course like to see what she makes of an ungrateful part. It is not usually expected of a tragic actress that she should sing, and Miss Bateman effectively recites the beautiful lines addressed to the lute. Afterwards, when the author makes her seat herself on the ground, he has unfortunately invited comparison with Constance in *King John*:—

Here is my throne; bid kings come bow to it.

But Constance was of other mettle than the ailing, wailing Mary, and we could have heard with pleasure the awakening discourse which she would have addressed to an unfaithful husband. The sorrows of Queen Mary do not lend themselves to poetic treatment.

The obstreperous loyalty of the Lord Mayor would in our day have been rewarded by a baronetcy; but as Sir Thomas Wyatt, whom he opposes, has been excised, the valiant magistrate fights with a mere vague suggestion of rebellion. If we turn to the scenes in which Wyatt appears, we shall find that they are among the best in the poem; and at any rate they are furthest removed from the caterwauling of Queen Mary. They exhibit vividly an example of what Macaulay has described as the system of government under the Tudors. The country would stand a good deal; but if the Court went too far, there was always in reserve that which in another time and clime was called the sacred right of insurrection. The men of Kent gathered at Penenden Heath, seized Rochester, and marched on London. A little more vigour in Wyatt, or a little less courage in the Queen, and the Spanish marriage and the Marian persecution would have been prevented. The Queen showed herself on this occasion her father's daughter, and the scene in which she declares that she will die "with those that are no cowards" is the least unpleasant of the acted play. Wyatt's failure and the executions which followed it cowed resistance, but still it is difficult to understand why the English people endured the proceedings of Gardiner and Bonner. Philip brought no soldiers to England, for the best of reasons—that the country would not endure them; and as the Queen had no money, she must have had few guards. She depended for help against rebels on the nobility or the City; and if rebels had real grievances, the nobility and the City were likely to be at least partially in sympathy with rebellion. We cannot help thinking that Philip of Spain has had rather hard treatment from the popular historians whom the poet has followed. The Spanish Ambassador, Renard, for a long time discouraged persecution, as became a man with whom policy was first and religion second. The Queen no doubt believed that burning heretics would make her a joyful mother of children, but it may be doubted whether her husband cared enough for England to take the trouble to extirpate its heresy. He was fearfully sea-sick on the voyage hither, drenched with rain on landing, and snubbed and suspected all his train. Like his more famous father, he was coarse and indiscriminate in his tastes, but we do not know that any English town or village preserves such traditions as may be found in Germany. The story which the poet puts into the mouth of a lady of the English Court seems, however, probable, and the Queen, besides being inconveniently fond of her husband, was, we may believe, intensely jealous of his civility to her attendants.

Unalterably and pesteringly fond

is Philip's own comment on his wife's behaviour, and it must be allowed that the scenes between them are dreadfully true to nature, although perhaps rather compromising to the dignity of the Tragic Muse. Mr. Irving has got himself up well for the part of Philip, not forgetting the "yellow head and yellow beard," and he preserves a suitable gravity of demeanour. If it had been possible for Philip's natural brother, Don John of Austria, to have taken his place, the English people might have been better pleased. Philip had none of his brother's military talent, and his personal courage was doubted. Not the least of this prince's trials must have been his first draught of ale which he took on the night of his arrival to show his determination to conform to the customs of the country. He landed at Southampton, and rode thence to Winchester in pouring rain to meet his bride, and it is reckoned that 4,000 noblemen, gentlemen, and others on horseback, and under no command, rode with him. The Emperor more than any other person was responsible for this unhappy marriage, which he desired for the sake of the preponderance it might give him over France. His Ambassador, Renard, although he counselled moderation in religion, was for thorough measures in politics. At his instigation the Queen sent Lady Jane Grey to the scaffold, although in the play she answers his first suggestion with the line,

I am English Queen, not Roman Emperor,

which now, for an obvious reason, is the most telling line in the play. When Philip reached London, the citizens, who had fancied him a monster, saw to their surprise a well-dressed gentleman who had learned with some difficulty to touch his cap in salutation. In the winter there were balls at Court, of which, by the way, this play contains no trace, and Spanish noblemen with English ladies, and the indefatigable Renard coached, as we should now say, Philip in the arts of popularity; and it began to be thought that Heaven would not have brought about this grand marriage without intending that some good should come of it. But in May it appeared doubtful whether Heaven had any purpose in the matter, although moved by prayers and processions, and by increased activity against heretics. The Queen sent letters to the justices of the peace, directing them to deliver the holders of erroneous opinions to the Ordinary, "to be by him charitably travelled withal." But it does not appear that Philip had any hand in this proceeding, and he usually acted under the guidance of Renard, who was as superior to superstition as to mercy. In August Philip got away to Flanders, where, if the climate was no better than in England, his wife could not watch him quite so closely, although reports soon reached her of his miscellaneous licentiousness. She, poor woman, all the time believed that she had lost her husband's love and the favour of Heaven by the sin of Saul, and therefore the Amalekites of England should be no longer spared. So the burnings became more frequent, but her husband's aversion was now undisguised; and, having lost Calais to the French, she was overwhelmed with sorrow and sickness, and she died. The world has seen few more miserable marriages, and such a dreary story could hardly make a good acting play.

REVIEWS.

LIFE OF LORD MACAULAY.*

(*First Notice.*)

MR. TREVELYAN is fortunate in a subject which belongs to him by hereditary right. Lord Macaulay's writings are familiar to the world, but little was known of his private character, and nothing of the domestic relations which were to himself the most important part of his life. In his later years he entered little into general society, and his few associates were for the most part older than himself. Hallam, Milman, Lord Lansdowne, Lord Carlisle, and Bishop Wilberforce who belonged to a later generation, have all passed away. A great literary reputation, still in its pristine freshness, necessarily creates interest in the personal history of the author. Only a few survivors recollect distinctly the events of a public career which ended nearly thirty years ago; students of oratory alone are accustomed to think of the brilliant historian as one of the most eloquent speakers of his time. There is a novel pleasure in the discovery that the bearer of a great and merited reputation was the kindliest, the most affectionate, and the most unselfish of men. Lord Macaulay's public and private character was known to be blameless; his tenderness, his constancy, his simple and healthy enjoyment of life, could not have been generally appreciated till now. If Mr. Trevelyan is to be congratulated on the choice of his hero, Lord Macaulay also is fortunate in his biographer. It is a happy accident when literary ability and taste coincide with the command of the necessary materials for the biography of a celebrated man. If Mr. Trevelyan had been a stranger, he would have possessed many qualifications for his task; but he could never have attained the intimate knowledge of his famous kinsman which began with his own earliest childhood. It may perhaps be a drawback to the biography as a work of art, that, in dealing with Macaulay's Parliamentary and

* *The Life and Letters of Lord Macaulay.* By his Nephew, George Otto Trevelyan, M.P. 2 vols. Longmans, Green, & Co.

official career, Mr. Trevelyan expresses strong and definite opinions, though his language is always temperate and fair; but the defect, if it is a defect, is a necessary consequence of Mr. Trevelyan's position and pursuits. If the person who is of all others best qualified to write the Life of Macaulay happens to be an active and earnest politician and a rising member of Parliament, his estimate of the political conflicts of the last generation cannot be expected to be colourless and neutral.

From detailed literary criticism and eulogy Mr. Trevelyan wisely abstains. He is justified in noticing the transparent clearness of style in which Macaulay excelled all competitors. It may be a question whether thoughtful intellects are not more irresistibly attracted by suggestive writers who leave something to be divined by competent students. The admirer of Macaulay, on a second reading of a passage or a volume, is sometimes disappointed by finding that he learns nothing new; but, on a balance of critical considerations, it is better to express the whole of a thought, and to leave nothing to be guessed. As Mr. Trevelyan relates, a reader in a printing-office once respectfully suggested to Macaulay that there was one sentence in two volumes of which the meaning could not be apprehended at a glance. A Northern manufacturer read the first two volumes of the History aloud to his men after business hours; and when the last chapter was finished, one of the audience moved a vote of thanks to Mr. Macaulay for writing a History which working-men could understand. The number of readers who take pleasure in riddles is as one to ten thousand grateful recipients of digested thought and knowledge. Style is the most characteristic product of intellect. Lord Macaulay wrote clearly because his knowledge was generally accurate, and his conclusions were always definite. The mannerism which critics remark in his writings proceeded from the same cause. His excessive use of antithesis may perhaps be explained by a tendency to resolve a perplexing doubt into two clear and contradictory propositions. The process was inapplicable to complex problems which admitted of no easy or distinct interpretation. Macaulay sometimes undertakes to reconcile his own description of an historical personage with actions which fail to fit the rhetorical framework by his favourite formula, "Such is the inconsistency of human nature." In all such cases the confusion exists in the mind of the observer, who may be well assured that qualities which co-exist are mutually compatible, and that in human nature there is no antithesis. Mr. Trevelyan quotes with implied approval Macaulay's adoption of Johnson's dogma, "that an author whose works are likely to live is very unwise if he stoops to wrangle with detractors whose works are certain to die." The doctrine may be sound when the criticism concerns literary merit; but it is wholly inapplicable to questions of historical truth. The gravest fault with which Lord Macaulay can be charged was the want of candour which he displayed in refusing to correct errors which were in themselves pardonable and, indeed, unavoidable. He trusted unfairly to the certainty that his own works would live, and to the likelihood that the works of his critics would die. In some instances the calculation has already failed. No capable judge adopts Lord Macaulay's version of Bacon's personal history against Mr. Spedding's, or fails to acknowledge the conclusive force of Mr. Paget's vindication of Penn. A descendant of Sir Elijah Impey, who injudiciously wrote a bulky volume in defence of his ancestor, pointed out inaccuracies which have never been corrected in the Life of Warren Hastings. Lord Macaulay had not the opportunity of retracting the errors which Mr. Forster has pointed out in his account of Swift's early life. It is not to be supposed that in these or other cases of the kind Lord Macaulay consciously persisted in error; but it would probably have been painful to him to disturb the convictions which he had once positively formed. It would be unjust to attribute his obstinacy to literary conceit or to personal vanity, for he seems to have been unusually exempt from all weakness of the kind. It is no discredit to a voluminous historian to be set right on isolated points by those who have made them the objects of special study; but the mental indolence which refuses to admit a more accurate view of truth is not a laudable quality. A great writer ought not to trust to his reputation to bear him harmless when he is justly open to criticism.

The interest of Mr. Trevelyan's biography begins with Macaulay's infancy, and sustains itself to his death. A slight sketch of his father's character and history forms an admirable introduction to the life of the more celebrated son. The virtuous austerity of the self-denying Puritan philanthropist contrasts well with the genial and joyous nature of Macaulay himself. Those who were best qualified to judge regarded Zachary Macaulay as the most efficient antagonist of the slave-trade and of slavery. To the great business of his life he sacrificed popularity and fortune, nor was he even compensated by contemporary fame; but he never repined at his own ill fortune, nor did he envy the celebrity of his coadjutors. A strong attachment between father and son was maintained in spite of entire incompatibility of character, of temperament, and of opinion. Macaulay always thought, with good reason, that he was fortunate in his birth and nurture in a strict and thrifty household, in the midst of a circle of able men who were united by a common enthusiasm for the abolition of slavery. Like many eminent men, and like many who have never become eminent, Macaulay was a precocious child. At three he was an eager reader of books; at four he explained his offer to Hannah More of some old spirits, by the remark that Robinson Crusoe was always taking old spirits. At eight or nine the boy amused his leisure by writing hymns, a Universal History, and voluminous poems in imitation of Scott and of other poets whom he admired. He became a good classical scholar at a small private school in Cambridgeshire, where he stayed till he went to Cambridge. At this time his father intended to leave him the share of an eldest son in a considerable fortune amassed in the African trade; but the accumulation soon afterwards dwindled, and eventually disappeared; and it was fortunate that Macaulay's classical knowledge, notwithstanding his ignorance of mathematics, secured his election to a fellowship at Trinity in 1824. Two years afterwards he was called to the Bar, and joined the Northern Circuit. He had not seriously studied law, and yet there is no stranger instance of the capricious uncertainty of professional success than his total failure to obtain business. His unequalled memory and his natural eloquence would have made him a great advocate; and if he had found it worth while, he would soon have corrected his early deficiency of legal knowledge; but the attorneys of the North never discerned his capacity; and his total earnings at the Bar amounted to a single guinea for prosecuting a fowl-stealer. In 1827 Lord Lyndhurst gave him an appointment as Commissioner of Bankruptcy, which he retained till the office was abolished five or six years afterwards. In 1826 he began his connexion with the *Edinburgh Review* with the well-known article on Milton; in 1830 Lord Lansdowne returned him for Calne at a fortunate moment. His speeches on the Reform Bill at once placed him in the first rank of Parliamentary orators; and in 1832 his merits were inadequately recognized by an appointment as Commissioner of the Board of Control, and soon afterwards as Secretary. A higher honour consisted in his election for Leeds in the first Reformed Parliament. In his official capacity he assisted in passing the West Indian Emancipation Bill; but at one stage, in accordance with his father's convictions and his own, he placed his resignation in Lord Althorp's hands. During his short service at the Board of Control he chafed under the restraints of a subordinate position, and he was strongly impressed with the necessity for an independent member of Parliament of possessing a pecuniary competence. For this reason, and also that he might be enabled more efficiently to assist his family, he accepted in 1833 the place of member of the Supreme Council in India. In this capacity he effected by the Penal Code the first of many great legislative improvements in which India has anticipated England. He also became the first President of the Committee of Public Instruction, and he took an active part in removing restrictions on the freedom of the press. His superfluous energy may be measured by his own list of the books which he read in thirteen months of 1834 and 1835:—

> I have read Æschylus twice; Sophocles twice; Euripides once; Pindar twice; Callimachus; Apollonius Rhodius; Quintus Calaber; Theocritus twice; Herodotus; Thucydides; almost all Xenophon's works; almost all Plato; Aristotle's Politics, and a good deal of his Organon, besides dipping elsewhere in him; the whole of Plutarch's Lives; about half of Lucian; two or three books of Athenæus; Plautus twice; Terence twice; Lucretius twice; Catullus; Tibullus; Propertius; Lucan; Statius; Silius Italicus; Livy; Velleius Paterculus; Sallust; Cæsar; and lastly Cicero. I have a little of Cicero left, but I shall finish him in a few days. I am now deep in Aristophanes and Lucian.

He was at the same time beginning German, and he read parts of Chrysostom and Augustine, whose style he irreverently described as that of a field preacher.

In 1838 Macaulay left India, having accomplished his object of obtaining an independent competence, which was augmented by a legacy from his uncle, General Colin Macaulay. During his stay in India his eldest sister, who had accompanied him, married Mr. Trevelyan, then the most rising of the young civilians; and he suffered deep affliction from the death of another sister, Mrs. Cropper. His father died during his homeward voyage; but he had the good fortune to be accompanied by Mr. Trevelyan and his family, who afterwards, to his great delight, remained permanently in England. While he was travelling in Italy in the following autumn he declined an offer by Lord Melbourne of the office of Judge Advocate; and, having already conceived the plan of his History, he was inclined rather to a political than a literary life. He was at this time thirty-eight, or, as Mr. Trevelyan is pleased to say, not much past middle life. Successive ages assume a different aspect as they are regarded from the Eastern or the Western side. In the following year Macaulay's scheme of life was temporarily altered by his election for Edinburgh, and his acceptance of the office of Secretary of War with a seat in the Cabinet. Immediately after his accession to office the venial slip of dating a letter to his constituents from Windsor Castle exposed him to exaggerated ridicule and groundless abuse. The incident is only worth noticing for his own comment, many years afterwards, on the happiness of a life in which the trivial blunder and its consequences were among his gravest misfortunes. During his tenure of office he sustained his early fame as a Parliamentary speaker, and he continued to write for the *Edinburgh Review*. The brilliant Essays on Clive and Warren Hastings belong to this period. No other Minister was probably so well content when Lord Melbourne's Government was driven from office in 1841. He immediately resumed the History; he published the *Lays of Ancient Rome* which had been begun in India; and he was driven against his will by American piracies to republish his Essays written for the *Edinburgh*. In Lord John Russell's Administration of 1846 he held the sinecure post of Paymaster-General; but at the general election of 1847 he lost his seat for Edinburgh, and consequently retired for the last time from office. In 1848 the first two volumes of his great work were published, with the result of raising his literary reputation to the highest point, and of adding largely to his fortune. In 1852 the

cy of Edinburgh retrieved the error which had been committed in 1847 by spontaneously electing Macaulay; but his interest in contemporary politics had by this time subsided, and his health began to break. He spoke, however, amid general applause, on the India Bill, and his authority and plausible argument induced the House of Commons to adopt the competitive system of appointment to the Civil Service. In 1856, in consequence of the state of his health, he resigned his seat for Edinburgh, and in the following year he gratefully accepted a peerage on the recommendation of Lord Palmerston. About the same time he received from his publishers a single cheque for 20,000*l.* in part payment of the proceeds of the second instalment of his History. From 1841 to 1856 he had lived pleasantly in the Albany, and from that time to his death at Holly Lodge on Campden Hill. At all times he found domestic society in the house of his sister, to whose children he was warmly attached. He felt as a heavy blow the departure of Sir C. Trevelyan to India as Governor of Madras in 1859. The family were to follow in a few months, and he could scarcely hope to see them again. His health at this time was breaking fast, and before the dreaded separation occurred, he died suddenly and without pain on the 28th of December, 1859. Of his character, tastes, and habits, as they are vividly described by Mr. Trevelyan, it will be more convenient to speak on another occasion.

(*To be continued.*)

WHEELER'S HISTORY OF INDIA.*

IN this fourth volume Mr. Wheeler enters upon an entirely new period of history, which it would have been well for his literary fame if he had left alone. At any rate it would have been better for him to have waited until he had acquired a more accurate and better digested knowledge of Mussulman India than this volume exhibits. His previous volumes on the history of ancient India gained him some credit. They did not show great scholarship or deep research; but the results of the author's reading and observation were set forth in a clear, lively style, and an obscure portion of history was laid open to unprofessional readers. Mr. Wheeler seems to have been carried away by his success. In the volume before us he is often over-smart, his little faults have become great and glaring, and he writes more with the reckless dash of a Special Correspondent than in the tone of a sober-minded historian. We are no lovers of the dry and dismal, we have no objection to an author's enlivening his narrative with his own ideas and speculations; but in history we do object to ideas being stated as if they were facts, and opinions laid down as ascertained and settled truths. Mr. Wheeler has all a Frenchman's love for an idea. When he catches one he cherishes and pets it until he is quite carried away, and is regardless of the consequences. So we have daring generalizations, false identifications, imperfect or unimportant analogies, and discoveries of supposed reasons or influences which either exist not at all or have too much importance attached to them.

A startling passage in the preface gave us timely notice of the sort of thing to be expected:—

> It will be seen [says Mr. Wheeler] in the course of the present volume that the Moghuls bore a striking resemblance to the Vedic Aryans; that the Moghul empire in India between the sixteenth and eighteenth centuries was probably only a repetition of what has been apparently going on in India through unrecorded ages; that the Moghul empire in India was only the last link in a chain of empires which began in the remotest antiquity. In other words it will be seen that the Vedic Aryans were Moghuls; that Asoka and Akber sprang from the same stock as the worshippers of the Vedic gods.

The reasons for this extraordinary opinion are stated summarily in p. 123, thus:—

> The religion of the Moghuls of the thirteenth century bore a significant resemblance to that of the Hindus. There was [Theirs was?] a primitive religion which was essentially Vedic. They presented food and wine to the four quarters of the earth in honour of fire, air, water, and ghosts. They set up domestic idols in their movable houses; they propitiated them in like manner. They poured libations on the earth, and also on the horse. They practised divination with burnt rams' horns. They had priests like Brâhmans, who were skilled in astronomy, foretold eclipses, and cast nativities. They also had dirty saints resembling Hindu Yogis, who performed miracles by virtue of their sanctity and penances.

Mr. Wheeler had got his idea. He could see these resemblances, but he did not discern of how little value they are. Hindus and Moghuls are not the only races among which these and similar practices prevail; but even if the like of these things had never been known before, are they in themselves so peculiar, so essentially different from all that has been elsewhere found, that they suggest a very strong presumption of one common origin, and repel altogether the supposition of independent development? Were there nothing to be said on the other side, such analogies as these might perhaps be accepted as suggestive, but certainly not as conclusive evidence. If Mr. Wheeler had been able to control his hobby-horse, he would have remembered that there is no fact which philology and ethnology have made more clear than that the Aryans and the Moghuls are typical of widely distinct branches of the great human family. In face of this fact, such points of resemblance as he has adduced are not worthy of a moment's consideration, and we would advise him to ponder well before he proceeds with his projected work on the Moghul origin of the Hindu people.

But Mr. Wheeler professes to strengthen his argument by comparing Asoka and Akber. Let us see what he makes of this:—

> Asoka was putting down revolt in the Punjab when his father died; so was Akber. Asoka was occupied for years in conquering and consolidating his empire; so was Akber. Asoka conquered all India to the north of the Nerbudda; so did Akber. Asoka was tolerant of other religions; so was Akber. Asoka went against the priests; so did Akber. Asoka taught a religion of his own; so did Akber. Asoka abstained from flesh meat; so did Akber. In the end Asoka took refuge in Buddha, the Law and the Assembly; in the end Akber recited the formula of Islam:—There is but one God and Muhammad is his prophet.

One point of identity has been overlooked. Asoka's name begins with A, so does Akber's. Exception might be taken to several of the premisses so categorically laid down; but, taking them as they are presented, they do very little towards helping the argument that the Aryans and the Moghuls are the same race, and but few men will be disposed to concur with Mr. Wheeler when he affirms that "the likeness between Akber and Asoka is one of the most remarkable phenomena in history." It is but fair to say that, after expressing this opinion and specifying all the supposed points of analogy, he goes on to add, "Some of these coincidents are mere accidents"—an opinion in which we entirely agree; but when he arrived at this just conclusion, he ought to have blotted out the argument he had built upon the accidents.

The early chapters of the work are of course derived from Mussulman writers. The narrative is short and pointed, too short perhaps for readers who have no previous knowledge of the subject; but it is very readable, and occasionally graphic and picturesque. We observe that Mr. Wheeler repeats the old story of the Afghans being the descendants of the lost Ten Tribes. This is one of those articles of belief which, though oft refuted, reassert themselves with undiminished vitality. Affinity or difference of language ought to settle the matter, and we thought that the difference had been effectually shown, and notably by the late Lord Strangford. Mr. Wheeler makes Kutb-ud-din, the first of the "Slave Kings," one of his favourites, and classes him among the four Sultans whom he thinks the only ones "deserving of remembrance" in the course of three centuries. The distinguishing merits of this monarch are not obvious, nor are they recounted. We cannot see, either, why the dynasty of the Slave Kings should be called the dynasty of Kutb-ud-dín. He was a slave who succeeded his master, and he himself was succeeded by another slave of the same master. Mr. Wheeler says, "They had been purchased as slaves, they had served as slaves, and then they had risen to favour and usurped the throne. It is, however, difficult to draw any inference from the circumstance." It is useless to seek for inferences and undercurrents when the course of events is clear and unmistakable. In default of available heirs to the throne, the reins of power fell into the hands of these men as the fittest and the strongest. They were the most prominent and powerful men at the death of their masters, and their servile origin was a mere accident. Mr. Wheeler often finds, or thinks he finds, analogies between events which have happened under former Governments and other events which have occurred, or which he thinks likely to occur, under our own, and here and there he utters a note of somewhat mysterious warning. In the thirteenth century the Khiljí sovereigns "carried their arms into the Dekhan and the Peninsula; they formed closer connexions with Hindus than any previous Sultáns. The result was a Hindu revolt against the Mussulman yoke, which foreshadowed the Mutiny of 1857, and in every way demands a careful study." There was a successful revolt against a foreign Government in the first instance, an unsuccessful mutiny in the second; beyond this it is difficult to see any relation between them, or to understand how one foreshadowed the other.

The ancient history of India divides itself into well-defined distinct eras—the Vedic, Brahmanical, Buddhistical, &c. In imitation of this, in the present volume,

> the history of Mussulman India has been divided into four periods; they correspond to four stages in the development of the religion of the Koran; the Sunní, the Shíah, the Súfí, and the Sunní revival. . . . Another division is the separation of the Mussulman period from the Moghul period. . . . The Moghul period has wrongly been called Mussulman. Neither Akber, nor his son Jahángír, nor his grandson Shah Jehán, has the slightest claim to be called Mussulmans.

These divisions are in a great degree fanciful, and the differences of religion on which Mr. Wheeler lays so much stress had little or no distinctive influence upon the destinies of the country. It is true that scarcely anything is heard about the Shías in the earliest period. When we come to the revolt of the Deckan we meet with Shías; still it was not a Shía revolt, as Mr. Wheeler calls it, but a revolt against a feeble central government by strong men in outlying provinces. Some of the successful rebels and their successors were Shías, others were not; lust of power was the moving principle, not religious animosity. There is no pretence for saying that the kingdoms of the Deckan sprang from Shía influences, or that they were governed entirely upon Shia principles. There was no doubt great laxity in religious matters among the Moghul emperors, but, excepting Akber, and for a part only of his reign, they were professed Muhammadans, and their government was that of a Muhammadan State. Jahángír makes a show of religion in his Autobiography, and the alternative of "Death or the Faith" which Shah Jehán offered to the Christian prisoners of Húglí ought to have secured him from a charge of apostacy. These monarchs were not good Mussulmans, but there have been many Christian sovereigns who were very bad Christians—such indeed as we often hear

* *The History of India, from the Earliest Ages.* By J. Talboys Wheeler. Vol. 4. Part I. Mussulman Rule. London: Trübner & Co. 1876.

called "no Christians." If Mr. Wheeler's words are to be taken in this limited sense, we in the main agree with him; but then we shall have to look with very indulgent eyes down the long list of Sultans of Hind and yet find only few who can be called good Mussulmans.

For the reign of Jahángír Mr. Wheeler has used the "Autobiography" of that monarch. But there are two works laying claim to that title. One of them, whether it was actually written by him or not, received a distinct mark of his recognition. The other has no such approval to show. Both works have been translated into English and are equally accessible, yet Mr. Wheeler uses the unauthenticated one, and on the strength of it makes Jahángír a witness against himself. Another writer of inferior grade receives such injustice from Mr. Wheeler that it may be safely said that he knows very little of the author whom he denounces as fulsome and a flatterer. Men best acquainted with the Persian historians have placed Khafí Khán among the most truthful and trustworthy of them, and it is unfair to stigmatize him, as Mr. Wheeler has done, upon a single passage, which certainly admits of an explanation which his censor has not discovered.

For the reigns of Jahángír and his successor, Shah Jehán, Mr. Wheeler has made great use of the writings of European travellers in India. Bernier's travels and Roe's mission have been often cited before, but there are many others whose writings afford incidental notices of great value. A publication of the collected works of these travellers or a careful selection from them would throw much light upon the period to which they relate. Mr. Wheeler has done good service by his researches and by the many passages he has quoted. We venture to think, however, that he has placed too implicit a trust in them. "Travellers often see strange things," and many might consider this observation applicable to some of our Indian travellers. But putting this aside, and admitting that all their accounts of things which came under their personal observation are correct, yet how much is then left! These men had everything to learn, without any previous preparation. The languages, the customs, the laws, the administration of the country were all new to them. How many errors must they have made, how often must they have gained only limited and onesided information! For many of their stories about the inner life of the palaces and harems and the private doings of the princes and nobles they must have depended on the gossip and scandal of the day. We may trust the good faith of the reporters, but are their reports to be believed? Evidence such as theirs requires jealous consideration, and a careful weighing of probabilities on both sides. Mr. Wheeler seems to have been free from all hesitation, and to have accepted as true all that he cites. Let us see the result. In the reign of Jahángír a man named Mahábat Khán played a conspicuous part. From a private soldier he rose to be the chief noble of the empire. Jahángír became a mere tool in the hands of his queen, Núr Jehán, and Mahábat Khán was disgraced. The proud soldier was not content to be thwarted by a woman. At the head of a body of Rajpoots he made a sudden attack upon Jahángír's camp, and carried him off, a not unwilling prisoner. Mr. Wheeler says:—

> Mahábat Khán was a Rajpoot; he commanded Rajpoots; he showed himself on all occasions to be a Rajpoot. His loyalty to Jahángir under the strongest provocations was an instinct in his Rajpoot nature. It shows the marked superiority of the Rajpoot to the Moghul.

The authority for Mahábat Khán's Rajpoot origin is Herbert, one of the English travellers, and Tod, the Rajpoot chronicler, whose scarce volumes we have not at hand to refer to. Mr. Wheeler says, "Jahángir, in his Autobiography, says that he (Mahábat) was an Afghán. He must refer to some other Mahábat Khán." Tod may have referred to some other Mahábat, but Jahángír certainly did not. He describes him as Zamána Beg, son of Ghayúr Beg of Kábul, who had served him when a prince, had been honoured with the title of Mahábat Khán, and been made paymaster. This is specific enough, and is confirmed by the *Maasir ul Umará*, the Peerage of the Moghul dynasty. When Mr. Wheeler finds Mahábat Khán promoted to be Khán-Khánán, or premier noble, he feels "the statement perplexing," but does not see the necessity of reconsidering his own strongly worded statement. "Rajpoots," he says, "would obey no one but their own Raja." But Mahábat Khán was not the first nor the last thoroughbred Mahomedan that has commanded Rajpoots. Mr. Wheeler has not observed the precautions which Mahábat Khán took to secure the fidelity of the Rajpoots who served him. He had bound them by an oath, and had carried "the wives and families of many of them with them, so that, if driven to extremity, they would fight to extremity for their lives and honour." This makes it perfectly clear that he was not their Raja. Like the Highlanders and other people among whom the clannish instinct is strong, the Rajpoots were ready to follow their chiefs without knowing or caring much for the quarrel in which they fought, or the general under whose supreme command they served. Akber's policy in gaining over the chiefs was of inestimable service to him and his successors, and helped to many a victory. But they were troublesome people to deal with. Sháh Jehán, at this very time we are speaking of, lost a great battle through the wilfulness of one of his Rajpoot adherents.

Mr. Wheeler brings a dreadful charge against Akber, which he has apparently taken from one of the travellers, but he does not give any reference. He says:—

> [Akber] had another way of getting rid of his enemies which is revolting to civilization. He kept a poisoner in his pay. He carried a box with three compartments—one for betel; another for digestive pills; a third for poisoned pills. No one dared to refuse to eat what was [illegible] him by the Pádisháh; the offer was esteemed an honour. How many were poisoned by Akber is unknown. The practice was in full force during the reign of his successors.

This bears such a suspicious resemblance to the stories about the Italian poisoners as at once to excite incredulity. The story, if heard at all, must have formed part of the gossip of the day; for it is quite incredible that any traveller could have acquired accurate personal knowledge of such a matter. Akber was, as Mr. Wheeler describes him, "generous and forgiving." In his wrath he was sometimes cruel; but cool, deliberate poisoning was utterly opposed to what is generally known of his nature, and at variance with all that has been written about him. One of the historians of his reign was a bigoted Mussulman, who was his rancorous enemy, and never failed to say an evil word when he could. But he brings no such charge as this. Surely this story has been too hastily adopted, with too great a liking for painting in the darkest colours.

The censures which we have felt compelled to pass on this book have been written reluctantly. Mr. Wheeler is a clever writer, and capable of better things. He has apparently written in haste, and without due preparation. But that is no excuse. The fault seems to lie yet deeper. He is evidently a man of quick perception and hasty judgment, whose feelings exercise an undue influence over him, and lead him to conclusions before his materials have been thoroughly examined.

DOWELL'S HISTORY OF TAXES.*

MR. DOWELL tells us in his preface that "the style of writing used" in his book "is lighter than that usually adopted in treating a fiscal subject; but the reader should not infer from that attempt in his service any want of care in regard to accuracy." It would follow from this that, in Mr. Dowell's belief, lightness of style is an "attempt in the reader's service." Our experience is exactly the contrary. We believe that there is some stuff in Mr. Dowell, and that his book has been written with some "care in regard to accuracy." But we have found the lightness of his style of writing anything but a service to the reader. It has sometimes made us half inclined to shut up the book. A fiscal subject need not be dull; several fiscal subjects are treated in the course of Lord Macaulay's History in a way which is anything but dull. Who does not remember the hearth-money, the early stages of the art of banking, the beginnings of the National Debt? Now we do not expect Mr. Dowell to write like Lord Macaulay; but he might have come nearer to it if he had not set out with a fixed determination to be lively. Fiscal matters, like all other grave matters, may be made interesting by those who have the skill to make them so; but they are not made interesting when the author frisks and capers and throws up his heels of malice prepense. A certain degree of decent gravity is not out of place in dealing with such matters. There is something solemn about even an ordinary bank; and we are sure that, could we have gone with Bishop Richard of London and seen the earliest recorded Tom Brown (Magister Thomas cognomento Brunus) sitting in King Henry's Exchequer, our soul would have been bowed down with reverence. Perhaps with Mr. Dowell, who dates from the Inland Revenue Office, Somerset House, familiarity with these things may have bred contempt. We would fain speak to him in a parable. He himself tells the story of the personage whom King Edward, Queen Edith—whom, by the way, he oddly turns into Eleanor—and Earl Harold saw dancing upon the moneybags. We know of no other precedent for such extreme lightness of manner in dealing with a fiscal subject. And we are sure that, on reflection, Mr. Dowell will no longer think the performance one which it is at all becoming to imitate.

It is plain that Mr. Dowell has taken a good deal of pains with his subject, and that, though he has not quite got rid of the notion that a book is a book, he has to a great extent gone to the best sources. Mr. Dowell discoursing of taxes is at any rate much better than a Cabinet Minister, past or present, discoursing of Emperors. It is cheering in such times to see a public officer of any kind really working at the history of his own subject. Only it is a pity that Mr. Dowell was stirred up by some evil genius, most likely his exemplar *Tempore Regis Edwardi*, to fancy that he must needs be lively. He begins with a scrap of Molière in the first half-page; he has two scraps of English verse in the next page; here is a bit of Horace, here a bit of Isaiah; here we are told that "the following lines of Seneca are said to have produced a deep effect on the mind of Columbus," and we accordingly get the passage, which everybody knows, about "nec sit terris ultima Thule." But perhaps Mr. Dowell's greatest exploit in the way of quotation is when, just after having set up Charles the First's standard at Nottingham, he adds:—

> Without departure from the course of the narrative, as confined to the history of taxation in this country, we may, in progress, put forth a hand and cull by the way a flower, if the reader will allow the expression, from under Italian skies.

No sensible reader will allow any such expression, or look upon it as any attempt in his service, when Mr. Dowell goes on to quote a page or more about taxation at Florence, "according to Sismondi." Most things with Mr. Dowell are "according to" somebody, and it does not always seem to make much difference

* *A Sketch of the History of Taxes in England from the Earliest Times to the Present Day.* By Stephen Dowell. Vol. I. To the Civil War, 1642. London: Longmans & Co. 1876.

to him whether it is "according to Stubbs" or only "according to Hume." In short, Mr. Dowell cannot be happy for a whole page without quoting somebody; only it is too bad when, in quoting from the Peterborough Chronicles one of those passages which everybody must quote once in his life, the description of the nineteen years of anarchy, Mr. Dowell carefully translates it into high-polite.

Yet the vice of quotation hardly equals in enormity the vice of allusion and the vice of interrogation, of both of which Mr. Dowell is very fond. He draws a picture of a knight who has gone to the crusade, and he asks, "Who, when he, the strong man armed, was beyond the seas, was to take care of goods and castle and fair *ladye*?" We had really thought that this last bit of frisky spelling was confined to those local antiquaries who seem to think that there is something either learned or lively or sanctimonious, we are not sure which, in spelling the eastern part of a great church the "*Ladye* chapel." So we get another fine frisk when the Saladin tithe draws near, and brings with it a discussion on the taxation of movables. The knight's fee suggests the knight, and the knight suggests the supposed virtues of chivalry; so we have an outburst leading to a quotation, but followed by a comment breathing the practical wisdom which is doubtless learned in the Inland Revenue Office, Somerset House:—

> The king's writ to a tenant-in-chief ran "per fidem et ligantiam quam nobis debes"; true answer, as beseemed his fealty, was required from noble knight; and to speak the truth—the Spartan rule—was ever a guiding precept of chivalry.
>
> This is a shameful thing for men to lie.

Moreover, land cannot be concealed from view; and in those days the approximate annual value of a man's possessions in land was probably no very difficult calculation to those who scrutinized the returns.

But there is also room for quotation, allusion, and interrogation in dealing with smaller people than those who held in chief of the king by knight service:—

> But in the case of the tenant in socage, the mere agriculturist, would his return of his horses, and cows, and sheep, and pigs be trustworthy? Would Cerdric, the Saxon franklin, care accurately to inventory cattle and goods for the purposes of the Norman tax-gatherer? And how could his return be checked by sheriff and justice? What answer would Gurth give when it came to the point, and the fiscal question was put. "Dic mihi, Dameta, cujum pecus?"—Tell me, shepherd, whose herd is this?

When we get into the quarters into which Mr. Dowell has now led us, we are at least thankful to be spared any reference to the swine and the sheep which got Norman names after they were dead. But Mr. Dowell has here given us another spelling of the mysterious "Saxon franklin." Did Scott by his "Cedric" mean "Cerdic," or what? Mr. Dowell's "Cerdric" seems to be a kind of half-way house. In another place Mr. Dowell gets on the history of towns, where we get more quotations after a fashion which shows that two good things mingled together do not always make a third good thing:—

> "Here too had been splendid cities, Christian churches, noble public works, and private mansions," writes Professor Stubbs, from whose admirable work on the Constitutional History of England a considerable portion of the next page or two is derived. The reader cannot but recall the lines:—
>
> "Adde tot egregias urbes, operumque laborem,
> Tot congesta manu præruptis oppida saxis."

Professor Stubbs is true in his way, and Virgil is true in his way, but the two put together make something which is not true. No reader who has ever compared England and Italy would think of recalling the bit of Virgil after the bit of Stubbs; for Virgil, speaking of Italy, gives a description which is applicable to Italy, but which is not applicable to England. The hill-fort grown into town, so common in Etruria and Latium, so common in a large part of Gaul, is in Britain almost unknown. The words of Virgil which exactly describe so many Italian sites could not be applied without a little straining even to Exeter and Lincoln.

In short, through the whole of Mr. Dowell's book, the dance which is performed on the money-bags so constantly catches the eye that we can hardly see the money-bags themselves. Yet we believe that the money-bags are there after all. We believe that Mr. Dowell really has taken a good deal of pains with his subject; only, under some strange notion of making his subject attractive, he has done his best to hide it under a mass of irrelevant stuff, put in simply to look sprightly. He begins by a long apology, with many quotations, for beginning at the beginning; and then he begins before the beginning; for what has "Ancient Britain"—even though derived from Brutus or from the πρυτανεῖον—to do with the history of taxation in England? "From the Roman Conquest of Britain to the Norman Conquest of England" is an odd division; yet both the wording of it and the chapter itself show that Mr. Dowell has read something. He has got up his Danegeld and such matters creditably, and he has worked hard at his Madox. But he still mistakes the one Pipe-roll of Henry the First for a Pipe-roll of Stephen; and, what is much graver, in the very act of quoting Professor Stubbs's demonstration to the contrary, he still believes, Blackstone-like, that a "feudal system" was "introduced" at some time, seemingly at the great Gemót of Salisbury. And so we go on to scutage and carucage and tallage and such like grave matters, which peep out here and there among the quotations and the bits of liveliness. There must, we suppose, be something funny, though we cannot see it, in turning "armiger quidam, dictus Robertus Camerarius," as W. Rishanger calls the man who set fire to Boston in 1288, into "Mr. *Thomas* Chamberlain, a gentleman of some note." Mr. Dowell makes him assemble his friends under pretence of a tournament, which may perhaps be in some other account, but is not in Rishanger, the only one that he refers to, where we are not told how Robert's "complices vere demoniaci" came together. But this endless frisking and jerking simply wearies us out long before we have reached the civil war of the seventeenth century, to which Mr. Dowell professes to guide us. We got the ship-money somehow, we did not exactly know how; and then came the setting up of the standard, which made Mr. Dowell pluck the flower from under Italian skies.

If we are doing Mr. Dowell any injustice, it is really his own fault. As in duty bound, we made a vigorous effort to get through the serious parts of his book. But our strength failed us; the fun had worn us out. We fully believe that there is some stuff in Mr. Dowell's book. If he will send us another copy, or another edition, or another volume, without any jokes, without any quotations save from actual authorities, something plain and straightforward that one can read calmly, like a Pipe-roll or Kelham's Domesday Illustrated, without being jerked up and down in every page, we shall by that time perhaps have got over the sad effects of his merriment, and we may be able to deal with him as a serious writer.

BISHOP SUMNER.*

THE present is an age of biographies. The number of books of this kind with which we have been supplied during the last few years is enough to make one despair of human progress. So many persons have been taken away who appear, under the skilful treatment of their biographers, to be altogether unlike their survivors, that the man may be pardoned who thinks that the world is in a fair way to ruin for lack of great men to rule and guide it. There really must be some limit. In whom the authority shall be vested of drawing the line which shall exclude the commonplace we cannot say; but until some such censorship is exercised, we can only be on our guard against the exaggeration which is the special snare of the biographer, and naturally so when the subject of his labours has been connected with him by kinship and affection. Having carefully read the book before us from beginning to end, we have more than once been puzzled to answer the question which persistently presented itself to our mind, Why was such a book written at all? Bishop Sumner was an eminently respectable prelate, but beyond the fact of his having become a bishop at the unusually early age of thirty-six, and continued to hold his see until he was in his eightieth year, we can see nothing in his career deserving especially to be chronicled. The highest ecclesiastical personage in these realms said on a recent public occasion that the most exalted positions in the English Church were not gained exclusively by merit, but that luck had a good deal to do with it. Bishop Sumner, at any rate, was pre-eminently a lucky man. The son of a country rector, without University distinction, he became a bishop and dean at thirty-six, having previously held two canonries; and for forty years he filled the historic see of Winchester, being the last of its Prince Bishops who enjoyed its lordly revenues without the control of Ecclesiastical Commissioners or the "sweet simplicity" of a fixed income. The "wisdom, zeal, power, and Christian love" which his biographer claims for him were no doubt his in the measure and degree in which all Christian ministers of blameless life possess them; but we cannot gather from his biography that they were found in Bishop Sumner in any exceptional measure. We have no doubt that there have been hundreds and thousands of conscientious clergymen serving in the Church of England during the lifetime of their more fortunate contemporary, in no degree his inferiors either in mental or moral qualities, but who have passed away and found no *Vates Sacer* because their lot was cast in the shade.

Mr. Sumner seems to have been not only fortunate, but even from his boyhood to have borne himself in a way that made him, if not exactly popular, yet a person of consideration. We pass over the inevitable goody stories of his childhood, from which so few biographers can refrain, and which Mr. Sumner is the more inexcusable for retailing inasmuch as he rejoices that "few records of his early years remain." At Eton he had for his intimate friends the future judges Patteson and Coleridge; they were his seniors, and left school before him, but in 1809 Coleridge wrote to Patteson, "You found Sumner prince of the school, just as amiable and respectable as ever, but not so happy, for he is miserably left alone by our departure." At the age of twenty Mr. Sumner entered Trinity College, Cambridge, and in the usual course took his B.A. degree; his undergraduate career, as respectable in all ways as his schoolboy course had been, had served to sow the seed of his future success in life, for he made friends with Lord Mount Charles and Lord Francis Conyngham, sons of the Marquess of Conyngham. Everything tended to smooth his path; the Marquess asked him to travel with his sons for two years, promising him a living or an equivalent at the end of that time. The young tutor was still a layman, and protracted ramblings on the Continent did not seem to be the most officacious means of preparing himself for the position of a beneficed clergyman; but a pliant prelate of Norwich was found ready to ordain

* *Life of Charles Richard Sumner, D.D., Bishop of Winchester, Prelate of the Most Noble Order of the Garter during a Forty Years' Episcopate.* By the Rev. George Henry Sumner, M.A., Hon. Canon of Winchester, and Rector of Old Alresford, Hants. London: John Murray. 1876.

him without the legal title, and the young deacon and his pupils set out on their travels. At Geneva he met his future wife, and this changed his plans at once; he now looked to returning to England, and in 1816 he was settled at Highclere as curate, with a house full of pupils. Even here his luck stood by him. To some young men possessing no University distinction such a curacy as Highclere, with six pupils at 250*l.* per annum apiece, might have seemed a sufficiently good resting-place; but this life was described by his brother, who in his turn became Archbishop of Canterbury, as "enduring hardness," and the prospect of immediate promotion led the same brother to write:—"The same light which the obscurity of a curacy has not concealed will equally, I dare predict, prove itself a light from heaven, now that it shall shine more publicly in the sight of men." The whole family, so far as we can judge from the correspondence, formed a mutual admiration society; they practised infinite courtesy among themselves, and seem to have had a very pleasant sense of their own superiority, individually and collectively. The five years of hardness at Highclere were once nearly interrupted by the offer of an endowed school at Enniskillen, with an assured income of 1,800*l.* per annum. The matter was duly weighed, and the offer was declined; yet in two years' time, when it was supposed that a stall at St. George's, Windsor, was about to be conferred on him, Mr. Sumner received a letter from his uncle, containing the following comfortable words:—"Thus has your conscientious decision relative to the Irish preferment been rewarded even in this life."

So it was that virtue was rewarded more substantially than is always the case. Mr. Sumner's first pupils seem to have been models of gratitude; they never forgot their tutor, and now that they were high in the favour of George IV. and attached to the Royal Household, they endeavoured to make Mr. Sumner partaker of their exaltation. The result of their representations was that Mr. Sumner was summoned to Brighton, dined with the King the same night, and after dinner was kept for three hours in conversation by His Majesty. What it was that impressed the King we are not told; but the Royal discerner of spirits at once offered the young curate a canonry at Windsor. This was done without consulting Lord Liverpool, the Premier, who refused to ratify the appointment, and threatened to resign his office; a very pretty quarrel ensued, and the letters which passed are full of recriminations and petulant complaints; but the Prime Minister was firm. The King pleaded that his word had been pledged; the Court were in dismay; Lord Mount Charles wrote in such anguish that his grammar failed him; still the Minister was resolute. But out of this wrangle ultimate profit and advancement were secured to the fortunate subject of it; the King, baffled on one hand, was only the more eager to promote the advancement of his protégé. He immediately made him his Private Chaplain, assigning him a house in the Park at Windsor:—

> Other arrangements are in progress [wrote Lord Mount Charles] which, if they take place, will, I trust, make you as comfortable as the Canonry; it is true you will not be Canon of Windsor this time, but, as the King most kindly quoted at dinner when he saw my agony:—
>
> "Nil desperandum Teucro duce et auspice Teucro."
>
> You cannot conceive what he suffered on the occasion. He is, without exception, the best-hearted man that ever breathed.

The present generation will perhaps be grateful for this contemporary estimate of our modern Teucer.

The "other arrangements" were completed, and Mr. Sumner soon afterwards wrote:—"All my appointments are confirmed, and I shall have a living, perhaps immediately, certainly very soon; it is Lyme, in Dorsetshire, on the sea-coast. This prospect is delightful," he adds; but whether he refers to his prospects of preferment or to the prospect from its vicarage we are not told. But Lyme did not receive Mr. Sumner for its vicar; the first living offered to him was Abingdon, which was accepted; and here Mr. Carter, the curate, was retained in his position; he was "so much liked that it would be a great injustice, both to him and the parish, not to continue him as curate." What was the subsequent lot of this exemplary curate we do not gather; perhaps he died a curate; but this we know, that in six months he must have had to make terms with another vicar, for Mr. Sumner was in that time made Canon of Worcester. An offer of the Bishopric of Jamaica was made in 1824, and declined by the King's command, who had richer gifts in store; in the following year the Worcester stall was exchanged for one at Canterbury, to which was added the promise of the next bishopric that should fall vacant. Sir W. Knighton, in revealing the King's intentions, added:—"Now, dear friend, you must begin to do everything as if you were at this moment a bishop. Be so good as to get rid of your shirt frill and trousers. It is the King's wish that you immediately take your Doctor's degree"; and without delay the University made Mr. Sumner D.D. by Royal mandate. In the following year the Royal word was kept, and Mr. Sumner became Bishop of Llandaff and Dean of St. Paul's; on all sides congratulations poured in, the Bishop of Chichester adding:—"You will want the attendance of two bishops at your consecration at Lambeth; I shall be most happy to render you my services on that occasion." The Bishop of St. David's (Jenkinson) kindly gave him his own experiences of the episcopal wig, which he thought would be comforting to a novice:—"I was annoyed by it at first, but I have now got used to it." It is melancholy to reflect that, in spite of this consolation, its recipient should have lived to discard that solemn head-gear. In the following year Dr. Sumner reached the limit of his prosperity, being translated to the see of Winchester at the age of thirty-seven.

If we were to accept the estimate of his biographer, we should be led to believe that no such episcopate has been elsewhere witnessed; but in truth the Bishop's career was sufficiently creditable fearlessly to challenge criticism, though not to call for unlimited panegyric. He was a sensible, clear-headed man of business, a diligent correspondent, earnest in the cause of education and of Church building; great progress, especially in regard to education, having been made in the diocese during the forty-two years of his rule; but it must be remembered that this long period included the epoch most fruitful of zeal and devotion in the history of the Church of England, while it would be ridiculous to assert that Winchester was in any respect the leading diocese. He refused all offers of commutation from the Ecclesiastical Commissioners, and he acted with much munificence in appropriating the value of his rights in an estate at Southwark to the increase of poor benefices. On many occasions he showed sound common sense, and once at least was not too timid to avow his sympathies with the weaker side when he thought the weaker side was in the right. In the agricultural riots of 1830 he received the discontented peasantry at Farnham Castle, and, instead of prescribing hydropathic treatment in the nearest horse-pond—a suggestion which it was reserved for a younger bishop to originate—he remonstrated with the farmers, and obtained an increase of wages for the labourers. This was all the more creditable to him inasmuch as it endangered his popularity, and popularity he valued very highly. He had the elements of it very much at his command—a genial presence, powers of conversation, and ample revenue. He was a courtier by conviction and diligent practice, and he always seemed to be impressed by the feeling that when he ceased to be popular he would begin to be nobody; and this, while it saved him from fanaticism, narrowed his sympathies, and in some instances made him unjust. Mr. Sumner is anxious to show that "the Bishop was no party man" (p. 413); that "no one was more tolerant than the Bishop" (p. 412); and, apparently with the view of enforcing this, he quotes from the late Sir J. T. Coleridge's Memoir of Keble an extract from a letter of Mr. Keble in which he describes a charge of the Bishop's as "really admirable," "and, as to matter, very instructive"; but in so doing he forgets that the mention of Mr. Keble's name recalls to all who have any memory incidents of Bishop Sumner's episcopal administration which a more cautious biographer would have taken care not to revive. Beyond the notorious fact that for the greater part of his episcopate Mr. Keble was vicar of Hursley, and never received even the slightest recognition of his Bishop's favour, it is hardly less notorious that he was the object of the Bishop's marked suspicion; and we think Mr. Sumner would have been more ingenuous if, when he had Sir J. Coleridge's Memoir before him, he had not contented himself with quoting Mr. Keble's friendly estimate of his father's charge, but had also quoted Sir J. Coleridge's remarks on the way in which Mr. Keble's manifold claims for preferment were passed over to the detriment of the Church herself; or had given the passage where, in the most delicate way, the story is briefly told of the special hardship under which Mr. Keble laboured from the fact of his curate being in deacon's orders. The Bishop had erected an isolated passage in Hooker's Fifth Book into a standard of faith, and in so doing had done what the Church had never attempted or wished to do; the curate declined to subscribe to any tests which the Church had not prescribed, and for seventeen years, while friendship for his vicar retained him at Hursley, the prejudices of his Bishop kept him a deacon. At last, when Mr. Keble's frequent and necessary exposure of himself at night while performing his parochial work gave the greatest concern to his friends, Sir J. T. Coleridge endeavoured to move the Bishop. He wrote, "From anxiety for one friend and confidence in the personal kindness of the other, I made an attempt which was unsuccessful." This led to the departure of the curate, who found no difficulty in obtaining priest's orders and preferment in another diocese, where the Bishop did not consider himself wiser than the Church. The man who ruled his diocese and distributed his patronage so as to leave the author of the *Christian Year* in unrewarded obscurity is self-convicted of mediocrity; and we imagine that all who read the work before us with any knowledge of what the diocese of Winchester has been, and who were the men that most readily found favour with Bishop Sumner, will ascribe to the not unnatural partiality of his biographer the estimate which he has formed of his influence in the Church. We do not think that members of Convocation or of the Lambeth Conference of 1867 have any recollection of his having swayed those bodies by the force of his character and eloquence, as he is represented to have done.

The more we study the book the more we are puzzled to divine what purpose it can have been intended to serve. Of a bishop whose one pre-eminent distinction was extraordinary good fortune a biography of fifty pages might surely have chronicled all that required to be commemorated; but the biographer, having the task before him, felt himself bound to compile a book of the regulation size, and so we have a volume of 480 closely printed pages, containing infinite gossip on all conceivable topics of no interest, including descriptions of such remote places as Ramsgate, Ghent, Geneva, Devonshire, Cornwall, and the Lakes, with details of meals taken on his walking tours and travels. The memory of a man worthy of a formal biography is not honoured by being mixed up with such a farrago.

APPLETON'S NILE JOURNAL.*

In his dedication Mr. Appleton expresses such a profound consciousness of the small proportion of valuable residuum left by "the turbid overflow of journalizing travel," that we can only express our surprise at his having decided to publish his own notes. For the Nile in particular has been done with most monotonous iteration from Cairo to the Upper Cataracts. The familiar tombs and temples stand just as they have stood since they burst upon the marvelling gaze of the fathers of modern tourists. Moralizing on the memories of the past has worn itself threadbare. The life of the dahabeah, from shooting the pigeons to shooting the rapids, must of necessity be singularly devoid of incidents of novelty. Everybody to be met with on the banks of the venerable river is an old and intimate acquaintance, from the obsequious native Vice-Consul to the vociferous and independent Reis of the Cataracts; and the occasional disinterment of some new bit of buried treasure scarcely furnishes matter for a fresh volume of travel. If a Nile traveller hopes to make a hit nowadays, he must turn his attention in the direction of the practical, like Mr. Eden when he published his serviceable little book with the object of making people independent of the hitherto inevitable dragoman. But when a man lays himself out to expatiate on the witchery of the sacred river in the æsthetic and romantic vein, even a Lamartine or a Kinglake would be hard put to it, and we cannot congratulate Mr. Appleton on having achieved a distinguished success. He says in his dedication that his journal is like a thousand others, "full of trivial details, and without learning or eloquence." But there he wrongs himself. As for the trivial details, we would very willingly have more of them, for those little incidents of dahabeah life which are always varying can alone brighten up chapters that treat of hackneyed themes. As for learning, he does not profess much of it, we grant; but, indeed, after the indefatigable researches of a host of historians and archæologists, any display of the modern "learning of the Egyptians" can at best be merely a *réchauffé*. But Mr. Appleton's pages positively teem with eloquence. From the opening sentences in the very first page the style goes on swelling and rising, like the Nile flood, till we are nearly carried off our legs in a rush of epithets and magnificent metaphor. As Mr. Appleton kept his journal for the entertainment of himself and his nieces, and only gave it to the public as an afterthought, we presume that tall thinking and grandiloquent expression come to him by instinct. But many of his qualifying, or rather aggravating, adjectives are so quaintly misplaced, so oddly inapplicable, or so visibly far-fetched, that we might have fancied he had wiled away the wearisome hours by exerting his ingenuity in parodying Mrs. Malaprop. Through the first half of the volume at least, he seems to have made a practice of discarding any expression that is plain, simple, and intelligible; nor is it only the admiration of some stupendous temple or the intoxication of some gorgeous sunset that fans into a flush of rapturous transport the latent poetry of the author's temperament. But when human nature has an undue strain put upon it things must arrive all the sooner at the inevitable climax, and (Mr. Appleton's metaphorical manner is catching) when the Nile inundation is at its height it begins steadily to subside. Happily for the author and his readers, the latter half of the Journal is simple and unpretentious in comparison with the former; and of a sudden we are conscious of a grateful relief, as if we were gliding along in peaceful waters after having cleared the sensational confusion of the cataracts.

To give our readers some notion of Mr. Appleton's style, we may cull at random a few of his flowers of speech, beginning with the very first of his paragraphs, where "this Journal gets launched out of the embayed sweetness of our earlier hours." "How unlike last evening, when Egypt melted our being in its twilight, and we hung like flies in amber in the golden peace around us!" Next day, "as the sky began to clarify," and the "ghostly films of clouds were smoothing into the deep, thoughtful brow of Egyptian day," the voyagers experienced the strange physical or psychological phenomenon of "lapping the sunshine with their Northern nerves." Taking a comprehensive glance at Nile natural history, we hear, *inter alia*, of the flies that figured in the plagues inflicted upon Pharaoh being stimulated in this nineteenth century "by the virus of millenniums of infants' eyes." The wicked vulture hangs in the sky, "its shaggy pin-feathers dark against the brightness." There are storks standing "silent and silvery, tesselating the brown sand bars"; and the pelicans are "shining like ingots of silver against the gold of the sunset." Whether Mr. Appleton is under the impression that the Nile Valley was settled much earlier than Mesopotamia or Syria, for instance, we do not know; but of a Sunday he moralizes thus:—"Sunday; such an eternity of years has poured through this valley since man first lived here that time almost melts into the white light of eternity." The figures in the temples of Luxor move before their eyes, "a procession of spirits, stripped of materialism and fastuous colour, friendly, yet remote, half imparting and half hiding their secret." The groves of palm trees are, if we rightly understand a somewhat obscure passage, singing hosannas and waving their branches in praise of their beautiful river, and we may listen to what is the "tumultuous discord of the beauty" of the dew, the morning, or the evening, according as we may choose to interpret the context. But, although the Nile life may have been in great measure rhapsody, it was not wholly dream." For "there is a peculiar effort of the mind, which moves like a questing hand among the dim places of the past, and puts up the game of fresh thought and restored life." Indeed, had it not been for occasional references to sport, and the fact that the writer was fond of shooting, from the internal evidences of thought and style we should have been inclined to set down "T. G. Appleton" as a romantic young lady. For he has a feminine weakness for gushing on the slightest provocation, and such deceptive little touches as "our dear Nile" are frequently to be met with.

As we have implied already, there is more that is original in the manner than in the matter of this journal, so that we have been tempted to linger over the former. And although we may regret the scarcity of "trivial details" and lively little episodes, yet the book is not altogether barren of these. Occasionally, too, Mr. Appleton does put something in a new light, or does say something suggestive. Thus he makes the very sensible remark in one place that it is the blemish of most Nile journals that, while they dilate on the sweets of the voyage, they say little or nothing of the bitters. This idea was borne in upon him at Derr, where a concatenation of untoward events tried a very equable temper. All the people on board seem to have suffered sympathetically; for the usually good-humoured sailors took to quarrelling, and one of them was thrown overboard. The weather, which had promised magnificently the night before, had taken a sudden turn for the worse. Though the wind came from the south, it blew chillingly. "Nature, stripped of gold and purple, is in sackcloth and ashes"; the scenery looked dull; the palms had ceased singing hosannas and looked like brooms, while the clouds of drifting sand blew over the colourless water. It was a disagreeable change enough from the evening before, when "silvery lawn, fine as if spun by the fairies, was drawn across the sky, and this, touched by the light of the departed sun, made the whole heavens seem as if powdered with rose leaves." On days like that, something worse than mere *ennui* must weigh upon the clouded spirits; and Mr. Appleton's own feelings no doubt enabled him to sympathize the more easily with those of an unlucky Greek gentleman who had been indebted to him the evening before for a cigar and a bottle of claret. Of all places in the world, the Greek had selected Derr for his villeggiatura, and no wonder that "he seemed hungry for chat," and pronounced the place of his sojourn dull. On the downward voyage the tourists really had an adventure. One morning as they were putting off, there rose a great clamour on the bank; a young Nubian, making his escape from a tyrannical master, had bolted on board the dahabeah, and the pilot, although a countryman of his own, wanted to give up the fugitive. The worthy dragoman, however, a British subject, would not hear of this; he struck an attitude with the British flag in one hand and his revolver in the other, while Mr. Appleton, rushing upon deck in his night-dress, came opportunely to use his authority to compel the pilot to make a start. Two days afterwards the mob of one of the villages made another serious attempt at recapture, which was again repelled. In a word, as Robinson Crusoe says, the lad stayed with them, learning to make himself as useful in the pantry and at the dinner-table as his uneducated clumsiness would allow. But in the course of the cruise they had been picking up other protégés till they ended by collecting a regular menagerie. The poultry coops of course were being steadily emptied and replenished, but the cook had a family of pot pigeons which appear to have been spared. There was a very fascinating kitten, christened Kiki, which grew too quickly into a cat, and a gazelle, the embodiment of grace and gentleness, which they bought from a woman that had tamed it. They were less successful with an infant crocodile, taken in a fisherman's net, and small enough to disport itself in a basin of water. Small as he was, he already snapped by instinct, and it was owing perhaps to his morose disposition that he only survived his capture a few days. Mr. Appleton had some conversation with Mariette Bey, who bitterly deplored the vandalism of certain tourists; those who have least appreciation of art being most unprincipled in mutilating its monuments by way of providing themselves with *souvenirs* of Egypt. Often, when the Bey has made some interesting discovery, he is obliged to cover it up carefully again; and should the Khedive become more liberal in the way of enlarging his staff of guardians, there are many treasures discovered and concealed again which will once more be finally restored to the light. As Mr. Appleton says, reasonably enough, enlightened measures of this kind would probably pay indirectly; for the more numerous and attractive the exhibition of remains of antiquity, the greater will be the influx of wealthy travellers to visit it. We may add that the cost to the Government might be insignificant. For once it would matter but little if the conservators received infinitesimal pay, and if the pay were suffered to run indefinitely into arrear. They could scarcely tamper with the monuments in their charge without imminent danger of detection; and in any case they would be sure to lay travellers under contribution for the *backshish* that would be seldom refused them.

* *A Nile Journal.* By T. G. Appleton. London: Macmillan & Co. 1876.

ROME DURING THE VATICAN COUNCIL.*

"A BOOK worthy of the best days of Italian thought"—such is the eulogium passed by Mr. Gladstone seven months ago

* *Eight Months at Rome during the Vatican Council: Impressions of a Contemporary.* By Pomponio Leto. Translated from the Original. London: John Murray. 1876.

on this remarkable volume; and it is with much pleasure that we may welcome an English translation of it. The book has made a considerable sensation in Italy, partly by reason of its conspicuous intellectual and literary ability, and partly on account of the mystery in which its authorship was for some time shrouded. It was clear from internal evidence that the author was an eye-witness of the events which he relates; and indeed he does not leave the reader in any doubt as to that point, for he frankly declares that "there is very little related of which the author was not a personal witness, or which he did not receive on authority of equivalent value." After a time suspicion fell on the Marquis Nobili-Vitelleschi, who was supposed to have received his information from some friend in the Council; but it is now pretty well understood in Italy that, whatever part the Marquis may have taken in the publication of the book, it embodies throughout the ideas and in a large measure the language of the Marquis's brother, who sat in the Council as Bishop of Osimo and Cingoli, and who died some months ago, at a comparatively early age, a few weeks after receiving the cardinal's hat. He was a man of wide culture and of liberal opinions and sympathies, combining an aptitude for philosophical speculation with the sagacity of a practical statesman; yet withal a sincere and devout Catholic. The Liberal Catholics of Italy—a larger party than is commonly supposed—had built great hopes on Mgr. Vitelleschi. In spite of his known liberal opinions, he was personally popular with the Roman Curia, and his name was sometimes mentioned among those likely to succeed the present Pope. His premature death has put an end to all those hopes; and this volume of vivid "Impressions" and profound reflections shows what he might have been to his Church and country had his life been prolonged.

Cardinal Vitelleschi—for we shall speak of the book as his, though we do not by any means wish to ignore his brother's share in its production—does not appear to have disapproved of the summoning of the Vatican Council. Here and there, indeed, he uses language which seems to imply some misgiving as to the wisdom of the enterprise. The Pope, for example, had availed himself of a public occasion to declare "that it was not only wrong, but blasphemous, to say that the Church needed reform." "If there was nothing requiring change," retorts our author, "what was the use of summoning the Vatican Council three centuries after the last that was held? But suppose there was something to change, there was something to reform. So that, if the Pope used the phrase in an absolute sense, he condemned himself for having summoned the Council; and this opinion would perhaps be in accordance with that of several prelates, and even of some cardinals of the Roman Curia." It was not, however, because he saw no need of reform that Vitelleschi had his doubts about the policy of summoning a Council, but because he had no confidence either in the disposition or capacity of the dominant party in his Church to cope with the evils which he saw paralysing her energies and menacing her future. To think of averting these dangers by proclaiming the infallibility of the Pope under the sanction of an anathema seemed to him as futile and as mischievous as Mr. Disraeli's recent device for arresting the conquests of Russia in Central Asia seems to us:—

Are there no defects in the Catholic religion [he asks], save those regarding its authority? Is that the only subject worth consideration? Is the loss of the temporal power the sole evil on which we should deliberate? Could no other matters be found worthy to occupy the attention of an Œcumenical Council called together after the lapse of three centuries to deliberate on the interests of religion? For instance, would it not be a suitable inquiry for the Œcumenical Council of the nineteenth century to examine into the cause of the various evils that affect the Catholic populations of our age; their abnormal condition in many ways, the slowness of their growth, and their relative inferiority, moral, civil, and political? An inferiority which is in proportion to the greater or less prevalence of the system presented in the scheme [he means the *Schema de Ecclesia* debated in the Council]. No very profound statistical knowledge is necessary; one can see at a glance the difference in prosperity and of civilization to be found in Spain as compared with England, and in Ireland as compared with the sister Isle, or as between Portugal and Holland, between South and North America, between Italy and Germany, between Savoy and Switzerland, and in this latter country between the Catholic and Protestant cantons.

That questions like these should be publicly propounded by an Italian bishop is sufficiently remarkable, and the answer which he gives to them is not less so. He finds that populations moulded by the Papacy are behind their neighbours, not only in temporal well-being, but also in the arts and sciences, "in grand undertakings," and "in all those useful institutions by which mankind can render homage to the Creator." It is in France that he finds the best illustration of these reflections, since that country presents at once the two sides of the picture. On the one hand, she appears as the rival of the foremost nations; their rival in literature, in art and science, in philosophy, in industry, and in general prosperity. But there is another side to this fair picture which shows France as on a level with the countries which have dropped out of the ranks in the march of modern civilization. Can we assign a reason for this duality in the life of a single nation? The author thinks we can:—

Beginning from the encyclopædists down to the learned men of the present day, how many of the *savants*, and of those who have in any way aided in the growth of Modern France, would have been recognized by her as her children? How many laws, how many institutions, and what amounts of learning would have been of necessity lost to France had the voice of Rome prevailed in that country? Imagine the consequences to France as regards culture and science had her intellectual progress been subjected for a century to the corrections and revisions of the Roman Index. What part can the influence of Catholicism (using that term in the Ultramontane sense) claim in the civil glory and intellectual progress of France?

The author's reference to the encyclopædists must not mislead the reader into supposing that he had any sympathy with those who think that even civil progress is possible without the stimulus and the sanctions of religion. On the contrary, he insists on "a strong and living faith" as a necessary element alike in the birth and development of any civilization worthy of the name. It was the elements of true religion which they contained that inspired the fairest forms of Pagan civilization, and in each the degeneration of the civil polity proceeded *pari passu* with the corruption of the religious sentiment. What he deprecates is that system of absolutism which reached its culmination in the Vatican Council, and which necessarily forces out of the Church, and consequently into activity independently of her, and sometimes against her, some of those elements in the formation of character which are essential to the orderly development of humanity. And the result of this policy is visible in the contrast which the author observes between those States which have been moulded by it and those which have comparatively escaped its influence. In the former he sees moral and intellectual stagnation, tempered occasionally by violent ebullitions of "the spirit of revolution"—not that legitimate revolution which expresses the universal law of progress, but that "which signifies the violent, brutal, and envious revolt" of the human passions against lawful authority. In the latter there has been a "chronic revolution" also; but it has been, on the whole, the peaceful revolution of social forces working out their predestined ends. The social and political progress which is the glory of the last two centuries in Europe and America has been achieved in spite of the doctrines of the Roman Curia. On the other hand, those States, in South America and elsewhere, in which those doctrines have had full play, are the reproach of modern civilization, and should furnish the Church of Rome with a subject "for sad meditation."

What is the explanation of these contrasts? Only two explanations seem possible to the author. The state of things which he describes must either be the effect of a difference in the moral and intellectual training of the populations in question, or it must result from some peculiar idiosyncrasies of race or influences of climate. The partisans of Ultramontanism would prefer the latter hypothesis as "the most convenient, though the most humiliating for humanity, and, if true, involving irreparable evil." The author, however, prefers the former, and justifies his preference by an acute and most interesting analysis of the intellectual and moral discipline to which the populations of Roman Catholic countries are usually subject, and which he is careful to distinguish from "Catholicism itself." We must refer the reader to the masterly chapter in which the author works out this part of his subject, and can here only indicate some of its points. He traces most of the mischief to the undue exaltation of "the principle of authority," which, "owing to the natural tendency of the institutions founded upon it, has been always exaggerated to such an extent in Catholic education, that on all subjects, and in every way, it has usurped the first place, and has produced the blindest submission corresponding to the most absolute power." The effect of this training is to weaken, and sometimes to suppress, the working of the individual conscience, which is absorbed in "the conscience of Church authority." The sense of personal responsibility hardly exists, "and so the perception of good and evil ceases to be personal and spontaneous, and becomes reflective and obligatory." "It often happens"—such is the startling statement of a Bishop and Cardinal of the Roman Church—"that a Catholic, unless gifted with an unusual superiority of mind, has no knowledge of good and evil other than that which he derives from the external authority, which in many cases is represented by any chance individual. Nor is this only with regard to questions of principle, where such help may be sometimes both desirable and salutary; the same external direction is applied on all occasions, in all contingencies, in the everyday life of the people, and is carried by simple natures into trivial details and matters of no importance."

A director charged with this minute control over the conscience ought to be, not only very wise, but very holy. But since the mass of directors are not thus qualified, "the human conscience, being often ill guided, is likely to go astray; at any rate, never having learnt to reflect and judge for itself, it loses the capacity for so doing, grows gradually weaker, and at last becomes impotent, just as the limbs of the body, if never used, lose their strength." A double evil results from this state of things. A person brought up in the way described is helpless the moment he finds himself in circumstances where it is necessary for him to decide for himself, "and the recoil from such a despotism frequently throws the pupils of the Jesuits into the wildest revolutionary excesses." The second evil is thus described by the author:—

In the second place, the external authority can only find expression through words spoken or written, and, being unable to follow the infinite complexities of human action or to discern the secret recesses of the human heart, cannot give a rule of right and wrong to meet all contingencies; so that there must still remain many cases in which an individual being without that guidance, can only ascertain the right course by consulting the delicate and indefinable instinct of his own conscience. Hence arise the subtleties, the mental compromises, and the disingenuousness too frequently met with among our people.

We have not space to follow the author through the rest of his analysis. His conclusion is that the system of education prevalent in Roman Catholic countries tends to form, instead of a Catholic world, a Catholic party, gradually sepa-

rating it in all countries from the habits, the interests, and the affections of the rest of the nation." It erects a barrier against the progress of modern civilization among Roman Catholic nations by the establishment of "an authority at once inflexible and incapable of carrying out its designs," "strong enough to overpower all resistance from its subjects, but incapable of assimilating them to itself." From the nature of the case "it is an authority ever at war with the rest of the world; ready and eager to create difficulties in the civil society in which it moves, but unable to conquer in the battle it has provoked." This is the policy which, after centuries of struggle, received its final triumph and consecration within the Church of Rome in the Council of the Vatican, and perhaps received at the same time the first impetus towards its eventual overthrow. The Roman Catholic Church is at this moment a theocracy the most absolute and unlimited which the world has yet seen. The whole fabric is centred in the Bishop of Rome, to whose irresponsible will the members of the communion which he rules must henceforth conform their conduct in faith and morals—that is, in all that relates to their life on earth. Whatever control circumstances may exercise over decisions of individual Popes, it is certain that, in decreeing what the author calls their "apotheosis," the Vatican Council took care that no such control should ever be exercised by the Church. The whole Episcopate voluntarily divested itself of every rag of jurisdiction, for it placed under the ban of an anathema all who should dare to question the Pope's "total plenitude of supreme power," which "supreme power" is defined as being "ordinary and immediate, sive in omnes et singulas Ecclesias, sive in omnes et singulos pastores et fideles." The Episcopate is thus degraded, as the author truly observes, to the condition of mere "official delegates," without any inherent jurisdiction in matters of discipline, and without any share in the teaching power of the Church, since the Pope's definitions in faith and morals are declared to be independent of the consent of the Church.

How this revolution has been brought about is recorded, step by step, in this striking volume. The book is divided into chapters, corresponding to the months during which the Council sat; so that it is partly a chronicle of what took place at the Council, and partly a record of the "impressions" that the events made upon a mind of singular breadth and power, which enjoyed the advantage of viewing these events from the vantage ground of an actor in the scene. "It may truly be affirmed," says Cardinal Manning in his Pastoral on the Council, "that never was there a greater unanimity than in the Vatican Council," and he goes on to denounce as "calumnious falsehoods, fabricated to bring the Council into odium and contempt," "the descriptions of violence, outcries, menace, denunciation," "with which certain newspapers deceived the world." We can only say that these descriptions are amply corroborated in the pages of "Pomponio Leto." Cardinal Manning's anger is, however, natural enough under the circumstances, as the following quotation from our author will show:—

> History is bound to award to the author and originator of every work the praise or blame which is due to him. All must remember the part taken by the Fathers of the *Civiltà Cattolica*, and Monsignor Manning, Archbishop of Westminster, in promoting the dogma of the personal Infallibility of the Pope, and all know that it was their mind and their will that carried it. On the day of the promulgation of the dogma Monsignor Manning received as a gift, from the Society of the Jesuits, a portrait of Bellarmine with the following inscription—
>
> HENRICO EDWARDO MANNING,
> ARCHIEP. WESTMONAST.
> SODALES SOC. JESU,
> COLLEGII CIVILITATIS CATHOLICÆ,
> SESSIONIS IV. CONCILII VATICANI
> MNEMOSYNON.

We cannot dismiss the volume without bearing our testimony to the excellence of the translation. We have compared it with the original, and can say with confidence that it is as faithful as it is vigorous and readable. We may add that the book is enriched by an appendix containing the full text of a number of important documents, several of which are only given in summary or in part in the Italian version.

JEBB'S ATTIC ORATORS.*

NO more solid proof of the enlarged scope of classical scholarship in this country has appeared within the last score of years than this essay of a most competent scholar to write the history of Greek oratory. Till now it has been the fashion of nineteen out of twenty Greek students to content themselves with one or two masterpieces of Demosthenes and Æschines, to which here and there one might add an oration or a letter of Isocrates. But the thought of working back to the origin of Greek oratory, of getting a systematic insight into those steps in the formation of style which are marked by the names of Antiphon, Andocides, Lysias, Isocrates, and Isæus, and of discovering in these the bases on which the mightier masters of Attic eloquence built their glorious superstructure, has, if it ever occurred to any English scholar, not been seriously followed up. Whilst there has hitherto been nothing like an adequate sketch of the rise and progress of Greek oratory, even for the use of general readers, the fact that Dobson's edition of the Greek orators, *cum notis variorum*, in sixteen volumes (London, 1828), has always been a drug on the market, bespeaks at the same time the general prejudice on the subject, and the boldness and merit of the scholar who rises superior to it. Mr. Jebb proposes to himself two objects, directly or indirectly bearing on the history and advancement of literature—first, to trace the influence of Greek oratory in its growth and its maturity on the history of Greek prose expression; and secondly, to furnish students and general readers with an apparatus (in the shape of lists, analyses, and so forth) for the comprehensive and consecutive study of the Attic orators before Demosthenes. As regards the first of these objects, he supplements K. O. Muller's inadequate conception of the relations of oratory to universal prose literature; in carrying out the second he both stimulates and assists, beyond most of his fellows past and present, the curiosity of modern students for a more thorough acquaintance with the extant speeches in the originals. It is, no doubt, hard to see how time is to be made for the incorporation of some five or six earlier orators (whose remains take up some six hundred pages in the Paris edition of Didot) with the study of Demosthenes and Æschines, in whom the subject finds its crowning interest; but it is obvious that, unless the range of view is thus widened, our knowledge must be after all fragmentary, whereas such help as is supplied by Mr. Jebb's thorough handling is likely to have the effect of bringing forth separate editions and analyses of the various orators, and thus facilitating the gradual mastery of a tract from which at present people seem to be frightened away. It will have been something achieved (apart from the contribution towards a history of Greek oratory) to stimulate by the incentive of a quickened interest the production of such commentaries on the earlier orators as that of Mr. Sandys on Isocrates's "Ad Demonicum" and "Panegyricus," now standing, as Mr. Jebb remarks, "alone in this country." But this, be it remembered, is only a secondary aim. Our author's prime aim, as he himself puts it,

> is to consider the lives, the styles, and the writings of Antiphon, Andocides, Lysias, Isocrates, and Isæos, with a view to showing how Greek oratory was developed, and thereby how Greek prose was moulded, from the outset of its existence as an art down to the point at which the organic forces of Attic speech were matured, its leading tendencies determined, and its destinies committed no longer to discoverers (εὑρεταί), but to those who should crown its perfection or initiate its decay. The men and the writings that mark this progress will need to be studied systematically and closely. It is hoped that much of historical, social, or literary interest will be found by the way. But the great reward of the labour will be to get a more complete and accurate notion of the way in which Greek prose grew. It will not be enough if we break off when the study of Isæos has been finished. It will be needful to look at the general characteristics of the mature political oratory built on those foundations at which Isæos was the latest worker, to conceive how distinctly Isæos and those before him were related to Lycurgos, Hyperides, Æschines, Demosthenes. Nor must we stop here. The tendencies set in motion between the fourth and fifth centuries B.C. were not spent till they had passed into that life of the Empire which sent them on into the modern world. The inquiry which starts from the Athens of Pericles has no proper goal but in the Rome of Augustus.

This is a task truly worthy of the accomplished author, and one in which all classical scholars may find their account in following him, whilst even general readers may well be attracted, by the questions and comparisons mooted in the Introduction, to the deeper study of a work which will be found in a large degree within their range. We have already stated that Mr. Jebb adopts the scope of Dionysius, one of the two contemporary Augustan Atticists, in connecting the orators treated of, either as inventors or perfecters, with a standard of Greek prose. That prose, he remarks, which was written with a view to being spoken, stood, in Greek antiquity, in the closest relation to that which was written to be read. Ancient oratory was a fine art, comparable—as indeed it is compared by Dionysius, speaking of the polished and chiselled forms of Plato and Isocrates—with sculpture or painting. As one proof of this, Mr. Jebb cites the training of the speakers and the appreciation of the hearers, who were alike solicitous of, and alive to, a standard of artistic elegance, and not merely attentive to the general effect. Reversing the modern order of elements of persuasion, the ancients set the *ethical* and *pathetic* before the *logical*, and Aristotle counsels the students of his Rhetoric to be chary of the last of these. The modern speaker has no distinct acceptance as an artist, whereas the ancients eschewed, as a rule, long chains of elaborate reasoning such as constitute one triumph of modern oratory. Another point of contrast, arising from a kindred cause, is our demand for extemporaneous speaking, or its semblance (attributable, in Mr. Jebb's view, to the Hebraic basis of education in modern Christendom, which regards the true counsellor as one whose inspiration is given him at the moment by a power external to himself); whilst the ancients wrought their masterpieces into an artistic whole which admitted of treasured commonplaces, plastic finish, and the highest measure of premeditation, but was incapable of those *coups* of modern eloquence, those thrills and electric shocks, which burst, or seemed to burst, spontaneously from such speakers as the elder Pitt, Sheil, and Erskine in the senate or at the Bar. One such rhetorical effect, indeed, our author reminds us, was esteemed both in ancient and modern oratory, down to the days of our fathers—the use of quotation; but the cause of the parallel failing to a great extent as regards our own day is to be found in the absence of an audience akin to the Attic in cultivation and sympathy. Were a speaker in our present House of Commons to peroration with as telling a quotation as that at the close of Pitt's speech on the Slave-trade, how many of his hearers would applaud from

* *The Attic Orators, from Antiphon to Isæus.* By R. C. Jebb, M.A., Public Orator in the University of Cambridge, and Professor of Greek in the University of Glasgow. London: Macmillan & Co.

the heart and from the sympathy of kindred cultivation, and how many from an adoption of Sir Arthur Helps's satirical advice about the proper reception of a classical quotation which you do not understand? Other questions touching the plastic character of Greek oratory, its personalities, its perorations (these last in some instances paralleled by the modern speaker), and its superiority to Roman eloquence, will be found treated with a breadth and shrewdness indicating Mr. Jebb's grasp of his subject; and every reader must study the pages which discuss the two prime elements of Attic oratory, the practical culture of Ionia and the Sicilian rhetoric (pp. cxii.–cxxx.) For the details of the latter use has been made of Mr. Cope's papers on the Sophists and the Sophistical Rhetoric. But we must pass over these for the purpose of glancing, as far as space will allow, at the three orators who make up the first volume of Mr. Jebb's work—Antiphon, Andocides, and Lysias.

The first of these represents what is termed the *austere* style, and the third the *plain* style, whilst the second—"an amateur among experts"—occupies a position midway between the formal grandeur of Antiphon and the polished ease of Lysias. The first was the originator at Athens of the profession of writing speeches for money, as well as a teacher of rhetoric, who possibly numbered his warm admirer Thucydides among his pupils. In the assembly and the law courts his influence, though exerted mostly behind the scenes, was such as consisted with the character for consummate ability given him by the illustrious historian (viii. 68), and was worthy of the great apologist of the revolution of the Four Hundred, his share in which he had to defend on trial for his life. In Mr. Jebb's estimate of him there seems to be ground for accepting relatively Thucydides' praise of Antiphon's virtue, in the sense of consistency and disinterestedness; but that which probably stood him more in stead, and brought him, late in life, to the front in politics, was his trained use of a subtle and quick wit, and the fertility of expedient and ingenuity in making points in debate which came from his rhetorical δεινότης (p. 17). In point of style Antiphon is represented as dignified and decorous above all else. In imagery his taste is fanciful but not florid, and the examples given of it justify the impression of severe control which consists with the character of his style. In pathos he excelled rather than in ethos, herein resembling Thucydides, though the latter is necessarily more dramatic. It is to Lysias in the next century that we must look for the artistic adjustment of words to the particular character and position of the person who is supposed to speak them; so that, to use Mr. Jebb's expression, a client had not only the advantage of professional aid, but the further advantage of appearing to have dispensed with it. In arrangement we note simplicity as a characteristic of Antiphon, his programme being as follows—procem; introduction; narrative of facts; arguments and proofs; epilogue. But his weakest point seems to have been narrative, in which Andocides and Lysias were strong. His strongest was in general argument, though a glance at the speeches of the first tetralogy in the chapter on Antiphon's works (pp. 48, 49) will show that he not seldom resorts to sophistries and to arguments in a circle. One more special and distinguishing characteristic of Antiphon is his stately standing aloof from hand-to-hand encounter, the result of his being essentially a furnisher of words and arguments for others. Whilst this disqualified him in a great measure for the fighting of the law courts, it may well have adapted him for the graver procedure of the Areopagus, to which also, as Mr. Jebb shows at some length, his religious feelings naturally drew him. The coincidence of sentiment between Antiphon "de cæde Herodis" § 82 and Æsch. Theb. 593 *seq.*, general though it may be, is one illustration of the strength of these feelings; and probably, did we possess other orations than the fifteen (all relating to cases of homicide) which remain of Antiphon, direct and indirect evidence of it would be multiplied in proportion. The criteria of the date of the speech on the murder of Herodes are cogently marshalled in p. 59, and the chief features of Antiphon's other extant speech before the Areopagus, "On the Choreutes" are sufficiently analysed.

There is so little of rhetorical training, or distinct progress in his art, about the speeches of Andocides, that one hardly sees his title to be numbered among the "ten" orators. Perhaps his connexion with history—"history" which, as Mr. Jebb puts it, "only knows him under a cloud"—has more to do with it than any services to the culture of oratory. The ill luck which brought him into odium with the oligarchs for his informations about the Mysteries and the Mutilation of the Hermæ, whilst his hereditary connexion with the oligarchy set the democratic party against him, seems to have placed him continually in an attitude of defence and self-preservation, and perhaps may have made him more reliant on native wit and shrewd knowledge of men than on the arts and resources of rhetoric. What remains of his speeches are that "De reditu," B.C. 410, in which he sought in vain the removal of disabilities attaching to him for his past complicity with the impious; that "on the Mysteries," in 401, whereby he achieved his acquittal; and a political speech on the peace with Sparta, which shows strong sense and a clear-sighted eye to Athenian interests. In all of these we miss method, finish, and precision of thought or rhetorical figures. Andocides depends rather on a rough unhewn ...ness, a simple arrangement of matter, and a forcible artless ...ive. Of this last, the famous description of the first night in ... when he yielded to entreaties to divulge what he knew of ... conspiracy, is a special example. Add to these his resort to such natural figures as irony and indignant question, and his introduction of stories and anecdotes, and we detect a certain advance beyond the grave and austere style of his predecessor Antiphon, though, after all, his place and value are more concerned with history than with rhetoric. It seems to be agreed that he had no training in the Sophistical schools, but curiosity is roused as to the source of the strange argument in the peroration of the speech "De reditu," wherein he lays the fault of human mistakes on the mind, not the body, and claims acquittal for his unoffending body on the plea that years had brought him a new mind! (See vol. i. 112 and Andoc. de Reditu, § 24.)

It is on turning to Lysias that we realize the progress made in Attic prose. Mr. Jebb regards the prose of Lysias as so admirable that his merit as a writer is in danger of obscuring the oratorical power which shines out in such speeches as that "Against Eratosthenes"—a speech comparable in some respects with that of Demosthenes on the Crown, though spoken, unlike that masterpiece, from a private standpoint. But perhaps this is no more than might have been expected of one whose business was not speaking, but speech-writing, and who lacked those opportunities of personally addressing an audience which the possession of citizenship would have given him. The brief history of this orator's career and its vicissitudes comes out very pleasantly in Mr. Jebb's tripartite sketch of the man, his style, and his works, the chief interest of which centres unquestionably in the second. As we have already said, Lysias introduced into speech-writing—to which after the confiscation of his property by the Thirty he resorted for a livelihood, and which he pursued so assiduously that he is said by Dionysius to have written two hundred forensic speeches—the practice of putting into the mouth of his client a plain natural expression of what the man might be expected to say, instead of a fashionable and conventional rhetoric. As the founder of the plain style, he recognized the dictum "Ars est celare artem," and, by combining tact of treatment with charm of language, stood out as the professor of naturalness. Mr. Jebb dissents, not without reason, from K. O. Muller's view that Lysias had two styles—the earlier forced and artificial, the later plain. As a rule, his pure and simple diction, his clearness of thought and expression, the result, according to Dionysius, of a wealth of the right words; his vividness, which sets a scene before the mind's eye in correct drawing, and not merely, as Isocrates does (the illustration is Mr. Jebb's), in brilliant colouring; his acute reading of character and sense of propriety, which makes all in keeping—these qualities are quite consistent with the plain style, whilst they do not allow plainness to become a synonym for lifelessness or formality. None of the orators are more skilled in delineating character by a few quiet touches, none more graphic or convincing in narrative; but it is here that we find his supremacy more assured than in appeals to the feelings, or in "the power which ought to elevate an epilogue." That which detracts from his oratorical pre-eminence is a want of pathos and fire. Yet a perusal of the chapters devoted to his works will serve to show that even in those traits which are least prominent Lysias can shine out upon occasion; as where, in his fragmentary speech on the Confiscation of the Goods of the brothers of Nicias, he exhibits a degree of feeling certainly rare in his speeches. Amongst the extant orations the masterpieces of Lysias are that "on the property of Aristophanes," "the defence of Mantitheos on his scrutiny before the Senate" (as to which Mr. Jebb redresses the scant justice of Dobree's criticisms), the famous "speech against Eratosthenes," and that against Agoratus, which, though having a narrower range and issue, is of special interest as containing a parallel to the prison-scene in the speech of Andocides "On the Mysteries." In his criteria of the genuineness of such speeches as the λόγος ἐπιτάφιος, and those for Polystratus and against the younger Alcibiades, Mr. Jebb's judgment seems to us sound and unimpeachable. He has apparently not overlooked any material criticism advanced by other writers, and it is impossible not to be impressed with a sense of the valuable service he has rendered in the field of classical literature which he has selected for illustration, and of the access of light, knowledge, and familiarity with the ancient models of oratory for which his readers are indebted to this lucid and well-arranged survey. At some other time we hope to notice the second volume.

THE DILEMMA.*

IN *The Dilemma*, a story of the Indian mutiny, the author of *The Battle of Dorking* has made choice of a congenial subject, which he handles with equal spirit and knowledge. The book vividly recalls the memories of that gallant struggle against overwhelming odds, which went far to redeem the English name from the disrepute into which it had been falling in consequence of the apparent ascendency of ultra-pacific doctrines. Our most inveterate detractors were forced to confess that we had not forgotten how to fight, when they saw the scattered handfuls of our countrymen, taken by surprise, turning successfully to bay against the disaffection of millions of their subjects; "scratch" garrisons defending improvised fortresses, while doubtful, or even despairing, of relief; flying columns, cast loose from all supports, marching from victory to victory over battalions drilled and armed by ourselves, and carrying great cities crowded with fanatical combatants, in a series of swift and irregular attacks. *The Dilemma* dramatically concen-

* *The Dilemma.* By the Author of "The Battle of Dorking." London: Blackwood & Sons. 1876.

trates our interest on the residents of a single station. When the tale opens, the society of Mustaphabad is in its normal state of stagnation, and we have leisure to make its acquaintance thoroughly, from the Government Commissioner down to Lieutenant Arthur Yorke, who is falling hopelessly in love with the only daughter of the great civil dignitary. Unsuspicious of the terrible experiences in store for them, they are all making the most of such stray occasions of excitement as a garrison steeplechase or a cavalry ball. Seldom have the details of garrison routine or the various shades of military character been more lightly and happily delineated. Mustaphabad may have been a purgatory to those who were quartered there; but readers of the novel find it anything but dull. We are introduced, very much to our entertainment, to the free and easy housekeeping of Yorke and his gay-hearted chum, in their bare little bachelor bungalow. We listen with amusement to the tittle-tattle of the ladies who lead the fashions, and to the pipeclay gossip that goes on round the mess-tables. The society of the station may find but languid enjoyment in their evening drives on the Mall or Course, but to most English readers the scene will be full of novelty. Some suggestive touches make us at home among the men and women who are soon to be subjected to an ordeal inconceivably trying. As for the great majority of the officers, they are fair average specimens of their class, nor does it need an intimate acquaintance with them to get to the bottom of their characters. Generally speaking, they are seriously bent on killing time, or on cultivating the serene Buddhist philosophy which persuades them to support the dulness of their lot in more or less cheerful abstraction. A few there are of a higher stamp, who have either already risen superior to circumstances or who still cherish the professional ambitions which protracted peace seems likely to stifle. There is the distinguished Colonel Falkland, respected and envied even by the triflers, who, like most Indian officers that have made themselves a name, has long been detached from regimental duties. There is Kirke, who has left the service under a cloud, and who has the vices as well as the military virtues of a *condottiere* leader of the middle ages. There is Braddon, who has likewise the makings of a noble soldier in him, but who, in the absence of all stirring occupation, threatens to settle into a confirmed tippler. And, finally, there is our young friend Lieutenant Yorke, who is approaching a critical point of his career. If he is left to nurse a hopeless attachment in obscure inactivity, he is likely enough to follow the example of Braddon, although as yet he is overflowing with life and hope. Should fortunate accidents give him an opening, his passion will incite him to make the most of it, and he may possibly rival the reputation of Falkland, whom he admires from a respectful distance with the devotion of generous youth.

The chances conspire in his favour sooner than he could have anticipated, and opportunities crowd fast upon him. The Bengal army has proved false to its colours. The English troops have been withdrawn from the station; the sepoys look sullen and waver, and finally declare for the mutineers. Having shown a bold front and an assumed confidence to the last, the English gentlemen of the place have beaten a retreat to the Residency with the women and children, with the determination of defending themselves to the last, though they know nothing of whence help may come to them. Then we have a most exciting description of the siege, in the simple but forcible language of a military historian who is a literary artist as well. There is an entire absence of rhetorical exaggeration and poetical rhapsody. The tone of the narrator is that of the besieged officers, who undertake the most dangerous service in the natural round of their duties, and never show themselves disposed to grumble save when they see comrades preferred to themselves for some desperate *sortie*. Their deeds of unassuming heroism are left to speak for themselves, and their jests over the privations they endure only serve to keep up their spirits. Though the narrative painfully recalls the sad associations of the time, we feel it to be a faithful and reassuring picture of the genuine warlike temperament that makes the English soldier so formidable. From Colonel Falkland, who has naturally taken the command, to the subalterns whose souls used to be in billiards or their betting-books, all are elevated and animated in the presence of imminent peril. The women evince a patience and composure worthy of the men who are fighting for them, although death is making gaps in the ranks of the defenders, and some of the wives and their families already find themselves widowed and orphaned. Yet, in spite of the sustained strain on the nerves, gaiety is not altogether banished, and the weary days and anxious nights—they never drag in the pages of *The Dilemma*—are not unenlivened by gleams of fun. We know, what of course the besieged cannot know, that they must be surely predestined to receive timely relief; yet we are carried away by their growing fears, as provision and ammunition begin to run low, and as the enemy becomes more audacious and enterprising. Suspense is more intense on the arrival of a messenger with the tidings that Kirke is on his way to their help; for every hour it becomes more questionable whether they can hold out till he appears. And the excitement culminates in a thrilling climax, when Kirke's Sikh levies seem to fall back after showing themselves in the distance, to return speedily in an irresistible onset which effectually scatters the blockading force.

All this time the interest of the novel has been by no means concentrated in the military narrative. Yorke is indirectly the hero of the various episodes, and his personal anxieties have been thrown out in conspicuous relief. Experienced students of fiction would have pronounced unhesitatingly that he was sure of the hand of Olivia Cunninghame; and they would have been doubly confirmed in their foregone conclusion had they known that he would speedily be a brevet-colonel. To their quick discomfiture, the young man receives a heavy blow before he gets his first occasion for distinguishing himself. The fair Olivia has given her hand to Falkland, who, in the double capacity of a veteran and her godfather, had formerly been admitted to the envied privilege of chaperoning her. Being made of sterling and sensible stuff, Yorke teaches himself to submit to his disappointment. Throughout the siege he does his duty like a man, recommending himself to the approving notice of his commander, to whom he bears no sort of grudge. He is genuinely grieved both for his friend and for Olivia when Falkland is numbered among the missing after the fighting that relieves Mustaphabad. But naturally his blighted hopes begin to revive with his brightening professional prospects; the more so that the deaths of her husband and father have left the lady almost penniless. Then follows shock number two; and very hard indeed we feel it is upon him. He hears that she is married again, and this time to his colonel, Kirke, whom, with much in externals calculated to captivate a woman, he suspects with reason to be altogether unworthy of her. It is fortunate for him that, by the very fact of her so lightly throwing herself away, Olivia loses something of the divinity with which he has hitherto invested her. Her subsequent conduct contributes to cure him of all illusions, for Kirke again gets involved in discreditable charges, and Olivia, in her affliction and acting under her husband's influence, tries in a painful and pathetic scene to tamper with the honour of her former lover. Yet still, as love is weak and men are mortal, we are left in uncertainty as to what may be in store for both of them when Yorke returns to England, whither Olivia has preceded him. We take for granted that she will have occasion to appeal to him for assistance, especially as her husband has left her for the time, and accepted a command in the Egyptian service.

The last volume of the novel is the least satisfactory. We feel it, in the first place, to be an unwelcome change from the freshness of the Indian scenes and the active excitement of irregular Indian warfare, to the tameness of English life in quiet country society. Doubtless it all chimes in with the scheme of the story, which is constructed after real life rather than according to romantic precedents. In order to lead up to the unlooked-for *dénouement*, it is necessary that Yorke should be dull and somewhat bored; he must be disenchanted of lofty ideals of womanhood, and predisposed to console himself as best he can. We can understand an Indian with few home ties yielding insensibly to the influences of a hospitable welcome in a wealthy household. Yet the chivalrous young soldier seems somewhat out of place in the ostentatious luxury of the Peevors' mansion; the reader is hardly prepared to see him making himself contentedly at home under the roof of a millionaire, whose vulgarity throws a shadow over his family, and courts cold-shouldering by the neighbourhood. But the last chapters are exciting enough. Yorke meets his early love again as well as several of his old acquaintances of Mustaphabad, and one of them, at least, makes a sensational reappearance like a phantom risen from the grave. There is a fire in which the danger is as real as in any of the most stirring incidents of the mutiny; we have a rescue and a recognition, and then the curtain comes down on a group of friends who are standing horror-stricken at the gaps that have opened in their number. We do not greatly like these melancholy endings, which savour of *Hamlet* or the *Bride of Lammermoor*. But in this case, considering that the author has been leading us all the time into a "dilemma," we do not see how he could have helped himself. If the close of the story leaves a painful impression, it may be not the less true to nature on that account, and from beginning to end we are spared any touch of monotony in the blending of humour, pathos, and action.

GERMAN LITERATURE.

BERNARDINO OCHINO* has long waited for a competent biographer. The interest attaching to his character and career is not less than in the case of any Reformer of his time, but few have cared to undertake the life of one so universally obnoxious, execrated by one party and disowned by the other. The laudable investigations of his Unitarian biographers have naturally been mainly restricted to his alleged anti-Trinitarianism, which is far from being the most interesting feature in his intellectual history. His life, in fact, could only be written in Italy, and it has been reserved for Dr. Benrath, by diligent research in the Italian and other archives, and acute criticism of Ochino's rare and neglected writings, to exhibit him in his real relation to the great reforming movement of his age. The eloquent Capuchin, although twice Vicar-General of his order, had undoubtedly assumed a more advanced position than Pole, Contarini, and the other leaders of the Evangelical movement in Italy. It was a correct instinct which led Caraffa, the soul of the Catholic reaction, to persuade the indulgent Paul III. to strike at him. Ochino, warned, it is said, by the dying Contarini, escaped to Switzerland—a step which, inevitable as it was, signalizes, and in a manner typifies, the final loss of Italy to the cause of the Reformation. Relieved from the restraints of ecclesiastical discipline, his inquisitive spirit, as in the

* *Bernardino Ochino von Siena. Ein Beitrag zur Geschichte der Reformation.* Von Karl Benrath. Leipzig: Fries. London: Williams & Norgate.

case of Socinus, Bruno, and intellectual Italians in general, soon transported him beyond the bounds which Luther and Calvin would fain have prescribed to free inquiry. How far the recoil from tradition actually carried him is difficult to determine. The writings which gave most offence to his contemporaries are cast in the form of dialogues, and it is not easy to say how far Ochino may have aimed at insidiously undermining current articles of belief, or how far his natural candour may have led him to state an opponent's case with unacceptable emphasis. Dr. Benrath vindicates him successfully from the charge of having advocated polygamy; the question of his anti-Trinitarianism is left very obscure. Whatever his real sentiments may have been, the Protestant Churches found his speculative opinions a source of scandal and danger. Expelled successively from Geneva, Zürich, Basel, Nuremberg, hunted across Europe into Poland and back again, the old man was finally carried off by the plague at an obscure village in Moravia. Dr. Benrath has restored his portrait with as much success as can be expected with such a paucity of private memorials. The intellectual personality is sufficiently distinct. Ochino appears as a man in whom great warmth of religious feeling is united to a keen, scrutinizing intellect and an innate restlessness which rarely allowed him to acquiesce long or unreservedly in dogmatic conclusions of any sort. His sincerity is unquestionable, except in the partial concealment of his opinions, imposed upon him by prudence, both before and after his secession. Dr. Benrath has given excellent analyses of his principal works—the unlucky Basel dialogues, which involved him in such misfortune; the Neapolitan dialogues, composed while he was still a monk; his sermons; above all, the "Tragedy," a withering invective against the Papacy, written in Latin, but only extant in the English translation of Anna Bacon. Ochino's residence in England during the reign of Edward VI. entitles him to a place among the foreign theologians by whom the Reformation in this country was influenced, and Dr. Benrath's full treatment of this department of his subject considerably enhances the interest of his work for English readers.

The extensive learning of the younger Bunsen * is employed in the investigation of themes fruitful in speculation and controversy—the origin and primary significance of the symbol of the cross, the cause of its universal dissemination in præ-Christian ages, and the obscuration of the original meaning by its association with the victorious creed. Baron Bunsen holds this later application to be secondary and accidental. The meaning of the Cross in the ancient mythologies is, he contends, the Sun; and his application of this actual or conjectural circumstance in connexion with the Saviour may be readily apprehended. He relies much on the testimony of the Epistle of Barnabas as proving that such was the accepted Christian conception in the first century; as also upon somewhat fanciful analogies between the Sun, the Cross, and the Brazen Serpent. Much of his work is indeed of a decidedly fanciful nature, but it is well calculated to illustrate his leading proposition of the general employment of the Cross as a religious symbol in ages long anterior to the Christian era.

The recent ecclesiastical legislation of Prussia, being felt as a grievance by the Protestant as well as the Catholic Church, has encouraged the small party in the bosom of the former who desire a separation of Church and State on religious grounds. Professor Jacoby † examines the question partly from this party's point of view, but arrives at the conclusion that, in the interests of religion itself, things had better remain as they are.

The order of "the Brethren of the Sword" ‡, on which Dr. von Bunge has given us a very acceptable monograph, was instituted about 1203 for the subjugation of the Livonians, Esthonians, Lithuanians, and the pagan nations of Eastern Europe in general. Its efforts were crowned by the conquest of Courland and Esthonia; but its acquisitions in the latter quarter brought it into collision with the Christian State of Denmark, and, finding itself hard pressed by this as well as the Lithuanians, it consented to merge itself into the Teutonic order about 1237. Dr. von Bunge has collected and illustrated its records with much care, and his little work is a valuable contribution to the history of Christian religious chivalry.

The story of Alaric's conquests is told by Dr. von Eicken § in a pleasing style, and with particular attention to the governing ideas of Roman and Gothic society at the period. He directs especial attention to the recognition by the Goths of the Roman Empire as a legitimate institution, which it was by no means their purpose to overthrow, whatever liberties they might take with the lives and property of its citizens.

Eduard Schüller's reminiscences of his youth ‖ are, to a certain extent, interesting from their naïveté and warmth of feeling, and the eventful period (1794–1813) within which they are comprised. They present, however, no incidents of any particular importance, and seem to have been principally valued by the writer as illustrations of his own intellectual development. Some public interest would have attached to them from this point of view had the author attained eminence in his maturity; but it would seem that, though Schüller wrote much, he published nothing, and that his best claim to distinction is his efficient administration of the Prussian Post-office.

Dr. Rodbertus-Jagetzow * discusses what he calls the social question chiefly in its aspects of pauperism and commercial crises, which he regards as effects of the same cause. His theory is offered as substantially identical with Ricardo's theory of rent, but an improvement upon the latter.

The excellent series of popular scientific lectures † edited by Virchow and Von Holtzendorff, and the no less valuable series of controversial pamphlets edited by Von Holtzendorff and Von Oncken, continue to receive numerous accessions of interest. Among the most important contributions to the former may be named Professor Stein's discourse on Milton and Cromwell; among the most entertaining, Professor Mannhardt's lecture on the part of the sunflower in popular mythology, with a reference to the so-called bust of Clytie in the British Museum. The other series, as is natural in the present state of Germany, bears frequent reference to the affairs of the Church of Rome.

Science has been said to have no other enemy than ignorance; but it may be questioned whether a more formidable antagonist is not to be found in the credulity of some among its own votaries. An unlearned person may well be excused for distrusting the announcements of archæologists and philologists when he becomes acquainted with such melancholy proofs as are afforded by the history of the so-called Moabite antiquities of the perfect compatibility of profound erudition with an absolute lack of common sense. After a delay in nowise redounding to the credit of the independence and integrity of German Semitic scholarship, this wretched delusion has at last received its quietus at the hands of Messrs. Kautzsch and Socin.‡ The latter gentleman has dealt with the external evidence for the authenticity of the objects, and his thorough exposure of the transparent absurdity almost supersedes the more recondite palæographical and philological disquisition of his colleague. Both, in fact, may be deemed to be superseded by the accompanying delineations of some of the objects themselves. It seems incredible that any one, much more Oriental scholars and Ministers of State, should ever have been deceived by such rubbish. Nothing remains but for the parties concerned to own their folly, and digest their mortification as best they may, while the exultation of French *savans* may be tempered by the recollection that their own Government appeared to no greater advantage in the affair of the Abbé Domenech's Mexican antiquities some years ago.

Albrecht Zehme ‖ has prepared an exceedingly useful manual of the geography of modern Arabia, compiled from the accounts of Niebuhr and subsequent travellers, such as Palgrave, Burckhardt, Wallin, Wredo, Cruttenden, and Maltzan. The work bears evidence of having been prepared with great exactness, and contains a vast amount of highly interesting information respecting not merely the topography of the country, but also its natural productions and the manners and customs of the inhabitants. Its value is greatly enhanced by an appendix treating of the political history of the peninsula during the last century, with a view of the actual political condition of Muscat and the Wahabi States, and of the recent encroachments of the Turks in Yemen. It is difficult to see how these acquisitions can be maintained in the present condition of Turkish credit, and South-West Arabia may not improbably be on the eve of great political changes. Like most disinterested observers, Herr Zehme is very adverse to the spread of Turkish and Egyptian influence in Arabia, and looks forward to the regeneration of the country under the protection of England, the only Power qualified to interfere with effect in its concerns.

The isles where burning Sappho lived and sung have been inspected by Dr. von Löher ‖ in the systematic and agreeable manner which is only possible to a man of leisure and a man of means. Having chartered a yacht with a Turkish crew at Cavalla in Macedonia, the birthplace of Mohammed Ali, he pursued his voyage southwards, touching successively at Thasos, Samothrace, Imbros, Lemnos, Lesbos, and Tenedos, and winding up with visits to Smyrna and Athens. The tour was most interesting throughout, and the narrative depicts in lively colours the natural beauty and picturesque manners of the archipelago, and its commercial and industrial decay under Turkish rule. Perhaps the more interesting description is that of Samothrace, with its simple and rugged shepherd population, its remains of primitive Cyclopean architecture, and its almost inaccessible coast. Thasos, in Dr. von Löher's opinion, is the most favoured by nature of any of the islands, and under more auspicious political circumstances might be made a centre of civilization for the rest. One of the first steps necessary would be the establishment of a bank, money being incredibly scarce and dear. Most of the islands suffer greatly from the reckless destruc-

tion of timber. Dr. von Löher found Smyrna a most interesting city, and speaks of the modern portion of Athens as indicating a great progress in every respect when compared with the old city. His opinion of the Greeks is in the main favourable; it must be recollected that he had nothing to do with them as politicians or financiers. He strongly contends for the perpetuation of the Hellenic type, notwithstanding the Slavonian, Bulgarian, and Wallachian admixtures with which it has had to contend. The book puts forth more decided pretension to literary finish than is usual with narratives of travels; it is enlivened with critical digressions and historical episodes; and printed in a miniature type of great elegance in a form admirably adapting it for a pocket companion throughout the archipelago it describes.

The second volume of Professor Körner's treatise on physical geography* is occupied with the world of waters, comprising water in its various shapes of ice and snow, sea, lake, and river.

The materials of Professor Rütimeyer's interesting tract on the modifications of the fauna of Switzerland since the appearance of the human race in the country† are principally derived from the examination of caves containing fossil remains, which have led to results corresponding to similar investigations in England. All the animals usually occurring in English caves are found in Switzerland, with the addition of the marmot and the Alpine hare, the wolverene and the arctic fox. There is a singular intermixture of arctic with tropical types, testifying to wide variations of climate. The book is illustrated with several fac-similes of primitive art in the shape of representations of mammoths and horses, which it is to be hoped are authentic.

A discourse on Christianity in its relation to pictorial art, by the ex-Minister Bethmann-Hollweg‡, is chiefly remarkable for an appendix in which the subject is illustrated by biographical details of Cornelius as the typical religious painter of modern times, accompanied by citations from his correspondence.

England has found an intelligent and friendly critic in Karl Hillebrand§, whose letters from this country indicate powers of observation combined with good feeling. The writer feels the poetry and the charm of association attaching to such places as Oxford, and can enter with enjoyment into such characteristically national amusements as the Eton and Harrow football match. He thinks that England and Germany are changing places, the former comes. There is Brandon, [illegible] a noble soldier in him, but who, in the absence of all stirring occu[illegible] pa[illegible]try gradually appropriating the lead in philosophy and abstruse thought long preserved by the latter, in proportion as Germany declines in intellectual prestige, but asserts herself as a force in practical politics. Exception may be taken to this proposition, which was originally laid down when the impression of the German victories was still recent, and ere there had been sufficient opportunity to estimate the extent of her financial embarrassments, and her dependence upon Russia. It may also be conjectured that Herr Hillebrand's estimate of English politics would have been somewhat different had his letters been penned before the elections of 1874. He attributes far too much influence to the advanced Liberal party, while, on the other hand, his appreciation of Stuart Mill is shallow and unsatisfactory. The best critical essays in his collection are notices of discussions of French affairs by three very dissimilar Englishmen, Mr. F. Marshall, Mr. John Morley, and the author of "The Member for Paris."

The *Rundschau*‖ has a pretty novelette, "The Guiding Star," a paper on the imperfections of German jurisprudence in such cases as the late Bremerhaven explosion, an interesting sketch of the Samoan archipelago, and a still more interesting paper on the present condition of Egypt, by the African traveller Gerhard Rohlfs. Herr Rohlfs deals rather with the social than the political or financial circumstances of the country, and insists particularly on the expediency of two difficult reforms—the abolition of polygamy, and the substitution, as far as possible, of the Italian for the Arabic language. The April number, besides the conclusion of "The Guiding Star," contains the commencement of the distinguished traveller Nachtigall's narrative of his expedition to Borneo, and of a comprehensive survey of the present political situation in the East. The two numbers also comprise an important paper, which seems to bear marks of official inspiration, by A. von Sybel, advocating the purchase of the German railways by the State on political as well as financial grounds.

"The Beggar Princess," by Edmund Hoefer¶, is a remarkably pretty novelette, and a characteristic example of the artistic treatment of short stories by German novelists, which forms so agreeable a contrast to the general heaviness and prolixity of their attempts upon a larger scale.

ADVERTISEMENTS.

MUSICAL UNION.—Tuesday Evening, April 25, St. James's Hall. THIRTY-SECOND SEASON.—Brahms (Pupil of Rubinstein), first time, with Papini, Hollander, Viola, first time, Wiener, and Lasserre, at Quartet-post Three. No stalls reserved, only for the Committee. Quartets, in G, Mozart, in G, Beethoven; Duet, Violin and Piano, Rubinstein; Solos, Violoncello and Pianoforte. Tickets, 7s. 6d., to be had of Lucas & Olivier, Bond Street, and Austin, at the Hall. Programmes gratis. Visitors can pay at the door, Regent Street Entrance. Director, Prof. ELLA, 9 Victoria Square.

THE SOCIETY of PAINTERS in WATER COLOURS.—The EIGHTY-SIXTH EXHIBITION will OPEN on Monday next, April 24. 6 Pall Mall East. Admission 1s.
ALFRED D. FRIPP, *Secretary.*

DORÉ'S GREAT PICTURE of "CHRIST LEAVING the PRÆTORIUM," with "Dream of Pilate's Wife," "The Night of the Crucifixion," "La Vigne," "Soldiers of the Cross," "Christian Martyrs," "Gaming Table," &c.—DORÉ GALLERY, 35 New Bond Street. Ten to Six. Admission, 1s.

CHRISTIAN WILBERG'S WATER-COLOUR DRAWINGS and [illegible] EXHIBITION now OPEN at BURLINGTON GALLERY, 191 Piccadilly. Ten to Six. Admission, including Catalogue, 1s.

THE LIGHT of the SANCTUARY, by SZOLDATICS, from a Sketch by the Right Hon. Lady PETRE, will shortly be ON VIEW at DICKINSON & FOSTER'S, 114 New Bond Street.

ART UNION of LONDON.—The ANNUAL GENERAL MEETING, to receive the Council's Report, and to distribute the amount subscribed for the purchase of Works of Art, will be held at Willis's Rooms, King street, St. James's, on Tuesday next, the 25th instant, at Eleven for Twelve o'clock. The Right Hon. Lord HOUGHTON, D.C.L., President, in the Chair. The Receipt for the current year will procure admission for Members and Friends.
LEWIS POCOCK, } *Hon. Secs.*
EDMD. E. ANTROBUS, }
444 West Strand, April 20, 1876.

ARTISTS' GENERAL BENEVOLENT INSTITUTION, for the Relief of Distressed Artists, their Widows and Orphans.
The ANNIVERSARY DINNER will take place, in Willis's Rooms, on Saturday, May 13, at Six o'clock.
His Grace the Archbishop of YORK in the Chair.
Donations will be received and thankfully acknowledged by:
JOHN EVERETT MILLAIS, R.A., *Honorary Secretary.*
FREDERIC W. MAYNARD, *Secretary*, 21 Old Bond Street, W.
Dinner Tickets, including Wines, One Guinea.

ST. BARTHOLOMEW'S HOSPITAL and COLLEGE.
The SUMMER SESSION will begin on Monday, May 1.
The Clinical Practice of the Hospital comprises a Service of 710 Beds, inclusive of 34 Beds for Convalescents at Highgate.
Students can reside within the Hospital walls, subject to the College regulations.
For all particulars concerning either the Hospital or College, application may be made personally, or by letter, to the RESIDENT WARDEN of the College, or at the Museum or Library.
A Handbook will be forwarded on application.

ST. GEORGE'S HOSPITAL MEDICAL SCHOOL.—The SUMMER SESSION commences on Monday, May 1. The Hospital contains 700 Beds. Clinical Lectures are delivered by the Physicians and Surgeons every week. In addition to the usual Courses of Lectures given by the appointed Teachers, Lectures are also given on Comparative Anatomy, and on Dental and Aural Surgery. The William Brown Exhibition of £100 per annum will be competed for at the end of this Session. Further information may be obtained from the TREASURER or DEAN of the School, at the Hospital.

UNIVERSITY of LONDON.—PRELIMINARY SCIENTIFIC M.B. EXAMINATION.—Instruction is given at GUY'S HOSPITAL in the subjects required for this Examination by Lectures and [illegible] Summer Session.—For further information apply to Mr. [illegible] the Dean, Dr. F. TAYLOR.

TURKEY AND HERZEGOVINA.

THE Foreign Office has lately issued some correspondence on the affairs of Turkey and Herzegovina which might have been interesting if nearly all of it had not been long since published in the newspapers. The only useful purpose which the Blue-Book can serve is to refresh the memory of those who pay but slight attention to important current transactions. It is perhaps not wholly unimportant to learn that the English Consul attributed the first outbreak in July to foreign agitation, and that the principal outrages which he mentions were perpetrated by insurgents. The agitation soon became serious enough to attract the notice of the Great Powers; and early in the autumn their Consular agents were instructed to hold interviews with the insurgent chiefs, which produced no definite result. A large part of the Blue-Book is occupied with official documents in which the Turkish Government decrees the adoption of various reforms. A pamphlet expressing the views of the malcontents is also published at full length, with a warning by Mr. HOLMES, the Consul, that its statements are probably exaggerated. None but those who possess accurate local knowledge are competent to judge whether the reforms promised by the SULTAN would be beneficial or satisfactory. On the other side objection is taken, not so much to the official schemes as to the ability and willingness of the Porte to perform its promises. Count ANDRASSY'S Note, and the correspondence among the Governments to which it gave occasion, are of course published at length. In the course of the discussion Count BEUST assured Lord DERBY that no armed intervention was intended, and that the Austro-Hungarian Government had no desire to undertake to keep the peace beyond its own frontiers. It has long been known that the Ottoman Government at once accepted the recommendations of the Note, with the exception of a clause which provided for the expenditure within each province of the proceeds of the direct taxes. The history of the insurrection comes down later than the published correspondence; and the communications which may have been exchanged among different parties are much less important than the progress of the struggle and the attitude and purposes of the insurgents themselves, of their neighbouring allies, and of their distant protectors.

The latest report is that Austria will, after all, interfere to restore order by force, as the representative and agent of the three Northern Powers. The recent operations in Herzegovina seem to have been unfavourable to the Turkish troops; and the return of spring is in itself a great advantage to the insurgents. Although the Governments of Servia and Montenegro still profess to maintain their neutrality, auxiliaries from both Principalities have, according to official Turkish statements, openly joined the insurgent forces. An affront which was lately offered at Belgrade to the Austrian flag was organized by the war party, and the Servian Ministry is increasing its military force. While the domestic prospects of the Porte are gloomy, still more serious alarm has been caused by an apparent change of policy on the part of Russia. Some of the official papers still affect to defend the system of neutrality; but their arguments are openly attacked and ridiculed by other journals of equal authority. Subscriptions are publicly collected with the sanction of the Government, nominally for the relief of fugitives from Herzegovina, but the real purpose of aiding the insurrection is scarcely disguised. Some Russian papers have published apocryphal versions of a speech made by Baron RODICH in which the Russian Government is supposed to be openly attacked. That the language of the journals has some political meaning may be inferred from the strong comments which it has provoked in Germany. Official assurances that the concord of the three Imperial Courts is undisturbed tended to encourage the suspicion that there was already a serious divergence of policy. There is no doubt that Austria has long been anxious to terminate the insurrection; and it is possible that the ambiguous demeanour of Russia may be explained by a natural unwillingness to alienate the good will of the Christian subjects of Turkey. The part which Germany may take if Russia encourages the disruption of the Turkish Empire cannot be confidently predicted. At present German feeling seems to be less friendly to Russia than at the time when all the three Powers were apparently earnest in their determination to discountenance the insurrection.

By continuing their resistance the insurgents temporarily relieve the Porte from the obligation of complying with the demands contained in Count ANDRASSY'S Note; but the strain on the finances and on the military resources of the Empire is constantly becoming more urgent. The greatest of all the immediate difficulties which beset the Turkish Government is the virtual impunity which the Russian protectorate furnishes to Servia and Montenegro. Neither province could venture on a contest with the superior force of Turkey but for the confidence that Europe will not allow a Christian State to fall a victim to Mahometan conquest. Montenegro claims, not without reason, to have been always independent, and Servia has within a few years been relieved from the presence of Turkish garrisons in the fortresses. Turkey is at liberty to repel direct attacks, but not to inflict punishment on her assailants. Although Austria may probably be jealous of Russian influence in Servia and Montenegro, none of the Great Powers would allow the establishment of Turkish rule in either province. Conscious security explains much of the disinterested enthusiasm which is felt for the insurgents. Both principalities would deprecate the occupation of the theatre of war by an Austrian army. With a Turkish force they can deal more easily, as long as they are certain of a safe retreat within their own respective frontiers. The Turkish operations are additionally hampered by the necessity of depending on regular troops, on account of the danger which might result from excesses that might be committed by the Mahometan population. It would seem that in Herzegovina they have sometimes been outnumbered, and that their troops are ill supplied with provisions and with munitions of war. The reports of a supplementary insurrection in Bosnia are still vague and uncertain. If it is true that Austrian subjects from the other side of the frontier have assisted the local malcontents, an additional motive will have been furnished for armed intervention. The party at Constantinople which thinks it desirable to declare war against Servia and Montenegro has lately seemed likely to prevail. The imminence of a decisive measure has had the effect of temporarily renewing the accord between Russia and Austria; and it is understood that the Government of Berlin has induced both Powers once more to fall back on the provisions of the ANDRASSY Note. It is not to be supposed that the allied Governments will at the same time restrain the Porte from reprisals and tolerate the aggressive enterprises of Servia and Montenegro.

Notwithstanding the ambiguous policy of Russia, it seems almost certain that there is no immediate danger of a direct

attack on Turkey. The Russian Government is not at present ready for war, nor can it be thought expedient to venture on an open rupture with Austria. It is not improbable that Russia may hope, if the insurgents succeed, to detach another fragment from the Ottoman Empire. Any aggrandizement of Servia would be disapproved at St. Petersburg as well as at Vienna. It is for many reasons undesirable either that the civil war should continue or that the insurrection should be suppressed by the superior force of Turkey. The complete triumph of the insurgents is impossible, because, even if they obtained temporary possession of the disputed territory, they would still be exposed to fresh attacks as the Turks received reinforcements. The English Government has no means of controlling the result, except by any influence which it may be able to exercise at Constantinople. Lord DERBY has thus far in all the negotiations guarded himself with even more than his customary caution. He took time for consideration before he gave even a theoretical assent to the ANDRASSY Note; and he defended his adhesion by the argument that the Note was but a reproduction of various laws and decrees which had been promised or published by the Porte during the last twenty years. The English Government is only committed to the moderate proposition that the Porte will do well to reform its administration; but at the same time Lord DERBY disclaims any purpose of becoming a guarantee for the concessions which may be offered to the insurgents. Count ANDRASSY and Count BEUST have from the first professed their intention of the most open communication with the English Government. If Austria at last finds it necessary to occupy the disputed territory, there seems to be no reason why the English Government should object to intervention. Even if the eventual consequence should be the annexation to Austria of a part of a Turkish province, there would be no ground for regret; but it is not probable either that Austria would consent to increase the number of its Slavonic subjects, or that Russia would regard with equanimity the territorial aggrandizement of a rival. The difficulties which surround the entire question have for the present no tendency to diminish.

THE PRINCE OF WALES IN SPAIN.

WHEN the QUEEN, on her return from Germany, stopped a few minutes at a station to exchange a few words with Marshal MACMAHON, some of the French newspapers mildly hinted that this was not all the compliment which their young and dear Republic might have expected. There was an uneasy feeling that, if Royalty had been there to give the welcome, Royalty would have stayed longer to enjoy it. It is needless to say that, far from any slight being intended to the PRESIDENT of the Republic, the QUEEN, who was returning from a strictly private visit to her relations in Germany, somewhat put herself to inconvenience to go through an interchange of courtesies with the MARSHAL. Nor does the strength of the ties that bind England and France depend in any way on Royal visits and Court festivities. As the ceremonies which attend Royal visits catch the public eye, and a Royal visitor is something new to look at and read about, a Royal visit has come to be thought of importance, whatever may be its occasion. But Royal visits, like most other things, are sometimes important, and sometimes have no significance at all. It was a really important event in the history of modern Italy when the Emperor of AUSTRIA paid a visit to VICTOR EMMANUEL, and when Venice, the object of so long a rivalry, was selected as the spot where pledges of future friendship were exchanged. It was an event equally important to Italy when the German EMPEROR came to Milan, and Italy was made sure that her visitor represented an alliance essential to her safety. When, again, sovereigns go into business together like the three EMPERORS, they must occasionally meet to talk over the affairs of the partnership, or to prove to a suspicious world that it still exists. But very often Royal visits are almost accidental, and are totally devoid of political significance. The sensitive Republicans of France should derive comfort from the visit of the PRINCE OF WALES to Madrid. The PRINCE has been received with great splendour at Madrid, and has had every possible attention shown him. But his going there was almost accidental. It formed no part of his original plan. In fact, when the PRINCE went out the Carlist war was still raging, and King ALFONSO had other things to think of than Court pageants and picture galleries. And no visit could possibly be more wholly devoid of political importance. We have not much to do with Spain, and do not wish to have. The Spaniards go on in a way which at any rate is not ours all our way. They truckle to the POPE, keep up slavery, and do not pay their debts. These are not things that Englishmen like, or pretend to like. Bigoted, slave-holding defaulters are not well suited to be our friends. But we need not quarrel with people or deny them the respect of ordinary courtesy simply because we do not agree with them. Spain has a recognized place in Europe, and its King, while he lasts, is as much a King as any other sovereign. If King ALFONSO likes to have the PRINCE at Madrid, the PRINCE is amiable and polite enough not to wound him by a refusal. That is all. It is a mere interchange of courtesy, and if one interchange of courtesy is to be compared with another, that which took place at the French railway station was much the more important, for behind it there was a sincere and cordial admiration for each other on the part of the two nations whom the QUEEN and the MARSHAL represented.

As the PRINCE had, in the performance of his public duty, to go to Madrid, it was fortunate for him that both there and on his road there was much to see that was well worth seeing. Even to a person born to it, hardened by long training, and singularly gifted for going through it well, all this eternal pomp, sightseeing, banqueting, and amusement, through which the PRINCE has been passing for six months, must be very wearisome. If the English public has grown tired of reading descriptions of his travels, and if even Special Correspondents seem convinced that to reawaken interest in the varied shows of his long tour is beyond the power of the finest language, how infinitely more wearisome it must be to be the person who does it all, who has to go through everything, and is obliged to conceal every sign of fatigue lest he should disappoint those who are doing their best to please him. But if the PRINCE had to add a few extra fatigues to the long list of those he has endured, Spain could offer much that it was well worth the trouble to look at. In Seville and Cordova there were the ancient remains of Moorish grandeur which, even to a traveller fresh from Agra, are in the highest degree interesting and imposing. At Madrid there was the magnificent picture gallery, and although picture galleries are generally the last straw that breaks the back of the fatigued sight-seeing camel, yet the Madrid gallery is so incomparably good that it is almost worth while for the camel to have his back broken in looking at it. Historical students have also endeavoured to picture the imaginary interest with which the PRINCE must recall the events in history which a visit to Spain would bring back to a well-informed mind. It is supposed that his thoughts will wander to the romantic episode when another PRINCE OF WALES set off, under the guidance of BUCKINGHAM, to look for an Infanta. If the PRINCE troubles his head about CHARLES I., he will probably content himself with the satisfactory reflection that his character is totally unlike that of his predecessor, that he has no reason to expect a similar fate, and that he is not in the least degree in need of a Spanish wife. The companionship of King ALFONSO may also, by no very remote association of ideas, recall to the PRINCE the memorable time in his own early boyhood when England was outwitted in the matter of the Spanish marriages; and, while the PRINCE may naturally, in making an inevitable comparison, regard the career of his own mother with much inward satisfaction, he may feel an honest pity for the poor woman who was so much sinned against by the cruelty and perfidy of statesmen, and for the well-meaning youth who has been called to play at Royalty under very difficult and depressing circumstances.

One of the most famous of Spanish sights proposed to be exhibited in his honour the PRINCE has declined to see. He has intimated that he does not wish to be present at a bull-fight. Criticism had been occasioned by his attendance, while in India, at a fight of wild animals. Now that he is so near home he has, with much good sense, judged it unwise, because unnecessary, to provoke similar remarks. The desire of the PRINCE to avoid all causes of public offence is one of the best parts of his character, and is one of the grounds on which in some respects he claims and receives some measure of indulgence. When he returns home, he will

have an excellent opportunity of manifesting his readiness to fall in with the wishes of a part of the nation, which even those who are of a contrary opinion must allow to be large and entitled to consideration. The Royal Titles Bill has now received the QUEEN'S assent, and the controversy so long and warmly waged has at length died away in Parliament, although not without some murmurs of bitterness and indignation at the last possible moment. When the PRINCE lands here he will find that the QUEEN has been authorized to call herself, as Sovereign of India, by a title profoundly distasteful to a large portion of her subjects; while, on the other hand, her Ministers have pledged themselves that this title shall be as absolutely excluded from England as possible. How far this pledge is to be redeemed in practice must obviously depend in a great degree on the PRINCE OF WALES. However much the QUEEN may exhibit her habitual moderation and prudence, there are plenty of people who would love to worship the rising sun and hail their future Emperor. A few words of discouragement from the PRINCE would do more to put them down than volumes of discussion, and a man who declines to see a bull-fight lest he should wound the susceptibilities of humane persons may be trusted to avoid impairing the general harmony of loyalty by clutching at the gewgaws of Continental sovereignty. The PRINCE has now seen much of the East, and much of the West. He knows better than most men India, the Continent, and England; and it is exceedingly unlikely that the end of all his wanderings and all his reflections should not be a profound conviction that the world offers nothing better than to be simply King of England, and the centre of the attachment of a free people.

BARBADOES.

LORD CARNARVON'S answer to the deputation of the West India Committee was, as might have been expected, temperate and judicious. He declined, not only to remove, but to censure, the Governor of Barbadoes until the facts of the case are fully known. At the same time Lord CARNARVON will evidently be prepared to act with vigour if even a part of the telegraphic reports proves to be correct. In times of excitement there is a probability that the more moderate of two conflicting statements is true. The Governor's telegraphic messages to the SECRETARY OF STATE virtually contradict the report that forty rioters have been shot. According to the official account, the troops have not been required to act; and the commanding officer has countermanded a request for military aid which had been addressed to the Government of Trinidad. Mr. HENNESSY'S statements, which must for the present be accepted as accurate, are in themselves highly unsatisfactory. The first message which Mr. LOWTHER quoted on Tuesday in the House of Commons reports the death of a man by a shot fired on the mob by the police in consequence of a robbery in a provision ground. The untoward event shows that the robbery was in the nature of a popular disturbance or riot; and Mr. HENNESSY'S remark that similar occurrences had taken place in former years is irrelevant and unsatisfactory. In a second telegram the Governor informs Lord CARNARVON that he has visited the several scenes of the disturbances, though he had apparently not thought it necessary to furnish a previous account of the disturbances themselves. While he admits that the planters are alarmed, he states that the sugar works go on as usual; but he adds, with an unseasonable sneer, that, "in consequence of the planters' panic," he had telegraphed for more troops from Jamaica, Demerara, and Trinidad. If there was no reason for panic, and if the Governor did not share the alarm of the planters, he would have taken the most obvious method of restoring general confidence by declining to increase the military force in the island. It is at least unlucky that a Governor who is accused of encouraging the discontent of the coloured population should use invidious language in speaking of the planters. He is himself exclusively responsible for his own demand for reinforcements, which seems to imply that the panic attributed to the planters was founded on substantial reasons. His determination to issue a special Commission for the trial of offenders is an additional proof that serious disturbances have occurred.

Mr. HENNESSY appears to have exhibited unnecessary zeal in the promotion of a policy which may in itself have been well conceived. Lord CARNARVON, who has encouraged confederation in several parts of the Colonial Empire, agreed with his predecessor, Lord KIMBERLEY, in recommending the adoption of the system in the group of the Windward Islands, which includes Barbadoes. The late Governor took no steps to give effect to Lord KIMBERLEY'S instructions; and Mr. HENNESSY seems to have gone into an opposite extreme in supposed obedience to Lord CARNARVON. The Legislative Assembly of Barbadoes misunderstood some parts of the project, and disapproved of the whole. They were mistaken in thinking that the island would be expected to contribute to the financial wants of less prosperous communities, and perhaps they may have thought, with more justice, that confederation would diminish the objects of local ambition. If the leaders of the Legislature could have communicated directly with the Colonial Office, they would have ascertained that the decision would be left to themselves, and that Lord CARNARVON, while he understood the material advantages of confederation, fully admitted the right of the colonists to manage their own affairs. Mr. HENNESSY unfortunately regarded the failure of Lord CARNARVON'S policy as a rebuff to himself and his chief, and as an injury to the native population. It is of the very essence of constitutional government that a representative Assembly should be regarded as supreme within its own department. The Executive authority has generally a power of appealing to the constituencies by dissolution; but in the meantime he ought to regard the opinion of the Parliamentary majority as provisionally conclusive. Three years ago Lord DUFFERIN, in the Dominion of Canada, illustrated under difficult and complicated circumstances the true constitutional doctrine. He had reason to believe that the House of Commons was dissatisfied with his Ministers; but, as there had been no vote against them, he complied with their advice in postponing the meeting of Parliament. The Constitution of Barbadoes is not the same with that of the larger English colonies; but the Legislature had the right of accepting or rejecting a scheme of confederation. The Governor is accused of having stimulated popular agitation against the Assembly, under circumstances which ought to have prevented any attempt to create dissatisfaction. Every domestic controversy in the West Indies is certain to resolve itself into an antagonism of race and colour.

Having satisfied himself that confederation would tend to increase the prosperity of the labouring population, Mr. HENNESSY proceeded to publish the conclusions at which he had arrived; and, if it was not his intention to cause dissatisfaction with the Legislature, his language was ill chosen. If the statements of the West India Committee are well founded, the Governor spoke of excessive taxation to a deputation of Wesleyan ministers who had not complained of any grievance of the kind. He informed the Assembly that the people of the colony were determined to support the views of HER MAJESTY'S Government, although the Assembly alone was authorized to represent the community. Some other suggestions which seem to the Committee objectionable may perhaps have been more properly within the competence of the Government. It may have been right and necessary to recommend relief from taxes, and measures for the discouragement of vagrancy. It can scarcely have been discreet to speak of "some of the worst practices of the days "of slavery" as still existing; but, in addressing the Legislature itself, the Governor cannot be said to have exceeded his constitutional powers. His conduct must be judged by a different rule when he appealed to the community out of doors. It is alleged that, at a meeting attended by some persons of bad character, the Governor declared that the poor of the island were over-taxed and otherwise oppressed. The riots which have since occurred, though their importance may have been greatly exaggerated, can scarcely have been unconnected with the Governor's language. It is possible that he may have had good reason for believing that industry would be promoted, and the rate of wages raised, as a result of confederation; but a negro population cannot be expected to understand the difference between wilful oppression and mistakes in economic policy. When they hear from the highest authority that low wages and poverty might be relieved by legislation, they naturally resent the opposition of the Legislature to the wise and beneficent suggestions of the Governor. It is extremely difficult to secure, by the exercise of tact and practical wisdom, the good government of a community which includes two unequal races. The

coloured majority is always ready to believe that it is injured by rulers who are, by no fault of their own, an oligarchy.

There can be little danger of the success of any seditious movement in Barbadoes. The number of white inhabitants bears a larger proportion to the coloured population than in most of the West India Islands; and the limited extent of the country throws impediments in the way of irregular warfare. The naval force on the station will be immediately increased, and it has already been shown that sufficient military reinforcements are within reach. There is fortunately no reason to suppose that the negroes are generally disloyal, although many of them may have been tempted to join in riotous proceedings. If they were once persuaded that the representative of the Crown was on their side, they might probably fancy that they were supporting lawful authority in their opposition to the planters. The Jamaica disturbances of ten years ago, resulting from long and systematic agitation, proved to be wholly insignificant, though they served as an occasion for extraordinary violence on the other side. It may be inferred from Mr. HENNESSY'S telegrams that order was not entirely restored, although he seems not to have apprehended any serious danger. In one point of view the Barbadoes riots are peculiarly disappointing. The colony had since the date of emancipation been regarded as a model for neighbouring communities, and the planters escaped the ruin which ensued elsewhere as soon as slavery was abolished. There was no waste land for squatters, and consequently the labouring population could only obtain subsistence by working for wages. The island has ever since been without a history; or, at least, nothing was known of its affairs by strangers. It may be hoped that it will soon subside into its accustomed tranquillity; but a long interval must elapse before confidence can be fully restored between the two races. If the negroes learn to expect from the Legislature high wages and general prosperity, their inevitable disappointment will certainly be resented. If the colonial Constitution ceases to work with facility, it may perhaps be necessary to follow the precedent of Jamaica. A benevolent despotism seems to be the only form of government which secures the safety and the rights of a white minority and a coloured population. The philanthropic partisanship which is attributed to Mr. HENNESSY is a grave fault in a West India Governor.

STAGNATION OF TRADE.

THE reduction of the Bank rate from three to two per cent. was a sign which unhappily meets corroboration in every quarter that there is no adequate field for the employment of capital. Trade shows no indication of recovering from its long and severe depression. Iron is almost unsaleable, and coal is only kept up at a price which is barely remunerative by strikes in one district necessitating supplies from others. There are many parts in which one factory after another ceases to work, and orders are received neither from home nor abroad. It is not indeed England that is suffering exclusively or even especially. The list of bankruptcies in the United States was longer and heavier in the first quarter of this year than in any quarter of last year, which was a year of successive calamities. At Berlin the number of artisans out of employment was recently so large that the Government determined to proceed with the construction of a great State line of railway in order to create work artificially. At Vienna the nearness to the scene of Turkish insurrection and the embarrassment in which the contest threatens to involve Austria have lately added a financial panic to the pressure of industrial distress. In France alone there is an even flow of moderate prosperity. The harvest of last year, though not admitting of export of cereals, sufficed for the wants of the population; and if there was a deficiency in the beet crop, which has now become a very important item in the national products, the vintage was abundant, and of very fair quality. Even here there have been causes at work which have greatly mitigated the evil results of commercial distress and foolish speculation. The ample supplies of corn which free trade enables us to command have kept down the price of bread, and wheat is now almost exactly at the same figure at which it stood ten years ago. A greater anxiety than usual may perhaps be entertained for the home crops of the present year, as the floods have in some districts entirely prevented the sowing of spring wheat. But the low price of iron is encouraging the rapid construction of merchant steamers which will, in consequence of their comparative lowness of cost, be able to bring wheat at a profit from ports whence hitherto it has hardly paid to convey it to England. Every year we are better able to meet bad harvests at home, and every year the farmer becomes less dependent on wheat for his income.

Serious, too, as has been the depression in trade, and heavy as the loss has been to investors from the default of foreign Governments, there has been no reason for apprehending any sudden and general catastrophe. The Bank was in a very strong position at the time of the great failures of last year, and is in a still stronger position now. In the old days of panics the misfortune usually occurred when the Bank happened to be weak, and then the danger of a general collapse of credit stared even the soundest mercantile firms in the face. With a reserve of over 25 millions of bullion and 12 millions of notes, and the rate of interest at two per cent., nothing of the kind is now to be feared. But it must not be assumed that we have as yet seen the worst of the present difficulties. The times are bad for trade, and are likely to remain bad. That rotten business should be abandoned and firms really insolvent should come down is not a loss, but a gain. But just now business which experience has shown to be legitimate is suspended, and firms whose credit is indisputable are at a standstill. We have lost our customers. The world does not want our goods. We have offered it too many goods, and it cannot take any more. It gave us too much business, and now it is giving us too little. We keep our shop open, but wayfarers pass by on the other side. The wealth of England is so vast, and derived from so many sources, and so many Englishmen think it a blunder to confess they are less well off than they used to be, that it is only very slowly that there are apparent signs of those pecuniary difficulties which are caused, not by a catastrophe, but by the languishing of trade. When one of the people who are called merchant princes is in his glory, he builds a palace, decorates it, and makes himself pleasantly conspicuous. When he fails, his house is sold, his pictures are sold, and his ruin is the talk of the day. Nothing of the kind indicates the progress of what is not ruin, but difficulty, from prolonged distress among moderate persons. The symptoms of their calamities are slight and hard to trace; but it is possible every now and then to discover them, and perhaps the unusual difficulty found this season in letting furnished houses in London may be taken as a slight sign that classes which are safe from ruin are beginning to be obliged to retrench.

The real cause of the present distress is that for a period of about seven years the world went too fast. More especially, it made railroads too fast. Lines that cannot pay for years, if ever, were constructed with borrowed money. Much money was sunk in mere useless personal extravagance. England kept the ball going. It found the money, or a great portion of it, and it sold the goods which the money was borrowed to procure. When any State, however impecunious, could borrow any amount of money it liked to name, and bought rails with as much of it as decency required to be expended with some show of honesty, it is no wonder that the iron market was exuberant. Now these countries at once defraud us of interest and cease to take iron, and investors and manufacturers alike suffer. It must not, however, be supposed that the money sunk in unproductive railways has all been lost to the world. We in England went at one time much too fast with our railways, and very severe suffering was caused by this improvidence; but there can be no doubt that the country as a whole gained by the outlay, and that the general increase of wealth was greater than it would have been if railways had been constructed more slowly. That the same thing will prove true of the United States may be said with confidence, and of Russia with some degree of hope. Even in Egypt, great as has been the waste and extravagance, the KHEDIVE is in so good a position, according to Mr. CAVE, that he can apply two-thirds of his revenue to the payment of his public debt. In all such cases there is a clear line of separation from the utter waste of borrowed money by States like Turkey and Spain. Time must, in the absence of counteracting causes, restore English trade, because it must better the position of the best customers of England. But the process must necessarily be slow, for almost all our customers are now in difficulties, and there

are no new customers for us. We have, as it were, discounted the globe. We have lent our colonies as much as they can at present safely absorb. They are in singular favour just now; but prudence would whisper that they have taken as much advantage of this favour as is at all warranted by their resources. We have lent money everywhere. We have tried Africa, South America, and every Continental State. We have glutted the East with our copious and often adulterated products. Things therefore can only come round slowly; and although trade will no doubt revive by degrees, yet a considerable interval must elapse before anything like a grand and a glorious time returns.

At present the two extraneous and accidental causes which most tend to disturb the recovery of trade are the Turkish insurrection and the depreciation of silver. It so happens that for the moment there is a lull in the anxiety which both these sources of disturbance produce. The Vienna Bourse has somehow managed to regain a temporary confidence, and the influences that are at work to prevent the outbreak of a general war are evidently very strong. The price of silver, too, has lately recovered from its point of lowest depression, and some steps have been taken to arrest the progress of depreciation. If the Silver Currency Bill is passed by Congress, a portion of the metal supplied by the United States will be wanted for domestic use. The Federal Council of Germany has postponed the operation of the law by which silver thalers are to have only a token value and cease to be part of the currency of the country. The Austrian journals, with one exception, unite in deprecating the introduction of a gold standard. But, although there may not be any reason for immediate alarm as to either Turkey or a continuous fall in silver, they both offer troublesome questions of which we cannot get rid by merely shutting our eyes. The most that can be done for Turkey is to patch it up for a while. It is now, in fact, not the maintenance of the power of the SULTAN in Europe, so much as the avoidance of a general conflict of the Great Powers in the event of its subversion, that is the chief anxiety of politicians. We may lay the ghost of the Eastern Question for one night, but we know that it will haunt us again before long. So, again, all speculations as to the course which the silver market will take are valueless until experience has shown whether the silver discoveries in the United States are mere pieces of accidental good luck or are the beginning of new discoveries on a great scale. One Company with a capital of 80,000*l.* is said to have already divided profits to the amount of two and a half millions sterling. This may be an instance of singular good fortune, or it may be the prelude to many successes of the same sort. Either alternative is possible, and if it is as yet much too early to believe the boasts of sanguine Americans who assert that they have acres of silver waiting for some one to pick up the treasure, it is also too early to be at all sure that we have not to face a grave perturbation of English, and still more of Indian, finance from the diminishing value of silver.

WOMEN'S DISABILITIES.

THE debate and division on Mr. FORSYTH'S Bill furnished an instructive comment on one part of his speech. Having judiciously determined that it was not worth while to reargue the question, Mr. FORSYTH endeavoured to influence the House by an appeal to that form of cant which disguises itself as public opinion. It appeared from his statement that large public meetings in almost every town in England and Scotland had petitioned in favour of his project for conferring the Parliamentary franchise on women. On the other side there was neither popular agitation nor a long string of names; yet the House of Commons decided by a large majority in favour of the silent protest which is tendered, in the shape of abstention from the movement, by the more intelligent part of the community. The responsibility of legislation, as of other kinds of practical action, produces a sobering effect. The class which habitually attends public meetings is not compelled to examine convictions which generally evaporate in phrases or in cheers. There are in every large town scores or hundreds of theorists and idlers who would vote, at a meeting of like-minded partisans, for any extension of the suffrage which could be devised. The popular fallacies and sentimental generalities which can be adduced in defence of projects for enfranchising women are well adapted to delude thoughtless and shallow minds. As no man attends a Disability meeting unless he is already converted to female suffrage, the proceedings are probably harmonious and even unanimous. Yet the crowd forms an insignificant fraction of the local community. Its numbers would be still further reduced if the meeting had the power of giving effect to its resolutions. It is worth notice that the House of Commons was at first inclined to trifle with the question; so that Mr. FORSYTH was able to quote several respectable names of former supporters of the fanciful scheme. It is only within a year or two that the debates have been conducted in earnest, with the natural result of disclosing the general repugnance to measures which might facilitate the political action of women.

Mr. SMOLLETT'S coarse jests supply Mr. FORSYTH'S clients with a legitimate ground of complaint. It might be expected that a certain number of intelligent and estimable women would believe a demand for political equality with men to be just and expedient. It is not easy to understand how they could advocate their cause if they remained in strict privacy; and there is neither generosity nor good taste in the ridicule with which their public efforts are treated by Mr. SMOLLETT. A fairer criticism on the Disabilities Bill is directed against Mr. FORSYTH'S odd position as the unconscious vehicle of a transparent secret. The ladies who care for the franchise entrust Mr. FORSYTH with the conduct of the Bill for the very reason that they withhold from him their ulterior confidence. A member who sympathizes with their supposed grievances only up to a certain point becomes for the present the fittest advocate of that part of their claims which can conveniently be advanced at present. Mr. FORSYTH has the good sense and the inconsistency to disapprove of any measure which would really put women on an equality with men. He would be shocked at the thought of a constituency in which fifty per cent. of the voters belonged to the non-political sex, but he sees no harm in the adulteration of the electoral body by thirteen per cent. The ladies who use him for their present object are well aware that the cause which they have at heart would be greatly advanced by an anomalous preference of single women and widows over wives. It is not accurate to describe as a disability the limitation which has been imposed from time immemorial on the functions of women; but the exclusion from the polling booth of the most capable and most important section of the female community might be plausibly regarded as an arbitrary disability or disqualification.

Mr. FORSYTH and Mr. JACOB BRIGHT believe that they conform to the principles of the Constitution when they propose to confer the franchise only on female householders; and Mr. FORSYTH even persuaded himself that under the present system taxation is the basis of the right to representation. It happens that the occupation of some kind of house is at present the qualification for the franchise in boroughs; and the effect of the law is to exclude from the franchise some part of the poorest population. The married women, whose disabilities would not be relieved by Mr. FORSYTH'S Bill, are not, as a rule, poorer, more ignorant, or less respectable than their neighbours, who are, unfortunately for themselves, obliged to appear in their own names on the rate-book. It might be demonstrably shown that the restrictions of the borough franchise and of the county franchise are equally inapplicable to women. There is no reason for adopting Mr. FORSYTH'S narrow measure, except that its comparatively small dimensions form its only merit. The logical ladies who inspire the agitation are not alarmed by the paradoxical prospect of a constituency consisting, to the extent of one-half, of women. Mr. JACOB BRIGHT, though he now adopts Mr. FORSYTH'S modest proposal, is not careful to disguise his preference for a more comprehensive measure. It might be easily arranged that the wife of a ratepayer should have the suffrage; and the only objection to the scheme is that it would be always unnatural, and occasionally mischievous. If wives habitually voted with their husbands, their enfranchisement would be simply useless. An affectation of independence would promote domestic discomfort, and in some cases the votes of women might be controlled by political quacks or more commonly by spiritual agitators. It is possible that Mr. FORSYTH'S instalment might produce little perceptible effect; but legislation which is essentially wrong in principle is not justified by the inefficiency which may tend to render it harmless. On a few questions, and in exceptional

circumstances, the majority of women might perhaps find themselves in opposition to the majority of men. If such a contingency occurred, the defeated party would resort to the dangerous remedy of disobedience. A House of Commons pledged by its female constituents to support some distasteful form of asceticism would find itself powerless to control masculine dissentients from its legislation.

The best proof of the increased attention which has been directed to the proposed innovation is the division which has taken place in the ranks of the more advanced Liberal party. Mr. LEATHAM for the second time expressed the strong repugnance to female suffrage which he shares with the majority of intelligent men. It may be inferred from his general opinions that he objects less to the dilution or deterioration of the constituencies than to the anomaly of introducing women into political life; yet it is possible that a thoughtful democrat might regard with apprehension a form of extended suffrage which would render the theory of numerical preponderance ridiculous. The most important incident of the debate was Mr. BRIGHT'S opposition to the Bill. Some years ago he had voted for a similar measure through personal sympathy with Mr. MILL, who erroneously, but not unnaturally, believed that Mr. BRIGHT had been converted by his arguments. It is certain that, if the question had at that time appeared serious, Mr. MILL'S influence would not have prevailed over a deliberate conviction. Mr. BRIGHT appears to be one of the numerous politicians who have been induced by the continuance of the agitation to reflect gravely on its principle and tendency. The objections which he now urges to the measure are substantially the same which have occurred to other opponents of female suffrage. Mr. BRIGHT is not prepared to admit that men and women have opposite interests, to be defended by one section of the community against another. Those who understand women best and respect them most will not be the first to allow them possession of the qualities which constitute political aptitude. Like other adversaries of the Bill, Mr. BRIGHT was probably unable or unwilling to give public expression to all his reasons for opposing the measure. On one point he could afford to speak more plainly than a less orthodox Liberal. One of the stock arguments in favour of the extension of the Parliamentary franchise to women is derived from the supposed advantage of their admission into the municipal electorate. Mr. BRIGHT asserts that in some instances scandalous consequences have resulted from their interference; and that hundreds of women have been seen in a state of intoxication during borough elections. It may be true that similar stories might be told of male voters; but to Mr. BRIGHT'S manly nature the degradation of women properly appears far more repulsive. It may now be taken for granted that for some years to come there is no risk of the admission of women to the Parliamentary franchise. Mr. DISRAELI once more gave a silent vote in favour of the Bill. Mr. GLADSTONE was not present; and Lord HARTINGTON was accidentally prevented from voting with the majority. It would be harsh to grudge Mr. FORSYTH the consolation for his defeat which he finds in a letter to the newspapers. He regrets the want of time which prevented him from replying; and "he believes that nothing could have been easier "than to give a conclusive answer to many of the trans- "parent fallacies which his opponents used as arguments in "the debate." As the arguments, fallacious or sound, had been repeatedly used before, it is unlucky that Mr. FORSYTH neglected to confute them by anticipation in his opening speech. His supporters in the debate may perhaps grumble at the implied censure on their incapacity to give the conclusive answers with which their leader seems to have been fully equipped.

M. WADDINGTON AND THE ULTRAMONTANES.

THE irritation of the Ultramontane party in France needs no better illustration than the reception they have given to M. WADDINGTON'S speech at the Sorbonne on Saturday. If he had declared open war against the Church the organs of the clerical Right could hardly have been more indignant. They charge him with an intention of kidnapping the children of Christian parents in order to have them brought up as Atheists; and they see in the phrase "our young and dear Republic" an indication that the worst extravagances of the Irreconcilable Left will find their counterpart in the policy recommended by the MINISTER of PUBLIC INSTRUCTION. Any one who reads the text of the speech will be greatly impressed by the fertility of the Ultramontane imagination and the freedom which characterizes its distribution of damnatory epithets. Had M. WADDINGTON'S speech been delivered in England it would have been set down as a highly Conservative exercise. The part which is devoted to the subject of compulsory education might have been spoken by Lord SANDON himself. The examples of England, Germany, and Switzerland, says M. WADDINGTON, have attracted a good deal of attention in France, and the Government are resolved to advance with prudence, but to advance in that direction. This is just the language which is habitually used on the front Conservative bench whenever Mr. RICHARD or Mr. DIXON has to be put down. We are profoundly impressed, says Lord SANDON or Mr. CROSS, with the necessity of getting children to school, and, so far as we move in the matter, it will be in the direction of extending the area within which attendance at school is enforced upon all children. But we are equally impressed with the difficulty of moving at all, and Parliament must not expect us to move with undue rapidity. The Conservative majority respond with great heartiness to this appeal, and the subject is laid aside for another Session. What is regarded as proper caution in England seems to be set down as revolutionary haste by the French Right. The state of education in France prevents a Minister from even dreaming of getting all children to school. As he very truly says, that is a triumph reserved for countries in which there are schools to send them to. Some day, when the necessary money has been spent, France will be one of these countries, and then it will be the duty of the Government to see that every parent gives his child a proper education. Thus France is still in the condition in which England was in before the passing of the Education Act, and the Ultramontanes may derive two alternative consolations from this fact. If they are sluggish, they may reflect that it will be a long time before the Government will be able to bring schools within the reach of every French child. If they are active, they may resolve to anticipate the Government by founding schools of their own. The same considerations which have made Denominational schools popular in England would make them popular in France. If the Church exerts itself and covers the face of the country with good elementary schools, the French ratepayer will be no more inclined than the English ratepayer to find large sums for building Government schools side by side with them. No doubt it is very much easier to denounce a Minister for having the impiety to say that schools must be provided somehow than to make it unnecessary for him to say so by providing them beforehand. But in these days theological energy cannot choose its own ordeal; it must be tested, like any other energy, by its willingness to spend money. It is only fair to say that the French Church has not been found wanting when judged by this standard, and it is highly probable that when the reactionary journals have used up their stock of abuse, they will see in M. WADDINGTON'S speech an invitation to be prepared with schools when the day comes for enforcing school attendance. If so, it would have been more dignified if they had digested the warning in silence, instead of giving their adversaries an occasion for taunting them with a dread of education even in its humblest form.

Perhaps the educational part of M. WADDINGTON'S speech would have attracted less notice if it had not been followed by a political exhortation of a peculiarly exasperating character. Among the Minister's hearers were many delegates of provincial learned societies, and his closing words were in the nature of a message to those whom they represented. If M. WADDINGTON had told them that the object of the new Government was to overturn established institutions of every kind, the organs of the Right would probably have praised him for his frankness. Instead of this, he bade the delegates carry back the news that preparations were about to begin for an International Exhibition in 1878, and assure their fellow-citizens that, as this fact alone might show, the Government of the Republic is a Government of peace abroad and of order and tranquillity at home. "Tell "them," M. WADDINGTON went on, "that this Government, "while firmly resolved to maintain the rights of the State, "cherishes a profound respect for everything that is dear "to the religious conscience, and pays equal regard to the "priest's cassock and the professor's gown." There is not a word in this message which does not contradict something that is dear to the reactionary, if not to the religious, con-

science. We saw last week how much anger had been aroused by the presumption of the Government in assuming that the Republic would be in being two years hence, and M. WADDINGTON'S address is a fresh example of the same temper. The Right has for years been preaching that the Republic means foreign war and domestic anarchy; that it is so hated by other Powers that, so long as it lasts, there can be no security that France will not be invaded; and that, if her enemies have the forbearance to leave her alone, it is only in the conviction that civil war will do their work more quickly than they could do it themselves. The late Ministry took care never to say anything inconsistent with these mournful predictions; indeed M. BUFFET not unfrequently went a long way towards making them his own. Consequently the Right had at least the advantage of having the field to themselves; and where ignorant people hear only one side of a question, they are likely to forget that there is another side. Now, the same halfpenny journal which used to carry M. BUFFET'S speeches to every commune in France will carry M. WADDINGTON'S, and the electors will learn that the Government is contented with the present aspect of affairs, and feels no uneasiness about the future. This is naturally resented by those who have so long acted as missionaries of a very different doctrine, and all the more so that what the Government says is very likely to be believed. The Ultramontanes are in the position in which a nurse who has been telling a patient that he cannot recover finds herself when the doctor steps in and says that there is nothing seriously the matter. She can shake her head, of course, and repeat as soon as his back is turned that time will show that she is right; but the patient will probably be disposed to believe the doctor, and to send the nurse about her business.

M. WADDINGTON'S reference to the Church has two fatal faults in the eyes of the Ultramontanes. In the first place, he promises to respect the rights of conscience, whereas the weapon that has been used with most force against the Republic is the assertion that it means to destroy the Church and proscribe religion. Of a certain small section of French Republicans this may be true enough; and the policy of the Extreme Right, alike in ecclesiastical and in secular matters, has always been to confound the Irreconcilable Left with the Republican party generally. Unfortunately, M. WADDINGTON says no more than the great majority of Frenchmen will be ready to say with him. The Government is determined to maintain the rights of the State and to respect the rights of the Church. Each has its own sphere, and neither must intrude into the sphere of the other. In the second place, although this is very different language from that which the Ultramontanes have been warning people to expect from a Republican Government, it is not the less exceedingly distasteful to them. A Government which pays equal regard to the priest's cassock and to the professor's gown may be a Government to be endured, but it can never be a Government to be liked. Again, it is all very well to talk of respecting everything that is dear to the religious conscience, but in the opinion of Ultramontanes a great deal depends upon whose religious conscience is meant. M. WADDINGTON may have implied, probably did imply, that all religious consciences would be respected so far as the Government had to deal with them, and then his declaration bears a terrible likeness to that pestilent heresy which the POPE has been manfully striving to keep out of Spain. It is not enough that the cassock and the gown should be put on a level; the gown must be subordinated to the cassock before the wearer of the cassock will have had his due. If the Ultramontane party in France repudiate this interpretation of their views, how will they account for their rage at M. WADDINGTON'S speech? The best possible evidence that a man wants more than his due is the fact that he cannot keep his temper when he is offered his due.

MERCHANT SHIPPING BILL.

THE objection that to prescribe one kind of precaution is to proscribe every other has often been heard in connexion with the Merchant Shipping Bill, and it was again urged by Sir CHARLES ADDERLEY against Mr. PLIMSOLL'S proposal to define what should be considered sufficient means of securing grain cargoes from shifting. The 14th Clause says that such cargoes shall be secured "by boards, bulk-heads, or otherwise." Mr. PLIMSOLL suggested that the boards should be of a certain thickness and should be placed in a certain way. Sir CHARLES ADDERLEY answered that this amendment would prevent any adaptation of grain ships to the wants of the trade, and in particular that it would exclude the use of longitudinal iron bulkheads. As regards the latter argument, it would not be very difficult so to modify the clause as to make it allow, besides shifting boards, any other satisfactory mode of securing grain cargoes from shifting which is at present in use or likely soon to come into use; and if the invention of such methods should be unexpectedly rapid, it might not be impossible to introduce an amended definition in a year or two's time. Mr. PLIMSOLL did not seem thoroughly content with his own amendment; and, with the prospect of reopening every question at the next stage of the Bill, no member has any motive for pressing an amendment unless he is thoroughly content with it.

A more serious discussion was raised on the 15th Clause, which deals with the question of deck cargoes. The Bill simply says that, if deck cargoes are carried, they shall pay the same dues as any other part of the cargo. Mr. PLIMSOLL wishes to prohibit the practice of carrying deck cargoes altogether, and with this view he moved a series of amendments. The argument in favour of prohibition is, that deck cargoes are the cause of a large proportion of shipwrecks. The argument against prohibition is, that deck cargoes are profitable. Between these opposite pleas the 15th Clause was very speedily ground to atoms. If the danger of deck cargoes is to be the main thing regarded, it is merely trifling with the question to say that they shall pay the same dues as less dangerous cargoes. If their profitableness is to be the main thing regarded, why should it be diminished by the imposition of additional dues? Sir CHARLES ADDERLEY began his speech by the admission that deck cargoes are undoubtedly dangerous. The natural conclusion from this confession was either that he had been converted by Mr. PLIMSOLL'S reasoning and was prepared to accept his amendment, or that he thought that, dangerous as deck cargoes were, they brought in too much money to shipowners to be dispensed with, and that the clause would consequently be withdrawn. Sir CHARLES ADDERLEY drew neither inference. The simple question, he said, was how deck cargoes could be prohibited, and the only way of prohibiting them which seemed to him satisfactory was to pass the clause as it stood. He then disclosed for the first time what the real motive of the clause is. The Government do not imagine that shipowners will be deterred from carrying deck cargoes by the amount of the additional duty; indeed Sir CHARLES ADDERLEY objected to an amendment of Mr. ASHLEY'S, imposing a heavier duty on the ground that it would operate as a prohibition of this particular mode of carriage. Shipowners are to be led into better ways by an appeal to something softer than their pockets. The 15th Clause "will be an "important declaration by Parliament against the carrying "of deck cargoes, and will no doubt have a beneficial "effect." But a few minutes before Sir CHARLES ADDERLEY had defended the clause on the score that it did not impose a tax for the first time, but merely took away an objectionable premium on the dangerous stowage of cargo. The principle of the Tonnage Laws, he says, is "that all cargo-"carrying space should be included in the tonnage measure-"ment, and the only reason why deck cargo has not been "included is that no one has devised a mode of measure-"ment." Then what becomes of the important declaration by Parliament? It sinks into a declaration that a mode of measuring deck cargoes has at last been devised. This may be important as giving the effect of a Parliamentary registration to the increased intelligence of the Board of Trade, but it can have no other value.

About this time a new difficulty presented itself. The feeling of the House evidently was that deck cargoes were undoubtedly dangerous, and that something ought to be done in the direction of prohibiting them. But a great number of deck cargoes are brought into this country from foreign ports and in foreign ships, and nothing is known about their dangerous character until it has been shown that for this time, at all events, the danger has been averted. Sir CHARLES ADDERLEY put the difficulty rather neatly when he said that, if foreign ships arrived here safely, it would be impossible to convict them on the ground that they ought to have gone to the bottom. The treatment of deck cargoes must therefore be determined by the general laws, whatever they are, which the Bill applies to foreign ships.

If it is intended to apply the same penalties to foreign ships as to British ships, with the difference that they will always be exacted after the completion of the voyage, Sir CHARLES ADDERLEY'S impossibility disappears before the omnipotence of Parliament, though the inconveniences to be apprehended from such a provision do not perhaps disappear quite so completely. If foreign ships are to be allowed to go their own wicked way, and British shipowners are to trust to profiting in the long run by the superior safety and lower rates of insurance secured by British laws, the difficulty will be got over in another way. A third mode of disposing of it would be to refuse to make British ships safe, because foreign ships cannot be made safe at the same time. The wonder that now came to light was this. The Government have not yet made up their minds what course to take about foreign ships. They seem to have understood that foreign ships sometimes load in British ports; but even this discovery has been made since the introduction of the Bill, for early on Monday evening the CHANCELLOR of the EXCHEQUER said that the exceeding difficulty of dealing with foreign ships so loading rendered it desirable to leave the question to be considered on the report. If this plan is to be freely adopted, the discussion of a Bill in Committee, or indeed on the second reading, will become altogether superfluous. All the really important clauses will be postponed, and the real struggle will begin after the contents of the Bill have nominally been settled. The fact that foreign ships unload as well as load in British ports broke on the Government for the first time on this terrible Monday. The effect of the discovery was immediately shown by the CHANCELLOR of the EXCHEQUER rising to explain that his promise to consider the question of foreign ships on the report only applied to foreign ships outward bound. To deal with foreign ships arriving in British ports would, he insisted, "be practically impossible." The Committee have by this time taken the measure of Ministerial impossibilities, and the discussion went on much as though Sir STAFFORD NORTHCOTE had not spoken. We cannot legislate, said one member, until it is known what the Government propose to do about foreign shipping. It is impossible, said another, to make any real progress with the Bill until the Government have determined whether they will or will not deal with foreign shipping. Take back your Bill and recast it, said a third, and so on until it really seemed as though every member in the House, without regard to party, meant to cast a stone at this unlucky measure. Finally, the CHANCELLOR of the EXCHEQUER put an end to the process by frankly admitting that there were many evils connected with the subject which the Government, after the most careful consideration, had found themselves unable to meet; and the Committee, having extracted this confession, were so far satisfied that they at once passed the clause.

Between Monday and Thursday the position of affairs underwent a complete change. Sir STAFFORD NORTHCOTE rose to move that the 16th Clause, which provides for the entry of deck cargo in the official log, should be postponed. He scolded the Committee for misapprehending the general intention and scope of the Bill with regard to the question of deck cargoes and of the lading of vessels, and desired them thoroughly to understand what the measure proposed to do and what it did not propose to do. It was a little hard upon the Committee to be rated in this way, because Sir STAFFORD NORTHCOTE at once went on to say that, in the matter of deck cargoes, the Government proposed to do something of which until that moment they had given no hint, and which on the previous Monday he had himself declared to be practically impossible. It is the intention of the Government to impose a penalty on deck cargoes, which will be levied, not only on British ships, but also on foreign ships arriving in British ports. This penalty is only to apply to ships laden with timber, and sailing from North America between the 1st of October and the 16th of March in any year, and it will not exceed 100*l*. It is evident that when the clause is brought forward there will be a great deal of opposition to the character of the penalty and to its limitation, both as regards the nature of the cargo and the port from which the vessel sails. If sailors are to be protected against loss of life arising from carrying timber from North America, why should they not be protected against similar loss of life arising from carrying timber from the Baltic, or other kinds of deck cargo from any port?

MACHINERY OF ELECTIONS.

THE Committee of the House of Commons appointed to inquire into the working of the machinery of elections recommend immediate legislation for the purpose of rendering clear the construction of certain directions contained in the Ballot Act. A witness mentioned to the Committee that in a case in an English Court upon this Act the LORD CHIEF JUSTICE concurred in a decision directly the reverse of the opinion which he had given as Attorney-General; and it appears that upon the same point contradictory decisions have been rendered by English and Scotch Courts, while an Irish Court has adopted an intermediate view. The Scotch judges held that it is essential to a valid vote that the ballot-paper be marked with a cross, and not with a mere line; that a ballot-paper marked with a cross to the left of the candidate's name must be rejected; and that a separate mark in addition to the cross, such as a superfluous cross, would render the vote null. These judges held that the "directions for the guidance of the voter" were an absolute and not merely directory enactment, and that Parliament had designedly stated its intention as to the manner in which alone papers should be marked in order to prevent the possible identification of the voter at the counting of votes. On the other hand, the Court of Common Pleas in England decided that the "directions" were not obligatory, and that all ballot-papers which were so marked that the voter's intention could be gathered should be held valid. We may remark that, if this be the case in which the LORD CHIEF JUSTICE is said to have concurred in the decision, the report does not bear out the statement, because it appears that he only read the considered judgment of the judges who had heard the case. It may be added that counsel who gives an opinion has not the advantage enjoyed by a judge of hearing argument, and the superstition which ascribes among opinions of counsel a higher value to that of an Attorney-General is as harmless as the belief that a full-bottomed wig necessarily covers a wise head. The Committee express their approval of the decision of the Court of Common Pleas, and make the proposal, which seems unnecessary, that the Home Office should forward the case and judgment to every Returning Officer. It may be doubted whether it was worth while to appoint a Parliamentary Committee to suggest to the Home Office to suggest to Returning Officers that "the shifting, stamping, perforating machine" is liable to fraudulent imitation, and "the percussion em-"bossing machine" tries the hands of those who use it. The provision as to illiterate voters has much exercised the Committee, and perhaps as regards elections for School Boards, which, from the number of candidates, offer most difficulty, voters who can neither read nor write might without public mischief be excluded. Some witnesses think that a slight preliminary drill might enable illiterate voters at Parliamentary elections to mark, without serious risk of error, the names of the candidates for whom they wish to vote. It is generally agreed that this provision as to illiterates may be used in electioneering tactics for delay. From two to five minutes are spent over each illiterate, and sometimes fifteen minutes have been thus consumed. In some cases where there has been an interval between the close of the poll and the counting of the votes the ballot-boxes have been left without protection. At an Irish election, where this interval extended over two days, a guard was put upon the boxes only on the second day, and it would be in harmony with the genius of the people if a foray had been made upon the unprotected boxes. The special case of an island containing only five voters, and liable to have its communication with the mainland cut off by storms, might, said a witness, be provided for by requiring the voters to come to the mainland, which he said just before might be impossible.

The Act provides that the ballot-paper, after being marked by the voter, and folded, should be shown to the presiding officer, and the intention was that he should see that the paper has the official mark on the back. But at Manchester, by a convenient, or "common-sense" construction of the Act, this enactment has been set aside. In the first place, the embossed stamp used there is not always visible at the back of the paper; and, if it were, the presiding officer has not time to look at it. "The ballot-"papers," says the Town Clerk of Manchester, "are, as a "rule put into the ballot-box without any attempt to show "them to the presiding officer, and without any attempt

"on the part of the presiding officer to look at them." He does not see how the polling could go on if the presiding officer were to be interrupted in the performance of his duties by the voter coming and putting his paper before him, and, "practically," it is not done at Manchester. Considering the importance which some persons attached to this provision, it is rather startling to find it quietly set aside. It was intended, among other purposes, to guard against what is called, we believe, the "Tasmanian dodge," by which A goes to the polling-booth, gets his paper, brings it away, and hands it to B, who goes and votes with his paper, and brings away his own to be used by C, and so on. The advantage of this proceeding would be that the papers to be used by B, C, &c., might be marked by them, under the supervision of a candidate's agent, and the voter must either put in the previously marked paper, or none at all. This process might be applied to a hundred voters in succession, and the only thing necessary to start it would be that the first voter should be supplied with a paper which, when folded, would resemble the ballot-paper handed to him. It would afford some security that a briber would get value for his money, as the voter must vote according to contract, or not at all. Whether it would be worth while to adopt this "Tasmanian dodge" is, we think, doubtful; but the authors of the Act contemplated something of the kind as possible, and wished to provide against it, and their arrangement has been abrogated as impracticable at Manchester. Supposing that the Town Clerk's method of working the Act be accepted, it must be allowed that his result is satisfactory. The number of voting-papers shown to have been issued at the polling-booths agreed with the number found in the ballot-boxes on counting within five, and even this small discrepancy was explained by finding in the boxes a corresponding number of cards, which it was supposed the voters to whom they belonged had put in by mistake for papers. The witness admitted that in these cases, amounting, however, to only five at most, the voter was able to put the card into the ballot-box, although the intention of the Act was that the presiding officer should see that the ballot-papers themselves were put in. He said that, when you have 40,000 votes to be taken, "it is "utterly impossible for anything of that kind to be "checked, whatever the Act of Parliament might say," and we are inclined to believe him. In another point the rigour of the law has been mitigated at Manchester. The Act only allows three clear days between the nomination and the polling. But it would be impossible to make the necessary arrangements within that time, and, in fact, in the two elections which have been held under the Ballot, it was known that there would be a contest, and orders were given accordingly a week beforehand.

The question of illiterate voters appears, on the evidence, important. In Liverpool, as might be expected, this class of voters is, or seems to be, numerous; and the Town Clerk of Liverpool, confirming other witnesses, thinks that the provision as to illiterates facilitates bribery, although he does not suspect that it has been used for this purpose at Liverpool. "With the agent present," he says, "it is as easy as possible to tick off those who "have voted according to promise." Thus there might be bribery in its most effective form, because the money need not be paid till it was known to have been earned. It would be difficult to carry out the practice to any considerable extent without detection, but the present point is the imperfection of the Ballot Act to attain one of its professed objects. The Town Clerk of Liverpool guesses the number of illiterates at 1,000 in 37,000 actual voters, and if this number could be effectually bribed, it would largely influence an election. A member of the Committee who took the illiterates under his protection suggests that, in the West of Ireland, where the population do not in general understand English, the Act inflicts special hardship, which is difficult to appreciate. But if he means that the names of Irish candidates ought to be printed in the way most intelligible to voters, we should agree with him. The ballot-paper now used has numbers affixed to the names of candidates, and it would apparently be easy for a voter, however illiterate, to learn beforehand against what numbers he should make his mark. Some witnesses, however, prefer that these marks should be omitted as unnecessary. In some large places the counting of the votes has been proceeded with continuously after the closing of the poll, and the result has been declared before midnight. In London and other places the counting has been postponed to next day. The reason for proceeding continuously is the desire to make an end of the excitement and trouble of the election, and rapidity of counting depends on the employment of a numerous and competent staff of clerks. On the whole, it would appear that the machinery of the Act has worked satisfactorily. It is in many respects convenient, and this Report shows probably all that can be urged against it. Bribery has not been prevented by the Act, and only enthusiasts expected that bribery would be prevented by it. The Committee advise that all special provisions for the assistance of illiterate voters should be abolished, and those who supported the passing of the Act can hardly hesitate to adopt this amendment of it.

THE *INFLEXIBLE*.

WHEN the *Inflexible*, which was launched on Thursday but will not be ready for sea for at least another year, is finished, the English navy will possess the most formidable ship of war actually in existence. But how long will this precedence be maintained? Two Italian ships are now being built at Spezzia and Castellamare which will carry much heavier guns and thicker armour than the *Inflexible*; other countries may join in the competition, and push ahead; and when the race will come to an end nobody can say. For the moment, at least as regards this particular ship, we have the advantage; and if, when the *Inflexible* is ready for work, there should happen to be any work to be done, she ought to make herself decisively felt. But then the need of the *Inflexible* may not come till later, when she has been distanced by some foreign monster. There could not, in fact, be a more striking illustration of the difficulty of naval construction in modern days than that afforded by the history of this yet unfinished ship. When she was designed, two years ago, the officials at the Admiralty resolved that she should be the biggest and most powerful vessel ever built, and there can be no doubt that, as the phrase is, they did all they then knew to accomplish this result. Various changes have, however, been made in the ship during the course of construction, and it is known that her supremacy is already menaced. The continual advance in the size and cost of ironclads is, no doubt, extremely embarrassing; but it is one of the inevitable conditions of the problem to be solved, and, while it lasts, must be submitted to. Whatever other Powers may do, England cannot afford to be the one which lags behind in order to see what the rest are doing and to profit by their experience. There does, however, appear to be one point of finality which has been almost, if not quite, reached; and that is in regard to the weight of ships. A ship is bound to float, and the buoyancy which must be secured for her imposes a check on the indefinite heaping up of armour and armaments. Whatever addition is made to the weight of a ship above a certain point must now be made up for by a reduction in some other direction. If the guns grow heavier the armour must be lighter, and if the armour is increased in thickness the guns must give way. In the case of the *Inflexible*, which has been described by her designer as a rectangular armed castle, a thin iron ship serves as a platform for a citadel, containing a battery, and the armour-plating is strictly limited to the vital parts of the structure, such as the engines and boilers, turrets, the hydraulic loading gear, magazine, and quarters for officers and men. The thickness of the armour is therefore not uniform, but varies according to the risk of exposure and the necessity of protection; and a considerable part of the ship, being intended merely to supply buoyancy, gets but a thin coating. Yet, even with all this economy of armour, the displacement of the *Inflexible* will be no less than 11,407 tons, the greatest ever known; the *Sultan* having a displacement of only 8,899 tons, and the *Devastation* of 9,062 tons. It becomes a question, therefore, whether, in the case of the Italian ships now being built, the increase of armour above that of the *Inflexible* from 18 inches to 22, and of guns from 81-ton to 100-ton, may not injuriously affect the flotation of the vessels.

It is obviously of no use to kick against what cannot be helped, and the common-sense course is to take things as they are, and make the best of them. In this case England must go on experimenting and improving as long as foreign competition continues to be formidable. It is

frightfully costly, for ironclads at half a million or so apiece are also a constant drain in expensive repairs; but still the position of the country requires that it should be done, and that is enough. It does not follow of course that the extravagance or mismanagement of Ministers should not be jealously watched, for that is a separate question. But it is quite certain that whatever is really needful to be spent in this way will be, if not cheerfully, yet readily, voted, and that the country is bound, above all in this branch of defence, to keep itself at its full strength. It must be remembered that, even though a new ship is immediately surpassed by a foreign rival, it is not necessarily wasted. It may, as an individual ship, be inferior to some other ship of a foreign Power; but, on the other hand, if it is a good ship, it may be relied upon for good work, and ought to count accordingly. Naval wars are not like prize-ring fights, a contest between well-balanced combatants; the *Inflexible* may never happen to be matched against the *Dandolo* or the *Duilio*, or even against any greater *Peter the Great* which the Russians may build; but it might turn the fortune of an important engagement, and will always inspire respect on the part of other countries. And there is another aspect of the question which must not be neglected. The habit of mind which consists in constant watchfulness and effort, which never goes to sleep or gets lazy over the problems that start up from time to time, but is always, as it were, on guard and prepared to grapple with them, is the salvation of a country. In a particular case one nation or another may be fortunate in getting hold of an important invention before its neighbours; but in the long run the superiority remains with the people who are constantly awake to the general conditions of their work, and are uninterruptedly on the alert to appropriate new ideas. It may be well to try to get the thickest armour and the heaviest guns, but, after all, that is not everything: and, if the accounts which are given of the *Inflexible* may be relied upon, she ought to be not only very formidable in strength, but in handiness, which in action is of vital importance. It is satisfactory to observe that the experience of recent disasters has not been neglected. The ram, or spur, of the *Inflexible* is made to no ship during ordinary cruises; arrangements have been made for removing from the 135 water-tight compartments of the hull any water that may collect within them through collision or other cause; the bulkheads are provided with water-tight doors of an improved pattern, sluice-valves, manholes, and scuttles; and each of the water-tight compartments has been tested by hydraulic pressure. Again, the working of the ship in regard to the loading of the guns and in other ways will be made much easier, as well as more precise, by the use of hydraulic machinery; and great care seems to have been taken to render all the engines of the ship available in any case of emergency, such as a leak or collision.

It may be taken, then, that up to the present time, or at least up to the time when the plans had to be settled, the *Inflexible* is a very complete and redoubtable instrument of war. Still it must not be forgotten that it is only an instrument, and that it requires intelligent and practical persons to work it. An addle-headed giant is, after all, a poor creature; and the best ships in the world may be a source of weakness rather than of strength if manned by scratch crews of insufficient numbers and demoralized by a cruise being turned into a party of pleasure, and commanded by an admiral who is afraid to give intelligible orders in a fog, and simply trusts to Providence till he himself gets to port, leaving his ships to any fate that may overtake them, in utter ignorance of their movements, and by captains who do not know, or are indifferent to, their duties. Recent disasters have supplied a forcible lesson on the danger of officers dozing over their work or indulging in self-confident recklessness; and unfortunately these are faults which have been not only condoned, but encouraged, by the Admiralty of the day. We have read before now very pretty accounts of the mechanical perfection of the various ironclads, and, to a certain extent, this perfection has no doubt been attained. The *Vanguard* was lost, not because she was badly constructed, but because she was stupidly commanded; and the *Iron Duke* ran into her consort, and afterwards nearly committed suicide, because she had incompetent and careless people to look after her. You may have the most perfect instrument in the world, but, if you put it into the hands of a fool, he will probably cut his fingers or wound a friend. It may be doubted whether the facilities which improved mechanical science has afforded for working ships had not have a deteriorating effect both on the prompt skill and on the habits of attention which formerly distinguished the service. It was certainly not owing to mere mechanical pre-eminence that the English fleets of other days gained their glorious reputation. It used to be the pride of men like NELSON to win victories with any kind of rotten old tub, and to make up by professional genius, alertness, and daring for the deficiencies of their ships. Nowadays, under Mr. WARD HUNT's administration, officers in high places are encouraged to make themselves purely ornamental persons, and are assured beforehand that the Admiralty will always take care to supply a scapegoat of inferior rank. The figure of an incapable FIRST LORD cast a dark and ominous shadow the other day on the launch of the *Inflexible*.

INTERNAL DEVELOPMENTS OF AMERICAN RELIGION.

WE lately noticed the remarkable change which has taken place during the past century in the condition and relative numbers and importance of the various religious communions in North America. These external changes naturally suggest a further inquiry as to the internal causes from which they spring. Such an inquiry derives a peculiar interest from the circumstance, to which we then called attention, that, since the conversion of the Empire, no Christian country can be found in which religious questions have been left to work themselves out with so little interference from the civil power. "A fair field and no favour" has been the professed and, to a large extent, the actual policy of the United States Government in its dealings with rival denominations; and it is something more than a matter of mere idle curiosity to watch the result, which can hardly be said altogether to conform to what the warmest advocates of that system would anticipate or desire. Amid the varying shades of Protestant Christianity represented in the American religion of a century ago—and there was no other Christianity worth taking into account—there was exceedingly little variety in points of speculative belief. The rival, or rather neighbouring, Churches not only agreed to differ, but differed much less than they agreed. Their general tone was that of a stern, dogmatic Calvinism. The most superficial acquaintance with American religionists in our own day would suffice to prove how complete has been the revolution in this respect. How far this reaction is connected with political changes is too wide a question for merely parenthetical discussion. But it has often been observed—if we remember rightly, by Mr. Lecky among others—that Calvinism has a natural affinity to systems of political and religious despotism; and a striking illustration of that view may be found in the undoubted fact that the religious revolt against Calvinism in America coincided with the democratic revolt against the Conservative politics of the first founders of the Republic. One of the first effects of the altered tone of religious sentiment is seen in the formation of the large sect who have assumed, with questionable modesty, the designation of "Christians," and who now stand fifth in order of numerical strength, having no less than 3,500 churches. But still more significant is the enormous and rapid growth of Methodism, now ranking *facile princeps* among American denominations, with its 25,000 parishes, and seventy millions of Church property. For its attractive power lay in an uncompromising appeal from the religion of the intellect to the religion of the feelings. While Calvinism "lay intrenched in the outworks of the understanding," Methodism cared little for logical convictions or dogmatic forms; it lived in a world of spiritual ecstasy, and spoke direct to the heart, basing its assurance always on the inward witness, sometimes also on the audible voice, of the Divine Spirit. Yet it did not sink, like Quakerism, into a mere system of otiose contemplation, or what in Catholic mystics has been condemned under the name of Quietism. It preached, organized, laboured; its dominant passion and purpose was to save souls. One of its earliest apostles in America is said in the course of his forty-five years' ministry to have ridden twelve times the distance of the diameter of the earth. These men were for the most part unlettered enthusiasts, but they laid the foundations of what has now grown into a vast organization, with stately churches, colleges, schools of theology, a powerful periodical press, a learned ministry, and the largest following of any American communion.

To a certain extent a similar explanation may be given of the growth of the Baptist community, which still remains second on the list. For, in spite of their retention of a modified Calvinism, no religionists have shown so marked a contempt for the historical aspect of Christianity, or have more pertinaciously insisted on "the Bible, and the Bible only," as the sole rule of faith. And so far it fell in with the prevalent tendency to substitute a religion of sentiment for a religion of dogmatic forms. Even among the Congregationalists a Transcendental school sprang up, who built on Coleridge's maxim that "Christianity is not a theory or speculation, but a living process." And accordingly at the Congregationalist Council held at Boston in 1865 it was found impossible to agree upon any doctrinal confession. Another side of this same tendency to a sentimental rather than a doctrinal system of religion found expression in an æsthetic and quasi-ritualistic revival, which at first sight seems hardly to harmonize with it. That

stained windows and choral services, and surpliced choirs and crosses, and the restoration of the altar to its original position on an elevated platform at the east end of the church, should gradually become the rule in the Episcopal communion was natural enough, for it was only a return to its own earlier traditions. It is more curious to detect a similar movement in bodies priding themselves on their exclusively Protestant character, and whose traditional precedents were all the other way. Yet "the pealing organ" began to be heard in Baptist and Methodist churches glowing with "a dim religious light," and choirs—not always even eschewing "the rag of Popery"—sang services which would have sounded strange indeed in the ears of Jonathan Edwards or the Pilgrim Fathers. But this is only one side of the picture. Contemporaneously with the pietistic reaction against Calvinism, and as an immediate result of political causes, there arose a decided impulse towards strong ecclesiastical organization. There are no doubt a great many religious bodies in America, though not probably so many as in England. But the general tendency of American Christianity has been, and is, not towards an indefinite multiplication of sects, but rather to a crystallization round a few dominant and clearly ascertained types of belief. In no country in Europe, Catholic or Protestant, is the Church left so completely untrammelled by State interference, and nowhere, accordingly, have the great religious bodies so effectually asserted an independent power and position of their own. When the Revolution was over, they found themselves left to their own devices, and began at once in good earnest to improve the occasion. The Presbyterians were the first to act, and, before the Federal Government had come into full operation, their Constitution was organized in the form it still retains. It follows from what has been said that, instead of disestablishment serving to merge religious distinctions, as is sometimes oddly assumed, the result of throwing rival communions on their own internal resources produces a precisely opposite effect. It brings their distinctive principles more prominently into play. This may be most aptly illustrated from the history of that one of the American communions which for many of our readers will have the most immediate interest.

When the "Protestant Episcopal Church" of America first started on its independent course, a small and insignificant sect, deprived of the civil support and prestige to which it had been accustomed, outnumbered by all the principal Protestant bodies, and labouring under a dead weight of inherited unpopularity, its aims were unambitious and its policy tame enough. Its chief characteristic was an unimpeachable respectability. One of its first bishops was noted for being "dignified without animation"; another for his "unusually slow and deliberate pronunciation"; a third for a style of preaching "rather moral than Evangelical." At the same time, those prelates, who lacked the civil rank and influence of their brethren in England, were fain, as far as possible, to sink the characteristic claims of their episcopal office, and Bishop White looked favourably on a scheme for union with the Methodists. It was not till the beginning of the present century—but still a good thirty years before the commencement of the Tractarian revival in England—that a change passed over the spirit of what was no longer merely a despised and struggling Church. In his *Companion to the Altar* and *Apology for Apostolic Order* Hobart laid the foundations of a different and more distinctive system both in doctrine and devotion; and his elevation to the episcopate gave him the opportunity of asserting his principles in a more authoritative manner, when he openly condemned co-operation with outlying religious bodies, and denounced the Bible Society on the express ground that the differences between Christians are not "on points subordinate and non-essential only." Within the course of another generation his principles came to be generally accepted, and the informant on whom we have chiefly relied, and who is evidently an acute observer, remarks that "the decided growth of the Episcopal Church dates from the period when it clearly enunciated its distinctive theory." It is of course only the natural sequel from this that, while religious men in all communions have protested against "the 'Evangelical' heresy that the normal state of the Church Universal is a state of schism," the unrestricted liberty of ecclesiastical action in the United States has been so far from leading to any amalgamation on the basis of what is sometimes vaguely termed "our common Christianity," that it has helped to sharpen the distinctions of faith and discipline. It is obvious that under these conditions a new class of questions must inevitably emerge between Church and State, notwithstanding the professed principle of entire separation; and with a brief notice of this point we must conclude.

We have already seen that the Roman Catholic Church has risen almost from nonentity to become the fourth largest in numbers, and in wealth the second, among religious bodies in America. This increase is, however, mainly due to the rush of Catholic immigrants from Europe, and it seems doubtful whether it has even kept pace with the immigration. Be that as it may, the Catholic body has become a very powerful one, and it has now thrown down the gauntlet to the State on a question which is at this moment the standing difficulty of more than one European Government. As long ago as 1840 the Roman Catholic authorities demanded the withdrawal of the Protestant Bible from the course of instruction in the public schools; but the real controversy was felt on both sides to turn, not so much on the reading of a few verses from a translation unauthorized by the Church, as on the deeper question of secular or denominational education. There seems to be no adequate reason for assuming that the opposition to the present Public School system is based on any covert hostility to the political institutions of America generally, and Catholics may be credited with quite sense enough to be aware of the almost unexampled facilities secured to them under that Constitution, of which they have not been at all slow to take advantage. The question, however, has now become a burning one, and three parties, mutually antagonistic, are organized or engaged in organizing themselves with a view to pressing their demands on the Federal Legislature. The Roman Catholics, as is natural, demand the abolition of the existing system and the apportionment of the education fund between the different religious bodies according to their numerical strength. The Protestant party, desiring to avert the entire secularization of the school system and to maintain the reading of the Bible, and feeling their position to be a precarious one under a Constitution which professedly excludes all official recognition of religion, desire a change which may give it a distinctively Christian—by which they mean distinctively Protestant—character. They accordingly propose the insertion of a clause in the preamble of the Constitution, expressing "a national recognition of Almighty God," of Christ, and of the Bible. An agitation for this purpose was set on foot in 1863. On the other hand, the secular party demand such a reform in the Constitution as may distinctly eliminate all such religious "survivals of a pre-national period" as it still exhibits. There are nine points in their programme, which is too long to quote here, and it includes, of course, the abolition of Bible-reading in the schools, as well as the absolute refusal of public funds for any "sectarian" purpose whatever, whether charitable, educational, or other, and of all enforcement of the observance of Sunday or of "Christian morality"—as distinct from "natural morality"—in any shape. Both these parties last named would be agreed in their resistance to the Catholic claim, but they are directly at issue with each other. On the whole, after the American experiment has been for a century on its trial, we may certainly say, with a writer already quoted, that "he would be a very bold or a very thoughtless man who would venture to affirm that the ideal of Catholic unity has been reached in this system of 'strenuously competing sects,' or that the problem of Church and State has received a final solution in remitting public worship to voluntary support."

THE SPARE ROOM.

A YOUNG couple setting up house in the country, however small may be their income and however limited the number of their servants, never dream of denying themselves the convenience of a spare room. The expense of receiving an occasional visitor is trifling; the ordinary domestic arrangements are scarcely disturbed; it is a treat to see a fresh face at the dinner-table, and pleasant to have a chat with some one outside the small circle of home and its neighbourhood. Time is sometimes rather a drug, particularly in the evening; so the hours spent in lounging about the garden in the moonlight are not regretted. The lady of the house has probably a basket carriage in which she can take her friends short excursions through the cool green lanes. The few pleasures within reach are not costly; there are no new books which must be read and returned to Mudie. Having tea out of doors is often sufficient excitement for a whole afternoon, and blackberry-gathering for another. Wet mornings are spent in looking out suitable extracts for the penny readings, or in knitting comforters for the old men in the village. The hostess feels herself quite under an obligation to the visitors who bring a little change into her quiet home. She knows it is only affection which induces them to come and stay with her. But in London the case is widely different. To busy people of moderate wealth the acknowledged possession of a spare room represents an income-tax of several shillings in the pound. It means to be forced to take in lodgers all the year round who do not pay, but who expect as much attention as if they were in an American hotel—to be obliged, not only to supply them with free quarters, but to amuse, advise, chaperon, perhaps even nurse and bury them. When one of the squire's many daughters marries her cousin in the Bluetape Office and they establish themselves in a tolerably comfortable, if single-brick, house at Kensington, they agree that their income does not allow much margin for hospitality. It would be unwise to start a guest-chamber, which in all probability would never be empty. In consequence of this sensible decision the servants are comfortably established in separate rooms, none of them in the region of the cellars or black-beetles. The master of the house has a roomy, well-appointed dressing-room, a cosy study, and even a den in which he may make a mess with shavings or collodion. The lady of the house rejoices in a little corner cupboard where she can puzzle undisturbed over the weekly bills, and write home letters descriptive of her happiness and her husband's extraordinary popularity amongst his new relations. The servants she represents as perfect treasures; but as the cook has had no opportunity of displaying her ignorance, because the young couple have dined out nearly every day, and as the housemaid has had an unlimited number of evenings to devote to her young man, this is not so very surprising. That such a state of things should go on for ever is perhaps scarcely desirable, but there is little chance of it, for one afternoon the bride's brother arrives unexpectedly from Calcutta. Accustomed, like all Anglo-Indians,

to give and receive unbounded hospitality, he never dreams of going to an hotel, but, collecting his innumerable traps, and a perfect menagerie of birds and beasts, drives at once to his sister's house. She is at a concert, but he stacks his portmanteaus in the hall, takes the monkeys to the kitchen, and hides himself in the drawing-room to surprise his sister when she returns home. The young wife screams as some one, not her husband, darts out from behind the portière and clasps her in his arms, and then half cries with delight to see the youngster who used to be the plague of her life grown into a handsome bearded man. Of course he is quite right to be sure that she can take him in; the fatted calf is immediately killed; the cook improvises for dinner an extra dish which she fondly believes to be a Madras curry, the table-maid gives an additional polish to the spoons, and a bottle of champagne makes its appearance from the cellar. Some sort of shakedown is arranged in the dressing-room, probably composed of a small iron bed, with an arm-chair at the foot to lengthen it, for six feet three does not repose comfortably on a six-feet stretcher. The owner of the elaborately arranged dressing-room good-naturedly rigs himself up a temporary establishment in the greenhouse, knocks in a nail on which to hang his wife's hand-glass, and is content to use the watering-pot for his chamber-jug. There is some little difficulty about tubbing; but it is easy to solve such difficulties amongst relations, and the brothers-in-law become all the sooner intimate from being obliged to be companions of the bath. Of course slippers, studs, clothes-brushes, button-hooks, collars, and neckties are all hopelessly mislaid; but at last a very happy trio sit down together at the breakfast-table. The only misfortune of the day is that the young husband misses his train, and arrives too late at his office.

The reason why so many people living in London avoid having a spare room is not because they do not wish to take in a friend, but because they find it impossible to protect themselves from acquaintances they dislike. And this is the case with our young couple. The thin edge of the wedge once introduced, their house is turned by a little audacity into a cheap and pleasant hotel. Soon comes a letter, full of the most lively affection, from an aunt by no means beloved in the family. She is delighted to hear what a charming *bijou* of a house her dear niece has got, and is longing to have the delight of watching how she does the honours of her own table. Besides, she is dying to become better acquainted with a nephew of whom she everywhere hears the most flattering descriptions. Could her dear niece find any little corner for her, no matter where, in the garrets, on a sofa, or a mattress on the floor? The poor innocent young couple have not strength of mind to risk a quarrel by saying No, and they cannot plead not having a corner after taking their brother in; so they tender an unwilling hospitality, with what grace they can muster, and prepare to make the best of circumstances. Again the dressing-room has to be turned upside down and the boots, brushes, and razors removed, this time to a comfortless closet under the stairs, in which it is impossible to turn round. The victim has not now the consolation of giving up his comforts for the sake of a fellow who is at least good company and with whom he can have a comfortable smoke after dinner. Then, too, it is almost impossible to give an elderly lady of vast proportions a small emigrant bedstead on which to lay her portly form; so a more imposing structure of brass has to be purchased, as well as a hanging wardrobe in which to stow away the new dresses which she has come to town to buy. The result is that a very considerable cheque has to be drawn, and that the dressing-room is promoted to the dignity of a guest-chamber. The aunt arrives; there is much display of enthusiastic affection amidst the pile of boxes and other litter that block the narrow hall, the passage, and the stairs, whilst in the background looms helpless and unprovided for an unexpected addition in the shape of a French maid. But, unabashed, the self-invited visitor explains that she has brought Frisette with her, and hopes her dear niece does not mind, and that if there is no cupboard in which she can be put, they will now go out and look for a room in the neighbourhood. She found that she really had so much to do and was so easily knocked up when without proper attendance, that Frisette in the long run would save trouble; besides, it was necessary to let her see the fashions at least once a year. By and by the husband returns. For the first time he does so almost reluctantly, and no wonder, for the evening drags along wearily in convulsive attempts at conversation. The host and hostess, obliged to lay aside their usual occupations, and not even able to talk freely to each other, are compelled to listen with an appearance of interest to tiresome details of all the commissions which have to be executed, and to the anticipated horrors of the dentist's back parlour. Meantime, Frisette has been giving herself airs downstairs and teaching the servants to be above their places and discontented with their food. She has observed divers shortcomings of management, and picked up numberless pieces of gossip, which will be duly retailed and exaggerated to her mistress, who will thus be prepared to give hints and good advice to her puzzled and distracted hostess. Eventually the day arrives on which it has been arranged that the unwelcome visitors are to take their departure. The master of the house, with natural politeness, says as many civil things as he can possibly force his tongue to utter, as he bids good-by after breakfast. All through the day's work visions of the quiet happy evening awaiting him pass before his eyes. He indulges in a hansom to reach home half an hour sooner, and then finds that the conventional regrets he expressed in the morning with so much difficulty have been taken advantage of, and that his house still remains in the hands of the enemy.

After several ineffectual struggles against their fate, the young couple are finally obliged to succumb, and to allow their spare room to become as much public property as if it were in the Great Western Hotel. The old clergyman from Stoneshire comes to look for a curate, and numerous seedily dressed men of the most repulsive appearance occupy the drawing-room during the afternoons. An elderly, hungry-looking Irishman arrives at luncheon-time, and it is impossible for the kind-hearted young hostess, with her country ideas, not to ask him to share it. It seems to her that no reasonable being wants a curacy, and that the old vicar will have to stay for ever looking for one. Happily, he is recalled because no one can be found to take his Sunday duty, and he is replaced by a lady in search of a governess. Before inviting herself, she had put in an advertisement to clinch matters, and prevent the possibility of being refused. The hall door bell now rings all day long, and the servants are fully occupied in showing candidates upstairs and out again. Letters have to be posted at every hour of the day and night, and that in the district office, as country people have a prejudice against pillar-boxes and fancy the contents are never delivered. The parlourmaid falls ill and the housemaid gives warning; the cook, who is dishonest and incompetent, remains. Now comes a letter from two pretty lively girls, saying that, if their dear cousin would only take them in for a few weeks, they would have "such fun," and would promise not to give one bit of trouble, as their aunt will chaperon them everywhere. All they want is bed and breakfast like a City clerk; but bed means returning at three o'clock every morning, and breakfast means a separate meal at half-past ten, which the lady of the house has to see after herself, otherwise the day's work would never be got through by the servants. One of the girls becomes engaged, and her mother sends the hostess a hamper of cabbages. Without any warning two schoolboys next arrive; scarlatina has broken out at the college and their baby brother at home is in measles. Naturally they are not in the least afflicted, and prepare to enjoy themselves thoroughly. One or two bolstering matches leave more feathers in the corners of the room than in the pillows, but the best part, the down, flies out of the windows. The carved ivory paper-knives make capital shoeing-horns, and do not last too long; the best use to make of ink is to spill it, and it is quite necessary to have a couple of squirts to amuse themselves with in the morning while waiting for breakfast. If the schoolboys are mischievous, the helpless widow who comes up on business is almost more intolerable. She asks advice upon every subject under the sun, from how to invest her money down to the proper kind of boot-laces to get for Harry. She never has the correct address of any person she wishes to go and see, or of any shop at which she wants to make purchases, nor can she ever muster the difference between Oxford Circus and Piccadilly Circus, or between King's Cross and Charing Cross. She sends in countless parcels "to be paid on delivery," but invariably forgets to leave the money for them. Every cabman she hires receives an umbrella in addition to his fare; and many a fruitless inquiry has to be made at Scotland Yard.

When the season is over the young couple awake to the startling fact that, owing to some mysterious dispensation of Providence, not one of their particular friends has slept a night in the house. The guest-chamber, always full, has been entirely occupied by people for whom they do not care in the least, and whom they never would have dreamed of asking. Indeed, now they think of it, they are not conscious of having invited a single creature. The girl whose never absent lover bored them to death was certainly not asked, nor yet the old lady who put tracts in their boots, and insisted on evening prayers. The Spiritualist who took unto himself seven other spirits, and who broke the leg of their best oak table, was self-invited; so was the lady who kept her room for a week while a new set of teeth was being prepared for her, and then for another week trying some cosmetic, which turned out disastrously and prevented her appearance to the outer world. The little bride saw too much of her, as she was compelled to read aloud by the firelight for her entertainment. What a blessing it is to be able at last to shut up house and go away for a run, and to have found an honest charwoman to take charge of everything! But there is no peace even yet for the doomed spare room. The young lady whose visit in the spring turned out such a signal success is now going to be married, and writes to say she is sure her dear cousin will allow her to bring mamma up to order the trousseau. They do not in the least mind that there are no servants or that the kitchen is being whitewashed. They will bring their own maid and man, who can do everything. The unhappy possessors of this popular house groan in spirit, but they are as helpless against an experienced woman of the world as they were against the girl who came to get music lessons and made life unendurable with the exercises she sang all day long out of tune. But perhaps their troubles have one good effect. The husband absolutely welcomes with effusion the mother-in-law, the monthly nurse, and the baby, who effectually put an end to the existence of the spare room.

KEBLE COLLEGE CHAPEL.

THE completion of the chapel of Keble College, Oxford, is an incident of which, whatever his own views may be, no candid man can deny the importance, whether he looks upon it in its

academic, its ecclesiastical, or its architectural relations. It is ten years since John Keble died—for some portion of his life a resident Fellow, but for a longer one a country vicar—and his name and memory are already living at Oxford in a foundation which, both by the buildings raised or contracted for, and by the body of students who already use those buildings, has made its position good among the foremost colleges. This fact is very significant as to Keble's own character and influence; but it is perhaps even more significant as to the power and tenacity of the principles of which his whole career was a proclamation, with the incidental and personal result of that career ending neither in close, deanery, nor palace, but in the vicarage of a living of which the patron had been his own pupil. There was no external compulsion to found a college in Oxford, or elsewhere, in his honour; on the contrary, the idea was, in many ways, risky. The money might not be forthcoming; the University of Oxford might repudiate the new comer; or the expected undergraduates might refuse the invitation. Any untoward accident might have marred the whole undertaking. These dangers have, however, all been so completely overcome by the simple process of going on in disregard of them, that the worst ill fortune of which Keble College can now complain is that it is not proof against a mildly invidious refrain of criticism, as "one-sided," "partisan," and so forth. This opposition rests no doubt upon a substratum of material fact; for it is certain that, while the Oxford of the last half-century has been successively the head-quarters of strongly defined and antagonistic parties, only one of these parties has struck out the idea of putting its hands into its own pockets in order, at its own expense, to create its own college; while the invention of other parties has been limited to reshaping those existing colleges for which preceding ages paid, and to criticizing the motives and the results of the Keble experiment. We shall not examine the cheap living and high teaching which are, so we are told, the special feature of the adventure; for our present object is to call attention to the very conspicuous addition made, by the singular munificence of a donor who did not live to see it completed, to the Keble pile, of which this week has witnessed the opening. It was in order to appreciate the idea which dominated this offering that we have referred to the phenomenon of such a college having been created in so brief a time, and in honour of a man whose characteristic excellence was the absolute opposite of popularity seeking.

Keble College Chapel, with its conspicuous height, is not only the leading feature of the whole body of buildings, but it has brought the lower ranges which hitherto composed the college into an intelligible order, to the detriment of much criticism which has been offered, in forgetfulness that a quadrangle which has been composed with the intention of contrasting the massive bulks of Chapel, Hall, and Library with the more humble proportions appropriate to a series of students' lodgings must, so long as only the latter are in existence, look low and mean. Tuesday not only saw the Chapel opened, but the first stone laid of a library and hall of equivalent dimensions, due to anonymous generosity, which are to occupy the still unfinished side of the quadrangle. When these are completed, no doubt the artistic estimate formed of the composition as it now presents itself will have again to be reformed. The criticism of the material adopted remains, and in this we recognize both a right and a wrong. The objections which have been raised, after the experiences of the perishable nature of Oxford stone, to the use of red brick were idle prejudice, and no good reason could be given for refusing to relieve, as was common in the fifteenth and sixteenth centuries, the dominant hue with occasional patterns of other colours. But Mr. Butterfield has certainly raised what should have been an accessory into a leading characteristic, and has, by the repeated streaks and chevrons of white bricks—a material unknown to our ancestors—much imperilled the scholarlike sobriety which belongs to our characteristic collegiate architecture when carried out in red brick by builders like those of Queen's College, Cambridge, of the second court of St. John's, and of Magdalen, since its restoration. Time of course will help to mellow this party colouring, and we hope for compensation in the more chastened treatment of materials in the Hall and Library. Keble Chapel is built in general conformity with the middle or Edwardian style of Gothic, and upon an exceedingly simple plan, consisting of a parallelogram with a recess or small transept for the organ on the south, and of a porch open to the interior at the western extremity of the same side. This apartment is boldly groined, and wears an aspect of stately spaciousness in excess of its absolute dimensions. It is about as broad, though not so long, as Guildhall, London; but we do not suppose that any one who had seen the two would suppose that it was the smaller chamber. Before we examine the decorations we have a word to say upon its general arrangements. A college chapel, as any one conversant with ecclesiastical architecture is well aware, has its own distinctive plan, correlative to, but widely distinguishable from, that of a parish church. The latter comprises a nave for worshippers with seats looking eastward, and a chancel or choir for the immediate ministers, with stalls or seats facing each other, and ranging lengthways down the building. In a college the members—both Fellows or tutors and students—are treated, at all events while at worship, as a religious corporation; so the nave of the parish church shrinks into an ante-chapel, which is either kept empty for musterings and other uses for which such an open area is found to be peculiarly convenient, or lent for the worship of strangers and dependents. On the other hand, the longer space of the building, representing the chancel and parted from the ante-chapel by some screen, is known as the "chapel" proper, and is fitted lengthways with the seats which the members of the house occupy; the stalls of the chief officers, like those of the dean and sub-dean in a cathedral, being returned to the westward. This arrangement is not only most consonant with traditionary practice, but is found by practical disciplinarians to be peculiarly convenient, from the otherwise unattainable opportunity which it gives them of enfilading their younger charges. Accordingly the modern chapels of Exeter College and of St. John's, Cambridge, by Sir Gilbert Scott, as well as of Balliol and St. Augustine's, Canterbury, by Mr. Butterfield himself, not to mention those of many schools, are arranged upon the old plan. At Keble College, however, the architect has unfortunately been persuaded to abandon the collegiate plan and—at the sacrifice of any ante-chapel—to lay out his area like an ordinary church with a nave for undergraduates seated crossways, a chancel beyond for the choir, and of course the sanctuary at the east end. We shall accordingly forget that we are dealing with a college chapel, and criticize the building as one more new church.

As such, it is decidedly successful in reproducing the minster type within a single and unbroken hall. The minster, as we have had often to insist, presents in its full development the triple arrangement of arcade, triforium, and clerestory, and is most perfect when the roof is groined. At Keble Chapel the triple effect is given by a lofty wall arcading, a range of recessed panels above, and then the windows, which may be treated as, internally at all events, a clerestory, the east and west windows standing at the same height. The wall arcading, with its frequent slender shafts and foliated heads of white stone, is a graceful feature in itself; and we regret that, out of regard to its vertical feeling, the architect had not forborne to employ his favourite decoration of longitudinal particoloured stripes of bricks and pattern-bearing stone. The *motif* of this is obviously to bring out the continuity of the wall lying behind the arcading, but the result is to jar against the vertical effect of the composition. Besides, why should we be reminded that the wall behind an internal arcading is continuous, when the intention of such a feature is to create a series of spaces each suitable for its independent treatment within the architectural framework? The triforium-like panels are filled with a series of Scriptural pictures, presenting Old and New Testament events, in type and antitype executed by a process of mosaic which Mr. Butterfield has the credit of having worked out, its speciality being that, as it is made up of much larger tesserae than Venetian and other similar mosaics, so it is both more easy and cheaper to produce. The surface is somewhat rough, but this is, at the height at which it is here employed, not at all a detriment, while the general effect, where the picture does not catch the light, is curiously like that of tapestry. In fully recognizing the general effectiveness of this series of pictures, as well as the material value of the new process, we wish that more attention had been paid to the anatomical modelling of the figures. These are days of criticism, and the less the eye is tempted to exercise that faculty the more cheerfully will the mind take in the teaching which such representations are intended to convey. The lofty reredos of alabaster, with its white marble cross, is one of the most effective features of the building. The series of mosaic pictures is carried round the west and east ends, the central point to the east over the altar being a quatrefoil containing a large sitting figure of Our Lord in "majesty." The general posture is stately, but the effect is certainly impaired both by the dull red of the dress and by the heavy yellow of the aureole behind. This was the point at which Mr. Butterfield might well have made an eclectic use of that gold mosaic which the modern Venetian masters have inherited from the older system, for an aureole in real glass-gold mosaic would have lighted up the whole east end, and given value by the contrast to the subdued tones of all the remaining subjects. The feature of the chapel which is least satisfactory is certainly the painted glass of the east window. The defects of drawing which the heavy wooden figures exhibit are relieved by no harmonious sparkle of colour, for crude unbalanced patches of red and yellow arrest the eye, while the curiously alternated blues and yellows of the lowest portion are cruelly conspicuous. This is the more to be regretted as we have glass-painters from whose studios far different work would have proceeded.

As we have indicated, the chapel soars outside with conspicuous boldness over the other college buildings. Its plan necessitated the gabled porch jutting out from the extreme western part of the south side, and the result of this is that a too sharp vertical line is produced when the elevation is seen at full face. A projecting oriel or turret at the corner would have harmonized the over-abrupt juncture.

SIGNOR ROSSI.

"AMLETO," tragedy in *six* acts, by William Shakspeare, "tradotta e ridotta per la scena Italiana da C. Rusconi," has been performed by Signor Rossi. It is perhaps of little matter whether the play is arranged in five acts or in six; but we may fairly find fault with whoever is responsible for the production of Signor Rusconi's text and the English version printed side by side with it. The simple method of printing Shakspeare's lines as if they were prose has been for the most part adopted; but here and there Shakspeare's words are improved upon, and there occur startling discrepancies between the Italian and the English

text. For instance, "Io, si, e con me Marcello," becomes "A piece of him, and Marcellus also"; and "Era un uomo perfetto" is rendered by "He was a man take him for all in all"; the rest of the well-known passage is omitted. In other places the compiler of the book has shown a sudden and laudable desire to disregard Shakspeare in order to follow the Italian version exactly. Thus, in the ghost scene, "Shall I strike at it with my partisan?" becomes "Debbo dargli sulla testa?" and appears again in the English text as "Shall I knock him on the head?" to which Horatio replies, "Yes, do." We may also fairly object to having tradesmen's advertisements thrust under our eyes at the end of each act. For such inconveniences as these, however, Signor Rossi is of course not responsible, and they cannot affect his performance.

Signor Rossi is an undoubtedly ingenious actor, and his ingenuity has been shown as much in the great difference between his first and second renderings of Hamlet as in anything else. On his first appearance he was suffering severely from a cold, and every allowance had to be made for the difficulties to which he was unwilling to yield. But the extravagances which marked his first performance can hardly have been the effect of a cold; and we may either suppose that they were toned down on the second occasion in consequence of what was said about them in the press, or that the actor is anxious to show himself capable of playing the same character in different ways. It was said in Paris that Signor Rossi gave out that he never knew, when he went on the scene, how he was going to represent the character he played; and if this is his method, any amount of variation in his performances is of course to be expected. Whether the method is a good one or not is another question. Certain main features in both the first and the second performance of Signor Rossi as Hamlet were, however, necessarily the same. As far as one can judge of an actor's conception of a character from what he does with it on the stage, Signor Rossi seems to have settled very definitely the question whether Hamlet were really mad or not, and represents him as a dangerous lunatic through a great part of the play. Again, on neither of Signor Rossi's appearances was there much excuse to be found for Ophelia's belief that Hamlet was the glass of fashion and the mould of form: there was not a trace either of a prince's dignity or a courtier's grace, and there were but few indications of a noble mind. On the other hand, it must be admitted that what the actor sets himself to do he does thoroughly; and from his conduct in the scene with his mother it was more easy to understand her alarm than it has been in the case of players of Hamlet who have retained more temperance in the midst of passion. Signor Rossi's gesture has all the freedom which one expects from a distinguished Italian actor: but it has the great defect of monotony; for the expression of great excitement he relies alternately upon ruffling and pulling his hair, and upon striking an attitude with both arms outstretched above his head. There is a want of variety also in his elocution, which in long speeches is apt to be decidedly tiresome; he counteracts its dulness by employing a device which seldom fails to command applause. This device, a sudden change from a stilted to a familiar tone, and from a slow to a rapid utterance, may on some occasions be employed with good effect; but by constant use it degenerates into a mere trick. Having said thus much of the general impression produced by Signor Rossi's method, we may go on to consider his performance of Hamlet in more detail.

His appearance in the first act, when, from the arrangement of the stage as well as from the importance of his character, he is the figure which at once attracts attention, is marked by an intense gloom, which nothing lightens or varies for a moment. His reception of Horatio, "I know you are no truant," is so profoundly melancholy that he seems to be mourning for his friend's industrious disposition, and even the excitement of hearing that his father's ghost has appeared hardly makes a break in the monotony of his despair. When the Ghost appears to him, however, he displays a good deal of excitement; so much that, when it has disappeared, he falls flat on the ground and speaks part of the ensuing speech in that position. The words "There's ne'er a villain dwelling in all Denmark but he's an arrant knave" are not given in Signor Rossi's version, and "You'll reveal it," in answer to Horatio's demand for the Ghost's news, becomes merely "Non posso." Part of the address to the fellow in the cellarage is, however, retained, and delivered with sufficient wildness; but, oddly enough, it is to the Ghost, not to Horatio and Marcellus, that the command to shift the ground is addressed. The curtain falls upon Hamlet administering the oath of secresy to Marcellus and Horatio.

In the scene of the second act with Polonius Signor Rossi shows an appreciation of Hamlet's ironical humour, but he gives it a strange element of savagery; and through this act there are various departures from its ordinary business which appear unreasonable. Polonius's "Still harping on my daughter" is addressed to Rosencrantz and Guildenstern, and it is not of the player but of Hamlet that the words "Look whether he has not turned his colour and has tears in 's eyes" are spoken. The final soliloquy is delivered with considerable strength, but the appeal to the audience is far too obvious when the actor at "O—O—Vendetta" comes down to the footlights and stands in his favourite posture with his arms spread out; and throughout the speech there is too much beating on the head and tearing of the hair. The scene with Ophelia is given, strangely enough, with a certain tameness, with the air of a man delivering a moral discourse rather than of one in great excitement. This, however, is interrupted at "Vostro padre è in casa?" after which Signor Rossi flings open the door at the back through which he has seen Polonius, and cries, presumably after his retreating figure, "Let the doors be shut upon him."

Perhaps the greatest difference between Signor Rossi's first and second performances has been observed in the play scene. On both occasions he kept up, in which there can be little doubt that he is right, a restless and excited demeanour; and on both occasions the actor's excessively tiresome habit of beginning and interrupting every one of his speeches with variously intonated exclamations of ah! and eh! was exhibited at its worst. On his first appearance, however, Signor Rossi adopted a very singular manner of expressing his triumph after the King's flight; he walked to the throne and sat down in it, kicking up both his legs in the air and clapping his hands wildly together. This action he judiciously omitted on his second appearance, when he also modified the remarkably hideous dress which he at first wore. Signor Rossi makes a departure which, whether wise or not, certainly attracts attention, from English traditions in the speech about the recorder, which he delivers without any appearance of excitement, handing the instrument back to Rosencrantz at the end of the speech with a subdued laugh.

In the scene between Hamlet and his mother both Signor Rossi's best and worst qualities are brought out strongly. It is difficult to admire the brutality with which he drags her about the stage and tears the King's miniature from her to stamp on it with wild fury; and one cannot but think the skill of gesture with which he imitates the birds and "the famous ape," in one of the speeches generally omitted, misplaced. On the other hand, the entreaty to his mother to repent was given with true feeling. In the graveyard scene Signor Rossi's discourse over the skull was marked by the same dulness and air of preaching which we have before observed, and there was a want of passion in the struggle with Laertes. The actor's performance in the last scene had, as far as execution went, a good deal of merit. The arrangement of the scene is curious. Before the fencing assault there are two speeches inserted, which we will give in the English version:—

> Horatio (to Hamlet). My lord, please do not.
> Hamlet. My friend, honour compels me, but if I am betrayed none will enjoy my death.

Thus Hamlet is evidently prepared for the treachery upon which he afterwards so loudly exclaims. When Laertes succeeds in touching Hamlet the prince disarms him and offers him his own foil. Then comes this dialogue:—

> Laertes. Why, you give me your foil.
> Hamlet. Yes.
> Laertes. I am lost.

When Laertes has told Hamlet the story of the plot, the prince rushes on the King, and, shortening his hold on the foil, stabs him with a backhanded blow, after which he stands over him and compels him to drink what remains in the poisoned goblet. The meekness with which the King, who is not so disabled that he cannot stand up, submits to this is remarkable; perhaps he felt that, as he was wounded to death, it mattered little whether he drank the poison or not. Hamlet, having completed this business, staggers to the throne and dies, prophesying the reign of Fortinbras in a speech which, it may be observed, is omitted in the published version.

We have said nothing of the other actors concerned with Signor Rossi in the performance of *Hamlet*, and beyond the fact that they knew their parts there is nothing to be said about them. It seems to us that Signor Rossi himself might do wisely to appear in some strong melodramatic part. He would undoubtedly make his performances more acceptable if he would speak his words without the inarticulate cries which constantly disfigure his utterance.

THE RATIONALE OF MIRACLES.

THE time has evidently arrived when Christian apologists must review their position in regard to miracles. The revolution which has taken place within the last few years in the domain of physical science, if in some respects it makes the defence of miracles easier, renders at the same time a change of front absolutely inevitable. Some of the old arguments have become not only obsolete, but mischievous, and even those which are sound must be recast in order to bring them into harmony with the changed aspect which nature presents to the scientific eye in the light of recent discoveries, that of evolution in particular. This has been enforced so strikingly in an article on miracles in the new number of the *Church Quarterly Review*, that we make no apology to our readers for calling attention to it.

The first thing to be done in such a review as we have suggested is to disencumber the defence of miracles of arguments which are clearly untenable. And we will begin with one which the writer of the article, probably for want of space, dismisses in a short paragraph, and which can claim among its advocates some great names—among the rest that of Dr. Mozley; we mean the distinction sought to be established between the miracles of Scripture and what are called ecclesiastical miracles. We have no objection at all to the rejection of any or all of the so-called ecclesiastical miracles on their merits. What we object to, as utterly inadmissible from a logical point of view and ruinous as a matter of tactics, is the setting up of an arbitrary line on one side of which miracles are freely accepted, on the other rigidly excluded. Dr. Mozley, in his generally

clear and powerful argument for miracles, lays down a number of tests by which, as he thinks, the miracles of Scripture may be distinguished from all others. But when these tests are examined they prove to be quite illusory. Let us look at one or two of them. "Wildness," "puerile extravagance," "grotesqueness and absurdity" mark, he thinks, the class of non-Scriptural miracles. This is certainly true of some, perhaps of most, of the ecclesiastical miracles; but it is by no means true of all. On the other hand, these same tests supply the favourite objections of scepticism against several of the miracles of the Bible; such as the speaking of the serpent to Eve, and of the ass to Balaam; the transformation of the rod of Moses into a serpent, which devoured the transformed rods of the magicians and then returned to its former shape; the destruction of the children which mocked Elisha; and the resurrection of a corpse which had afterwards accidentally touched his lifeless bones. It is clear, therefore, that what looks like extravagance and absurdity cannot be admitted as a valid test, since it proves too much. Dr. Mozley, indeed, endeavours to get rid of this objection by contrasting "the quantity and the proportion" of "miracles of an eccentric type" recorded in ecclesiastical history with those of the same class recorded in the Bible. But is not this to forget the fact that the Bible miracles are merely an inspired selection out of a large mass of alleged miracles? Not to dwell on the miracles of the Apocryphal Gospels, the author of the Fourth Gospel states explicitly that the miracles recorded by himself are but a fractional part of those which he had witnessed. On the other hand, a selection might easily be made of post-apostolic miracles which would answer all Dr. Mozley's tests. It would be difficult, for example, to summon a witness more competent in every way to give satisfactory evidence as to any matter which fell within the range of his own experience than St. Augustine of Hippo. Now St. Augustine bears witness to the reality of several miracles which were alleged to have occurred in his neighbourhood during his lifetime; and he declares, in particular, that he beheld one of those miracles with his own eyes. Ambrose, Irenæus, and other great names bear similar testimony; and, if we summarily reject their evidence merely because it comes into collision with some arbitrary assumption of our own, we shall find it rather difficult, as the writer of the article in the *Church Quarterly Review* reminds us, to make any effective answer to the professed sceptic when he proposes to "carry the principle a little further, and deal in like manner with St. Paul." We repeat that we are not at present passing judgment on the character or credibility of any of the ecclesiastical miracles; we are only pointing out the unreasonableness and the danger of rejecting them in the lump, not on their merits, but in obedience to a canon of criticism which will not bear investigation. The anonymous author of *Supernatural Religion* and several other writers of repute have aimed at the miracles of the Bible, and with considerable effect, the arguments usually advanced against ecclesiastical miracles; a fact which illustrates the proverbial danger of playing with edged tools. It is better to admit frankly and at once the impossibility of laying down any criteria which shall include all the Biblical miracles and exclude all the ecclesiastical.

One of the most perplexing objections against miracles is the difficulty of distinguishing those which are of Divine origin from those which are the result of Satanic agency. Scripture admits the reality of the latter class as distinctly as that of the former, and it is therefore with considerable plausibility that the assailant of the doctrine of miracles urges the impossibility of accepting miraculous phenomena, granting their existence, as evidence of Divine intervention. May they not point, on the contrary, it is asked, to the intervention of an evil spirit? The writer of the article in the *Church Quarterly* admits that the author of *Supernatural Religion* "has here hit upon a weak point in our modern theology, and with great ingenuity has driven his attack home." The fact is that Calvinism has largely distorted, wherever it has prevailed, the features of the Christian faith, and among these distortions is its polemical use of the argument from miracles. In the Calvinistic system Christianity is narrowed down to the deliverance of a revelation from God to man. This He is supposed to have done some eighteen centuries ago; the Bible contains that revelation, and human redemption consists in the subjective apprehension and appropriation by man of the truths contained in the inspired volume. The sole *raison d'être* of miracles, therefore, is to attest the Divine origin of the revelation, and, having fulfilled this function, they naturally ceased with the close of the canon of Scripture. The Calvinist has thus an obvious reason for rejecting all post-apostolic miracles; but the result has been to throw on the doctrine of miracles a burden which that doctrine was never intended, and which it is in fact incompetent, to support. Miracles are thus isolated not only from all other acts of Divine Providence in nature, but even from the laws and rules of Divine action in the sphere of grace. They are in contradiction not merely to the course of nature, but quite as much to the course of the Divine action generally. This is the first distortion of the miracle by Calvinism; and the second consists in wrenching it from its true meaning and import. Its existence and significance are strictly limited to its evidential value. Unless it can be shown to be the Divine certificate of some revealed doctrine, a miracle is on Calvinistic principles simply incredible.

Of course the writer of the article in the *Church Quarterly Review* does not deny that miracles form, and were intended to form, an important element in the mass of evidence on which Christianity rests. What he does deny is that evidence is their primary purpose and chief end. The Resurrection of our Lord, for example, is one of the great arguments for the truth of his religion, and has constantly been appealed to as such by Christian apologists from St. Paul downwards. Yet the chief purpose of our Lord's resurrection was not to furnish credentials for the truth of his mission, but to regenerate humanity—a work in which his resurrection from the dead was a necessary link. The truth, however, is that, as the writer of the article has well expressed it, "we must look at revelation, not as a system of doctrines contained in an inspired book, but as a series of complex historical facts." "Christianity is a very complex historical fact, with a vast multiplicity of aspects"; and what we have to do therefore in sifting the evidence of its origin is to view it as a whole and sum up the general impression. If that impression shows that, regarded as an organized institution, it is on the whole, from first to last, on the side of whatever conduces to the honour of God and the happiness of man, then it is evident that it is from God, and it follows of course that its miracles must be from God also. This gets rid of the objection against miracles from the assumed impossibility of differentiating Divine miracles from those wrought by the agency of evil spirits. "It is not as attesting a message that a miracle has evidential value, but merely as one out of many elements in a complex historical fact." Our Lord, indeed, once or twice appealed to his miracles as evidencing the divinity of his mission; but it is remarkable that he invariably refused to work a miracle to convince his adversaries, and this when he was pointedly invited to do so. Nay, more, in the story of Dives and Lazarus he lays it down as a kind of theological axiom that miracles are of themselves insufficient to establish the reality of a spiritual world. "If they hear not Moses and the Prophets, neither will they be persuaded though one rose from the dead." Miracles are thus seen to be only one element in the vast mass of proof which guarantees the Divine origin of Christianity, and Christianity is so completely opposed to the Devil's work that it would be irrational to suppose that Christian miracles could be the result of Satanic agency. This is, in fact, our Lord's own answer to a similar objection, when he pointed out the absurdity of supposing that the Devil would work miracles in favour of a system which was manifestly hostile to him.

But, if we are to reject their evidential character as the *differentia* of miracles, where shall we look for their characteristic mark? A miracle has been variously defined as "an infraction of the laws of nature," "an event contrary to the order of nature," "a suspension of the laws of nature," and the like. The writer of the article rejects all such definitions as untenable alike on theological and scientific grounds. Miracles can never be either a violation or suspension of any of the laws of nature. On the contrary, a miracle must of necessity postulate the order of nature as its correlate. Our Lord's walking on the sea implied the co-existence of the law of gravitation, for "gravity is an essential condition to the possibility of walking." The uninterrupted course of natural laws is, in fact, the physical basis on which the doctrine of miracles rests. But when we speak of "the order of nature," we must remember that the phrase has a history, and connotes two opposite schools of thought—that of the *à priori* philosophy and that of the Sense philosophy. According to the former, "laws of nature" mean "those ultimate principles of human reason to which all the phenomena of nature are in the end reducible." The truths of arithmetic and geometry are instances in point. That the angles of a triangle are equal to two right angles, or that two straight lines running parallel can never inclose a space, are truths of which, when they are once fairly grasped by the mind, the contradictory is simply inconceivable. Mr. J. S. Mill, indeed, actually denied this, and boldly affirmed the possibility of a world where two and two might make five—though perhaps this is only a quibble, or bad pun, on the ambiguous import of the word "make"—and where two parallel straight lines might enclose a space. The question, however, is not whether a world might exist in which the inhabitants might think that two and two make five—for some of the inmates of our lunatic asylums are possibly of the same opinion—but whether the sane inhabitants of this planet, constituted as they now are, can conceive the possibility of such a thing? We confidently affirm that they cannot. In the view of the *à priori* philosophy therefore the suspension of a law of nature would be equivalent to the suspension of human intelligence.

According to the Sense philosophy, on the other hand, of which Mr. Mill was a distinguished advocate, there is no such thing as a necessary sequence in the order of nature. It is all a matter of experience, and our expectation that natural phenomena will pursue their orderly course as heretofore is not a conclusion of the reason at all, but of the imagination only. Dr. Mozley stormed this position in one of the most brilliant of his Bampton Lectures, and turned the arguments of the Sense philosophy school against itself with crushing effect. But so unmetaphysical and illogical are some of the most eminent of the impugners of miracles—Professor Tyndall, for example—that they glide backward and forward, according to the exigencies of their argument, between the *à priori* philosophy and the Sense philosophy, in utter unconsciousness that the two are mutually destructive.

If, then, the usual definitions of a miracle are misleading or inadequate, what shall we offer by way of substitute? To constitute a miracle, it is plain that we must fix upon some *differentia* which separates it from the product of purely natural forces. Now, what is the essential characteristic of the products of natural forces? It is that they go straight to their mark with blind and brutal obstinacy, regardless of persons and reckless of consequences.

Such is the token of a physical law; it is mere power, and knows nothing of purpose. But man can impress his purpose on physical laws, and make them subservient to his will. If, therefore, we find in any given case that outside the sphere of man's activity the blind forces of nature are evidently controlled and directed towards some special end, it is reasonable to conclude that they are obeying the dictates of an intelligence higher than man's. This leads the writer of the article to a definition of miracle as an "event impressed with a visible purpose lying outside the sphere of man's activity." It follows accordingly that it is not superhuman power simply, but superhuman power "radiant with a Divine purpose," which constitutes the *differentia* of a miracle. The stilling of the storm on the Lake of Galilee might in itself have been a natural event. What denoted the miracle was the calm immediately following on the command to the wind to be still.
